The bill contained two sections and a schedule, the latter being the agreement dated March 8, 1920, executed under the powers of the Grand Trunk Railway Acquisition Act, 1919. The first section of the bill provided for the correction of the agreement in two particulars, viz.:—"By adding thereto, under the caption, 'Companies directly controlled by the Grand Trunk Railway of Canada,' the following:—Vermont and Province Railroad Co., controlled by stock owners' corp., 100 per cent.; Pembroke Southern Ry. Co., controlled by stock owners' corp., majority, and by striking out of the first schedule of the agreement under the caption 'Companies controlled by the Grand Trunk Ry. Co. of Canada by lease,' the words, 'Pembroke Southern Ry. Co.'"

The second section of the bill was as follows:—"The said agreement, as corrected as aforesaid, is hereby declared to have been sufficiently ratified by the holders of stocks of the G. T. Ry. Co. as required by Sec. 7 of the said act, and to be binding and effective, and is hereby in all respects ratified and confirmed as the agreement authorized by the said act and for all the purposes thereof."

The bill was passed through its various stages up to the third reading without amendment, when on the motion to read it the third time, April 22, unanimous consent was given to the insertion of the following as section 3:—"Nothing herein contained shall be construed as authorizing any lending of money by the government to the managing committee, mentioned in the fourth section of the said agreement, without the specific authority of parliament."

	1917	1918	1919
Gross earnings	\$152,389,335	\$157,347,694	\$176,929,060
Operating expenses	105,849,317	123,935,310	143,936,024
Net earnings	46,546,018	34,502,388	32,993,036
Other income	8,744,617	7,994,775	9,049,343
Total income	55,290,635	42,437,163	41,982,379
Fixed charges	10,229,143	10,177,513	10,161,510
Balance after charges	\$45,061,492	\$32,259,650	\$31,820,869
Times charges earned	5.40	4.17	4.13

Hon Mackenzie King, moved to return the bill to committee of the whole for the consideration and insertion of the following words:—"Any right or interest of any employee of the G. T. Ry. Co. existing in the pension system, prior to the strike of the company's employees which occurred in July, 1910, is hereby declared not to have been affected by the said strike or any circumstance or condition arising out of or in connection therewith."

This motion was defeated by 90 to 69, and the bill was then passed and sent to the Senate.

Standard Conditions for Wire Crossings Over Railways.

The Board of Railway Commissioners passed general order 291, April 7, as follows:—"Re sec. 372 of the Railway Act, 1919, for carrying of wires and cables along or across railway tracks; and application of Canadian National Rys. for an order amending the Standard Conditions and Specifications for Wire Crossings, approved by general order 231, May 6, 1918, as amended by general order 267, June 27, 1919. Upon reading what is filed in support of the application, the Canadian Pacific and Grand Trunk Railways concurring therein. It is ordered that the said standard conditions and specifications, as approved by general order 231, be amended.

(1) By striking out paragraph 4 of part 1, and substituting therefor the following, viz.:—"4. The applicant, before any work is begun, shall give the railway at least 72 hours prior notice thereof in writing, and the said railway company shall be entitled to appoint an inspector, under whose supervision such work shall be done, and whose wages, at a rate not to exceed \$11 a day, shall be paid by the applicant, such payment to cover both wages and expenses. When the applicant is a municipality and the work is on a highway under its jurisdiction, the wages of the inspector shall be paid by the railway company."

(2) By striking out paragraph 4 of part 2 and substituting therefor the following, viz.:—"4. Before any work of laying, removing, or repairing any pipe, conduit, wire, or cable is begun, the applicant shall give to the railway company at least 72 hours prior notice thereof in writing, accompanied by a plan and profile of the part of the railway to be affected, showing the proposed location of such pipe, wire or cable, conduit, and works contemplated in connection therewith; and the said railway company shall be entitled to appoint an inspector to see that the applicant, in performing said work, complies in all respects with the terms and conditions of this order, and whose wages, at a rate not exceeding \$11 a day, shall be paid by the applicant, such payment to cover both wages and expenses. When the applicant is a municipality, and the crossing is on a highway under its jurisdiction, the wages of the inspector shall be paid by the railway company."

And it is further ordered that general order 267, June 27, 1919, and general order 288, Mar. 23, 1920, made herein, be rescinded.

Telegraph, Telephone and Cable Matters.

The Oldtime Telegraphers and Historical Association will hold its 1920 meeting at Toronto, Sept. 1 and 2. G. D. Perry, General Manager, Great North Western Telegraph Co., is President.

The Pacific Cable Board announces the following staff changes: W. E. Lawson, from Bamfield, B.C., to Sydney, Australia; T. Atkins and J. Ritz, from Suva to Halifax, N.S., and F. C. Wilkins, from Montreal to Halifax, N.S.

The Great North Western Telegraph Co. has opened offices at L'Anse a Louise, Little Metis lighthouse, Que., Bankfield, Missouga and Penhurst, Ont., Runnymede, Sask., and Redland, Alta., and has closed its office at Shippegan, N.B., Riviere Ouelle Wharf, Que., and Larson and Minataree, Ont.

The daily press made the statement recently that, "all telegraphs in Canada except the C. P. R. are shortly coming under the Government's Great North Western system," which is not quite correct. The Great North Western Telegraph Co., came under Dominion Government control, through the taking over of the Canadian Northern Ry. by the Canadian National Ry. Co. The G. N. W. T. Co., in conjunction with the C. N. R., has about completed the erection of copper wires between Toronto and Montreal in the east, and Winnipeg in the west. The erection of wires has also been about completed between Edmonton, Alta., and Vancouver, B.C., and between Kamloops and Victoria, B.C. The company already has wire facilities be-

...of the C.R. agents and the use of express stations and also for the privilege of operating over the C.G.R. The Canadian Ex. Co. operates over the C.G.R. on the same basis. Replying to a question as to the business of the Rys. taking over control of the Canadian Ex. Co. and whether it is the intention to give the services of the agents and stations, the Minister said, that as this is a question of policy, it will be considered by the C.G.R. management.

Telegraph and Telephone Lines Estimates for 1920-1921.

The Public Works Department estimates for the year ending Mar. 31, 1921, submitted to the House of Commons recently, contain the followings items, characterized by Province:

NOVA SCOTIA.

Reconstruction of express line from Port Harvey to ...	3,000
Reconstruction of express line from ...	800
Reconstruction of express line from ...	2,000
Reconstruction of express line from ...	1,000
Reconstruction of express line from ...	8,000

Reconstruction of express line from ...	3,000
Reconstruction of express line from ...	100

ONTARIO.

Reconstruction of express line from ...	2,000
---	-------

Reconstruction of express line from ...	5,000
Reconstruction of express line from ...	500

BRITISH COLUMBIA.

Reconstruction of express line from ...	7,500
Reconstruction of express line from ...	1,500
Reconstruction of express line from ...	8,400

CHARGEABLE TO COLLECTION OF REVENUE.

Reconstruction of express line from ...	3,000
Reconstruction of express line from ...	10,000
Reconstruction of express line from ...	24,000
Reconstruction of express line from ...	107,000
Reconstruction of express line from ...	70,000
Reconstruction of express line from ...	110,000
Reconstruction of express line from ...	330,000
Reconstruction of express line from ...	10,000
Reconstruction of express line from ...	800,000

Among the Express Companies.

The Canadian National Express Co. has opened offices at Smoky Lake, Radway Center, and Ashmont, Alta.

The Canadian National Ex. Co. has opened offices at Runnymede, Sask., and Redland, Alta.

W. S. Stout, President, Dominion Express Co., returned to Toronto early in April, after spending some time at Pas Christian, Mississippi.

The American Railway Ex. Co. put into effect Apr. 15, a rule which requires that prepayment be made on all parcels shipped from Canadian to U.S. points, and that payment may be made in Canadian currency from the point of origin.

The Minister of Railways stated, in answer to questions in the House of Commons recently, that the Dominion Ex. Co. pays Canadian Government Rys. for the use of the express facilities for the

...of the C.R. agents and the use of express stations and also for the privilege of operating over the C.G.R. The Canadian Ex. Co. operates over the C.G.R. on the same basis. Replying to a question as to the business of the Rys. taking over control of the Canadian Ex. Co. and whether it is the intention to give the services of the agents and stations, the Minister said, that as this is a question of policy, it will be considered by the C.G.R. management.

The Dominion Ex. Co. was defendant in a suit brought by a Russian named Kosovsky, in the Court of Review at Montreal, recently, for loss sustained through a money transaction between Canada and Russia. The plaintiff arranged for the company to buy 1,165 roubles for dispatch to his wife in Russia, but owing to the unsettled state of that country, the party could not be found, and the money was returned. In the meantime the value of the rouble had dropped considerably, so that the 1,165 roubles were only worth \$148.50 in Canadian currency, which the company offered to pay the plaintiff. It was held that the company could not be held responsible for any loss caused through differences in the rate of exchange, and judgment was given in favor of the company, except that the plaintiff was given the option to demand payment in Russian money.

Board of Railway Commissioners' Jurisdiction Over Express Companies.

The Board of Railway Commissioners gave the following ruling Mar. 24: The board's powers in regard to express business are set out in the Railway Act, secs. 360-366, inclusive. The jurisdiction is concerned with tolls. The group of sections 360-363 is concerned with the formalities as to preparation, filing, etc., of tariffs. Sec. 365 requires that contracts, conditions, etc., limiting the liability of express companies are to be approved by Board. Sub-section 2 (b) of the same section provides that the board may prescribe the terms and conditions under which "goods may be collected, received, cared for or handled." This is a power in regard to the liability, not in regard to requiring the establishment of facilities. See in this connection Canadian and Dominion Express Co. vs. Commercial Acetylene Co., 9 Can. Ry. Case, 172, at p. 174. The only other section in the group referred to, 366, is concerned with returns by companies charging express tolls.

Sec. 364 gives the board power to define carriage by express. This was formerly sec. 352 of The Railway Act; and it was decided in Canadian and Dominion Express Cos. vs. Commercial Acetylene Co., May 20, 1909, 9 Can. Ry. Case, 172, that express companies were at liberty to exercise their own discretion in refusing to carry by express any particular commodity.

Sec. 364 of the present act differs from sec. 352 of the former act by the addition of the words "and may order that all such goods as the board may think proper shall be carried by express." The effect of this is to remove the discretion which the express companies formerly had. The express company may not discriminate between goods as to carriage, but this does not give power to direct the installation of facilities at stations. It may further be noted that in the group of

sections already referred to, there is no section which gives the board power to direct that facilities shall be afforded.

Subject to the change to sec. 364 as above referred to, the group of sections covering express business are, with some exceptions, as to preparation, the same as of the 1914 express legislation given. In that judgment, the following position was laid down: "No application have ever been made to the board to require railway companies in Canada to furnish either an express service, or any facilities connected with such a service. All applications have been made against the express companies. It is apparent that as the act now stands, orders for improved facilities for handling the express traffic can only be made against the railway company. By improved facilities is meant car service, shelters, and the like; and if express companies do not provide for these matters, with the railway companies over whose lines they operate, and remove all proper causes of complaint, then it will be the board's duty to deal directly with the railway companies as to these matters, and complaints from the public must be made against them." In the matter of express companies, etc., pp. 49-50.

At a later date, the board had before it an application of the Village of Cumberland, Ont., for reinstatement of express service which had for some time been rendered by the Canadian Northern Ry. and then taken out. In reply the Board stated on July 14, 1911: "The board's jurisdiction in the matter of express service is much more limited than it is in the matter of freight and passenger rates. Under the act the board has no jurisdiction to compel the Canadian Northern Express Co. to reinstall the express service which the board has been advised is withdrawn between Hawkesbury and Ottawa. If the freight department of the railway refuses to give proper facilities for the handling of traffic, complaint as to this should be put in form and submitted to the board, when the matter will be taken up with the railway company."

In dealing with an application of the Town of Sudbury for a direction that the Dominion Express Co. should establish an up-town office, to receive and deliver express parcels, it was pointed out that a direction, if any, as to the installation of an up-town express office must be a direction to the railway, not to the express company. A similar ruling, in regard to the same point, is to be found in connection with a complaint from the Town of Pincher Creek, complaining inter alia, against the closing of the Dominion Express Co.'s up-town office.

In summary form, the board's jurisdiction is as to tolls and contracts, etc., limiting liability, by sec. 364 amended as already noted, of saying what may be carried by express. The board is given no power to direct an express company qua express company, to install facilities or to arrange that specific service shall be given at specific stations. It follows from this that so far as jurisdiction is concerned, the board has no power to direct an express company to re-instate at a station or stations express facilities which it has removed, nor has the board power, as a matter of jurisdiction, in the first instance to direct the installation of facilities at a station or stations. Its jurisdiction over telegraph, telephone and express companies is essentially a rate jurisdiction, and much more limited than in the case of railways.

Electric Railway Department

Increases in Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry.—A press report states that Vancouver City Council is considering the advisability of asking the Board of Railway Commissioners for a rehearing of the company's application for a 6c fare, which was granted in Oct., 1919.

The Cape Breton Electric Co. is reported to have applied to the Nova Scotia Public Utilities Commission for permission to increase its car fare from the present rate of 6c to 7½. C. C. Curtis, Manager, addressed the Sydney Board of Trade, recently, on the company's financial position, with a view of showing why an increase of fare is necessary.

Edmonton Radial Ry.—The Edmonton, Alta., Bulletin, in a recent article, said:—"The flat rate is illogical. It defies the principle that the charge should be in proportion to the service rendered. Having found that we cannot defy that principle without bankruptcy of the street railway, why keep on trying?" The article claims that "the high fare kills short haul traffic," and that "there is no money in long haul traffic," and suggests that the fares should be in proportion to the distance a passenger is carried.

Hamilton St. Ry.—At a meeting of the Hamilton, Ont., City Council's Street Railway Committee, April 26, it was reported that the Hamilton St. Ry. Co. was preparing to ask for power to increase fares.

London Street Ry.—In July, 1919, the London, Ont., City Council passed a bylaw authorizing the London St. Ry. to increase its fares for adults to 5c or 7 tickets for 25c, with limited tickets good from 6.30 to 8 a.m. and from 5 to 6.30 p.m., at 9 for 25c. This bylaw was quashed by Chief Justice Falconbridge. The case was then appealed to the High Court's Appellate Division, which in April 9 reversed the late Chief Justice's decision. We are officially advised, however, that at the period of eight months specified in the bylaw during which the higher fare provided for in it was to prevail had expired before the Appellate Division's decision was rendered, had expired, the higher fares cannot be put into effect again.

Montreal & Southern Counties Ry.—The Board of Railway Commissioners passed order 29,564, Apr. 24, authorizing the company to publish and file tariffs making an increase of 20% in its passenger fares, the tariffs to be effective within seven days from the date of the order. This order was cancelled by order 29,571, passed Apr. 26, as follows:—"Re application of Montreal & Southern Counties Ry. for an order permitting it to file tariffs providing for an increase of 20% in its fares now charged for the carriage of passengers: Upon hearing the application at Montreal, Mar. 9, in the presence of counsel for and representatives of the applicant company, the South Shore Welfare League, the towns of St. Lambert and Longueuil, the City of Montreal, and other parties interested, and what was alleged, it is ordered that the company be authorized to publish and file tariffs making an increase of 20% in its present passenger fares; the said tariffs to become effective when

the standard tariffs are published, with a notice of their approval, in The Canada Gazette, in compliance with the provisions of the Railway Act 1919. That order 29,564, dated April 24, made herein, be rescinded.

The Nova Scotia Tramways & Power Co's directors' report, presented at the annual meeting recently, says that the average fare in Halifax is 4.3c a passenger. A bill was introduced in the Nova Scotia Legislature recently, providing for an increase of fares on the company's electric railway lines in Halifax. A press report states that the bill passed for the payment of three rates:—7c for a single fare; 4 tickets for 25c, or a strip of 16 tickets for 90c. The bill is also said to provide that the Public Utili-

ties Commission shall have jurisdiction over the fares to be charged on the lines after July 1, 1921.

that there should also be a zone east of Cloverdale road and that workmen's limited tickets should be issued on the interurban extensions, as on the city lines. The board passed order 29,550 accordingly on the same day in accordance with which the company filed Special Passenger Tariff C.R.C. 7, cancelling C.R.C. 4, effective April 26, and providing for separate fares on the two interurban extensions as follows:—

Between points within the area defined by Holland Ave. in the west, the City of Hull in the north, Cloverdale Road in the east, and Grove St. in the south; and between points therein and the Experimental Farm and intermediate points. Also between Holland Ave. and Britannia Park, and intermediate points; and between Cloverdale Road and the Rockcliffe rifle range and intermediate points.

Between 5.30 a.m. and 12 midnight 5c. Children under 10, 3c.

To workmen and others, 33 tickets for \$1, or 8 tickets for 25c, good from first trip in morning until 7.30 a.m., and between 5 and 6.30.

Seven tickets for 25c, good only on Sunday.

School children under 14 to and from school at the rate of 40 tickets for \$1, good between 7 and 9.30 a.m., 11.30 a.m. and 1.30 p.m., and 3.30 and 5 p.m.

Between 12 o'clock midnight and 5.30 a.m., 10c.

The above fares are of course in addition to fares on the city lines, for passengers travelling over both city and interurban lines and are additional to the city fares as charged formerly.

Peterborough Radial Ry.—A Peterborough, Ont., press dispatch of April 7 says:—"To meet the cost of extension of the street railway, a new schedule of fares is contemplated at 5c, 6c, 7c and 10c. The 10c fares will be for a service to Crawford's Grove and other points outside of the city."

Regina Municipal Ry.—A press report of April 20 stated that the Regina, Sask., City Council was to consider on April 21 the report by D. W. Houston, Superintendent, recommending the adoption of a 6c. fare unless the people are prepared to endorse the operation of one-man cars.

St. Thomas Municipal Ry.—The St. Thomas, Ont., City Council has decided to eliminate workmen's tickets, sold formerly 8 for 25c. The fares now are 5c cash; 6 tickets for 25c, or 24 for \$1; children from 5 to 12 years, 10 tickets for 25c.

Winnipeg Electric Ry.—The hearing of the Winnipeg Electric Ry.'s application for power to charge increased fares was resumed before the Manitoba Public Utilities Commissioner April 15.

A recent press report stated that an understanding had been reached between the company and the city on the fare question, but we were officially advised April 12 that there was no foundation for the report.

Chatham, Wallaceburg & Lake Erie Ry's Future. — The Chatham, Ont., Chamber of Commerce is reported to have invited Sir Adam Beck to visit the city to discuss with representative of the various municipalities served by the C. W. & L. E. R. the advisability of taking it over as part of the Hydro Electric Power Commission of Ontario's system of electric railways. Representatives from various municipalities met at Wallaceburg, Ont., Mar. 31, and appointed a committee to invite the C.P.R. to acquire the line and to extend it from Wallaceburg to Sarnia.

Canadian Electric Railway Association.

Honorary President, Lieut.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co.

Honorary Vice President, Acton Burrows, Proprietor and Editor, Canadian Railway and Marine World.

President, A. Gaboury, Superintendent, Montreal Tramways Co.

Vice President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.

Honorary Secretary-Treasurer, pro tem, A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.

Executive Committee, The President, Vice President, and F. D. Burpee, Superintendent, Ottawa Electric Railway Co.; C. C. Curtis, Manager, Cape Breton Electric Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.; Geo. Kidd, General Manager, British Columbia Electric Railway Co.; M. W. Kirkwood, General Manager, Grand River Railway Co. and Lake Erie & Northern Railway Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Railway Co.; R. M. Beaud, Superintendent, Quebec Railway Light & Power Co.; Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Railway Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Railway Co.

Official Organ—Canadian Railway and Marine World, Toronto.

ties Commission shall have jurisdiction over the fares to be charged on the lines after July 1, 1921.

Ottawa Electric Ry.—Canadian Railway and Marine World for April contained a copy of the company's special passenger tariff C.R.C. 6, which it filed to become effective April 5, following the Supreme Court's judgment allowing the company's appeal against the Board of Railway Commissioners' judgment refusing it permission to increase fares on its suburban lines to Britannia-on-the-Bay and Rockcliffe. On April 1 the Board of Railway Commissioners, on the application of the City of Ottawa and Nepean Tp., suspended the tariff until further order. The tariff provided for three zones on the suburban lines, two west of Holland Ave. on the Britannia line and one east of Cloverdale Road on the Rockcliffe line. It also eliminated workmen's limited tickets on the extension. On April 19 Chief Commissioner Carvell gave judgment, deciding that there should be but one zone between Holland Ave. and Britannia-on-the-Bay, instead of two as asked by the company,

Auditor's Report on Hydro Electric Power Commission of Ontario's Electric Railway Projects.

of the Commission, the Commission is authorized to issue bonds to meet the requirements of the Hydro Electric Power Commission of Ontario's electric railway projects. The Commission is authorized to issue bonds to meet the requirements of the Hydro Electric Power Commission of Ontario's electric railway projects.

The Commission is authorized to issue bonds to meet the requirements of the Hydro Electric Power Commission of Ontario's electric railway projects. The Commission is authorized to issue bonds to meet the requirements of the Hydro Electric Power Commission of Ontario's electric railway projects.

Following is the portion of Mr. Clark's report dealing with the Hydro-Electric railway lines:—

Under the provisions of the Hydro-Electric Railway Act, 1914, and amendments thereto, the commission is authorized to enter upon the construction or purchase and operation of electric railway lines when and so soon as (a) The Lieutenant-Governor in council shall have authorized the municipalities interested to enter into agreements with the commission for the construction and operation of any electric railway; and (b) The municipalities interested shall, in respect of any proposed line, have signed agreements containing terms and conditions laid down by the act, including the assumption on their part of liability for the costs of construction and operation of such a line.

Under sec. 6 of the act, it is provided that the commission may raise money for the construction and equipment of such a railway line by the issue of bonds secured upon the railway and all assets belonging thereto, and further, that it may from time to time increase the amount of the bonds so to be issued by any amount which it deems necessary to cover the costs of construction and equipment or to provide for extensions or improvements to the line.

Under sec. 7 of the act it is provided that neither the province nor the commission shall be liable for the payment of the bonds to be issued by the commission, except to the extent of the moneys which shall be received in connection with the operation of the railway line or from the sale of debentures to be deposited with the commission by the municipalities. Under sec. 8 of the act, however, it is provided that the Lieutenant-Governor in council may authorize the Provincial Treasurer to guarantee the payment of the bonds issued in respect of any radial line they cannot be sold by the commission to advantage without the guarantee of the province.

The municipalities on their part are required to deposit debentures to the amount of their respective shares of the costs of construction and equipment of the railway line, with the commission, and from interest thereon to be held by the commission as collateral security for

the bonds issued by it, subject to the amount on its part to sell at auction at any time to meet the payment of any amounts due by a municipality in default. The agreements with the municipalities are very rigid in character, in that the responsibilities assumed by each municipality are based upon the costs of construction and operation of a line, the exact location and character of which is definitely laid down in each agreement. Legal opinion is that there is doubt as to whether the obligations assumed by any municipality can be enforced in the event that a line shall be constructed and operated for a portion only of the distance prescribed in the agreement to which such municipality is a party; this is particularly the case if the portion constructed becomes a defined part of a new system comprised of the part of one system and the part or the whole of another system, leaving any part of either of the original systems unconstructed.

The commission has in contemplation the construction or purchase and operation of the following lines:—(a) Port Credit to St. Catharines Line, to run between the Village of Port Credit and the City of St. Catharines; (b) Toronto to Port Credit to London line, to run between the City of Toronto, to the Village of Port Credit, and the City of London; (c) The Toronto and Eastern line, to run from the City of Toronto to the Town of Bowmanville.

Necessary agreements have been executed with the municipalities in respect of the Port Credit to St. Catharines line, and such agreements have been approved of by the Lieutenant-Governor in council. Agreements have been voted upon by the municipalities interested in the Toronto to Port Credit to London line, but the same have to be signed, I am informed, by the municipalities between Toronto and Port Credit only. Agreements with the municipalities in respect of the Toronto and Eastern line have been executed and the approval of the Lieutenant-Governor in Council thereto has been obtained.

Costs of construction and purchase of the Port Credit to St. Catharines line are estimated by engineers of the commission at \$11,000,000, which amount it is proposed to raise when and as required by sale of bonds of the commission. Certain of these bonds have already been guaranteed by the province and are in the hands of the commission. The commission has entered upon certain obligations in connection with the acquisition of right of way and for supplies and materials, and these obligations amount to between \$250,000 and \$300,000.

In order to provide for connection of the Port Credit to St. Catharines line with the City of Toronto, the commission has made expenditures and incurred liabilities to the amount of upwards of \$650,000, and it states that these expenditures have been made as part of the costs of construction and purchase of the proposed Toronto to Port Credit to London line, in respect of which it intends to apply for legislation authorizing it to construct and operate the same in two divisions, to be located between Toronto and Port Credit, and Port Credit and London. Agreements have been executed by the municipalities between Toronto

and Port Credit, but not by those between Port Credit and London; accordingly the terms of the Hydro-Electric Railway Act have not yet been complied with in respect of the Toronto to Port Credit to London line as voted on by the municipalities. The commission states that it received assurances from Sir William Hearst, when Premier of Ontario, that if it would obtain resolutions by the municipalities interested, requesting the government to introduce and pass amendments to existing legislation that may be necessary to validate the building of the Toronto to Port Credit section as a part of the Toronto to St. Catharines Hydro-Electric Railway (so as to make the same legal, valid and binding upon the municipalities), that the government would, with the presentation to it of such resolutions, support legislation to that effect. In such event Sir William Hearst is said to have expressed the opinion that no difficulty would be met with in carrying out the wishes of the commission to have the bonds necessary for the construction and equipment of such line guaranteed by the province. On the basis of these assurances, therefore, and with resolutions by the municipalities in its possession, the commission, although without statutory authority to do so, has felt justified in making expenditures amounting to \$550,000 out of the funds held by it under the terms of The Power Commission Act, in the belief that by so doing it would make a considerable saving in the cost of the Toronto to Port Credit line. Engineers of the commission estimate that the cost of construction of the Toronto to Port Credit line will be upwards of \$5,000,000 to \$6,000,000.

Estimates of the engineers of the commission indicate that the cost of construction of the Toronto and Eastern line will be about \$9,000,000, to be raised as and when required by sale or issue of the commission's bonds guaranteed by the province. The approval of the Lieutenant-Governor in council to the agreements with the municipalities has been obtained, and expenditures upon the line to this date amount to about \$10,000.

As the costs of construction or purchase and operation of the above mentioned electric railway lines are matters which engineers alone can estimate at this time, I am unable to make any further statement to you with reference to them. Engineers of the commission are of the opinion, however, that the revenues of such lines will be sufficient to meet costs of operation.

Niagara Falls, Wesley Park and Clifton Tramway Co.—We are officially advised that this company's franchise in Niagara Falls, Ont., expired Mar. 31, and that the city council had given notice that it would assume the ownership on the expiration of the franchise. The city council recently advised the Niagara, St. Catharines & Toronto Ry., which owns the N.F., W.P. & C.T. Co., that it was applying to the Ontario Railway and Municipal Board for a board of arbitration to decide upon a price for the line. In the meantime the line is being operated by the N.S.C. & T. Ry. as formerly, but without any agreement with the city.

British Columbia Public Utilities Commission Abolished.

In the British Columbia Legislature, April 8, a government bill to repeal the act of 1919 providing for the regulation of public utilities and establishing a Public Utilities Commission for the province was read a first time.

1. This act may be cited as the Public Utilities Act Repeal Act.

2. The Public Utilities Act is hereby repealed.

3. Where, because of the enactment or operation of the Public Utilities Act, it is deemed just, necessary, or expedient that any of the powers or duties conferred or imposed on the commission by the said act should be exercised, the Lieutenant-Governor in Council may authorize the commission to so exercise its powers or duties to the extent of such authorization as if the said act had not been repealed, or may appoint any other person for this purpose, and in either case may provide for remuneration for such services, or may himself make any order for the doing of anything provided for under and within the scope of the powers conferred on the commission by the said act, the doing or making of which may so become necessary or expedient, and he may make any order or regulation which may appear necessary or expedient because of the repeal of the said act or because of conditions arising or rights affected as a consequence.

4. The jurisdiction, rights, powers, duties, and authority of every person, city, municipality, minister of the Crown, public official, or public body divested, modified, or affected by the enactment of the act hereby repealed shall revive and be restored as if such act had not been enacted.

5. In the event of the British Columbia Electric Ry. Co. at any time coming under the jurisdiction of the Provincial Legislature or being declared by a court of appellate jurisdiction, whose decision is not overruled, to be under provincial jurisdiction and not a work for the general advantage of Canada, all agreements heretofore existing, statutory or otherwise, between the company and the City of Vancouver, or any other municipality shall become operative and binding according to the tenor thereof as if the Public Utilities Act had never been passed.

6. The moneys collected by the British Columbia Electric Ry. Co. and held as a trust fund under and by virtue of the provisions of subsec. (4) of section 11 of the Public Utilities Act from, on or after April 9, 1919, when the said trust first became operative, to July 7, 1919, shall be divided as follows: One-half to the British Columbia Electric Ry. and the other half to the Vancouver General Hospital; and the railway company shall forthwith pay to the hospital its share of the said money, which payment shall constitute a discharge of the trust as to the money collected between the two aforementioned dates to which the said trust applied.

7. All acts done by the Minister of Railways since the enactment of the Public Utilities Act purporting to be done under the provisions of the Railway Act are hereby declared to be valid as of their date, notwithstanding the provisions of the Public Utilities Act.

8. The Lieutenant Governor in Council may pay to the officials and servants appointed under the Public Utilities Act such amounts, not exceeding as to any official servant three months salary or

wages, as may be deemed proper in consideration of the termination of their employment, which is hereby terminated.

The legislature has voted \$24,360 for the expenses of the commission in winding up its affairs. When this vote was before the house, April 8, the Attorney-General stated that there were certain matters which the Commissioner had to clear up and it was estimated that this would take at least three months.

The Public Utilities Act was assented to Mar. 29, 1919, and shortly thereafter Major Retallack was appointed Commissioner. Practically the first work he took up was the question of increased fares on the B. C. Electric Ry. in Vancouver, which had been the subject of considerable controversy for some months prior to the passing of the act, and which formed the subject of special provisions in sub sec. 4, sec. 11, which provided that the excess of 1c being collected in Vancouver by the B. C. E. Ry. was after April 9, be paid into a special trust fund and retained there until the Commissioner fixed the fare to be charged, after full investigation. After the Commissioner had started the investigation, legislation was passed at Ottawa which placed the whole of the B. C. E. Ry. lines under the Board of Railway Commissioners for Canada, and that board sanctioned the company's fare schedules on the higher rate. The trust fund at the time this took place was approximately \$50,000, and the bill passed by the legislature will divide this equally between the city hospital and the company.

A Vancouver correspondent wrote us April 17 as follows:—The bill repealing the Public Utilities Act of 1919 has been passed by the Legislature, and only requires the signature of the Lieutenant Governor to become law. One of the reasons for the repealing of the act was that the railway lines of the British Columbia Electric Ry. Co. were, by an act of the Dominion Parliament, taken from the control of the province, and placed under the Dominion Board of Railway Commissioners. Then the Telephone Company of British Columbia was placed under Dominion control, which left, in the opinion of the British Columbia government, very little scope for the provincial commission.

The B.C. Legislature has provided in its repealing of the Public Utilities Act for the revival of all agreements binding the B.C. Electric Ry. Co., as if the act had never been passed. Just what effect this will have upon the 6c fare charged in Vancouver, New Westminster and other communities, is somewhat doubtful. The company's franchise provides for a 5c fare. The 6c fare was granted until April 9, 1919, and consequently the British Columbia government, by the Public Utilities Act, extended this privilege until the Public Utilities Commission could investigate the necessity for such a fare. The B.C.E.R. Co. was removed from provincial jurisdiction, its fares were confirmed by the Dominion Board of Railway Commissioners, and it is under this confirmation that the present fares are being charged. If the Dominion Government should cancel its jurisdiction over the company, this would throw it back on original agreements, and it would then be without recourse to either Dominion or B.C. commissions.

Another curious feature of the B.C. repealing act, is a clause which might

be said to confiscate one-half of some \$48,000 held in trust by the B.C.E.R. Co. It was provided in the Public Utilities Act that the 6c fare be continued after April, 1919, and that the additional cent, over the 5c statutory fare, should be paid into a fund, until such time as the provincial commission could investigate the merits of the 6c fare. If it should have been decided that the company was not entitled to this additional cent, the fund was to go to the Vancouver General Hospital. The contributions to the fund up to July 7, 1919 were about \$48,000, when they stopped, owing to the company coming under Dominion Government jurisdiction and having its fares approved. The repeal act contains a clause to the effect that this fund shall be divided equally between the B.C.E.R. Co. and the Vancouver General Hospital, without providing for any investigation. Whether this is a confiscation or not, it is hard to say, but it is quite probable that the cost of giving service from April to July 7, 1919, warranted much more than a 6c fare, in which case the company would be entitled to the whole of the fund.

Responsibility for Fire Damage by Electric Wires.

The Imperial Privy Council gave judgment recently on the Quebec Ry., Light & Power Co.'s appeal against a decision of the Supreme Court of Canada in an action brought against the company by G. A. Vaudry et al to recover damages for fires caused by the company's wires. The five actions were consolidated for the purposes of the appeal, the principal object of which was to settle the true construction of article 1054 of the Civil Code of Lower Canada.

The company generates and distributes electricity in Quebec City. The respondents' houses are on the St. Foye Road, along which the company erected a pole line carrying a primary cable charged with electricity at 2,200 volts and a secondary cable from which electricity was supplied to the houses at 108 volts. During a winter storm a branch from a tree broke the primary cable and the high tension electricity found its way along the secondary cable into the houses, setting them on fire. For the damage caused the owners brought their actions, and obtained a favorable verdict in the first court, which was reversed by the Court of Appeal, and restored by a majority of one by the Supreme Court.

In the Privy Council judgment Lord Sumner held that two questions of law arose upon the case (1) whether the plaintiffs can succeed without proving negligence or fault against the company, and (2) whether even so the defendants would succeed if they proved that they could have prevented the fire. After discussing the law fully and its relation to the facts, their Lordships decided that the appeal should be dismissed with costs.

New Brunswick Electrical Development.—The N.B. Legislature is being asked to appropriate \$1,000,000 to develop water powers in the province and provide for the distribution of electrical energy. It is proposed to do this work in three districts, viz., St. John and vicinity; Fredericton and the upper St. John Valley and the North Shore, through a provincial commission.

Electric Railway Employees' Wages, Working Conditions, Etc.

Electric Railway Situation in Detroit.

The British Columbia Electric Ry.—The board of directors of the B.C. Electric Ry. has decided to raise the rates for the first time since 1914.

The board of directors of the B.C. Electric Ry. has decided to raise the rates for the first time since 1914.

The board of directors of the B.C. Electric Ry. has decided to raise the rates for the first time since 1914.

The Dominion Power & Transmission Co., Hamilton, Ont., has made a new agreement with the conductors and linemen on its interurban lines only until April 1, 1921. The following table shows the rates paid heretofore, the rates asked by the men and the rates agreed on per hour:—

	Old	Agreed	New
Conductor	50c	55c	60c
Lineman	40c	45c	50c

Time and a half for overtime. Ten hours constitute a days work, to be completed in 11 consecutive hours. Nothing extra for Sundays or holidays. Uniforms supplied free to all trainmen after two years service, company pays half cost of uniforms for first and second year.

A Hamilton press report of April 27 says a board of conciliation has been appointed to investigate a wage dispute between the Hamilton St. Ry. and its employees. G. C. Kerr, K.C., represents the company, and F. Bancroft the men.

Edmonton Radial Ry.—A new wage schedule is reported to have been agreed on between the Edmonton, Alta., City Commissioners and the Street Railway Men's Union, for Edmonton Radial Ry. employees. Following are the rate reported for conductors and motormen per hour:—

	One man car	Two man cars
Conductor	50c	55c
Motorman	40c	45c

A 9 hour day is to be worked, time and a half will be paid after 9 1/4 hours have been worked, and time and a half will be paid for all statutory holidays.

London & Port Stanley Ry.—A board of conciliation has been authorized by the Minister of Labor to deal with the differences as to wages between the London & Port Stanley Ry. and its employees. B. W. Bennett, Sarnia, Ont., is the railway's representative, and J. W. Campbell, Kingston, Ont., is the men's representative. It was stated, April 22, that the chairman would be appointed a few days thereafter. The men ask a maximum rate of 65c an hour, and were offered 52c an hour.

London St. Ry.—London, Ont., press dispatch April 25.—At a mass meeting of London St. Ry. employees last night it was unanimously voted to strike on May 1 unless the company shall have by that time met their demand for an increase in wages of from 44 to 65c an hour. The company having repeated its declaration that on the present rate of fares it is unable to grant the increase, the men voted

to go out on strike. The board of directors, as it was declared that, under the circumstances, the board could do nothing to avoid the strike. If the city council does not intervene and raise the fares, the strike appears an absolute certainty. No negotiations have taken place with the company.

Montreal Tramways Co.'s employees are negotiating for increased wages, and improved working conditions. The scale asked by conductors and motormen as compared with the present scale is as follows per hour:—

	Present	Agreed
Conductor	50c	55c
Motorman	40c	45c

The demands of the men, it is reported, would involve, if granted, an addition of about \$3,000,000 a year to the pay roll.

Nova Scotia Tramways & Power Co. A press report states that an agreement has been arrived at between the company and its outside employees, under which an advance of wages has been given, the minimum rate for conductors and motormen being 52c an hour. The report adds that the increase is contingent upon the passing of an act by the Nova Scotia Legislature allowing the company to increase fares on its electric lines.

Ottawa Electric Ry.—Negotiations are reported to have been in progress for some time respecting a new wage agreement between the Ottawa Electric Ry. Co. and its employees. The men are said to be asking for a maximum rate of 65c an hour, the existing rate being 45c.

Quebec Ry., Light & Power Co.—A new schedule of wages on an increased scale is reported to have been arranged between the company and its Montmorency Division employees.

St. Thomas, Ont., Municipal Ry. conductors and motormen have been granted an all round increase of 5c an hour, making the wages as follows per hour:—1st month 43c, after 1st month 45c. Working hours 10.

Toronto Civic Ry.—Employees of the Toronto Civic Ry. are reported to have accepted April 12 the new wage scale offered by the city council, which gives rates running from 60c to 65c an hour.

Toronto Ry.—The question of increased wages for employees is expected to be discussed, and a new schedule drawn up, at a meeting of the employees union on May 1.

Winnipeg Electric Ry.—A new schedule is reported to have been presented to the management by the men on April 1, in which increases ranging from 25c to 35c an hour are asked. A. W. McLimont, Vice President and General Manager, is reported to have replied to the local union, which is not now affiliated with the international one, that the demands were so extreme that it was impossible for the company even to consider them as a basis of negotiation.

The Quebec Ry., Light & Power Co. is reported to have received 4 new cars for its city lines. Two have been placed on the Champlain line, two on the Palace Hill line, and one on the Crown St. line. They are reported to have cost \$18,200 each, against \$7,500 each for cars of the same type in 1914.

The street railway situation in Detroit, Mich., entered upon another phase April 6, when ratepayers voted on the Couzens plan under which the city will go extensively into street railway business. Of approximately 300,000 persons in the city entitled to vote, it is reported that only about 140,000 voted, and that 89,134, or 63.564% of these voted in favor of the proposal. The affirmative vote was therefore less than one-third of the possible vote. The proposal endorsed by the ratepayers provides for the issue of \$15,000,000 of bonds to finance and equip 101 miles of new tracks, and take over 55 miles of line now operated by the Detroit United Ry. The lines to be built and taken over are reported to include two into the heart of the city—one on Fort St. and one on Woodward Ave., with north, south and cross town tracks.

We are advised that the plan, as it appeared in full on the ballot, cannot be read by itself to obtain the real intention or the operation requirements. While not so officially stated, the announcement was made repeatedly during the campaign,—and that is the intention—to take over parts of the Woodward and Fort lines on which franchises are claimed to have expired; also some of the other lines operated on a day to day basis; and the construction of additional lines. The estimate of cost made by the mayor of the price to be paid the company for the lines to be taken over is \$40,000 a mile, greatly under their depreciated value.

Following the vote the city council granted authority for the immediate issue of \$100,000 of public utility bonds, and work was reported to have been started April 7 on the Mack-Myrtle belt line. The franchises on the Ford and Woodward Ave. lines are reported to have expired, and it is stated that the present traffic arrangements will not be disturbed until the city is ready to provide cars and other equipment necessary to operate the lines.

Detroit's street railway situation has been under discussion since 1913, when the city was given authority to appoint a commission with power to acquire a railway. In 1915 a plan to purchase the Detroit United Ry.'s city properties at a price to be fixed by the Wayne County Circuit Judges was defeated, and in 1919 a plan to purchase the company's lines at a price agreed upon between the commission and the company was defeated on the ground that the price named was in excess of the value of the system. A service at cost plan was subsequently considered, but was not approved by Mayor Couzens. The present plan of building a city system, and the taking over of the lines operated by the D.U.R. on the day to day agreement, was then developed with the result stated above.

The Detroit United Ry. is reported to have stopped all construction work on its lines, and to have taken action to contest the constitutionality of the city ordinance. This, it is stated, will put a stop to any progress being made by the city until a decision is given by the U.S. courts, which a press report says will probably be some three years hence.

G. E. Waller, General Superintendent of Railways, Dominion Power & Transmission Co., is reported to have expressed the opinion that it would be impracticable for the company to operate cars in Hamilton.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—In connection with the construction by the Ontario Government of the provincial highway between Hamilton and Brantford, Ont., a question has been raised as to the Brantford Municipal Ry.'s rights from Brantford to Cainsville. An extension of the line to Cainsville, it is stated, will have to be made very soon, and provision will have to be made for the laying of tracks when the pavement is being put down. The matter is under consideration by W. A. McLean, the Ontario Engineer of Highways. (April, pg. 202.)

British Columbia Electric Ry.—Work was reported to have been started Mar. 30 on removing the tracks, etc., on the center of King Edward Ave., Shaughnessy Heights, Vancouver, between Granville St. and the Inter Island Ry. tracks. The tracks were originally laid for use in connection with one of the company's lines, but other arrangements were made subsequently and a boulevard is to be laid out to replace the tracks. (April, pg. 202.)

A press report states that the company will shortly build a new station at Marpole, at an estimated cost of \$10,000.

Cape Breton Electric Co.—A press report states that the company will not rebuild the car barn destroyed by fire recently, but will repair the old power station so as to provide accommodation for cars requiring to be stored overnight. (Dec., 1919, pg. 670.)

The Hamilton Radial Ry.—Is reported to have applied to the Burlington Beach Commission for permission to lay temporary switches from its line to the G. T. R. bridge over the canal for the operation of its cars between Hamilton and Oakville, Ont., during the construction of the highway bridge across the canal by the Dominion Government.

London & Port Stanley Ry.—The new station in St. Thomas, Ont., was opened April 23. Sir Adam Beck, Chairman London Railway Commission operating the railway, the mayor and other members of the London City Council, were present, and were subsequently entertained at luncheon by the St. Thomas City Council.

Moncton Tramways, Electricity & Gas Co.—We are officially advised that the rebuilding of the car barn and machine shops at Moncton, N.B., destroyed by fire recently, is being held in abeyance pending certain decisions by the city council. (Mar., pg. 145.)

Montreal Tramways Co.—The Montreal City Council has been advised that the Tramways Commission is prepared to order the company to build a line on Kelly St. from Ahunistic, Bordeaux station, to Lamonth St., as soon as the city opens the street, and the Montreal Administrative Commission has recommended that the money be voted to expatriate the property required.

A press report states a second track is to be laid on the line from Guy St. to Queen Mary Road, during this year, and that a second track will be laid on the Iberville line later. (April, pg. 202.)

Oshawa Ry.—We are officially advised that the company has ordered from Canadian Westinghouse Co. an additional 500 k.w. motor generator.

We are officially advised that the company proposes to rebuild the car barn and to replace the rolling stock destroyed

by the fire, immediately. The total loss is put at \$450,000, which is covered by insurance.

Ottawa Electric Ry.—The Hull, Que., City Council is reported to have instructed its solicitor to appear before the Board of Railway Commissioners and oppose the company's application for permission to lay a loop at the terminus of its line in Hull. (Mar., pg. 145.)

Peterborough Radial Ry.—We were officially advised April 13 that nothing had been definitely settled about any track extensions in the city, with the exception of lifting a piece of track and replacing it as soon as the city paves the street from the C.P.R. south to Romaine St.

Quebec Ry., Light & Power Co.—We are officially advised that negotiations are still pending in connection with the proposal to extend the electric railway from Quebec to Loretteville, Que., but that no decision has been reached as to whether the line will be built this year. (April, pg. 202.)

Winnipeg Electric Ry.—As the result of an explosion the company's Main St. car barns were destroyed by fire April 7, the loss being estimated at \$400,000, distributed as follows:—Buildings, \$50,000; 20 cars, \$300,000; 4 sweepers, \$32,000. A number of other cars were damaged, and are undergoing repairs. (Jan., pg. 34.)

The Rule of the Road in British Columbia.

In the British Columbia Legislature on April 8 a bill to amend the Highways Act by changing the rule of the road in the province, to bring it into accord with that followed generally throughout the rest of Canada, was read a second time. The Minister of Public Works is reported to have stated that there is grave danger to the public in the retention of the "turn to the left" rule of the road, and with tens and even hundreds of thousands of motors arriving and leaving the province it is only a matter of time until the change would have to be made. The change is to become operative generally throughout the province July 15, but out of consideration for the street railways it has been decided to make the time of the change Dec. 31, 1921. This will mean that a small corner of the province would retain the present rule for a year and nine months; that is to say, that part of the Lower Mainland and Vancouver Island cut off by natural barriers from the interior and northern sections.

The B. C. Electric Ry., which operates all the electric railways in the district, had submitted a report showing that the changing of its rolling stock and tracks to comply with the new rule will cost over \$1,000,000. This had not been checked by the Department, but would be as soon as possible. The Minister proceeded to show that the change would cost more the longer it was left, chiefly because the company would be obliged in the near future to purchase new rolling stock. In the course of the discussion it was suggested that the province should bear part of the cost of the changes to be forced on the B.C.E. Ry. by the bill.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.

Net	\$116,668	\$107,254	\$235,474	\$226,777

The surplus after allowing for fixed charges for January was \$63,547.81, and for February, \$57,084.85.

Stops in Ottawa.—The Ottawa Electric Ry. is, we are officially advised, adopting a modified form of skip stops which will cut out about 25% of the present stops on its city lines. The city council has approved of the plan, which was put in operation April 5, and was reported April 15 to have resulted in a speeding up of the service. With regard to the matter of stopping cars on the near or far side of street intersections, we are advised that the Ottawa Motor Club requested the city Board of Control to adopt the near side stop. The company objected to this, and the city council decided not to make any change from the present far side stop. There are many reasons why the company objects due to the climatic peculiarities, but the chief objection is that it slows up the car service, making it necessary to extend the time schedules. This is because when a car stops on the near side all the cross traffic has the right of way over it for the time being. When a car stops on the far side it has the right of way in crossing the street, and after its business is finished at that crossing, it gets away immediately without inconveniencing anyone. The near side stop system was in operation during 1913, 1914 and 1915.

STOREKEEPER AND PURCHASING AGENT WANTED.

An Electric Railway operating a City and Interurban service requires a man to act as Storekeeper and Purchasing Agent. Must have experience in Stores Department. Applicants will please state experience and salary expected.

Address Box 666, Canadian Railway and Marine World.

Mainly About Electric Railway People.

Sandwich, Windsor and Amherstburg Railway Transfer.

Mr. Anderson, formerly of the Peoria, Ill., Traction Co., at Peoria, Ill., in which the Sun Life Insurance Co. of Canada is largely interested, as it also is in the Cornwall Light and Power Co., and the Lewis County Ry. Mr. McFarlane was born at Montreal, Dec. 1, 1871, and from 1888 to 1903 occupied various positions with Montreal Light, Heat & Power Co., ranging from wireman to Superintendent of stations, including the equipping of electric railway cars for the Montreal Street Ry. in the early days of street railway electrification; 1903 to 1916, Manager, St. Lawrence Power Co., Cornwall, Ont.; and from 1916 to 1920 in military service overseas, and in the Militia Department's Cornwall and Kingston, Ont., offices.

H. Brooker, formerly dispatcher, Niagara Falls, Ont., has been appointed General Manager, Sandwich, Windsor and Amherstburg Ry., Windsor, Ont.

Geo. Earl, formerly General Superintendent, Peoria, Ill., Traction Co.,

F. E. Hayes, formerly General Superintendent, Sandwich, Windsor & Amherstburg Ry., has retired from that company's service, on it having been taken over by the Hydro Electric Power Commission of Ontario, and has removed from Windsor, Ont., to Detroit, Mich.

Edward Jennings, heretofore Superintendent Overhead Construction, Sandwich, Windsor & Amherstburg Ry., is continued in the same position by the Hydro Electric Power Commission of Ontario Electric Ry., Essex Division, Windsor, Ont., which has taken over the S.W. & A.R.

Jno. Lynch, heretofore Track Superintendent, Sandwich, Windsor & Amherstburg Ry., is continued in the same position by the Hydro Electric Power Commission of Ontario Electric Ry., Essex Division, Windsor, Ont., which has taken over the S.W. & A.R.

W. H. MacAloney, who resigned his position as Superintendent of Rolling Stock, Winnipeg Electric Ry., recently, to return to Denver, Col., was entertained at dinner before leaving Winnipeg, by some 30 of the company's department heads. F. L. Butler, General Superintendent, presiding. R. R. Knox, Assistant to the General Manager, presented Mr. MacAloney with a handsome wrist watch from his friends, and his health was proposed by R. D. Guy, Solicitor.

Neil Maitland, heretofore Chief Power Engineer, Sandwich, Windsor & Amherstburg Ry., has been transferred to the Hydro Power Department at Windsor, Ont., on the railway being taken over by the Hydro Electric Power Commission of Ontario.

Harry R. Mallison, whose appointment as Purchasing Agent and Secretary to President, Montreal Tramways Co., was announced in our last issue, was born at Toronto, Nov. 14, 1873, and has been from Feb., 1893, to Mar., 1903, in various positions, finally as Comptroller, Montreal Street Ry., Montreal; Mar., 1903, to Apr., 1907, Comptroller, Mexican Light & Power Co., Mexico City, and Necaxa, Puebla; May, 1907, to Apr., 1914, Secretary-Treasurer, Canadian Light & Power Co., Montreal, Public Service Corporation, Imperial Trust Co., Montreal; Apr., 1914, to Dec., 1916, Assistant Secretary, Halifax Electric Tramways Co., Halifax, N.S.; Jan., 1917, to Dec., 1919, Managing Director and Secretary-Treasurer, Nova Scotia Tramways & Power Co., Halifax, N.S.

Walter L. McFarlane has been appointed Manager, Cornwall Street Railway, Light and Power Co., Cornwall, Ont., succeeding C. U. Peeling, who resigned

to enter the service of the Illinois Traction Co. at Peoria, Ill., in which the Sun Life Insurance Co. of Canada is largely interested, as it also is in the Cornwall Light and Power Co., and the Lewis County Ry. Mr. McFarlane was born at Montreal, Dec. 1, 1871, and from 1888 to 1903 occupied various positions with Montreal Light, Heat & Power Co., ranging from wireman to Superintendent of stations, including the equipping of electric railway cars for the Montreal Street Ry. in the early days of street railway electrification; 1903 to 1916, Manager, St. Lawrence Power Co., Cornwall, Ont.; and from 1916 to 1920 in military service overseas, and in the Militia Department's Cornwall and Kingston, Ont., offices.

A. F. McGill, formerly Assistant Superintendent, Niagara, St. Catharines and Toronto Ry., has been appointed Superintendent, Hydro Electric Power Commission of Ontario Electric Ry., Essex Division, heretofore Sandwich, Windsor and Amherstburg Ry., Windsor, Ont.

A. Montgomery has been appointed acting Superintendent of Transportation, Nipissing Central Ry., K. McDonald, Superintendent, having resigned.

Alexander Montgomery, whose appointment as acting Superintendent, Nipissing Central Ry., North Cobalt, Ont., was announced in our last issue, was born in Ontario, Mar. 12, 1867, and from Apr. 30, 1910, to Mar. 10, 1920, was conductor, N.C.R. at North Cobalt, Ont.

W. H. Moore, K.C., Chairman of the Public Utilities Commission, Peterborough, Ont., died there, April 23, aged 77.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., left Vancouver, April 4, for a trip to England, accompanied by Mrs. Murrin.

A. N. Pay, formerly Master Mechanic, Niagara, St. Catharines and Toronto Ry., St. Catharines, Ont., has been appointed Master Mechanic, Hydro Electric Power Commission of Ontario Electric Ry., Essex Division, heretofore Sandwich, Windsor and Amherstburg Ry., Windsor, Ont.

J. S. Richards, Manager, London & Port Stanley Ry., London, Ont., who underwent an operation recently, is reported to be recovering.

C. Stokes has been appointed Accountant, Hydro Electric Power Commission of Ontario Electric Ry., Essex Division, heretofore Sandwich, Windsor and Amherstburg Ry., Windsor, Ont.

J. E. Watkins, heretofore with the British Columbia Electric Ry., has been appointed Superintendent of rolling stock, Winnipeg Electric Ry., vice W. H. MacAloney, who has resigned and returned to Denver, Col.

The British Columbia Electric Ry. gave notice recently that, beginning April 1, the rule against smoking on Vancouver city cars would be enforced strictly, in compliance with repeated requests from passengers, and a resolution passed by the city council.

The cost of removing snow from Montreal streets on which there are electric railway tracks during the past winter is reported to have been \$132,115.05 for the city's share; \$132,115.05 for the Montreal Tramways Co., and \$2,683.40 for the Montreal and Southern Counties Ry.

to enter the service of the Illinois Traction Co. at Peoria, Ill., in which the Sun Life Insurance Co. of Canada is largely interested, as it also is in the Cornwall Light and Power Co., and the Lewis County Ry.

Mr. McFarlane was born at Montreal, Dec. 1, 1871, and from 1888 to 1903 occupied various positions with Montreal Light, Heat & Power Co., ranging from wireman to Superintendent of stations, including the equipping of electric railway cars for the Montreal Street Ry. in the early days of street railway electrification; 1903 to 1916, Manager, St. Lawrence Power Co., Cornwall, Ont.; and from 1916 to 1920 in military service overseas, and in the Militia Department's Cornwall and Kingston, Ont., offices.

A. F. McGill, formerly Assistant Superintendent, Niagara, St. Catharines and Toronto Ry., has been appointed Superintendent, Hydro Electric Power Commission of Ontario Electric Ry., Essex Division, heretofore Sandwich, Windsor and Amherstburg Ry., Windsor, Ont.

A. Montgomery has been appointed acting Superintendent of Transportation, Nipissing Central Ry., K. McDonald, Superintendent, having resigned.

Alexander Montgomery, whose appointment as acting Superintendent, Nipissing Central Ry., North Cobalt, Ont., was announced in our last issue, was born in Ontario, Mar. 12, 1867, and from Apr. 30, 1910, to Mar. 10, 1920, was conductor, N.C.R. at North Cobalt, Ont.

W. H. Moore, K.C., Chairman of the Public Utilities Commission, Peterborough, Ont., died there, April 23, aged 77.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., left Vancouver, April 4, for a trip to England, accompanied by Mrs. Murrin.

A. N. Pay, formerly Master Mechanic, Niagara, St. Catharines and Toronto Ry., St. Catharines, Ont., has been appointed Master Mechanic, Hydro Electric Power Commission of Ontario Electric Ry., Essex Division, heretofore Sandwich, Windsor and Amherstburg Ry., Windsor, Ont.

J. S. Richards, Manager, London & Port Stanley Ry., London, Ont., who underwent an operation recently, is reported to be recovering.

C. Stokes has been appointed Accountant, Hydro Electric Power Commission of Ontario Electric Ry., Essex Division, heretofore Sandwich, Windsor and Amherstburg Ry., Windsor, Ont.

J. E. Watkins, heretofore with the British Columbia Electric Ry., has been appointed Superintendent of rolling stock, Winnipeg Electric Ry., vice W. H. MacAloney, who has resigned and returned to Denver, Col.

The lines are being operated under W. N. Robertson, General Superintendent of the Hydro-Electric Power Commission's railway division. The principal officials of the S. W. & A. Ry. have left the service and new officials have been appointed, particulars of the appointments being given under "Mainly About Electric Railway People," on this page.

Increase of Winnipeg Electric Railway Co.'s Capital.

Winnipeg Electric Ry. shareholders will be asked at a meeting on May 3, to authorize the issue of \$3,000,000 of 7% cumulative preference stock. A circular issued by the company says in part:—"The reason for the issue of this stock is that the company desires to clear up its floating indebtedness, amounting to approximately \$3,000,000, and not materially increase its interest charges. This indebtedness would not have occurred had it not been for the war. Prior to 1914 the company had entered on a constructive programme, caused by the growth of the City of Winnipeg, and had financed up to that time by the sale of debenture stock which had been authorized to complete this programme, but the war rendered it impossible to sell any further securities in London, and the debenture stock having been created in a form to meet the requirements of the London market was not acceptable on this side. The construction programme had to be proceeded with, and was financed partly by the sale of short term securities, and partly by borrowing from the banks."

It is added that the company is rapidly improving its position as regards earnings. The new preferred stock is offered to shareholders at par, with a bonus of 20% of common stock, or one share of common for every five shares of preferred stock subscribed for. The company's outstanding common stock is \$9,000,000, in addition to which there is \$4,380,000 debenture stock and \$5,750,000 bonds. No dividends have been paid on the common stock since Oct., 1915.

Electric Railway Notes.

The Peterborough, Ont., Radial Ry. will, a press report states, put one-man cars on all its lines.

The Quebec Railway Light and Power Co. has received 5 cars from Ottawa Car Manufacturing Co.

The Hydro-Electric Power Commission of Ontario has ordered 3 bodies for 50-ton electric locomotives, from Canadian Car and Foundry Co.

The Windsor, Essex & Lake Shore Rapid Ry. has bought a steam shovel from F. H. Hopkins & Co., Montreal, for its gravel pit.

The Lake Erie and Northern Ry. is adding 3 steel passenger cars, 60 ft. long; 1 trailer passenger car, and 1 electric locomotive, 60 tons capacity, to its rolling stock.

The Grand River Ry. is adding 4 steel passenger cars, 60 ft. long; 2 trailer passenger cars, 1 baggage and express car and 1 electric locomotive, 60 tons capacity, to its rolling stock.

The Cape Breton Electric Co. has, it is reported, sufficient cars on hand to handle its traffic, notwithstanding the fact that two were destroyed in a recent fire at the car barns. The company may be in the market for additional cars later in the year.

The Nova Scotia Tramways & Power Co. has received 14 of its new one man p.a.y.e. cars, and has established a 4 minute service on the belt line in Halifax. It is stated that when additional cars are delivered the service will be approximately a 2½ minute one on this line during the rush hours.

The London, Ont., City Council, is reported to have under consideration the assessment of the London St. Ry. for city taxes. The company's statement for 1918 shows the value of road and equipment to Jan. 1, 1919, to be \$1,493,254. Allowing \$134,208 for depreciation, the value is placed at \$1,359,046. It was assessed for 1919 at \$156,275.

The Montreal Tramways Commission's new schedule of stops worked out for use on the Montreal Tramways Co.'s lines, is expected to be put in operation May 1. The Westmount City Council was asked to approve of the schedule so far as it affected the lines within that city, but was reported, April 14, to have suggested that the present stops within the city be continued.

The Premier of New Brunswick is reported to have informed the legislature, April 15, that the government had not yet made an appointment to the position of Chairman of the Public Utilities Commission in place of G. Otty, K.C., whose term has expired. Mr. Otty was appointed a Commissioner in 1910, and succeeded D. McL. Vince, K.C., as Chairman in 1912.

The New Brunswick Public Utilities Commission has decided that the New Brunswick Power Co. must restore the street railway service as regards bridge cars from Union St. to the end of the line at the foot of Rodney wharf, St. John. The company applied for permission to discontinue this service, and the St. John City Council asked that the company be compelled to operate its cars on Rodney wharf.

The British Columbia Electric Ry. has arranged for insuring all its male employees over 18 years old, and who have been a year or more in the service, for

\$1,000 each. Provision is made for the payment of the total amount insured by annual instalments should the employee become wholly and permanently disabled through accident or disease. It has also been arranged that any employee leaving the company's service may continue the insurance by paying his own premiums at the existing rates.

The Imperial Privy Council confirmed recently a decision of the Quebec Court of Appeal granting P. McAllister \$2,400 damages against the Montreal Tramways Co. for injuries to his son. The boy got off a west bound car opposite Westmount athletic grounds, and while crossing the tracks was struck by an eastbound car and sustained serious injuries. The jury found that both parties were at fault, the boy for rashness in attempting to cross the track, and the motorman on the eastbound car for not having it under control, and a verdict was given for reduced damages of \$2,400. This was confirmed by the Court of Appeal, and is now finally approved.

The Niagara, St. Catharines and Toronto Ry. is having 12 of its cars remodelled by Ottawa Car Manufacturing Co., to make them into double end one-man or two-man operated cars, to suit the prevailing conditions on the railway. The cars, at present, have omnibus sides, which will be made straight with steel panels, and the bulkhead at each end removed. Vestibules will be rebuilt throughout, extending them 18 in. beyond the present length, making a total length of 6½ ft. over bunter. The doors will be made double, of two leaves each, worked automatically, by National Pneumatic Co.'s automatic door and step control. Keystone signs will be placed at the right hand corner window of vestibules, and a railing of 1½ iron pipe will be placed there from center of doors, taking a curve to the stanchions dividing bulkhead into entrance and exit, and another railing will enclose the conductor who will stand at the same end as the motorman, at the first corner window to body, when car is operated by two men. Sanitary hand straps will be placed in the cars at the longitudinal seats. The bolster will have ball center bearing and side roller bearings, and a buzzer system will be installed in each car. The cars will be painted the N., St. C. & T. R. standard gray color, and when completed will have the following dimensions:—length of body 28 ft., length of vestibule 6½ ft., length over bunter 41 ft., seating capacity 36.

Cars for Toronto Civic Ry.—The Toronto City Board of Control has under consideration tenders for the supply and delivery of 13 double truck, double end cars, specifications and details of which were given in a previous issue. Three tenders were received, no. 1 being for \$30,437 each, f.o.b., Montreal; no. 2 \$24,142 each, f.o.b., Toronto, subject to exchange, with an alternative proposition at \$12,555 each, plus \$10,973.10 each, f.o.b., Toronto, subject to exchange; No. 3, \$27,420 each, f.o.b., Toronto. It is stated that the Board of Control, owing to questions of exchange, etc., and the apparent lack of competition amongst Canadian car builders on account of heavy booking of orders, may consider the possibility of obtaining tenders from English car building companies.

Edmonton Radial Railway's Condition.

An Edmonton, Alta., paper says of the Edmonton Radial Ry., which is owned by the city: "In regard to the street railway a somewhat curious attitude seems to be growing up at the city hall, it being somewhat to the effect that the street railway has reached a state of senility or to put it in other words, that the street railway is a doubtful utility to handle for the reason that in a very short time it may be out of date altogether. At one time there used to be a considerable amount of talk to the point that as soon as the population came back to the city, and it began to grow again, the street railway would eventually become one of the best paying utilities. Not much of this sort of opinion has been heard of late. It is understood and generally admitted that tracks and rolling stock are in bad condition, and a large expenditure would be necessary to restore any degree of permanence. There seems to be a great reluctance to contemplate expenditure of this kind, or any more than needed to keep the street railway on its feet, or as it might be said, to maintain the cars on the rails."

Grand River and Lake Erie and Northern Railway Betterments, Etc.

We are officially advised that the total amount appropriated for betterments, etc., this year on the Grand River Ry. and the Lake Erie & Northern Ry., both of which are C.P.R. subsidiaries, is \$1,453,700, of which \$1,035,200 is for the Grand River Ry. and \$418,500 for the Lake Erie & Northern Ry. The amounts include renewals of appropriations granted in 1919, as well as for the purchase of generating and equipment, construction of substation to provide uniform 1,500 volt operation, by rebuilding and reinsulating existing overhead system, additional shop equipment, tie and rail renewals, etc.

Some of the work, including buildings, sidings, etc., will be done by the companies' own forces. Contract have been given to A. E. Rigley, St. Catharines, Ont., for the following:—Kitchener-Waterloo line revision, second track work between Preston and Hageys; revision of line in Galt; terminals in Galt; and other smaller works. These contracts have been let on the cost plus basis. Details in regard to some of them have already been given in Canadian Railway and Marine World. With regard to the Kitchener-Waterloo revision, we are advised that owing to the expiration of franchise rights in the City of Kitchener, it is necessary to provide service on a private right of way, on a greatly improved location. The new second track between Preston and Hageys, 0.50 mile, will be laid with 85-lb. rails.

The station and office buildings at Galt will probably be of brick and concrete construction, 40 x 120 ft.; the station on the ground floor and general offices above. The substation at Preston will be 56 x 48 ft. A 60 ft. extension to car barn and repair shop at Preston will be done by the company's own forces.

The equipment to be bought will consist of two 1,000 k.w. motor generator sets; six transformers; short-circuiting switches, lightning arresters, etc. The

The Port Arthur Civic Railway's History and Present Position.

The history of the street car and its development in the Port Arthur Civic Ry. has taken place in the Port Arthur, the Rotary and the city's public utility commission. After having dealt with matters affecting public utilities in general, he gave the following information regarding the Port Arthur Civic Ry. The railway was incorporated in 1891, it being not only one of the oldest electric railways in Canada, but the first municipally owned line. An issue of \$75,000 of 5%, 20-year bonds was made in that year to finance the project. At present the line is capitalized at \$795,633.02. The original line was laid in Port Arthur, and subsequently an extension was made, under Port Arthur ownership, to Port William, and the operation of the line in the two cities was continued under Port Arthur's management until 1908, when an agreement was made under which Port William bought the lines within its own boundaries, and the lines were placed under the management of a joint board. This continued until 1913, when the management of the Port Arthur line was taken over by the city council, and in 1915 the management was handed over to the then newly formed Public Utilities Commission. The line was financed by debentures, of two types—sinking fund debentures, and serial debentures, the total amount issued from 1891 to date being \$240,184.

Mr. Inglis continued:—"The assets comprise chiefly 20 miles of track computed as single track; car barns and shed; 22 convertible cars, of which 5 are single truck, and the remainder double truck; 2 trailers; 2 combination work cars and snow plows and sweepers; one baggage car; one open trailer; and power plant machinery of the capacity of 2,000 h.p., as well as overhead construction, feeders, tools and equipment for the operation of the system. Compared with other systems, every attention has been paid to providing the best and most comfortable equipment that could be obtained. Each double truck car similar to those used on the main line service is equipped with four 40 h.p. motors, geared to the car axles and capable of maintaining a car speed of 25 miles an hour should it be found necessary in operation."

Mr. Inglis then pointed out that the electric railway might be regarded as an industry, on consideration being given to the capital invested; the revenue derived; the number of employees and the wages paid, and to the material bought. The revenue for 1919 was \$196,000; the amount paid in wages in 1919 \$88,000 approximately. The amount paid for materials in 1919, including insurance and other such items was approximately \$19,000. Power cost for the year was approximately \$20,000.

He continued: "Pressing needs to make ends meet has also awakened us to the fact that our street railway is a commercial enterprise, and that its function is not merely to run cars, but to sell service, and that like any other manufacturing concern. While not the foremost industry in the city, from point of view of the wages paid and other items men-

tioned, it, in addition to these influential elements, fills a place in our social life and development that cannot be measured in a pecuniary way, and would be difficult, if not almost impossible, to supplant."

Considering the future of the system, Mr. Inglis said: "We know now, if we did not do so before, that service is being sold at less than cost. In this we cannot altogether blame the representatives whom we elected to office, because they were merely responding to the will of the ratepayers in general. With what has been happening during these past five years or more, and the trend of current events, it is not surprising that we have not re-established our equilibrium, but progress of a material kind has been made in connection with the street railway system that reflects at least some credit. Credit is due particularly to the commissioners for the policy they have inaugurated since coming into office, and in no less degree to the co-operation of all departments and employees connected with the system."

"Briefly, the commission's policy is as follows: To render service at cost, and in so doing to provide for interest charges on all capital expended. Sinking fund, to retire all debentures at maturity, and, in addition, depreciation to replace all plant and other assets at the end of their useful life. It has so far been inconvenient to carry out the entire policy as above quoted, but the goal has been set, and it is not beyond attainment, and that without great hardship if the citizens will realize their full responsibility and assist. Just as the merchant or manufacturer sells his product and bases his cost on the unit system, so it is with the street railway. Our basis is that of the car mile, or the car hour, depending upon which is the more convenient, and in order to eliminate as far as possible the many variables that enter into the matter of costs."

Mr. Inglis claimed that the operating cost of the system compares very favorably with that of any other system in Canada. This is primarily due to the fact that the Port Arthur system lends itself to fast service when compared with other city systems. Port Arthur and Port William have one of the fastest street railways in the Dominion; the main line cars make on an average 11½ miles an hour. This is a desirable feature to retain, if it cannot be improved upon. After touching on the question of the cost of frequent stops, the cost of labor, the proposal to combine the ownership of the two lines in connection with the Hydro Electric Power Commission of Ontario's railway plans; one-man cars, and zone system of fares, which he did not discuss in detail, Mr. Inglis concluded by saying: "To my mind three very essential things are necessary and should precede any of the aforementioned suggestions in order that the transportation system of these two cities can develop and keep pace with the future growth which we all anticipate. These essentials are: 1. Joint ownership. 2. Relief for the car rider from paying for those extensions which are imperative

as well as relief from paying charges assessed against the street railway department. 3. The co-operation of every individual citizen in promoting the interests of the department and in this connection I could not do better than quote the Rotary Club's motto: 'He profits most who serves best.'"

Valuation of New Brunswick Power Co.'s Plant.

A judgment of the New Brunswick Court of Appeal, prepared by Sir Douglas Hazen, Chief Justice, in the New Brunswick Power Co. plant valuation case, was delivered at Fredericton, Mar. 1. The Currier Commission appointed in 1918, fixed the original cost of the plant used for street railway and other purposes, on which a return of 7% was to be earned, at \$2,800,000, and this sum was inserted in the act passed by the Legislature in 1919. As the city of St. John, contended that the value should be fixed at \$2,000,000, while the company contended for \$5,000,000, provision was made for a review of the valuation by the Court of Appeal. The arguments were concluded in January and the court took advantage of the power given it to employ expert assistance before reaching a decision as to the value. The judgment is a very lengthy one, reviewing the whole matter, and fixes the original cost of the plant at \$2,577,665.56. This amount, the judgment says, does not take into account any allowance for depreciation nor include any amount representing the proposed water power development on the Lapreux and Magaguadavic Rivers, or any amount representing working capital, including materials and supplies. The amount of which should not be in excess of the company's financial needs in carrying on the railway, electric and gas services.

Calgary Municipal Ry. Results for 1919.

A press summary of the Calgary, Alta., City Treasurer's report for 1919 contains the following information as to the Calgary Municipal Ry.: The surplus for 1919 was \$24,232.95, against a surplus of \$74,656.87 for 1918. There was a total capital expenditure to Dec. 31, 1919, of \$2,462,051.14 on track and roadway, equipment, etc. Holdings acquired otherwise than by the bylaw, such as Bowness Park improvements, land, sub base and other items add another \$103,915.59 to the capital assets. Taking from this \$788,413.13 for sinking fund, reserve and depreciation reserve gives a total of \$1,777,553.99 to which is to be added the sinking fund bank account of \$370,726.08, and depreciation bank account of \$87,264.81, making the net capital assets \$2,492,476.97. During 1919 \$583,098.88 was expended for maintenance on ways and structures, equipment, transportation and general expenses, \$6,541.41 was expended for taxes, rental of land and conduits, and for debenture interest there was laid aside \$110,182.85, for sinking fund, \$4,507.87, for depreciation, \$31,652.44, for reserve against accidents and damages, \$15,447, bad debts, \$750, and surplus carried to net revenue accounts \$42,232.95, making the total expenditure for the year \$834,413.40. Against this were \$772,349.98 in passenger earnings, \$42,607.90 in miscellaneous earnings, and \$12,455.52 in bank interest.

Marine Department

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Orders for Steamships.—In answer to questions asked in the House of Commons, Mar. 31, by L. Cannon, M.P. for Dorchester, Que., the Minister of Marine gave the following information: The government has contracted to build 63 steamships, of which 19 were delivered to Canadian Government Merchant Marine Ltd., for operation, during 1919. Those delivered were built as follows: Canadian Vickers, Ltd., Montreal, 7; Collingwood Shipbuilding Co., Collingwood, Ont., 4; Port Arthur Shipbuilding Co., Port Arthur, Ont., 4; Wallace Shipyards Ltd., North Vancouver, B.C., 3; Tidewater Shipbuilders, Ltd., Three Rivers, Que., 1. The following voyages were completed, and accounts closed, during 1919: Canadian Voyageur, 4 trips; Canadian Pioneer, 1 trip; Canadian Warrior, 3 trips; Canadian Ranger, 3 trips; Canadian Recruit, 3 trips; Canadian Volunteer, 2 trips; Canadian Leader, 3 trips; Canadian Sailor, 2 trips; Canadian Trooper, 1 trip; Canadian Seigneur, 2 trips; Canadian Signaller, 2 trips; Canadian Miller, 1 trip; Canadian Adventurer, 1 trip. The other 6 ships were delivered late in the year, and did not complete trips by Dec. 31, 1919. The total gross revenue from the 13 ships was \$3,448,030.25. The total operating expenses were \$2,041,262.87, giving a surplus of \$1,406,767.38, for only a portion of the year, as most of the ships were delivered during the latter part of the year. It is not considered in the public interest to state the cost of maintenance of each ship.

Very full information about orders will be found in the Minister of Marine's speech in the House of Commons on the government's shipbuilding programme, which is given in full further on in this issue.

Names of Steamships.—The Minister of Marine, in answer to questions in the House of Commons recently, by L. Cannon, M.P. for Dorchester, Que., gave the names chosen for steel cargo steamships for Canadian Government Merchant Marine Ltd., as published in Canadian Railway and Marine World from time to time, and stated that the Marine Department was responsible for the choice of them.

The Marine Department has officially advised us of the following names, which have been decided on, for steel cargo steamships being built for Canadian Government Merchant Marine Ltd., in addition to those published in Canadian Railway and Marine World for April.

Canadian Challenger; Marine Department contract 60; builder's yard no. 476; approximately 8,390 d.w. tons; Davie Shipbuilding & Repairing Co., Lauzon, Que.

Canadian Coaster; Marine Department contract 58; builder's yard no. 16; approximately 3,890 d.w. tons, Collingwood Shipbuilding Co., Kingston, Ont.

Canadian Freighter; Marine Department contract 63; builder's yard no. 21; approximately 8,390 d.w. tons; J. Coughlan & Sons, Vancouver, B.C.

Canadian Highlander; Marine Department contract 55; builder's yard no. 103; approximately 8,390 d.w. tons; Wallace Shipyards, Ltd., North Vancouver, B.C.

Canadian Racer; Marine Department contract 54; builder's yard no. 10; ap-

proximately 3,990 d.w. tons; Midland Shipbuilding Co., Midland, Ont.

Canadian Rover; Marine Department contract 57; builder's yard no. 67; approximately 3,890 d.w. tons; Collingwood Shipbuilding Co., Collingwood, Ont.

Canadian Skirmisher; Marine Department contract 56; builder's yard no. 7; approximately 8,390 d.w. tons; Wallace Shipyards, Ltd., North Vancouver, B.C.

Canadian Transporter; Marine Department contract 62; builder's yard no. 8; approximately 8,390 d.w. tons; J. Coughlan & Sons, Vancouver, B.C.

Canadian Pathfinder; Marine Department contract 48; builder's yard no. 10; approximately 3,500 d.w. tons; Dominion Shipbuilding Co., Toronto; instead of Canadian Artificer, as selected originally.

Canadian Winner; Marine Department contract 29; builders' yard no. 1; ap-

proximately 2,800 d.w. tons; Nova Scotia Steel & Coal Co.; April 3, 1920.

S.S. Canadian Otter; Marine Department contract 44; builder's yard no. 4; approximately 3,575 d.w. tons; British American Shipbuilding Co., Welland, Ont. This hull was built in two sections, the aft one being launched Mar. 25, and the forward one Apr. 13. They will be taken through the Welland and St. Lawrence Canals separately, to be joined together, probably at Montreal.

The s.s. Canadian Runner; Marine Department contract 32; builder's yard no. 43; and the s.s. Canadian Carrier; Marine Department contract 33; builder's yard no. 44; each approximately 4,575 d.w. tons; being built by Port Arthur Shipbuilding Co., for Canadian Government Merchant Marine, Ltd., and the keels of which were laid Aug. 29, 1919, are expected to be launched on May 1 and 15, respectively.

The s.s. Canadian Victor; Marine Department contract 50; builder's yard no. 77; approximately 8,390 d.w. tons; being built by Canadian Vickers, Ltd., Montreal; will be launched about the end of May.

The s.s. Canadian Conqueror; Marine Department contract 51; builder's yard no. 78; approximately 8,390 d.w. tons; being built by Canadian Vickers, Ltd., Montreal; will be launched about the middle of July.

The s.s. Canadian Pathfinder; Marine Department contract 48; builder's yard no. 10; approximately 3,500 d.w. tons; being built by Dominion Shipbuilding Co.; and will probably be launched in June; and a sister ship, Canadian Engineer; Marine Department contract 49; builder's yard no. 11; being built by the same builders, will probably be launched in July.

Oil Fuel Equipment.—The Marine Department has arranged for the installation of oil fuel burning apparatus in the following steel cargo steamships which are being built for Canadian Government Merchant Marine, Ltd.

Canadian Highlander and Canadian Skirmisher, each approximately 8,390 d.w. tons, Wallace Shipyards, North Vancouver, B.C.

Canadian Freighter and Canadian Transporter, each approximately 8,390 d.w. tons, J. Coughlan & Sons, Vancouver, B.C.

Canadian Challenger, approximately 8,390 d.w. tons, Davie Shipbuilding & Repairing Co., Lauzon, Que.

Refrigerating Space on Steamships.—The Marine Department has arranged for the installation of refrigerating space in the following steel cargo steamships being built for Canadian Government Merchant Marine, Ltd.

Canadian Exporter, Canadian Inventor and Canadian Prospector, each approximately 8,390 d.w. tons, J. Coughlan & Sons, Vancouver, B.C.

Canadian Commander, Canadian Conqueror, Canadian Leader and Canadian Victor, each approximately 8,390 d.w. tons, Canadian Vickers, Ltd., Montreal.

Canadian Highlander and Canadian Skirmisher, each approximately 8,390 d.w. tons, Wallace Shipyards, North Vancouver, B.C.

Dominion Marine Association.

President, A. E. Mathews, Managing Director, Mathews Steamship Co., Toronto.

First Vice President, H. W. Cowan, Director of Operation, Canada Steamship Lines, Montreal.

Second Vice President, A. A. Larocque, President, Sincennes-McNaughton Line, Montreal.

Executive Committee, E. H. Beazley, Union Steamship Co. of British Columbia, Vancouver; W. E. Burke, Canada Steamship Lines, Montreal; T. R. Enderby, Montreal Transportation Co., Montreal; L. Henderson, Montreal Transportation Co., Montreal; W. J. McCormack, Algoma Central Steamship Line, Sault Ste. Marie, Ont.; G. J. Madden, George Hall Coal Co. of Canada, Montreal; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Sowards Coal Co., Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; Jno. Waller, Keystone Transportation Co., Montreal; Lorne C. Webster, Webster Steamship Co., Montreal; J. Wilkie, Imperial Oil Ltd., Toronto; A. A. Wright, honorary member, Toronto.

General Counsel, Francis King, M.A., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

proximately 8,390 d.w. tons; Harbour Marine Co., Victoria, B.C.; instead of Canadian Armourer, as selected originally.

Canadian Traveller; Marine Department contract 30; builder's yard no. 2; approximately 8,390 d.w. tons; Harbour Marine Co., Victoria, B.C.; instead of Canadian Composer, as selected originally.

Keel Laid.—Since our last issue we have been advise of the laying of the following keel:

Steel Cargo Steamship, Marine Department contract 61; builders, yard no. 45; approximately 3,890 d.w. tons; Port Arthur Shipbuilding Co., Port Arthur, Ont.; Mar. 30.

Launching of Steamships.—We have been advised of the following launchings of steel cargo steamships for Canadian Government Merchant Marine, Ltd., in addition to those mentioned in previous issues:—

S.S. Canadian Miner; Marine Depart-

Canadian National Ry. and Canadian Marine, each approximately \$100,000, from Halifax, Maritime, and Victoria, B.C.

Canadian National Ry. and Canadian Marine, each approximately \$100,000, from Halifax, Maritime, and Victoria, B.C.

Costs of Steamships.—W. Duff, M.P., for London, asked the following question in the House of Commons April 13: Under the Dominion Government's programme for the construction of ships, what was the cost of each ship? What was the cost of each ship per deadweight ton for each of such ships? What was the total amount paid for each of said ships? The Minister of Marine gave the following information in reply:

Ship	Year	Cost	Cost per ton
Albatross	1919	\$100,000	\$100.00
Albatross	1920	\$100,000	\$100.00
Albatross	1921	\$100,000	\$100.00
Albatross	1922	\$100,000	\$100.00
Albatross	1923	\$100,000	\$100.00
Albatross	1924	\$100,000	\$100.00
Albatross	1925	\$100,000	\$100.00
Albatross	1926	\$100,000	\$100.00
Albatross	1927	\$100,000	\$100.00
Albatross	1928	\$100,000	\$100.00
Albatross	1929	\$100,000	\$100.00
Albatross	1930	\$100,000	\$100.00

Operation of steamships. The Minister of Railways, in answering a question, in the House of Commons, recently, as to ships being operated by the Canadian National Ry., said that this was provided for by order in council, Canadian Railway and Marine World has been supplied with a copy of the order referred to, no. 575, passed Mar. 16, 1920, as follows:

The committee of the Privy Council have had before them a memorandum, dated Mar. 11, 1920, from the Minister of Marine, submitting a report from the Deputy Minister of Marine, which states as follows: That contracts have been placed with ship-building firms in Canada, by the Department, for the construction of 62 ships, of a total tonnage of approximately 376,725 tons, at an average cost of \$192.04 a ton, of which 23 have been completed and delivered to the department. That several plans for the dispositions and operation of these ships have been considered, viz.: By the regular steamship operators on a basis of hire or commission to be agreed upon; by an organization to be formed within the department, subject to and under instructions from the Minister; by the Canadian National Ry.; by sale to private interests, on terms to be agreed upon, and subject to the condition that they should be available for Canadian trade, so long as any such trade is offering. That it has been determined by the government to operate some, or all, of these ships, by the directors from time to time operating the Canadian National Ry., and it having been represented that in order to avoid the full effects of collision liabilities each individual ship should be owned by a separate company incorporated for that purpose.

The Minister, therefore, recommends: that he be authorized, upon the completion and delivery, whether heretofore or hereafter, of the ships so contracted for, to transfer or cause the same to be transferred to individual companies (hereinafter called the owning companies) to be incorporated for that purpose under the Dominion Companies Act, with names similar to those of the respective vessels transferred. That the permanent directors of such owning companies shall be five or more of the directors from time to time operating the Canadian Na-

tional Ry. That the terms of transfer with respect to each ship shall generally be the same as similar to the terms of transfer of the Canadian Voyaguer as set forth in the draft agreement hereto attached, the necessary variations in description and price being made to suit each individual case, such terms being in effect as follows:—The owning company will agree to repay to His Majesty the whole of the unpaid principal of His Majesty on the vessel affected, such expenditure to be represented by the notes of the owning company in favor of His Majesty, secured, if desired, by a statutory mortgage on the vessel. As a part of the consideration for such transfer, the Minister of Finance will also receive the whole of the capital stock of the owning company, fully paid, except the qualifying shares of directors (one share each) which will stand in their respective names. All net earnings of the owning companies, after due

and appropriate, taxes paid or otherwise fully discharged, the Minister of Finance is authorized to transfer to the Canadian National Ry. Co., without further compensation, all shares of stock in the holding company, so received in exchange as aforesaid. It is understood that the permanent directors of the holding company shall be five or more of the directors from time to time operating Canadian National Ry.

The Minister observes, in connection with the foregoing, that the result of his recommendations will be that the title to the several ships will stand in the name of the respective owning companies, bearing the ships name, subject to notes for the ships cost, secured by statutory mortgage on each ship in favor of His Majesty. The whole of the stock of the owning companies (less qualifying shares of directors—one share each) will be held by the holding company, and the whole of the issued capital stock of

Steel Cargo Steamship, Canadian Exporter, approximately 8,390 d.w. tons, built for Canadian Government Merchant Marine Ltd., by J. Coughlan & Sons, Vancouver, B.C.

allowances for working expenditure, renewals, repairs and other costs and charges incidental to operation, will be applied either by the owning company or the holding company hereinafter mentioned in payment of the interest on the said promissory notes and in reduction or discharge of any unpaid principal thereof.

The Minister further recommends that the Minister of Finance be authorized to transfer any capital stocks in the owning companies, received by him under the terms of any of the said agreements, to Canadian Government Merchant Marine, Ltd., (hereinafter called the holding company), receiving in exchange therefor shares in the capital stock at par, fully paid, of the holding company. Upon the whole of the promissory notes and mortgages made by the respective owning companies, and held by His Majesty under the terms of the

the holding company (less qualifying shares of directors) will, until all expenditures made by His Majesty in respect of the said ships are fully reimbursed to His Majesty, be held by the Minister of Finance on behalf of His Majesty. The permanent directors of both the holding and owning companies will be elected from the directors operating the Canadian National Ry.

The Minister also recommends that order in council of June 2, 1919 (no. 1022), authorizing the turning over of the said ships to Canadian National Ry., be cancelled. The committee concur in the foregoing recommendations and submit the same for approval.

Unit Companies Incorporated.—In accordance with a recommendation made at the time of the incorporation of Canadian Government Merchant Marine, Ltd., separate companies are being incorporated for each ship. Under order in council,

575, passed March 16, the stock of the separate ship companies is owned by C. G. M. M., Ltd., the latter company's stock being owned by the Dominion Government. The following companies have been incorporated with a nominal capital of \$40,000 each:—Canadian Warrior, Ltd.; Canadian Ranger, Ltd.; Canadian Recruit, Ltd.; Canadian Volunteer, Ltd.; Canadian Trader, Ltd.; Canadian Sailor, Ltd.; Canadian Trooper, Ltd.; Canadian Seigneur, Ltd.; Canadian Signaller, Ltd.; Canadian Miller, Ltd.; Canadian Adventurer, Ltd.; Canadian Gunner, Ltd.; Canadian Aviator, Ltd.; Canadian Settler, Ltd.; Canadian Spinner, Ltd.; Canadian Trapper, Ltd.; Canadian Sower, Ltd.; Canadian Navigator, Ltd.; J. A. McKee, Ltd.; Thomas J. Drummond, Ltd., and Sheba Ltd. The incorporators are:—D. B. Hanna, A. J. Mitchell, G. Ruel, R. C. Vaughan, all Canadian National Ry.s., and C. G. M. M. officials; and G. A. Bell, C.M.G., Deputy Minister of Railways and Canals.

Officers of Steamships.—The following officers have been appointed by Canadian Government Merchant Marine, Ltd. The first column contains the name of the ship, the second that of the captain, and the third that of the chief engineer: Canadian Inventor A. B. Watson W. Britton

Canadian Vickers, Ltd., Montreal, has orders for 4 steel cargo steamships of 8,390 d.w. tons each, for Canadian Government Merchant Marine, Ltd., as follows:—

S.s. Canadian Victor; Marine Department contract 50; builder's yard no. 77; keel laid Dec. 10, 1919; to be launched about the end of May.

S.s. Canadian Conqueror; Marine Department contract 51; builder's yard no. 78; keel laid Jan. 17; to be launched about the middle of July.

The keels for the s.s. Canadian Commander; Marine Department contract 52; builder's yard no. 79; and the s.s. Canadian Leader; Marine Department contract 53; builder's yard no. 80; will be laid as berths become vacant, and delivery will be made about Nov., 1920.

The Collingwood Shipbuilding Co., advised us, April 19, that the s.s. Canadian Farmer, Marine Department contract 46, builder's yard no. 65, approximately 3,990 d.w. tons, would run her trial trips on Apl. 23, and then be delivered to the Marine Department.

The Collingwood Shipbuilding Co., advised us Apl. 19, that the s.s. Canadian Observer, Marine Department contract 47, builder's yard no. 66, approximately 3,990 d.w. tons, would be launched during the first week in May, and be delivered to the Marine Department about the end of May.

The Collingwood Shipbuilding Co's last order from the Marine Department is for a steel cargo steamship, Canadian Rover; Marine Department contract 57; builder's yard no. 67; approximately 3,890 d.w. tons. The keel had not been laid up to Apl. 19, delay having been caused by U.S. railway strikes.

Collingwood Shipbuilding Co., Kingston, Ont., advised us, April 5, that it expected to deliver the s.s. Canadian Beaver; Marine Department contract 31; builder's yard no. 15; approximately 3,990 d.w. tons; about the end of April, or early in May. The company has another contract for the s.s. Canadian Coaster; Marine Department contract 58; builder's yard no. 11; approximately 3,890 d.w. tons; the laying of the keel of which has been delayed waiting for material, but we are advised, April 10,

that it was expected to be laid before the end of April.

Davie Shipbuilding and Repairing Co., Lauzon, Que., is building 2 steel cargo steamships for Canadian Government Merchant Marine, Ltd., approximately 5,100 d.w. tons each, viz.: Canadian Trapper; Marine Department contract 17; builder's yard no. 459; and Canadian Hunter; Marine Department contract 18; builder's yard no. 460. The company advised us April 13 that it expected to deliver Canadian Trapper early in May, and to launch Canadian Hunter about the end of April.

Halifax Shipyards, Ltd., Halifax, N.S., is building 4 steel cargo steamships for Canadian Government Merchant Marine, Ltd., viz.: Canadian Mariner and Canadian Explorer, each approximately 8,390 d.w. tons; and Canadian Cruiser and Canadian Constructor, each approximately 10,500 d.w. tons. The company advised us April 8 that it expected to launch the first one in May. It has encountered considerable difficulty, owing to delay in delivery of material, also labor conditions.

Harbor Marine Co., Victoria, B.C.—The boilers for the s.s. Canadian Winner, approximately 8,390 d.w. tons, being built for Canadian Government Merchant Marine, Ltd., were received at the shipyard towards the end of March, and were placed in the hull in sections. The shell plating of the hull was reported at that time to be practically completed, and considerable progress had then been made on the hull of the sister ship, Canadian Traveller.

Midland Shipbuilding Co., Midland, Ont., which has a contract for a steel cargo steamship, Canadian Racer; Marine Department contract 54; builder's yard no. 10; advised us, April 6, that the laying of the keel had been delayed and that it had practically to close down operations owing to lack of steel.

Nova Scotia Steel & Coal Co., New Glasgow, N.S., launched the s.s. Canadian Miner, Marine Department contract 41; builder's yard no. 6; approximately 2,800 d.w. tons, April 3; the christening ceremony being performed by Mrs. Levy McMillan, wife of the company's superintendent of shipbuilding. It also has a contract for another steel cargo steamship; Marine Department contract 59; builder's yard no. 8; respecting which it advised us April 8, that the keel would be laid a few days thereafter.

Port Arthur Shipbuilding Co., Port Arthur, Ont., laid the keel of a steel cargo steamship, Marine Department contract 61; builder's yard no. 45; approximately 3,890 d.w. tons, for Canadian Government Merchant Marine, Ltd., Mar. 30.

The Port Arthur Shipbuilding Co. expects to launch 2 steel cargo steamships, of approximately 4,575 d.w. tons each, for Canadian Government Merchant Marine, Ltd., in May, viz.: Canadian Runner; Marine Department contract 32; builder's yard no. 43; about May 8; and Canadian Carrier; Marine Department contract 33; builder's yard no. 44; about May 15. Their keels were laid Aug. 29, 1919.

Prince Rupert Drydock & Engineering Co.,—Prince Rupert, B.C., has about 400 men engaged at its shipyard and drydock, and more could be employed but for lack of housing accommodation. The two steel cargo steamships, Canadian Reaper and Canadian Thrasher, of approximately 8,390 d.w. tons each, under construction for Canadian Government

Merchant Marine, Ltd., are reported to be progressing satisfactorily.

Tidewater Shipbuilders, Ltd., Three Rivers, Que., which has a contract for 2 steel cargo steamships, for Canadian Government Merchant Marine, Ltd., viz.: Canadian Fisher and Canadian Forester, advised us, April 12, that work on the hulls was progressing very favorably, the Canadian Fisher being completely plated, and that the plating of Canadian Forester would be finished by the end of April.

The Dominion Government's Naval Policy.

Replying to questions in the Senate Apr. 14, regarding the present conditions at the Esquimalt naval yard and its future, and also in regard to certain Dominion Government's steamships which have been utilized for war purposes, Sir James Loughheed said that the government had had under consideration for some time the question of Canada's naval defence. In view of Canada's heavy financial commitments, and the fact that Great Britain had not decided on her permanent naval policy, and of the approaching Imperial conference, at which the question of Imperial naval defence would come up for discussion between the Imperial and Dominion Governments, it had been decided to defer action in regard to a permanent policy for Canada. The Canadian Naval Service will be carried on on pre-war lines and the Dominion Government has accepted Great Britain's offer of one light cruiser and two torpedo boat destroyers to take the place of the present obsolete and useless training ships, Niobe and Rainbow. The Minister of Naval Service, in order to be free to reorganize the present service and place it on an economical and efficient basis, has ordered the demobilization of all officers and naval ratings, and for the discontinuance of civilian help at headquarters and at the naval dockyards at Esquimalt, B.C., and Halifax, N.S. The Canadian officers who are in the Imperial fleet and who are being paid by the Dominion Government, will be recalled, and placed on duty with the Canadian naval service. The Naval College will be continued. After reorganization has been completed, only those officers, and other ratings, and civilian help, will be taken on who are absolutely necessary and possess the qualifications desired.

Drydock at Sydney, N.S.—In connection with the proposed construction of a drydock at Sydney, N.S., by interests associated with the Sydney Foundry & Machine Works, F. Clark of that company applied recently to the city council for concessions in the way of tax exemptions, re water, etc., for the construction of a large retaining wall on the esplanade, above the site of the proposed drydock. He is reported to have stated that some change in the original dock plans will have to be made, and additional equipment to what was originally intended must be provided. An application for a grant under the Dominion Drydock Subsidies Act is before the Dominion Government.

Importation of Shipbuilding Materials. In response to a question in the House of Commons Apr. 12, the Minister of Marine stated that the Naval Service Department had paid \$94,489.96 for material imported from the U.S. between Jan. 1, 1918, and Jan. 1, 1920, to be used in the construction of Canadian ships.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

[illegible][illegible][illegible]

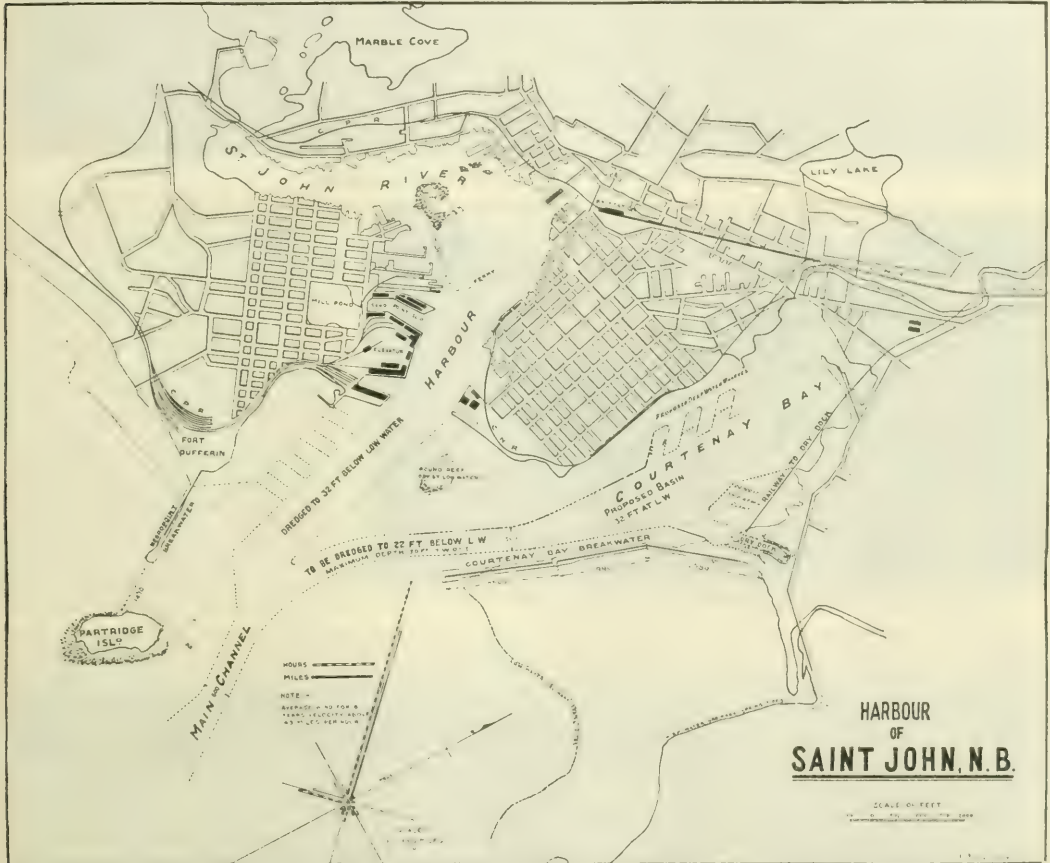

Harbor Development, and Drydock and Ship Repairing Plant Construction, at St. John, N. B.

The Dominion Government has under construction in Courtenay Bay, St. John, N.B., a large and comprehensive scheme of harbor development, the object of which is to cope with the increasing demands of Canada's large export and import trade. In conjunction with these improvements, there are also under course of construction a dry dock and ship repair plant.

By reason of its location on the Atlantic coast, with the shortest rail haul to the interior, and the terminus of two

	Exports.

Halifax		72,904,274	

to St. John and the Canadian National Rys. Courtenay Bay is particularly well adapted to the further expansion in harbor and terminal facilities required by St. John. It has a considerable area, an advantage over the present main harbor, and it is free from objectionable currents that make navigation and berthing of vessels difficult. There is ample room for industrial, railway and terminal development at the head and on the east side of the bay. Easy access is afforded the Canadian National Rys. which

large transcontinental railway lines, St. John is Canada's chief winter port and, as regards volume of trade, is the second ocean port of Canada. The total values of exports and imports during recent years were as follows:

	Imports.	Exports.	Total.
1915	\$ 8,887,049	\$ 43,081,929	\$ 51,968,978
1916	11,057,022	119,490,818	130,547,840
1917	14,956,948	186,239,101	201,196,049
1918	16,787,150	200,783,647	217,570,797
1919	15,702,446	149,986,167	165,688,613
	\$67,350,615	\$699,601,662	\$766,952,277

Following is a comparison of the trade of Canada's four principal ports for the 12 months ended Feb. 29, 1920:—

The facilities to take care of the trade, in St. John's main harbor, are inadequate. During the recent winter there were as many as 17 ships at anchor awaiting berth space. Similar conditions in previous waters led to the consideration of the advantages of Courtenay Bay and to the final adoption of the scheme of improvements that is being carried on.

Courtenay Bay.—The accompanying map of St. John harbor shows the present deep water wharves and accommodation in the main harbor, and the location of Courtenay Bay and its relation

have lines on both sides, one of which terminates at the dry dock now under construction.

Two Contracts.—The works under construction are comprised in two contracts, known as the Harbor Works Contract and the Dry Dock Contract. These contracts were taken over in July, 1918, by the St. John Dry Dock & Shipbuilding Co., Ltd., which is incorporated under the Dominion Companies Act, the principals in which have been engaged for some years in harbor developments on the Great Lakes and in transportation and shipbuilding. The

Harbor Works Contract provided for the construction of a breakwater, entrance channel and basin and deep water wharves, the location of which is shown on the accompanying plan. This contract includes the following work: 2,700 lin. ft. of breakwater extension. The dredging of an entrance channel 500 ft. wide, with 20 ft. depth at lowest water (maximum tide 28 feet), involving the removal of about 2,000,000 cu. yd. of sand, gravel and clay. The dredging of a large turning basin to a depth of 32 ft. at lowest water, requiring the removal

of from 2 to 25 tons over the tides. The last extension of 2,500 ft. has been under construction since Dec., 1918, and is now at its ultimate length and almost completed.

Entrance Channel and Basin.—Navigation access to Courtenay Bay will be afforded by an entrance channel 500 ft. wide, with a depth of 22 ft. at lowest water (maximum tide 28 ft.). With the range of tide that obtains, the depth in this channel at high water will vary from 43 ft. to 50 ft. The entrance channel enlarges into a turning basin, shown

Dock and Suspenders Co. has undertaken to build and operate a dry dock of the first class for naval and general purposes. The act specifies a first class dry dock as:

"Any Dry dock, other than floating dry docks, of dimensions when completed of not less than the principal dimensions next hereinafter mentioned, that is to say, clear length on bottom from caisson groove or hollow quoin to head, 1,150 ft., clear width of entrance, 125 ft., depth of water over sill at high water ordinary spring tides, 38 ft.

Breakwater, at Courtenay Bay, St. John, N.B., from west side.

Excavation of Drydock, at Courtenay Bay, St. John, N.B.

Coffer Dam, at entrance channel to Drydock, Courtenay Bay, St. John, N.B.

of about 4,500,000 cu. yd. of sand, gravel and clay. The removal of some 140,000 cu. yd. of submarine rock, leading into the entrance to the dry dock. The construction of a series of deep water piers.

The breakwater is of the rubble mound type, 7,070 ft. long, with a top width of 20 ft., outer slope, 1 on 2 horizontal, and inner slope, 1 on 1½ horizontal. The outer end, or head, has both outer and inner slopes of 1 on 3 horizontal. Large

on the accompanying map, which will have a depth of 32 ft. at lowest water.

Deep Water Wharves.—On the west side of Courtenay Bay there will be built a series of deep water wharves, affording some 8,500 ft. of berth space, with a depth of 32 ft. at lowest water.

Dry Dock and Ship Repair Yard.—Under the terms of The Dry Docks Subsidies Act, 1910, and The Dry Docks Amendment Act, 1917, the St. John Dry

of ships to be accommodated. The inner and outer entrances will be closed by floating caissons, two of these being provided. The pumping equipment will consist of three 52 in. vertical centrifugal motor driven pumps, capable of unwatering the dock in 2½ hours. The dock will be equipped with a travelling crane capable of lifting 40 tons at a reach of one-half the width of the dock.

To the north of and immediately ad-

joining the dock, on a reclaimed area, there will be established an extensive ship repair yard which will include the following buildings: Main offices, boiler, engine and machinery shops; steel and brass foundries; joiner shop, plater and framer shops, blacksmith shop, pattern shop, stores and molding loft, power house.

The estimated cost of the dry dock is \$5,500,000, of which the ship repair equipment will cost \$1,100,000.

Progress of Work.—The contract for these works was awarded in July, 1918,

been reached over a considerable portion, is El.—21.5 (extreme low water -zero datum) and the coping level is El. +36.0, the most difficult problem was one of tracks and grades to get over the 57.5 ft. lift in a pit only 1,150 ft. long. This was accomplished by a switch-back along the south side of the excavation. The excavation is remarkably free from water, few springs having been encountered, and the pit is kept dry by intermittent pumping of a 4 in. centrifugal pump.

It is expected that the excavation will

and form an integral part of the lower north wall of the dock and will house in the three large submerged 52 in. centrifugal main pumps and the two 12 in. drainage pumps. All pumps will be direct electric motor driven. Power for operating all pumping equipment, cranes, shops and lighting, will be generated in a central power station, by three turbo generator sets, developing about 4,000 h.p., the equipment for which is on hand.

The work resulting from the dry dock excavation has been transported, in 6 and 15 yard dump cars, to the break-

Breakwater, at Courtenay Bay, St. John, N.B., from west side.

and preparatory and organization work followed which was somewhat extensive, requiring the repair and outfitting of excavation plant then on the work and the taking in of additional plant to excavate the dry dock site and prism. This work involved an entirely new track layout, the installation of a compressor plant, with air line distribution, and repairs to steam shovels and car equipment. Excavation was started on Dec. 1, 1918, with steam shovels and, up to Mar. 31, 1920, a period of 16 months, a total of 575,000 cu. yd. of rock had been removed from the dry dock site and prism of which 490,000 cu. yd. were placed in the 2,500 ft. breakwater extension.

With the exception of a small amount of earth overburden, all the excavation is in rock, a large portion of which is a hard, greenish trap, with seams and faults, generally at an angle of about 45 degrees, thus making it difficult to drill. In the lower end of the prism, a carboniferous shale is encountered, with a 45 degree stratification. Excavation

Interior of Coffor Dam, at Courtenay Bay, St. John, N.B., from drydock entrance.

Coffor Dam, at entrance channel to Drydock, Courtenay Bay, St. John, N.B.

in the trap has resulted in fairly well defined and satisfactory break, but considerable overbreak occurs in the shale. There have been no unusual features connected with the rock excavation. The drilling has been done by tripod air drills, holes, generally spaced 8 to 10 ft., for 12 to 15 ft. lifts.

Three large Marion steam shovels have been used in the prism. As the grade depth of the excavation, which has now

be completed during the ensuing summer and consideration is now being given to the actual construction of the dry dock, which will be entirely of concrete, with the exception of the stops and sills, three in number, for the two floating steel caisson gates. The sills and stops will be built of granite. A departure from usual practice will be the use of concrete for all altars.

The pumping station will be built in,

water extension, dumped from a single 4 pile bent trestle, and built up to side slopes of 1 on 2 horizontal, with top width of 20 ft. This breakwater extension is very nearly completed, with the exception of the placing of the large cover stone required for the slopes. Cover stones up to 20 tons have been sent out to the breakwater, and these are being placed into position by a travelling derrick.

PROPOSED GRAVING DOCK ST. JOHN, N.B.

GENERAL PLAN ELEVATION & CROSS SECTIONS - DRAWING NO. 2

A 30 m. pipe line discharge hydraulic dredge was operated in the basin last year, the material being pumped 1,800 ft. to a spoil ground south of the breakwater. At extreme low water the ma-

terial was pumped against a head of 36 ft.

The accompanying map shows the site of the proposed ship repair plant, which will be an area reclaimed by means of

about 1,700,000 cu. yd. of material pumped from the excavation of the basin. The company will this ensuing summer have a large hydraulic dredge for this reclamation work. For dredging the entrance

channel a bucket ladder dredge has been bought and will be placed at work during the dredging material was pumped. A very interesting engineering feature

of the whole work is the scheme that has been adopted to remove some 140,000 cu. yd. of rock in the immediate entrance channel to the dry dock. The grade of the excavation in this channel is El.—32, which, with a 28 ft. maximum tide, gives 60 ft. at highest water. The depth of rock at the entrance to the dock is 48 ft. and the rock dips below grade 500 ft. out from this point. The width of the entrance channel is 250 ft. The customary method of submarine drilling and blasting and dredging was at first considered for the removal of this rock, but the anticipated difficulty of drilling to a 60 ft. depth, at high water, with rise and fall, of the tide, and undertow, suggested the possibility of coffer damming the whole area and excavating in the dry. This scheme also appeared to assure better results in the excavation of foundations for the lay to and fitting out berths.

dam was completed in Dec., 1919, and the water let out at low tide period, the succeeding high tide being kept out by making a closure in a sluice left for that purpose. The sheet piling has been found to be tight, but leaks have developed at the inner end of both side walls, necessitating cutting off where these walls make contact with the bank. Unusually severe weather conditions this winter have interfered with further work on the cofferdam, but work will soon be resumed and no difficulty is anticipated in making a satisfactory closure. The crucial test of the cofferdam will be when the overburden in the enclosed area is removed. The danger to be found will be from water in sand and gravel beds coming underneath the sheet piling. Dependence is being placed on the continuity of certain beds of clay, which, it is expected, will form an impenetrable seal.

Ont.; D. L. White, Jr., Midland, Ont. The local staff at St. John consists of A. R. Dufresne, Chief Engineer and Manager; E. J. Cameron, Principal Engineer; V. S. Chestnut, B. Allen, J. T. Turnbull, engineer, F. M. Ross and S. M. Telfer, general office.

Alex. Ritchie Dufresne, B.A.Sc., was born at Ottawa, Dec. 18, 1872, and graduated in civil engineering at McGill University, Montreal, in 1896, since when his record has been as follows: 1896-1900, construction, St. Lawrence River canals, Railways and Canals Department; 1900-1903, hydrographic surveys, St. Lawrence River, Public Works Department, 1903-1906, in charge of construction, St. Andrews lock and dam, Red River, Man.; 1906-1910, District Engineer for Manitoba, Dominion Public Works Department, Winnipeg; 1910-1918, Assistant Chief Engineer, Public Works Department, Ottawa; 1918 to date, Chief Engineer and Manager, St. John Drydock & Shipbuilding Co., St. John, N.B. He is a member of the American Society of Civil Engineers and of the Engineering Institute of Canada.

The rock excavation is being done by the Bedford Construction Co., Ltd., of Halifax, N.S., the officers of which are: P. Pagano, President; V. J. Cavicchi, Vice President; and J. J. Herbert, Secretary-Treasurer. Carlo Carniel is Superintendent of the works in Courtenay Bay. The other portions of the work in connection with the main contracts are being done direct by St. John Drydock & Shipbuilding Co.

United States Shipping and Shipbuilding Notes.

The Atlantic Coast Shipbuilders' Association states that, exclusive of U.S. Shipping Board tonnage, U.S. shipyards had in hand recently 263 steel vessels of 1,250,573 gross tons for private account.

A U.S. Senate sub committee, on April 14, completed a merchant marine policy bill, containing a provision that merchant ships owned by the government shall be disposed of to private interests within 10 years. It also provides for a permanent shipping board of 7, instead of 5, members, which would be directed to devote special attention to development of new trade routes.

According to returns received by the U.S. Bureau of Navigation, merchant steel ship building on a commercial basis in the U.S. shows steady progress. On Jan. 1, shipyards were building, or under contract to build, for private ship-owners, 165 steel ships of 679,170 gross tons. On Feb. 1, the total had increased to 183 steel ships of 791,911 gross tons, and on Mar. 1, the total was 247 of 947,193 gross tons.

Esquimalt Dry Dock. We are officially advised that the Dominion Government has acquired a site for the construction of a dry dock at Skinners Cove, Esquimalt, B.C. The proposed drydock will be of the first class as specified under the Drydocks Subsidy Act and will have the following general dimensions,—length 1150 ft., breadth 125 ft., depth 38 ft. It was anticipated that tenders for the construction of the dock would be invited about the end of April.

Shipping figures for the world, published recently in London, Eng., are reported to show that Canada comes first after the great powers.

Looking along top of Breakwater at Courtenay Bay, St. John, N.B.

A decision having been arrived at a cofferdam, enclosing an area about 600 x 600 ft. has been built. The cofferdam consists of a single row of 6 inch B. C. fir, tongue and groove, sheet piling, driven from a substantial 4 pile bent trestle, with stone and earth fill on both sides. On the location of the outer cross wall of the cofferdam, there is an average depth of 45 ft. of silt, gravel, sand and clay, overlying the rock, and the sheet piling is driven to an average penetration of 14 ft. in this material, fetching up in a bed of what appears to be stiff clay. From this it will be seen that contact has not been made with the rock. The general elevation of the ground surface within the enclosed area is El.—10 (10 ft. above lowest water). The coffer-

The Harbor Works Contract calls for the construction of a series of three deep water piers on the west side of Courtenay Bay, in the position shown on the accompanying map. Work on these has not been started.

The contracts call for completion of all works, with the exception of the deep water wharves, by July, 1922, and, based on the present rate of progress, the conditions in this respect will be fulfilled.

The Organization.—The St. John Drydock & Shipbuilding Co.'s officers are: Jas. Playfair, Midland, Ont., President; D. S. Pratt, Midland Ont., Vice President and Managing Director; Thomas A. Duff, Toronto, Secretary-Treasurer; J. B. Craven, New York, N.Y.; W. E. Phin, Hamilton, Ont.; W. J. Sheppard, Waubashene,

Navigation Regulations for Lower Detroit River.

While the Livingstone channel is being widened, the following rules and regulations will go into effect on the opening of navigation, 1920, and will remain in effect until further notice. Rules 1 to 5, below, cover the regulations, which may be summarized as follows:—

Amherstburg channel is to be used by all downbound vessels, all upbound loaded freight vessels, all upbound light vessels with more than one vessel in tow, optional for upbound passenger vessels, optional for vessels under 100 gross tons and for vessels making local stops.

Livingstone channel is to be used by all upbound light vessels when alone or with but one light vessel in tow, optional for upbound passenger vessels, but such vessels are subject to the rules governing this channel, optional for vessels under 100 gross tons and for vessels making local stops; time interval of five minutes required between vessels, and no vessel to pass another between Bar Point light vessel and Ballards Reef.

All vessels using Amherstburg channel will enter or leave Lake Erie via channel to the east of Detroit River lighthouse. All vessels upbound for Livingstone channel will leave Lake Erie via the channel to the west of Detroit River lighthouse.

Upbound vessels using Livingstone channel will keep well to its westerly side where said channel unites with Amherstburg channel north of Detroit River lighthouse.

Upbound vessels leaving Livingstone channel must cross the path of downbound vessels in the vicinity of Ballards Reef. Downbound vessels have the right of way, but masters of both downbound and upbound vessels using Amherstburg channel should be unfailingly watchful for upbound vessels from Livingstone channel. All vessels in this locality should navigate under complete control and with the utmost caution.

Rule 1. No vessel of 100 gross tons or over shall navigate the Livingstone channel at a greater speed than 12 statute miles an hour between its junction with the Amherstburg channel at Ballards Reef and the Bar Point light vessel; nor the Amherstburg channel at a greater speed than 12 statute miles an hour between the south end of Bois Blanc Island and the North gas buoys at Ballards Reef, and where the width of either of these channels is restricted by improvements in progress the speed through such restricted width of channel shall not exceed 8 statute miles an hour.

Rule 2. No loaded freight vessel, whether alone or in tow, shall pass through Livingstone channel, in either direction. All downbound vessels, all upbound loaded vessels, and all upbound light vessels with more than one vessel in tow, shall pass through the Amherstburg channel and the channel to the east of Detroit river lighthouse. All upbound light vessels, whether alone or with a single vessel in tow, shall pass through the channel to the west of Detroit river lighthouse and through the Livingstone channel, except as stated in rule 3. Vessels under 100 gross tons, and vessels making local stops along these routes, are exempt from this rule.

Rule 3. Upbound passenger vessels may use either the Amherstburg channel or the Livingstone channel, but if they use the latter they shall be subject to the rules governing that channel.

Rule 4. All light draft passenger and freight vessels using the Amherstburg channel in either direction shall pass through the auxiliary channel (280 ft. wide and 14½ ft. deep), to the eastward of the improved channel at Ballards Reef.

Rule 5. No vessel shall pass another vessel bound in the same direction in that portion of Livingstone channel between its junction with Amherstburg channel at Bar Point light vessel and at Ballards Reef, nor at any other portion of either Livingstone and Amherstburg channels where the width of the channel is restricted by improvements in progress. Between any two upbound vessels navigating that portion of Livingstone channel from Bar Point light vessel to Ballards Reef, there shall be a time interval of not less than five minutes. Tugs without tows and vessels under 100 gross tons are exempt from this rule.

Mainly About Marine People.

W. A. Bowden, B.A.Sc., Chief Engineer, Railways and Canals Department, Ottawa, has been appointed Consulting Engineer to the Dominion Government, in connection with the reference, to the International Joint Waterways Commission, of the question of the further improvement of the St. Lawrence River, between Montreal and Lake Ontario, full particulars of which were given in Canadian Railway and Marine World for April, page 210.

C. Duguid, Naval Architect, Marine Department, has returned to Ottawa, from Great Britain, where he went on official business.

H. S. Durkee, heretofore in the Grand Trunk Pacific Ry. Freight Department, Vancouver, B.C., has resigned to enter Cunard Line Steamship Co.'s service as Contracting Freight Agent, at Vancouver.

Harold E. A. Hawken, Chief Registrar of Shipping, Marine Department, Ottawa, is acting as Assistant Deputy Minister of Marine, Cameron Stanton having been superannuated.

Commander B. L. Johnston, D.S.O., who was appointed Superintendent of the British Columbia Pilotage District, at Victoria, Jan. 1, has resigned, and Charles Eddie, Supervising Examiner of Masters and Mates, Western Division, Vancouver, is acting until another appointment is made.

Francis King, M.A., General Counsel, Dominion Marine Association, addressed the London, Ont., Chamber of Commerce, Apr. 8, on the proposed legislation to place the control of inland shipping under the Board of Railway Commissioners.

Jas. Playfair, President, Great Lakes Transportation Co., and Mrs. Playfair, returned to Midland, Ont., recently, after spending some weeks in California.

H. B. Smith, President, Collingwood Shipbuilding Co. and Northern Navigation Co., has paid off the balance of mortgage on St. George's Anglican Church, at Owen Sound, Ont., as a thank offering for the conclusion of peace.

Cameron Stanton, Assistant Deputy Minister of Marine, after having been on leave in California since early in Dec., 1919, retired from the service, Mar. 31, and was placed on the superannuation list. He was born July 12, 1861, and received his first permanent appointment in the government service, June 1, 1879.

W. J. Stewart, Chief Hydrographer,

Naval Service Department, is granted an allowance of \$1,000 in the estimates for the year ending Mar. 31, 1921, submitted to the House of Commons recently, for services performed during 1919-1920 in relation to questions under consideration by the International Joint Commission.

R. B. Teakle, General Manager, Canadian Government Merchant Marine, Ltd., left Montreal Apr. 5, for a business trip to the Pacific coast.

Wm. Tremblay has been appointed captain of the Naval Service Department's patrol boat Loos.

Capt. R. Winter, master of Canadian Government Merchant Marine's s.s. Canadian Raider, is reported to have been lost overboard, while on a voyage between Melbourne and Sydney, Australia.

Proposed Dominion Government Control of Ships Trading with Canadian Ports.

H. H. Stevens, M.P. for Center Vancouver, B.C., moved the following resolution in the House of Commons Apr. 14:—"That it is expedient to amend the Water Carriage of Goods Act, Statutes of 1910, chap. 61, by providing that the act shall also apply to ships carrying goods from any port outside of Canada, to any port in Canada, and to goods carried by such ships or received to be carried by such ships."

In introducing the motion, he stated that it has been the custom for owners and charterers to insert clauses in bills of lading, contracting themselves out of liability for damage to goods carried, and this practice has been the cause of considerable complaint, shippers contending that it has not been possible for them to obtain justice in regard to claims for damaged goods. He pointed out that responsible lines operating regularly between various ports, seldom try to contract themselves out of liability, but tramp ships of small lines, making irregular calls, simply picking up cargo and carrying it here and there as opportunity offers, frequently take advantage of these special clauses in their bills of lading, and cause loss to the shippers. After discussion, the motion was withdrawn, on the understanding that a bill will be introduced to cover the point raised.

Proposed Drydock at Louisburg, N.S.

—J. W. Maddin, K.C., one of the promoters of the proposed drydock at Louisburg, N.S., on his return there from Ottawa, recently, where he has been seeking a Dominion subsidy in aid of building the dock, is reported to have stated that although the company had not been refused a subsidy it could be gathered from the government's attitude that it will not subsidize any drydock for Nova Scotia, during this year, and probably not next year. He is also reported to have stated that it was not likely that his company would proceed with the construction of a drydock without subsidy.

Lists of Lights and Fog Signals. The Marine Department, Ottawa, has issued the following lists of lights and fog signals corrected to April 1. (1) On the Atlantic coast, including the Gulf of St. Lawrence, to head of ocean navigation. (2) West of Montreal and east of British Columbia. (3) On the Pacific coast, and British Columbia rivers and lakes

Halifax Graving Dock Questions Answered in the Senate.

The following questions were asked in the Senate April 6 by Senator Dennis of Illinois. No. 1, the answers given by the two Congresses:

At the agreement taken possession of the property of the Halting Guarding District, Ltd. Answer: Yes.

It was not what matters most, it is by how we behave, ourselves, and our fellow men, in the hour of our greatest need. The War Memorial, Art. 1. American Expeditionary Force, in *Memorial* (New York: Mac. 1919).

Q. Has any sum been paid for or on account of this property, and if so how much, and on what date? Answer. No.

Q. In the Hall's towing dock and adjunct ship repairing plant being operated at the mouth of the government? If so, how long has it been so operated? Answer. No.

by the government, has it been rented, sold, leased, or given to a private company? Answer: Leased to Halifax Shipyards, Ltd.

only so (a) on what date, (b) on what terms, and conditions, and (c) for what period? Answer: (a) Order in council dated June 10, 1918, the Annual rental of \$62,500. The company agree and bind itself to buy the dock property and plant outright, by giving notice to that effect at any time during the term of the lease, for \$1,250,000; (c) For one year computed from June 24, 1918, but in case notice is not given within the year then the lease shall continue from year to year upon the same terms and conditions, until such notice is given.

The name of the private company to which the Halifax graving dock property has been so transferred, its capitalization, and the names of its directors. Answer: Halifax Shipyards, Ltd (b and c) No information in departmental records.

How much, if anything, has been paid to Mr. 1, 1920, by said private company on account of the rental, or purchase, or for the use of said graving dock property? Answer. \$96,750 rental.

The amount paid by the government to the Halifax Graving Dock Co. for its property at Halifax, taken possession of by the government, and if nothing, the amount for withholding payment; and any and other fees made, and if so what, to effect an amicable settlement with the Halifax Graving Dock Co. Answer. Nothing paid; an offer of \$1,100,000 was made for the property but refused, when proceedings to expropriate were instituted.

The number of square feet of land and land covered with water taken by the government from the Halifax Graving Dock Co. on (or in connection with) which the dock and plant was located

Water area, land, and land covered with water, additional to that taken from the Halifax Graving Dock Co., sold, leased or otherwise disposed of, by the City of Halifax, so (a) how many square feet, (b) was it acquired by purchase thereof to the Halifax Shipyards, at what price? And (c) if so, by whom, and (d) for what purpose; appropriation; e) \$11,484 is offered to the Lorne Yacht Club for this property but refused; (d) Halifax Shipyards, Ltd., to pay 5% on award and costs, if any, with

Is the government's expanded an-

Has the government been asked to make any further expenditures in this connection? If so, how much, and does it propose to do so. Answer. No.

Is the government to be fully reimbursed for all its expenditures for the Halifax graving dock property and in connection therewith by Halifax Shipyards, Ltd., and if not all, what proportion and upon what conditions; and whether or not any deferred payments carry interest charges? Answer. Answered by answers to previous questions.

United States Navigation Wages on the Great Lakes.

The following agreement was drawn up Apr. 6, at Detroit, Mich., by the Great Lakes Passenger Lines Association and agreed to by its members and also by some of the independent passenger steamship lines, with the firemen, oilers, water tenders and seamen's unions:

"There shall be an advance in wages to the members of the said unions employed on boats of the Passenger Steamboat Lines of 25% over last year's scales, and the said unions shall have an opportunity to put into operation an 8-hour day, as to their members, if it can be done without the employment of additional men, and without additional expense to the passenger steamboat lines, the same to be under the supervision and subject to the approval of the officers of the ships, the said officers to have orders to co-operate in establishing said 8-hour day; provide, however, that it is understood that on certain steamers one or two additional coal passers may have to be employed."

We were advised April 14 that the agreement had not then been assented to by the unions.

C. G. S. Champlain.—The Minister of Railways stated in the House of Commons, Mar. 24, in answer to questions, that five tenders had been received for the purchase of this ship, viz: Gulf of St. Lawrence Shipping & Trading Co., Quebec, Que., \$61,650; R. T. Saintinail and Co., North Sydney, N.S., \$55,000 (submitted for inspection and approval, and received after other tenders opened); Thomas A. Duff, Toronto, \$31,500; J. C. Hearn, Quebec, Que., \$4,500; W. J. Thomson, Quebec, Que., \$4,250. No sale of the ship had been made up to that date (Mar. 24). The conditions of payment are as follows:

C.P.R. Steamships Sold and Bought.—The C.P.R. annual report for the calendar year 1919 states that, during the year, the following steamships were sold, viz.: Prince George, Princess May, Princess Margaret, Monmouth and Virginian. The steamships War Beryl and War Peridot, each 10,500 d.w. tons, were bought.

Shipbuilding and Ship Channel
Estimates for 1920-1921.

The estimates for the year ending Mar. 31, 1921, submitted to the House of Commons recently, contain the following items under Public Works, chargeable to capital, Marine Depart-

Review of Lawrence Ship Channel navigation and porting facilities there	1 475 000
Maritime-related responsibilities of State Department, ships and others, as well as expanding industry	20 000 000
Construction of shipbuilding plant, including refurbishment of the shipbuilding industry in shipbuilding and marine engineering	20 000 000
Construction of shipbuilding shipbuilding for the United States Navy	20 000 000

Steamship Merger Suits.—Two actions have been entered in the Superior Court at Montreal in connection with the formation of Canada Steamship Lines, Ltd., a few years ago. One of these is by James Playfair, President, Great Lakes Transportation Co., Midland, Ont., who claims \$511,725, and the other by James Garruthers, formerly President Canada Steamship Lines, Ltd., for \$168,283, the defendants in each case being W. Grant Morden, M.P., London, Eng., and C. A. Barnard, K.C., Montreal. The plaintiffs claim that in 1912 and 1913 the defendants incorporated a company known as Canada Transportation Lines, Ltd., changed subsequently to Canada Steamship Lines, Ltd., that plaintiffs were individually large stockholders of the Richelieu & Ontario Navigation Co. Ltd., that they were induced to use their influence with other stockholders, to consent to the transfer of their holdings to the new company, and that they (plaintiffs) were to receive a certain percentage on their holdings in the R. & O. N. Co. The plaintiffs claim that they performed their share of the contract, but that defendants failed to carry out the transfer of the shares in the new company as agreed, and they now sue for the transfer of the shares and payment of accrued dividends.

The s.s. *War Isis*, which was built by the Port Arthur Shipbuilding Co., Port Arthur, Ont., in 1918, for the British Government, under order from the Imperial Munitions Board, was offered for sale by auction in London, Eng., recently to any person entitled to own a British vessel. She is of steel, single deck type about 2,231 tons gross, 1,343 tons registered and 3,230 tons d.w., on about 20 ft. draft. She was built under Lloyd's special survey and classed A1. She is equipped with triple expansion engines, and two single ended boilers, for a speed of about 9½ knots an hour, on 24 tons of fuel. The hull is divided into 2 holds with 4 hatches. Her dimensions are: length 251 ft., breadth 43.8 ft., depth 21.6 ft.

British Columbia Pilotage—A press report states that a message was received in Vancouver early in April from the Deputy Minister of Marine to the effect that unless the B.C. pilots accept the government terms regarding wages and working conditions, open pilotage will become effective on the British Columbia coast, May 6. The pilots are asking a minimum of \$325 a month, including 5% superannuation, and the valuation of their equipment to be settled by arbitration. In addition they ask their fares including room and board, when traveling to or from pilotage duty.

Atlantic and Pacific Ocean.

The Cunard Steamship Co. has announced that its Atlantic steamships will call at Halifax, N.S., on their westward voyage, making one call a month, until the end of September.

Furness, Withy & Co. announce the inauguration of a steamship service between Montreal and Sweden, on the reopening of St. Lawrence navigation, the s.s. Gunborg making the first sailing.

The Red Star Line announces the commencement of a steamship service between Montreal and Antwerp, Belgium, the first sailing to take place early in May. The steamships Aledo and Challenger, which will be used in the service, are on their way from Antwerp.

Elder Dempster and Co.'s new steamship service between Canada and the west coast of Africa, will be commenced with the s.s. Gaboon, leaving Montreal early in May, calling at Dakar, Freetown, Sekondi, Accra, Lagos, and other ports should sufficient inducement offer.

The British War Office s.s. Petrel has been transferred from the Canadian to the British register. She was built at Port Richmond, N.Y., in 1915, and is screw driven by engine of 65 h.p., her dimensions being,—length 123.7 ft., breadth 26.3 ft., depth 15.3 ft., tonnage 504 gross, 367 registered.

The White Star Lines' s.s. Megantic arrived at New York, Apr. 15, via the Panama Canal, from Australia, and sailed for Liverpool, Eng., Apr. 21, having completed all her war transport service. On her arrival in England, she will be put on the Canadian route again and is expected to sail for Montreal about May 8.

Canadian Pacific Ocean Services Ltd. has sold the s.s. Virginian to Swedish interests. She was built at Glasgow, Scotland, in 1905, for the Allan Line Steamship Co., and is screw driven by engines of 12,000 i.h.p. Her dimensions are,—length 520.4 ft., breadth 60.3 ft., depth 38 ft.; tonnage 10,757 gross, 6,827 registered.

The Swedish-American Line, Ltd., and the Trans-Atlantic Steamship Co. have arranged to commence an ocean service between Montreal and Swedish ports, on the reopening of St. Lawrence navigation. It is expected that the first sailing will be early in May, and that other sailings will be made at intervals of three weeks.

The s.s. War Charger, one of the steel steamships built by J. Coughlan & Sons, Vancouver, for the British Government, under orders from the Imperial Munitions Board, and sold recently to Greek parties for, it is reported, \$1,800,000, has, since 1918 been in service on the Pacific and Atlantic Oceans and the Mediterranean Sea.

Canadian Pacific Ocean Services' s.s. Empress of Canada will, it is announced, be launched at Govan, Scotland, about Aug. 17, and it is anticipated that she will be completed and ready to sail from Liverpool during March, 1921, for Vancouver, B.C., when she will be placed in the trans-Pacific service. She will be 644 ft. long, by 77 ft. beam, and approximately 22,000 tons. She will be equipped with all the latest improvements, including gymnasium, swimming baths, dark rooms for photography, etc., and the whole promenade deck will be given up to social and amusement purposes.

Canadian Pacific Ocean Services, Ltd. is booking through passages to various

points, until recently in the war area, including Hamburg, Danzig, Vienna, Antwerp, etc. Passengers for Hamburg must have passports issued by the Swiss Consul, representing German interests; those to Danzig must hold Polish passports, no visa being necessary. Passengers to Vienna, Buchs, Havre and Antwerp must be booked via Liverpool, or by the direct continental service. Germans must apply for passports to nearest Swiss Consul, and Austrians and Hungarians to the nearest Swedish Consul, but when the destination is Buchs or Vienna, both French and Swiss visas are required, and for Antwerp a Belgian visa also. Germans booking through France or Belgium must appear personally before the nearest French or Belgian Consul to secure visas. The first of the company's sailings on the St. Lawrence route this year will be made by the s.s. Victorian from Quebec, May 7, followed by the s.s. Corsican from Montreal, May 8.

Maritime Provinces and Newfoundland.

The s.s. Edmund Donald is reported to have been bought by St. John's, Nfld., parties for service on the St. John's-Halifax-Boston route. The Edmund Donald was formerly named David C. and was built at Shad Bay, N.S., in 1919.

A bill will be presented in the New Brunswick Legislature shortly, to enable the City of St. John, N.B., and the City and County of St. John municipality, to issue bonds to buy, or build a ferry steamship, to be operated between Indiantown and Pleasant Point.

Eastern Steamship Line, Inc., announces, that until the International Line service is resumed between Boston, Mass., and St. John, N.B., miscellaneous freight shipments will be handled by the s.s. North Land, to Yarmouth, N.S., and thence by the s.s. Keith Cann to St. John, giving a weekly service.

The s.s. Robert G. Cann, owned by Hugh Cann & Sons, Yarmouth, N.S., which grounded at the entrance to Canso harbor during March, was released about the end of that month by the Atlantic Salvage & Wrecking Co.'s s.s. La Canadienne, and towed into Canso for temporary repair, to allow her being taken to Halifax, where permanent repairs were undertaken.

The French s.s. Barr was destroyed by fire at Dartmouth, N.S., Apr. 17. She was a wooden ship of 1,500 tons, valued at approximately \$400,000, and is regarded as a total loss. She was built recently by the National Shipbuilding Corpora-

tion, Three Rivers Shipyards Division, Three Rivers, Que., and was to have sailed from Halifax for Newport, Eng., Apr. 19.

The master of the sealing steamship Terra Nova has entered action, in Newfoundland, against members of his crew, for a breach of the Merchant Shipping Act, in refusing to remain on the sealing grounds longer than the time provided for when they signed articles. Generally, the sealing season has been somewhat of a failure, the catch being exceedingly poor, being less than 35,000 seals for nine ships. It was hoped to better the catch by making a longer stay on the sealing grounds, but the crew refused.

Province of Quebec.

The Dominion Public Works Department has received tenders for repairs to dredge no. 1 (Quinlan & Robertson), which is lying in the Montreal dry dock.

An order in council has been passed disbanding the Quebec Harbor Commission, following on the resignation of the chairman, Hon. D. O. L'Esperance, and providing for the constitution of a new commission. It is reported that Sir David Watson will be chairman, and General Tremblay and A. S. Gravelle, members, of the new commission.

The St. Lawrence channel was reported to be practically clear of ice from the Victoria Bridge, Montreal, to the sea, Apr. 12, and it was expected that the Marine Department would commence laying buoys between Montreal and Quebec during the third week of April. The department's steamships Dollard and Shamrock, with their attendant scows, and steam barges, were being held at Sorel in readiness for the work.

The longshoremen at Montreal have made an agreement with the Shipping Federation of Canada for this year, providing for an increase of 10c an hour in wages for day work, and time and a half for night work. The working day consists of 10 hours, with a 9 hour shift at night. For day workers the new rate is 70c an hour. For handling nitrate and bulk sulphur the rate is 85c an hour, and also for grain trimming and packing. Coal handling is to be paid at the rate of 75c an hour.

Trawler Sales.—The Anderson Co. of Canada has sold the Admiralty trawlers T. R. 41 to Percherie et Armentens La Rachelle Ocean, Havre, France, and the T. R. 44 to Anglo-Newfoundland Development Co., Grand Falls, Nfld. The first named trawler was sent to Boulogne, France, in January, as an exhibit ship.

Ontario and the Great Lakes.

The Western canal was opened for traffic Apr. 15.

The Great St. Marys canals were opened for traffic Apr. 15, two s.s. Harvester being the first ship to lock through.

A Dominion order in council has been passed approving regulations for operation of ferry service across the Niagara River between Fort Erie, Ont., and Buffalo, N.Y.

An action brought by E. Torco to determine the ownership of the s.s. *Chicora*, formerly owned by Canada Steamship Lines Ltd., was dismissed at Toronto, the plaintiff having to pay costs.

The name of the Ontario Government's Captain Verner, registered at Kingston on 1-17-20, and operated by the Ontario Canal and Fisheries Department, has been changed to Gray Bird.

The Detroit and Windsor Ferry Co. is being asked by the Windsor Council for a more adequate service, and if some improvement is not made, it is intimated that a municipal ferry line will be started.

The s.s. H. M. Pellatt, which, as announced in our last issue, has been sold by Canada Steamship Lines, Ltd., to Belgian parties, is now owned by the Societe Belge d'Armement Maritime, Antwerp, Belgium.

A committee representing the Rochester, N.Y., chamber of commerce, has asked Canadian Steamship Lines, Ltd., that steamships running between Hamilton, Toronto, Kingston, and Montreal, call at Rochester, each way.

Canada Steamship Lines, Ltd., has changed the names of its steamships, Murray Bay, Rochester, Syracuse, and St. Irene, to Cape Diamond, Cape Eternity, Cape Trinity and Cape St. Francis, respectively.

A press report stating that the Northern Navigation Co. will dock its steamships at Point Edward this year, instead of at Sarnia, is to some extent misleading. The company has used Point Edward as a terminal for its steamships since 1918, they only going to the Sarnia dock occasionally. The company calls its terminal, Sarnia, (Point Edward dock).

The Dominion Government steamships Grenville and Lambton arrived at Parry Sound, Apr. 20, from Midland, thus opening navigation between these points. The Great Lakes Transportation Co.'s s.s. Glenorchy cleared from Goderich on the same date for Cleveland, Ohio, to load coal. Considerable ice was encountered between Midland and Parry Sound, but Goderich harbor was reported to have been clear of ice for several days.

The Great Lakes Transportation Co.'s s.s. Glenfoyle, registered at Midland, Ont., has been removed from the Canadian register, and her register closed, she having been lost while in Admiralty service. She was built at Londonderry, Ireland, in 1913, and was screw driven by engine of 97 h.p., her dimensions being—length 250 ft., breadth 42.5 ft., depth 17.4 ft.; tonnage 1,680 gross, 1,051 registered.

The s.s. Empress, owned by the Central Railway Co. of Canada, has been sold by the receiver for the company to W. H. Dwyer, Ottawa, Ont. She was built at Montreal, in 1873, and was originally named Peerless. She was rebuilt in 1886, when she was renamed Empress. Her dimensions are—length b.p. 185 ft. 3 in., breadth moulded 27 ft. 6 in., depth

moulded 16 ft. 1 in. She is paddle wheel driven by engine of 152 n.h.p.

The acting Minister of Public Works is reported to have obtained by a deputation from London, St. Thomas, Elgin and Middlesex, Ont., Apr. 15, that the deepening and widening of the outer harbor at Port Stanley will be commenced as soon as possible, the programme including extensive dredging and the removal of the submerged east pier, which has been a menace to navigation there for some years.

The U.S. Lake Survey reports the stages of the Great Lakes in feet above mean sea level for March as follows:—Superior, 601.92; Michigan and Huron, 580.00; St. Clair, 574.00; Erie, 570.85; Ontario, 245.05. Compared with the average March stages for the past 10 years, Superior was 0.28 ft. above; Michigan and Huron, no change; Erie, 0.90 ft. below, Ontario 0.62 ft. below.

The Northern Navigation Co.'s s.s. Noronic is to be taken to Detroit, Mich., May 1, where she will be utilized as an hotel until June 9, when she opens her summer service by taking members of the Detroit Board of Commerce on their annual lake trip. If the Noronic is a success as an hotel in the early part of the season, the company will probably again place her at Detroit, for similar purposes, from the close of the summer season until the end of November.

Canada Steamship Lines, Ltd., which, as announced in a previous issue, has bought the steamships Nipigon and Wyoming from U.S. owners, has transferred them to the Canadian register, the former under the name of Maplehill and the latter as Wyoming. The Maplehill was built at St. Clair, Mich., in 1883, and is screw driven by engine of 79 h.p., her dimensions being—length 194.2 ft., breadth 33.9 ft., depth 13.7 ft., tonnage 925 gross, 560 registered. The Wyoming was built at Buffalo N.Y., in 1887, and is screw driven by engine of 109 h.p., her dimensions being—length 250.4 ft., breadth 40.1 ft., depth 14.6 ft.; tonnage 1,492 gross, 911 registered.

It is reported that Belleville business men are negotiating with Canada Steamship Lines, Ltd., for the purchase of the s.s. Brockville, to be operated in passenger service between Belleville and Montreal, during the forthcoming season. The s.s. Brockville has an oak hull and was built at Toronto in 1898. Her dimensions are—length 105 ft., breadth 21 ft. 5 in., depth 5 ft. 7 in., tonnage 191 gross, 88 registered. She is equipped with fore and aft compound engine with cylinders 9 and 18 in. diam., by 14 in. stroke, 140 i.h.p., at 165 r.p.m., supplied with steam by one firebox boiler 4 ft. 9 in. diam. by 8 ft. long, at 165 lb., by Polson Iron Works Ltd., Toronto.

The s.s. Oceanica, has been bought from U.S. owners by W. Ziff, Montreal. She was owned formerly by Tonawanda Iron and Steel Co., Tonawanda, N.Y., and has an oak hull, with diagonal strapping on the frames, steel boiler house, steel arches, bow sheathed for navigation in ice, bulkhead between decks, with no efficient bulkhead abaft. She was built at West Bay City, Mich., in 1881, when she was named Sevona. She underwent considerable repairs in 1913. Her dimensions are—length b.p. 263 ft., breadth moulded 37 1/2 ft., depth moulded 21 ft., tonnage 1,409 gross, 1,241 net. She is equipped with fore and aft compound engines, with cylinders 27 and 50 in. diam. by 40 in. stroke, 600 h.p., at 80 r.p.m., supplied with steam by two firebox boilers at 95 lb.

The Kingston Navigation Co. is being formed at Kingston, Ont., by a number of members of the Board of Trade, for the operation of a steamship between Kingston and Ogdensburg, N.Y., during the summer. It is stated that the s.s. St. Lawrence has been bought from Canada Steamship Lines, Ltd., and that she will be transferred from U.S. to Canadian register. She was built at Clayton, N.Y., in 1884, and is of composite construction, of the single deck type, with the following dimensions,—length b.p. 154 ft., breadth moulded 21 ft., depth moulded 7 ft., tonnage 312 gross, 186 net. She is equipped with beam condensing engine having cylinder 32 in. diam. by 72 in. stroke, 350 i.h.p., at 38 r.p.m., supplied with steam by a single fire box boiler 8 ft. diam. by 16 ft. 2 in. long, at 87 lb.

The s.s. Viking, which was bought some time ago by interests associated with the Mathews Steamship Co., Toronto, from U.S. owners, has been transferred to the Canadian register, and to Mathews Steamship Co.'s ownership, under the name of Cylaton. She was built at Buffalo, N.Y., in 1889, and is a steel ship of the well deck type, with double bottom for watertight ballast, 3 watertight bulkheads, steel boiler house, steam pump wells, electric lighting, and hatches spaced 24 ft. centers. Her dimensions are,—length b.p. 217 ft., breadth moulded 37 ft., depth moulded 18 ft. She is equipped with fore and aft compound engines, with cylinders 23 and 48 in. diam. by 42 in. stroke, 365 i.h.p. at 85 r.p.m., supplied with steam by two firebox boilers, each 8 1/2 ft. diam. by 14 ft. long, at 125 lb.

Dredging operations are being carried on in Toronto harbor by Canadian Stewart Co. in connection with the harbor improvements. This necessitates the maintenance of a pipe line across the western entrance channel, from the opening of navigation until about May 21, with the exception of such days as weather conditions prevent the use of the eastern entrance channel. In the event of a heavy easterly wind making the approach through the eastern entrance difficult, the pipe line will be broken temporarily to provide an opening for vessels at the western entrance, the harbor master deciding as to the necessity for such break. Signals, for the use of the western entrance during heavy weather, are 2 long and 2 short blasts of the whistle at 3 minutes intervals, at least 10 minutes before reaching the piers. The pipe line, through which dredge material is discharged, will be kept well lighted at night by the contractors.

The barge Arthur, owned by Connelly Bros., Buffalo, N.Y., was sold recently to Webster Steamship Co., Montreal, who have traded her for the barge Valencia, owned by Sincennes-McNaughton Line, Ltd., Montreal, and the last mentioned company has bought the barge Nellie Redington from Connelly Bros., Buffalo, N.W. The Arthur was built at Detroit, Mich., in 1871, and was originally the schooner D. P. Rhodes, and underwent large repairs in 1912. Her hull is of oak and she has the following dimensions,—length b.p. 216 ft., breadth moulded 35 ft., depth moulded 16 ft., tonnage 891 net. The barge Valencia was built at Garden Island, Ont., in 1888, and has an oak hull of the following dimensions,—length b.p. 178 ft., breadth moulded 30 ft. 8 in., depth moulded 13 ft. 2 in., tonnage 443 net. She was at

one time owned by Montreal Transportation Co., and is classified for service on Lake Ontario and St. Lawrence River and canals. The barge Nellie Redington was built of oak, at Cleveland, Ohio, in 1872, and underwent large repair in 1914. Her dimensions are,—length b.p. 205 ft., breadth moulded 33 ft., depth moulded 16 ft., tonnage 775 net.

Manitoba, Saskatchewan and Alberta.

It is reported that a waterways association is being formed in Winnipeg, to encourage the development of waterways in the Prairie Provinces. It is stated that one object is to make the Saskatchewan River navigable for the transportation of coal from the western mines.

Lamson and Hubbard Canadian Co., Ltd. has been granted supplementary letters patent decreasing its capital stock to 10,000 shares of preferred stock of \$100 each, and 15,000 shares of common stock without nominal or par value, and increasing its preferred capital stock to 15,000 shares of \$100 each, and its

common capital stock to 33,750 shares without nominal or par value, provided that it carry on business with a capital of \$1,668,750. The company is engaged chiefly in the fur trade, and operates steamboats on the Athabasca, Slave and Mackenzie Rivers.

British Columbia and Pacific Coast.

The Consolidated Whaling Corporation's 8 steamships have all been overhauled and refitted at the company's headquarters at Point Ellice, Victoria, and are in readiness for the opening of the Whaling season early in May.

The Vancouver Harbor Commissioner's agreement with the Great Northern Ry. Co. for the acquisition of land as a site for a pier to be built on Burrard Inlet, and to be known as the Ballantyne pier, has been submitted to the Dominion Government for approval.

The s.s. Tactician, which was docked at Yarrow's yard, Esquimalt, Apr. 10, to have her rudder repaired by electric welding, cleared from the yard again,

Apr. 13, this being the first large electric welding job carried out there since the installation of a complete new electric welding equipment.

The s.s. Robert Dunsmuir, owned formerly by Ocean Falls Co., Vancouver, B.C., has been dismantled and removed from the Canadian register. She was built at New Westminster, B.C., in 1883, and was screw driven by engine of 18 h.p., her dimensions being,—length 105 ft., breadth 17.5 ft., depth 6.7 ft.; tonnage 152 gross, 96 registered.

The C.P.R. British Columbia Coast Service recently declined to put any ships in the ferry service between Port Angeles and Victoria during the coming summer, as all its available ships will be heavily engaged on the regular routes. The Puget Sound Navigation Co. has, however, announced that it will put on a ferry service between these points.

The Kingsley Navigation Co.'s s.s. E. D. Kingsley arrived at Victoria, B.C., Apr. 10, after a voyage from Port William, Ont., through the Great Lakes, the St. Lawrence River, Gulf, Atlantic Ocean, occupying about 4½ months. She was built by Canadian Car and Found-

Vessels Registered in Canada During January and February, 1920.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 h.p., are eliminated, as also are sailing vessels of less than 100 tons register.

at Port Williams, Ont. last, and will be sent to the British Columbia coast by sea.

The U. S. Federal Court at Seattle, Wash., made an order yesterday, continuing the trial of the case of the *Princess Rupert* until the 14th day of May, 1920. The court was satisfied that the *Princess Rupert* was damaged by the collision with the *Albatross* on the 14th day of March, 1919, and that the damage was not the result of the negligence of the *Princess Rupert*. The court also ordered that the *Princess Rupert* be allowed to return to its home port, and that the *Albatross* be allowed to return to its home port.

The Canadian Trading Co., Vancouver, B.C., has transferred its steamship, *Princess Rupert*, and *Princess George*, from the British to the Canadian register. The *Princess Rupert* was built at Hull, Eng., in 1887, originally named *Albatross*, and lengthened there in 1902. She is screw driven by engine of 58 h.p., and has the following dimensions,—length 121.2 ft.; breadth 21 ft.; depth 11.3 ft.; tonnage 266 gross tons. The *Princess George* was built at Hull, Eng., in 1885, and is screw driven by engine of 80 h.p., her dimensions are,—length 135.3 ft.; breadth 21.5 ft.; depth 11.2 ft.; tonnage 266 gross tons.

The Grand Trunk Pacific Coast Steamship Co. has introduced a bi-weekly steamship service between Seattle, Wash., and Prince Rupert, Apr. 21, with the steamships *Princess Rupert* and *Princess George*, the former leaving Seattle at 11 p.m. Sundays and the latter 11 p.m. Wednesdays, returning there 4 p.m. Sundays and 4 p.m. Wednesdays, respectively. Calls will be made at Victoria, Vancouver, Ocean Falls, and Swanson Bay. The s.s. *Princess Albert* is operating between Prince Rupert and Queen Charlotte Island ports.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. *Princess John* was damaged and beached off Deadtree Point, Graham Island, towards the end of March in a collision with the company's s.s. *Princess Albert*. She was subsequently floated and taken to Prince Rupert by the salvage steamship *Algerine*. It is stated that tenders have been asked for the repairs, which will include the straightening of several plates, relaying of a new upper deck, and the replacing of all cabin work. There appears to have been no damage to machinery, but the cargo was practically a complete loss.

The auxiliary powered schooner *Laurel Whalen* arrived in Vancouver, Apr. 10, after an absence of two years, during which she had considerable adventure. She was one of 12 similar ships built by Cameron-Genoa Mills Shipbuilders Ltd. for Canada West Coast Navigation Co. Ltd. She sailed from Victoria about 2 years ago for Australia, with lumber, and later cleared from Adelaide with wheat for British Columbia, but off New Zealand broke her crank shaft and put into Auckland for repairs. On again sailing she ran into heavy storms, and on Aug. 25, 1919, was compelled to put into Paapeete, in leaking condition, and as she could not be repaired there, her cargo of wheat was discharged, and arrangements were made for towing her back to her home port. The towing was done by the tug *Hercules*, and lasted from Mar. 3 to Apr. 10, at an approximate cost of \$35,000.

Steamboat Inspection.—The estimates for the year ending Mar. 31, 1921, submitted to the House of Commons recently, contain an item of \$105,470 for steamboat inspection.

Dominion Government Aid for Wooden Shipbuilding in British Columbia.

Canadian Railway and Marine World has been authorized to order, in consequence of Dec. 24, 1919, granting aid for the construction and equipment of ships in British Columbia, to the extent of \$175,000. The order has been approved by the Department, dated Mar. 16, between the Dominion Government and Victoria (B.C.) Shipowners, Ltd., a company incorporated under the British Columbia Companies Act, by which the company agrees to build and equip in the Chohberg shipyard, Victoria, or such other shipyard as may be approved by the Finance Minister, and to have completed within 12 months of the commencement of construction, 4 sailing ships of barkentine rig, each with a cargo capacity of 2,400 d.w. tons, or 1,500,000 ft. b.m. firm lumber, at an estimated cost of \$250,000 each. Contracts, plans, specifications, etc., are all subject to the Minister's approval, or of a marine architect to be named by him. Advances on account of the cost of construction, not exceeding \$175,000 for each ship, will be made from time to time on the architect's certificate that the expenditure and payment has been provided for to the extent of at least \$75,000 on the construction of the ship, and that in his judgment the further expenditure incurred for material and labor, and the progress of the work, are sufficient to justify the advances named in his certificate. These advances will be secured by a first mortgage, or mortgages, on the ships, with interest at 6% per annum. The owners shall expend in construction and equipment of these ships, not less than \$75,000 each, or \$300,000 in all, the intention being that the company shall assume the cost to that extent, the government to advance the balance of cost, not exceeding \$175,000, for each ship, and if the cost of the building and equipping any one of the ships shall exceed \$250,000, such excess shall be paid by the company. It is agreed that for determining the amount of the advances, if any portion of the cost be represented by the delivery of lumber required, the prices shall not exceed the following, f.o.b. cars at Victoria:—

Frame, grade	\$24 per m
Merchantable	30 "
Planking	30 "
Ship decking	65 "
Additions as per Standard Fir Tumble list no. 2	
B.C. average length 30 ft.	

Payment for other materials to be allowed at not exceeding lowest prices available, as ascertained by competitive bids, all material to be delivered and accepted in good condition. It is also provided that the net operating revenue from the operation of the ships when completed, shall first be applied in payment of interest on the government advances, and when sufficient has been set aside for this purpose in any year, the company may appropriate out of the revenue earned by each ship in that year, \$4,500, and the balance of the net earnings of each ship in any year shall be paid on account of money advanced by the Government, and interest shall be chargeable only on the balances remaining unpaid. It is agreed that returned soldiers shall be given employment on the building of these ships to the fullest extent practicable, and that at least 60% of the total number of men engaged at any time thereon, shall be returned sol-

diers. As men required shall be employed through the Dominion Department of Labour, an R. C. Government Employment Agency, and as soon as the work is sufficiently advanced, at least 235 men shall be employed on each ship.

If the company, by reason of bankruptcy, fire, or any other causes, fails, or is unable to complete the ships, or, if in the opinion of the architect it is guilty of unreasonable delay, the government may take immediate possession of the ships, and all material intended for them, and the mortgages shall become due any payable, and all powers in connection therewith shall be transferred to the government. The agreement is signed on behalf of the company, by Clarence Board, Vice-President, and Edwin Board, Secretary, Treasurer.

Mariners' Certificates of Service Requirements Amended.

A bill to amend the Canada Shipping Act was passed by the House of Commons, Apr. 8, repealing R.S.C. 1906, chap. 113, secs. 85 to 89 and sec. 91 containing the conditions relative to the issuing of certificates of service to masters and mates of seagoing and inland waters shipping, and substituting therefor the following:—

"85. Every British subject who, (a) served as a master or mate of a seagoing or coasting sailing vessel of over 75,000 gross tons, before Jan. 1, 1920, for a full period of 12 months within 10 years immediately next preceding the date of his application for a certificate of service; (b) produces satisfactory evidence of his sobriety, experience, ability and general good conduct on board ship; and, (c) passes the sight test and the prescribed examination in signalling; shall be entitled, on payment of the prescribed fee, to a certificate of service as a master or mate of a square rigged or fore-and-aft rigged seagoing or coasting sailing vessel not exceeding 750 registered tonnage, according as his service has been (a) as master or as mate, (b) on a seagoing or on a coasting sailing vessel, (c) on a square rigged sailing ship or on a fore-and-aft rigged sailing vessel.

"91. In every such certificate of service the name, place and date of birth of the person to whom the same is issued shall be stated, and each certificate shall specify whether the holder is entitled to act as master or mate, whether the certificate is for seagoing vessels or for vessels in the coasting trade, and whether for square rigged sailing vessels or for fore-and-aft sailing vessels, and that it is not for any vessel exceeding 750 registered tonnage."

Black Star Line of Canada, Ltd., has been incorporated under the Dominion Companies Act, with authorized capital of \$1,000,000, and office at Montreal, to own and operate steam and other ships and to carry on a general navigation and transportation business. The incorporators are: F. H. Markey, K.C.; W. W. Skinner, K.C.; G. G. Hyde, K.C.; R. C. Grant, and R. J. Forester, Montreal.

Concrete Ships Failure.—Sir G. B. Hunter, Managing Director, Swan Hunter, and Wigham Richardson Ltd., English shipbuilders, is reported, in a London press cablegram, to have stated that concrete ships are a complete failure, that they cost twice as much as steel ships, and take twice the time to build, and that his company has discontinued their construction finally.

The Minister of Marine on the Government's Shipbuilding Programme.

When the House of Commons went into committee of supply on Mar. 23, on the estimates for the year ending Mar. 31, 1921, on the item Marine Department Government shipbuilding programme, amount required for the construction of ships in accordance with Government programme, \$20,000,000, the Minister of Marine, Hon. C. C. Ballantyne, said:— This amount, \$20,000,000, is being asked for in order to complete the Government merchant marine shipbuilding programme, and part of the appropriation is a re-vote from last year. If Parliament gives its consent to this appropriation, then the government have no further estimates to bring down in connection with the building of steel freight ships. I will refer briefly to the condition of the shipbuilding industry from 1875 up to 1919 and give a comparative statement showing the number and tonnage of ships on the Canadian registry books on Dec. 31 as follows:—

Year.	Number.	Net tonnage.
1875	6,852	1,205,565
1885	7,315	1,231,356
1895	7,262	825,776
1905	7,325	669,825
1915	8,757	929,312
1919	8,573	1,091,780

Members will note the great shrinkage in shipbuilding in Canada over the periods which I have just mentioned. During the last 10 years, while the quantity is small, the ships built were of both classes, wood and steel. In 1919, the business revived again, on account of the war, and 8,573 ships were built with a net tonnage of 1,091,780.

Before the war the world's merchant shipping was roughly 43,000,000 tons, of which Great Britain owned approximately 23,250,000 tons. Owing to the great destruction by submarines during the war, the total world tonnage lost by enemy action was 15,000,000 tons gross, and of these losses British merchant tonnage comprised 2,479 ships with a gross tonnage of 7,759,090 tons, and 14,287 lives were lost. 675 fishing ships were lost, with a gross tonnage of 71,765 tons, and in addition 1,885 British ships, with a total tonnage of 8,007,967 tons were damaged and temporarily put out of commission, involving the loss of 592 lives. May I be permitted to pay a tribute—which I am sure will be concurred in by all members and in which I am sure I am expressing the opinion of Parliament—to the heroic men who manned the merchant marine, and so many of whom gave up their lives during the recent war?

I wish to state very briefly, too, the reason why the government decided to enter upon a shipbuilding policy. In a word, the reason was simply this, that, owing to the great loss of world tonnage and the imperative need of Canada creating, owning and operating a merchant marine of her own, and also in view of the fact that the government owned a very large system of railways which, when the Grand Trunk is formally taken over, will comprise some 22,000 miles, it was a matter of very urgent importance that Canada should own her own merchant marine, to do work in conjunction with our large transcontinental railway system, and also for the purpose of expanding Canada's export business. Later on, I shall have something more to say in this regard, but I will now pass on to the contracts that have been let. The following table shows the several classes

of vessels built and in course of building, they being divided into six types, as follows:

Type	Tonnage	No.
1	10,800	2
2	8,300	25
3	5,100	8
4	4,500	8
5	3,400 to 3,900	17
6	2,800	3
Total.....		63

The total net tonnage is 380,435. The contracts are spread over a period from March or April, 1918, up to within a few weeks ago. The average cost of these 63 ships, including the contracts that were let during the war and since the armistice was signed, is \$191.92 a ton. During the war contracts were let at from \$180 a ton for the large ships to \$215 a ton for the lake size. Since the armistice has been signed, we have been able to contract for the large size at \$167.50 a ton and for the lake size at \$180. The contracts have been placed with the following yards:

Ships.	Tons.	Tons.	Tons.
Canadian Vickers, Ltd.—	4,555	9,150	
10	8,390	83,900	
			93,050

Harbour Marine Company, Victoria—	2	8,390	16,780
Collingwood Shipbuilding Co., Collingwood—	7	3,890	27,230
Collingwood Shipbuilding Co., Kingston—	2	3,890	7,780
Port Arthur Shipbuilding Co.—	4	3,400	13,600
	2	4,375	8,750
	1	3,890	3,890
			26,240

Halifax Shipyards, Ltd.—	2	10,800	21,600
	2	8,390	16,780
			38,380

Tidewater Shipbuilders Ltd.—	4	5,100	20,400
------------------------------	---	-------	--------

Davie Shipbuilding & Repairing Co.—	2	5,100	10,200
	1	8,390	8,390
			18,590

British American Shipbuilding Co.—	2	4,575	9,150
------------------------------------	---	-------	-------

Midland Shipbuilding Co.—	1	3,890	3,890
---------------------------	---	-------	-------

Dominion Shipbuilding Co.—	2	3,400	7,000
----------------------------	---	-------	-------

J. Coughlan & Sons -	6	8,390	50,340
----------------------	---	-------	--------

Wallace Shipyards, Ltd.—	2	4,575	9,150
	2	5,100	10,200
	2	8,390	16,780
			36,130

Prince Rupert Shipbuilding Co.—	2	8,390	16,780
---------------------------------	---	-------	--------

Nova Scotia Steel & Coal Co.—	3	2,800	8,400
-------------------------------	---	-------	-------

Seven ships have been completed of type no. 2, 8,300 tons; 4 have been completed of type no. 3, 5,100 tons; 4 have been completed of type no. 4, 4,500 tons; 8 have been completed of type no. 5, 3,400 to 3,900 tons, and 1 has been completed of type no. 6, 2,800 tons. Of the 8,300-ton type, 5 are being equipped with oil fuel apparatus and 13 of the same type are being fitted with refrigerating space.

The expenditure to date is as follows: Payments to April, 1919, \$19,510,322.35; payments from April, 1919, to Mar. 1, 1920 \$24,194,639.78, total, \$43,704,962.13. Balance available on Mar. 1, 1920, from vote for current year, \$15,505,361.22.

There has been some little criticism in the press, in regard to the cost of the government ships, and I wish to take advantage of this occasion to make a comparison between our cost and the cost of ships contracted for in Canada by the Imperial Munitions Board for Great Britain, also the cost of ships built for Great Britain in foreign countries, and the cost of similar types of steel ships

built in the United States. From information available it is learned that the ships constructed by the U.S. Emergency Fleet Corporation varied considerably in cost. Most, if not all, of the contracts placed by them during the war contained a provision that the price agreed upon in the contract was to increase or decrease according as wages and the cost of materials increased or decreased. Inasmuch as there was a steady increase in wages, there was a consequent increase in the cost of materials, with the result that it was not possible for them to determine the cost of their ships until after they were completed. It was then found that the price ranged very considerably over \$200 a ton.

In placing contracts, we had our own technical officers figure up the cost. Then we called for bids and made the very closest and best arrangement we could with the various yards with which we have placed contracts. We made our price and our contracts at so much per ton deadweight. It will be noted that the U.S. policy differed entirely from that pursued by the Canadian Government. They took a base price, and then had a clause in their contract to the effect that as wages and the cost of materials varied up or down—and it was always up—an increase in price would be allowed from the time the contract was let until the ship was completed. Consequently, until the ship was ready to be put into commission, they could not tell what the actual cost was. I believe I am making a very conservative statement when I say that the large amount of steel tonnage built in the U.S. for the Emergency Fleet Corporation cost \$200 a ton or over. Skinner and Eddy, of Seattle, are building a standard ship of 3,800 tons capacity, and Mr. Skinner, giving testimony before the U.S. Senate last month, declared that these ships were being built at present at a price of \$188 a d.w. ton. Ships somewhat similar in size, but more exacting in the matter of equipment, etc., are being built in British Columbia at present under the Government programme for \$167.50 a ton.

Cost of Shipbuilding.

I wish to refer to the cost of ships built in this country by the Imperial Munitions Board, and I offer no criticism whatever of the way in which the board let contracts: on the contrary, I think they deserve a great deal of credit for getting the steel shipbuilding industry in this country started in the manner they did. My figures are taken from the report of the National Committee on Expenditure appointed by the British Government, and are therefore official and authentic. The Imperial Munitions Board ordered 44 steel ships in Canada at \$39.10s. a ton, which would be equivalent to \$190. When they placed their contracts in 1916, the cost of labor, of ship plates, and of all other material entering into a ship was not nearly as high as when this government entered on its shipbuilding programme about May, 1918. The Imperial Munitions Board also built in Canada 16 wooden ships at a cost of £42 a net ton d.w., equivalent to \$204.

Some criticism has been levelled at this government for intervening at the time we did instead of allowing the Imperial Munitions Board to proceed with their shipbuilding programme, but I am sure members must see the wisdom of

showing. The government ships enabled the exportation of Canadian products in 1919 to the value of \$21,362,000, much of which would not have been shipped if the shipping facilities had not been provided by the government.

Since Jan. 1 shipyards on the Pacific Coast have delivered three ships, Canadian Raider, Canadian Importer, and Canadian Exporter, all of which will be employed in the Canadian-Australian trade. The Canadian Raider and Canadian Importer have sailed with a full cargo of lumber in the one case, and a full cargo of confectionery, newspaper, lumber, rubber tires, etc., in the other. The Canadian Exporter is loading at present. It is expected that with the service which the Canadian Government Merchant Marine will be able to provide between Canada, Australia and New Zealand very important business will be established.

By order in council these ships were transferred to Canadian Government Merchant Marine at contract price. In lieu of that Canadian Government Merchant Marine issued notes payable to the Finance Minister bearing interest at 5½%. It is incumbent upon Canadian Government Merchant Marine not only to meet the interest on the cost of construction on these ships at 5½%, but also to pay the principal from time to time out of earnings. I am very happy to announce that, notwithstanding only 19 ships were in service for a portion of the year, yet, out of earnings Canadian Government Merchant Marine has issued a cheque to the consolidated revenue fund of Canada for \$500,000 which meets the interest at 5½% to Dec. 31, 1919. Members will see that the Canadian Government Merchant Marine is paying its way although it has hardly got started.

Australian Shipbuilding.

It may interest members to know what our sister Dominion of Australia is doing. Australia has half our population but is still a nation of great vision, energy and capability. In the early days of the war, Australia acquired by purchase 15 second hand British ships with a tonnage of approximately 100,000 tons. In addition the Commonwealth Government undertook a local building programme. The original programme provided for building 24 steel ships of about 5,500 tons deadweight each and 24 wooden ships of about 2,600 tons d.w. each. A second programme was subsequently undertaken which provided for building 14 steel ships of about 6,000 tons d.w. each. In addition contracts were placed by the Australian Government for building 6 vessels in United Kingdom yards of about 12,000 tons d.w. When Australia completes her programme she will possess a total of 348,400 tons net, a very good merchant marine for our overseas dominions to have.

Steel Plates for Shipbuilding.

I now come to an important adjunct of shipping, viz., the establishment of a steel plate mill and the contract entered into by the Dominion Steel Corporation with the government which calls for 250,000 tons of ship plates, the government obligating itself to take 50,000 tons a year for five years with the option of increasing that quantity up to 75,000 tons if it should think fit to do so. The contract was made when the war was on. The government had entered upon a shipbuilding programme and the only country that Canada could get ships plates from was the U.S. We placed a large order in that country for 80,000

tons, but notwithstanding all our efforts to get delivery of steel we were only able, after 12 months, to get 6,000 tons. At that time no one knew how long the war was going to last, and the necessities of shipping were very pressing upon the government. Therefore we decided that Canada should be self contained, as far as shipbuilding was concerned, and entered into the contract referred to. The government made this contract at a price of \$4.15 per 100 lb. That was during the war, but after the armistice had been signed I summoned the Dominion Steel Corporation's officials to Ottawa and told them that while the contract was binding upon both parties and I could not force them to reduce their price, at the same time the government would appreciate it if they could see their way clear to make a reduction. The officials received the proposal in a very broad and generous spirit, and after several weeks of negotiation, I was able to prevail upon them to reduce the price from \$4.15 per 100 lb. to \$3.65, equal to \$11.20 a gross ton, a saving on the entire contract of \$2,800,000. The mill commenced operations on Feb. 17 last, and from the first, ship plates measuring up to the high standard required by Lloyds were being successfully turned out. Within a month after the actual commencement of operations at the mill, the total commitments for the first year were practically disposed of. Thirty-four thousand tons will be required for shipbuilding purposes; 9,300.59 tons have been sold to outside powers; at the present moment 6,000 additional tons are under option. In addition the government is in negotiation with the New South Wales Government for the sale of some 15,000 tons, which it is hoped to conclude successfully within the next 30 days. Further enquiries are being received almost daily for steel, but until such time as the department ascertains the quantity of plates that the mill will be able to produce in the first year it will not be possible to take any further commitments.

There will be no difficulty on the government's part in fulfilling its part of the contract by taking in its part of the contract by taking 50,000 tons, and I am almost certain that we will have to ask the Steel Corporation, under the terms of our contract, for a maximum quantity of 75,000 tons. I do not want to make any statement that will not prove to be accurate later on, but as far as I can tell from the contracts that we have taken, and the contracts that we expect to take, I think I am safe in saying that the government will not make any loss after accepting the maximum quantity that it has to take under the terms of the contract, and there is a fair possibility that a year hence, if I am spared, I may be able to inform members that there has been a profit in the matter of ships' plates as well as ships.

Our competitor in ships' plates in the world is not the United Kingdom, but in Australia, and elsewhere our competitors are our neighbors to the south, the United States. The price of ships' plates in England is, if my memory serves me right, \$27.10 a ton, which is very much higher than is our price from the Steel Corporation, so much so that we could ship Canadian plate, turned out at the Sydney mill, to any part of the United Kingdom and meet the competition there and still have a good profit. It is not to be wondered at that the price of plates

has advanced in the old country. There has been a rise in wages over there and the price of materials of all kinds that enter into shipbuilding has gone up. No one expects that the United Kingdom will ever return to pre-war prices for steel freight ships or passenger ships either. The price of building steel ships in the United Kingdom, of similar size and design, is just as high as in this country. But there will come a time when the yards in the United Kingdom will not be as fully occupied as they are now. Every yard in England, Ireland and Scotland has more contracts than it is able to turn out for some time to come; but when the pressure on those yards eases off, competition is bound to become keener; and if nothing is done for the shipbuilding industry in this country, when that time arrives it is difficult for one to forecast what may happen to our magnificent shipbuilding industry, which as it is established at present has bright prospects of becoming very much bigger and greater.

Subsidies for Shipbuilding.

That brings me to the question of subsidies. I am not going to say anything in that regard, further than that the government has the matter under its careful consideration. The Finance Minister, when he brings down his budget, will state, in the government's behalf, whether or not it can see its way clear to do anything to aid the shipbuilding industry in Canada. However, it will be gratifying to members to know that notwithstanding the fact that Canadian shipbuilders have absolutely no protection of any kind they have been able under existing conditions to secure foreign orders in competition with shipbuilders in the old land. The National Shipbuilding Co. of Three Rivers, Que., is building six ships of 5,000 tons d.w. each, three of 3,200 tons each and two of 6,500 tons each for foreign registry. These orders were secured from France by the National Shipbuilding Co. in competition with the world. Canadian Vickers, Ltd., of Montreal, also in competition with the world, secured a contract from Norway for the construction of two steel vessels of 8,000 tons d.w. each. The Collingwood Shipbuilding Co. has secured the contract for a canal size ship for the Standard Oil Company of New Jersey, to be employed in foreign waters. That may seem to indicate that our shipbuilders can now compete with the world, on account of the conditions that I have referred to. But I am not so optimistic as to say that one or two years from now they would be able to do so without any assistance whatever.

I desire to pay a tribute to those of our Canadians who have had to do with the building of these ships. They were not skilled in the building of ships when steel shipbuilding was commenced on a large scale some two or three years ago. But although the designs of the ships which are being turned out in the yards from Halifax to Prince Rupert are British, the materials and workmanship are Canadian, and Canadians have demonstrated their skill in shipbuilding as they have in other walks of life, just as when the call of their country came they displayed their adaptation to military life, and their bravery in the field of battle. Our ships are equal in design, workmanship and efficiency to any ships of the same kind that are built in the old land. I have covered the programme as fully as I have been able to; if members desire to ask any questions I shall be only

The Baddeck Steamship Co's s.s. Bluehill is running between Iona and Baddeck, N.S., connecting at Iona with Canadian National Rys. trains 5 and 5 daily except Sundays.

Canadian Railway and Marine World

June, 1920

Railway Rates for Carriage of Mails Recommended to be Largely Increased.

The Dominion Government, on Mar. 7, 1917, passed the following order in council:—The committee of the Privy Council have had before them a report, dated Feb. 15, 1917, from the Postmaster General, submitting that the different railway companies of Canada have carried the mails since Feb. 1, 1913, at the following rates:

For full postal car	16c a mile
For half postal car	9c a mile
For baggage car service over 30 ft. space	16c a mile
For baggage car service, 15 to 30 ft. space	9c a mile
For baggage car service less than 15 ft. space	4c a mile
Special mail train ordered by Post Office Department	\$1.25 a mile
Special mail train when other cars are attached by the railway company	\$1.00 a mile

It is claimed by the Canadian Pacific and Grand Trunk Railways that these rates are inadequate, and the Minister therefore recommends that the question of remuneration to be paid the railway companies be referred to the Board of Railway Commissioners to determine as to the accuracy or inaccuracy of the claims made by the railway companies, and, if it is found that the present rates are inadequate, to determine, as the result of evidence to be submitted by both parties, that is the Post Office Department and the different railway companies interested, what would be a fair rate of payment for the service. The committee concur in the foregoing recommendation and submit the same for approval.

The hearing of the case by the Board of Railway Commissioners was postponed from time to time, at the Post Office Department's request, and it was not until Mar. 18, 1919, that it was heard at Ottawa, the P. O. Department's counsel having submitted previously that no conditions had arisen which would warrant any increased payments to the railways. Commissioner S. J. McLean made a report, under the reference, on July 5, 1919, but the Post Office Department declined to make it public, on the ground that it was before the government for consideration. However, at the Dominion Parliament's recent session, Jacques Bureau, M.P. for Three Rivers, Que., moved that the report be submitted to the House of Commons and it was brought down accordingly. Commissioner McLean's report, referred to above, is as follows:—

The rates referred to in the reference by the Privy Council were put into force for one year and have been continued from year to year. The railways contend that they in no sense agreed to these rates, but that they had made protests from time to time. There is some uncertainty as to how the basis for full cars was arrived at in the first instance. It was stated that information had been obtained from F. P. Gutelius as to operating costs on the Intercolonial Ry., and that the rates had been built up, allowing an operating ratio of approximately 60%. It was stated, however, by the P. O. department's counsel that the estimate of basic cost per mail car mile, submitted by Mr. Gutelius, had been withdrawn by him subsequently. It was

recognized at the hearing that costs had increased and the submission of the department was, in substance, that it was justifiable to consider this increase of cost, and to add thereto such additional amount, by way of operating ratio, as would give a reasonable profit on cost. There is no difference between the parties as to the car mile being the proper unit of charge.

Statistical material bearing on the apportionment of costs was submitted at the hearing by the Canadian Pacific, Grand Trunk, and the Toronto, Hamilton & Buffalo Railways. W. J. Moule, Assistant Comptroller, Canadian Pacific Ry., made an apportionment of cost, involving in the first instance the separation of freight and passenger costs, and allowing thereafter for certain items of expense which he considered did not enter into the mail service in the same ratio as they did into the passenger service, and the allocation of cost on the basis of passenger train mileage. About 50% of the cost so computed was stated to be on the basis of items which could be directly allocated; the remainder was on a basis admittedly more or less arbitrary. Reference was made by Mr. Moule to the question of mail pay which is being brought before the Interstate Commerce Commission by the United States Post Office Department. That department has prepared a form of subdivisions of costs, and it was stated by Mr. Moule that his methods did not make more than a fraction of 1% of difference on the total as compared with the method prepared by the U.S. Post Office Department. The method of subdivisions, as made use of by Mr. Moule, is in summary form as follows:

Actual cost:—Train locomotive men, fuel for train locomotives, trainman's wages, and great bulk of train supplies and wages.

Yard expenses:—Statements from heads of different divisions as to the different proportions.

Maintenance of way and structures, divided on basis of expenses.

Locomotive repairs and renewals:—Divided on straight locomotive basis (this is in accordance with general practice; also made study of typical passenger and freight locomotives, and found locomotive cost per mile practically identical).

Maintenance of equipment:—(This is a general heading). Under this heading there are here concerned items of superintendence, shop, machinery, and other items under that heading. Apportioned on the basis that the previously divided expenses under maintenance bore to the total, what is commonly known as overhead basis.

Traffic expenses, worked out on a test for one month by him, giving 57.77% passenger.

Dispatching trains, divided on a train mile basis.

Items under Transportation:—Superintendence and station employees, station supplies and expenses, miscellaneous accounts, e.g., drawbridge operation, telegraph and telephone operation, operat-

ing floating equipment, other expenses, operating joint tracks and facilities, damage to property, damage to live stock on right of way, injuries to persons. Above apportioned on the basis which the previously divided expenses for passenger bore to the total expenses of those accounts. This is the I.C.C. basis.

General expenses, apportioned on the basis of how the other accounts were divided between passenger and freight as an overhead or supervisory expense under all previous items.

In addition to asking for increases in mail car rates, there are the following items:—terminal charges, switching, cleaning, repairs, for full mail storage cars \$4 a round trip; for apartment cars, 30 ft., \$2 a round trip; for baggage cars, 15 ft., \$1 a round trip. In the proposition made by the railways, it is provided that if the railways make use of the returning (empty) storage or baggage car space, credit is to be allowed the P. O. Department for the return mileage, and terminal charge; that is, the payment is to be for the loaded trip only. The evidence as developed was not sufficiently detailed to show that there were services commensurate with these costs, or to warrant the conclusion that additional terminal charges as asked for were justified.

The method used by the Canadian Pacific in its analysis of costs was followed by the Grand Trunk and may, therefore, be set out in summary form as typical. In the first instance, the Canadian Pacific submitted figures dealing with apportionment of cost for the year ended June 30, 1918. At the hearing, additional figures were submitted for the period from Aug. 1, 1918, to Feb. 1, 1919. In support of these figures being taken as affording a more exact measure of existing conditions, it was pointed out that the wage increases under the McAdoo award had become effective from Aug. 1, 1918, and added greatly to operating costs. On the basis of apportionment made by Mr. Moule, passenger car mile cost for the period Aug. 1, 1918, to Feb. 1, 1919, was 33.10c. From this he made certain deductions. In the case of baggage and express cars, it was found that the cost for maintenance was one-third less than for passenger cars. In the case of train supplies and expenses an arbitrary deduction of one half was made. These deductions amount to 2.52c a car mile, giving a computation of 30.58c a mail-car mile. To this figure was added a ratio for taxes, fixed charges and dividends, and a margin of 2% on the common stock. These items amount to 8.93c, which would give a total of 39.51c. If the 2% allowance above referred to is left out, it would give a figure of 38.25c. The general contention of Mr. Moule, the C.P.R. statistical expert, was that all the services in connection with passenger business should be so considered as in effect, since advantage was being taken of the whole passenger service and organization, by the mail service. It was contended for the P. O. Department that there were various items not properly allocatable to the mail service and

that these should be deducted. While referring to the deduction proposed, he stated that mail service, station supplies and some allowance for maintenance of buildings would take off 6.67c, leaving 11.5c, with a profit charge for a capital investment stock as included, of 1.18c, which is not included.

The Quebec Central Ry., in a written submission, stated it had an actual cost of 27.75c a car-mile, and overhead charges of 10.85c, giving a total of 41.44c. The Toronto, Hamilton & Buffalo Ry. said it had direct costs of 47.28c a car-mile. The services on the T. & B. are its baggage cars, entirely, and while its figures are referred to, it does not appear that they can be taken as characteristic.

Reference has already been made to the pending investigation into mail-car payment in the U.S. In a written submission, prior to the hearing, various railways represented that the payments they were then receiving were inadequate, and that in fact other services had to bear, under existing conditions, part of the cost of carrying the mails. Comparisons were made with the rates which were paid in the U.S., and it was pointed out that the Canadian rates were much lower. It does not appear that a finding based on existing U.S. rates can be made. It was stated by counsel for the P. O. Department, as by the Comptroller of Railway Mail Service, that the services performed by railways in Canada and in the United States are not on all fours; and in some particulars this was admitted by counsel for the railways, certain off line delivery service performed by the railways being referred to in this connection. Putting the foregoing figures in summary form the result is—

Passenger car-mile cost	33.10c
Deduct lesser charges of maintenance, train supplies and expenses	2.52c
Mail car-mile cost	30.58c
Ratio added for taxes, fixed charges, dividends and margin of 2% on common stock	8.93c
If margin of 2% on common stock deducted	39.51c
	1.26c
	38.25c
Deducting station services, station supplies and some allowance for maintenance of buildings (such deduction objected to by railway)	6.07c
	32.18c

The Grand Trunk figures for the year ended June, 1918, before the increase under the McAdoo award became effective, showed a computed car-mile cost of 25.48c, and adding to this 3c for overhead charges the result would be 28.48c a car-mile.

The criticism directed against the method of computation used by Mr. Moule, both by counsel for the P. O. Department and by his statistical expert, J. L. Payne, Comptroller of Railway Statistics, was that the element of individual judgment bulked largely in making the allocation. It cannot be said that exception was taken to this, as a principle, by the railways, the differences were as to details. It was frankly admitted by counsel for the P. O. Department that there were many costs common both to passenger and to mail service. It was contended for the P. O. Department that while the mail-car operation was mixed in with passenger train operation, there were certain costs attributable to passenger car operation which did not properly enter into the mail-car service; and it was further contended that the proper way of approaching the matter was to deal with it as if the mail

service were handled entirely on mail trains, to ascertain the cost properly apportionable thereto, and then make the necessary computations on the car-mile basis. As was pointed out by Mr. Payne, when cross-examined, there is not sufficient business for separate mail trains and, therefore, computations as to costs based on mail-train service proceed from a purely theoretical assumption. Further, he expressed the opinion that operation on a mail train basis would be both unnecessary and impracticable. While in view of what has been stated it does not seem that a computation in regard to a method of service that is not used can be helpful in arriving at a result of value, it may be pointed out that the items of cost which would be deducted in computing on a mail-train basis amount would mean a reduction from 33.10c for passenger mile cost to 24.29c for computed mail-car mile cost on a train movement basis.

Counsel for the P. O. Department had before him, before the hearing, a C.P.R. statement for the year ended June 30, 1918. While the statement for the period Aug. 1, 1918, to Feb. 1, 1919, differed as to totals, this does not change the situation from the standpoint of criticism of the principle involved. The mail-car mile cost as computed for the year ended June, 1918, was 24.83c. For the period Aug., 1918, to Feb. 1, 1919, it was 30.58c, or an increase of 23%. Against this must be remembered the large increases in wage and material costs.

The evidence given on behalf of the P. O. Department by the Comptroller of Railway Statistics, emphasized the element of judgment as a factor of importance in the allocation of costs. From the total cost of \$36,617,000, which was allocated to passenger business by the C.P.R., including under this mail-car service for the year ended June, 1918, Mr. Payne made computations to the effect that there should be deductions amounting to \$6,803,719. He considered that these should be deducted, before making the various divisions intended, to arrive at mail-car cost. The net effect is that he claimed there should be a deduction of 18.5%.

In connection with the original computations whereby a 16c figure per car-mile was arrived at, it is suggested that a basis of 11½c was taken, and that approximately 40% was added to this, to take care of general charges and an assumed element of profit. That is to say, there was an operating ratio of 60% provided for. Mr. Payne, in his evidence, considered that in order to provide for overhead, etc., an operating ratio of 75% was reasonable. For the years 1914-1917, inclusive, the operating ratio for Canadian railways averaged 72.1%. If Mr. Payne's deductions, averaging 18.5%, are made, the C.P.R.'s cost figure for mail-car service is reduced to 24.29c. For the theoretical mail-train service, the computed cost figure is 24.29c a car mile. At an operating ratio of 75%, the first computation would give a reasonable charge of 33.22c a car mile. On the same basis, the second computation which shows the extreme of what is claimed, but which for reasons set out is not a practical basis, the 75% ratio would give a reasonable charge of 32.38c a car mile. If a 60% ratio is taken, the figures would be 41.53c and 40.48c respectively. On the average of 1914-1917, the resultant figures would be 34.56c and 33.68c respectively.

Giving the consideration to the averages involved, and the element of judgment concerned in dealing with the ques-

tion as to the proper participation of the mail service in general costs, it would appear not unreasonable that the rate accepted by the board for the standard express service, in the general express judgment should be adopted, that is, a rate of 34.7c for a full mail-car mile. It would appear also not unreasonable that the charges for the other services set out in the order in council as contained in the reference to the board, should be increased in each case by the same percentage as the 34.7c rate represents over the 15c rate.

On August 29, 1919, Commissioner McLean made the following addition to his report:—Since the draft report was prepared, the matter has been before the other members of the board, who, in agreeing, are of the opinion that the 34.7c rate should be the maximum rate, and subject to all bonus or statutory deductions.

The report is still before the government and up to the time of writing (May 19) no intimation had been given of what action will be taken, though the Postmaster General, as one excuse for raising newspaper postage, said the railways will have to be paid much higher compensation than at present.

Electrification on Paulista Railway in Brazil.

The Paulista Ry. has given a contract to the International General Electric Co. for the electrification of its line between Jundiá and Campinas, Brazil, a distance of 45 kilometers, or about 28 miles. As the road is of double track construction, the total mileage, including switches and extra track, is about 76 miles. The project anticipates further extensions, amounting to about 100 additional miles, which may eventually bring the total electrification up to 128 miles, extending between Jundiá and San Carlos.

The equipment to be supplied by the contractors will consist of 12 locomotives, 8 freight and 4 passenger, material for the transmission line and substation, and a 3,000 volt overhead, of the twin-catenary type construction. The locomotives will be of the geared type, 3,000 volt direct current. The freight locomotives will weigh 100 tons each, all weight on driving axles, and the passenger locomotives 120 tons, equipped with 2 axle guiding trucks at each end. They will be built at the General Electric Co.'s works at Erie, Pa. All of them will be equipped with regenerative braking apparatus. The design of the new equipment will parallel closely that of the Chicago, Milwaukee & St. Paul Ry. electrification, and the locomotives will be almost the duplicates of those used on the Butte, Anaconda & Pacific Ry., except for slightly increased weight and the additional of regenerative braking. Power for the operation of the lines will be supplied by the Sao Paulo Light & Power Co. at 88,000 volts, 60 cycles.

The contract amounts to nearly \$2,000,000, and it is expected that it will be completed by July, 1921.

Sleeping and Parlor Car Rates.—The increases in sleeping and parlor car rates which went into force on May 1, between points in the United States, and on international traffic between Canada and the U.S., full particulars of which were given in Canadian Railway and Marine World for May, pg. 249, also went into force between points in Canada on May 15.

Canadian Pacific Railway Co's Annual Meeting.

The C.P.R. Co's shareholders' 39th annual meeting was held at Montreal, May 5, Lord Shaughnessy, Chairman of the company, presiding. E. W. Beatty, President, in moving the adoption of the annual report for the calendar year 1919, as published in Canadian Railway and Marine World for May, said:—The annual report and statements attached, which have been in your possession for some time, reflect very vividly the situation prevailing generally in respect of increased costs of operation. Notwithstanding that the company's gross earnings were the largest in its history, and exceeded those of 1918 by \$19,391,362, the net earnings were less by \$1,569,351. The large increase in working expenses of \$20,960,713, following as it does an increase of \$17,191,993 in the working expenses during 1918, or a total increase in 1919 over 1917 of \$38,152,706, is a striking example of the effect of the increased cost of wages and material in the operations of a company, even one conservatively and economically administered as are the affairs of your company. While it is a matter of great gratification that, even with these exceptional costs, your company has been able during the past two years to earn its fixed charges and usual dividends, and very moderate surpluses, it is nevertheless important that the relation between earnings and expenses should now receive the most careful consideration. The results of the operations during the past two years show an upward trend in costs, which even extensive increases in gross earnings and effective operating economies, due to heavier loading, larger power and consequent reduced train mileage, have not equalized.

For the past 16 years the freight and passenger rates of all Canadian railways have been subject to review or have been fixed by the Board of Railway Commissioners. The rates have been readjusted from time to time, first being lowered and then increased, but the extent of the increase has not equalled the increased costs which have recently been forced upon all companies, and reductions in which cannot with any confidence be predicted at this time. During the fiscal year ended June, 1914, the working expenses of your company, with a mileage somewhat less than the operated mileage of last year, were \$87,388,000, while for 1919 they had climbed to practically \$144,000,000, an increase of 64%. Within that period, increases of nominally 40% in freight rates, and 15% in passenger rates have been authorized by the Board of Railway Commissioners. The actual increases owing to the adjustment of rates made by the board were in fact 30% in freight rates and 10% in passenger rates. The result, therefore, has been that during the past five years the percentage increase in operating expenses was double the percentage increase in tolls accorded to the companies.

Owing to the parity of conditions existing between the United States and Canada, the Canadian roads were forced, during the war, to put into effect the high scales made effective under government control of the U.S. roads and they were also compelled to continue operating under tariffs of tolls substantially the same as those in force in the U.S. These tariffs were entirely inadequate, as results in the U.S. clearly demonstrated. By legislation recently enacted, the U.S.

carriers are assured of rates which will return a fixed percentage on the value of the undertakings used in the public service, which will mean a reconsideration of, and increase in, the rates now current in that country. No doubt the necessity of rate adjustments in Canada will be given earnest consideration by the government and the Board of Railway Commissioners. While it is not my purpose to anticipate any action which may be taken, it is only proper, I think, to say that a readjustment is amply warranted, both on the ground of the value of the service rendered by the carriers and the cost to them of performing such service.

It is further to be remembered, and I do not anticipate that it will be forgotten that the value of any enterprise to the people it serves depends greatly upon its ability to progress and develop, and on the maintenance of a high credit, without which such development cannot take place. Waste, extravagance and improvidence must be discouraged, but I can imagine nothing more detrimental to Canada than that its railway systems should be unable to keep pace in their own development with the progress of the country, and that they should be unable to aid that progress by the expansion of facilities, the construction of necessary new lines and by meeting the increasing demands of the public in the way of efficiency and comfort in service. Based upon accepted principles in other countries government compensation due to transportation and other public service corporations, the net earnings of your company have always yielded a moderate return upon the capital actually invested in the enterprise. The railway net earnings of the company for 1919 represent only a return of 4% on the actual cash invested in the railway itself. The operations for 1919, after the payment of fixed charges and the usual preference and common stock dividends, showed a nominal surplus of \$844,249, which has been placed in reserve to meet the special taxation imposed by the Dominion Government, which special taxation ended in 1919. The company's fixed charges are low, the interest on the preference stock is equally low, and the dividend of 7% payable on common stock from railway earnings is moderate. A factor which seems to be lost sight of in these discussions of the relations between expenses and revenues, is the absolute necessity of reasonable surpluses, in the case of any corporation conducting an enterprise as extensive as that of your company. The company's gross earnings for the year exceeded \$176,000,000 and the surplus, after deduction of the moderate fixed charges and dividends, only amounted to less than half of 1% of these earnings. Considering the importance of reasonable provision for working capital annually from the operations of the company if its high credit and ability to progress are to be maintained, it will readily be appreciated that the revenues during the past two years have been, to say the least, inadequate.

In the discussion which has taken place as to the desirability, or otherwise, of increased rates and therefore increased revenues to the Canadian railways, two theories are publicly mentioned. The first, that rates should be increased but that any surplus earnings thereby accruing to your company should be taken

back through the medium of special taxes, and the second, that rates should not be increased but that the Government Railways' deficits, if such occur, should be met out of the general revenues of the country. Both theories are, in my opinion, unsound. Rates should be established which represent a fair return for the service rendered, and if, by efficiency and economy, and the character and extent of its equipment and facilities, a company can render its operations under such rates profitable, there is no warrant for the confiscation of those profits, nor can there be anything but doubtful honesty in the proposal that one company's revenue accruing to it from service actually rendered by it, and well performed, should be taken from it to supplement the revenue of a competitor whose operations do not show favorable results. It is scarcely necessary for me to say that the fairness, or otherwise, of any rate basis is not necessarily measured by the strength or resources of a company, or by the lack of them.

The second theory, that rates should not be increased, but that any deficits should be met from the general revenues of the country, is unsound economically and unfair alike to the government-owned and other railways. It is obvious that any system which permits services to shippers and others to be performed at unreasonably low rates is discriminatory in their favor, and discriminatory against the public, whose taxes are increased as a contribution to those who use railway facilities. In my opinion the rates in this country should be determined, having regard to the cost and value of the services rendered by the companies, and to the legitimate needs of the companies, if they are to meet the transportation requirements of the country. No doubt a question so important and far reaching in its effect will be given the careful consideration to which it is entitled, by those in authority and empowered to deal with it. I may say, however, that this company's properties are in excellent condition, and at no time in its history has it been better equipped to perform its important public services or to play its full part in the advancement of the transportation future of this country.

Irrigation.—In the annual report reference has been made to the company's irrigation project in Alberta, the construction of which was undertaken some years ago, and in the earlier progress of which some difficulties were met. The project has now become firmly established, and the success has been so pronounced during the past few years that further reference to this important undertaking is, I think, warranted. An area of 643,526 acres has been brought under irrigation, through the medium of 3,969 miles of irrigation canals and distributing ditches. Of this area 301,382 acres of irrigable land have been sold at an average price of \$38.18 an acre. There is still for sale, within the block, 342,144 acres of irrigable land, for which there is at present a very active demand. During the period from the commencement of construction to Dec. 31, 1919, the company has expended in connection with the construction and maintenance of these irrigation works \$15,186,348 and in their operation \$1,761,268. The introduction of irrigation in Southern Alberta has made it possible to successfully produce, on irrigated land, splendid crops

of alfalfa, corn, small fruits and vegetables, which are not produced with equal success under the dry farming conditions. Census statistics, covering 11 years, indicate remarkable increases in ordinary crops grown on irrigated land, even those produced on dry land and the wisdom of the decision to undertake this extensive project has been more than satisfied. We are amply warranted in the belief that the irrigation block will ultimately be a closely settled, intensively cultivated, and a considerable traffic-producing area tributary to the company's lines in Southern Alberta. The success of the company's undertaking in this respect, combined with the obvious necessities of that portion of the country will, I hope, lead to the extension of irrigation projects under the auspices of the Dominion or provincial governments, which will, in the end, render the danger of crop failure in these districts practically negligible.

Rolling Stock.—As indicated in the annual report your directors thought it necessary to make provision for the construction of necessary additions to your company's rolling stock. Since the report has been issued arrangements have been concluded for an equipment trust agreement, under which the payments for such equipment are spread over 12 years. The actual amount of the equipment trust issue is \$12,000,000. By reason of the conditions existing at the time the transaction was concluded highly favorable interest rates were secured.

Directors.—Since the issuance of the annual report for 1919 your board has considered it desirable to apply for an amendment to the company's charter, which will permit the increase of the number of directors from 15 to 18, should that at any time appear necessary. The statute is purely empowering, and the amending bylaw will be submitted for your approval, in the event of it being considered advisable to increase the directorate. The purpose of any increase will, of course, be to secure a large representation on the board from those portions of Canada in which the company's interests are specially important.

Immigration.—I look forward to immigration to Canada on a large scale and, while a period of retrenchment and financial conservation may conceivably be the part of wisdom, your directors have the same implicit faith in the future growth and prosperity of the country that they have always had, and also the same confidence in the ability of your company to play an important part in its development and prosperity.

The report was unanimously adopted.

Nakusp & Slocan Ry.—A lease to the C.P.R. Co. from the N. & S. Ry. was approved. The lease demises to the C.P.R. Co. for 99 years, the N. & S. Ry. Co.'s railway and undertaking in British Columbia from Nakusp to Three Forks with branches from Three Forks to Sandon, and from Three Forks to Retallack near Whiteswater Creek, a distance of 48.47 miles, and all such branches and additions to those railways as the N. & S. Ry. Co. is now or may be hereafter authorized to construct, together with other appurtenances, at an annual rental equal to the interest payable on the outstanding securities issued, or which may be hereafter issued, by the N. & S. Ry. Co. with the C.P.R.'s consent, the total of all such securities unpaid or unredeemed not exceeding at any time \$25,000 a mile of the said demised railways, and to bear interest at a rate not exceeding 5% per annum, payable half-yearly, the

payment of such interest being guaranteed by the C.P.R. Co.

Branch Line Construction.—It was resolved that whereas it is, in the directors' view, expedient that the following branch lines, and extensions of branch lines, be built in the near future, viz.:

Archive-Wymark Branch, 25 miles.
Rostown Southerly Branch, 45 miles.
An extension of the Weyburn-Lethbridge Branch, from Altawan to Manyberries, 35 miles.

An extension of the Consul southeasterly section of the Moose Jaw Southwesterly Branch, of which 35 miles have been previously authorized as from Vidora easterly, mile 35 to 60.

An extension of the Moose Jaw Southwesterly Branch from Assiniboia southwesterly, 30 miles.

Leader Southerly Branch, 50 miles.
Duchess or Rosemary Northerly Branch, 34 miles.

Cutknife to Whitford Lake Branch, 40 miles.

An extension of the Swift Current Northwesterly Branch, from Empress northwesterly, 20 miles.

An extension of the Swift Current Northwesterly Branch from Sedgewick to Vegreville, 54 miles.

It is therefore resolved that the directors are authorized to proceed with the construction of the said branch lines, and extensions of branch lines, when in their opinion conditions warrant, and after statutory authority, where any be necessary, shall have been obtained therefor, and that to aid in the construction and equipment of the said branch lines and extensions of branch lines, the directors are hereby authorized to issue and dispose of consolidated debenture stock to such an amount as they may deem expedient, but not exceeding in respect of any of the said lines the amount which the company is or may be empowered by statute to issue.

Freight and Passenger Tariffs.—By-law 91 was repealed and the following substituted therefor:—That the Vice President in charge of Traffic, the Freight Traffic Manager, the Assistant Freight Traffic Manager, Eastern Lines, and the Assistant Freight Traffic Manager, Western Lines, are, and each of them is authorized, from time to time, to prepare and issue tariffs of the tolls to be charged, as provided by the Railway Act and amendments thereto, for the carriage of freight traffic upon the railway and vessels owned or operated by the company, and any portion thereof; and the Passenger Traffic Manager is authorized in like manner to prepare and issue tariffs of the tolls to be charged, as above provided, for the carriage of passenger traffic upon the said railways and any portion thereof, and upon the said vessels.

Directors.—Sir John C. Eaton, Grant Hall, Sir Vincent Meredith, and Sir Augustus M. Nanton, whose terms of office had expired, were re-elected directors for four years.

Officers, Etc.—At a meeting of the board held immediately after the shareholders' meeting, Lord Shaughnessy was re-elected Chairman of the company, E. W. Beatty, President, and Grant Hall, Vice President, and the following were appointed the executive committee:—R. B. Angus, E. W. Beatty, Grant Hall, Sir Herbert S. Holt, Sir Edmund B. Osler, Lord Shaughnessy.

The Canadian National Ex. Co. has opened an office at Bethany, Man.

Ontario Land Grant to Grand Trunk Pacific Ry.

The Minister of Lands, in answering questions in the Ontario Legislature recently, stated that no action had been taken by the Government to reserve for the province lands awarded to the Grand Trunk Pacific Ry. under 4 Edward 7, chap. 18, sec. 2, which now appear to be the property of the province, but that it is contemplated to take action to recover the subsidy, and the lands, or value thereof, as provided for under the section, which is as follows:—"In case the Government of Canada shall at any time take over at a valuation the line of the G.T.P. Ry. Co., mentioned in sec. 1 of this act, the amount of cash subsidy and the amount or value of the land grant both mentioned in sec. 1 of this act, and which shall have been received by the said G. T. P. Ry. Co., shall be forthwith repaid by the said G.T.P. Ry. Co. to the Treasurer of the Province of Ontario; and an agreement shall be entered into forthwith after the passing of this act between His Majesty and the G.T.P. Ry. Co. embodying and providing for the carrying into execution of the provisions of this section."

Section one of the act provided a cash subsidy of \$2,000 a mile and a land grant of 6,000 acres a mile to the G.T.P. Ry. Co. for the construction of a line not exceeding 200 miles from Thunder Bay to the Transcontinental Ry. main line. This was built and is known as the G.T. P. Ry. Lake Superior Branch.

C.P.R. Mechanical Department Machinery.

The C.P.R. Co.'s annual report for 1919, published in Canadian Railway and Marine World for May, stated that an appropriation of \$363,236 had been authorized for mechanical department machinery at various shops. Following is a list of new machinery, etc., ordered for Angus shops, Montreal, for this year.

- Locomotive Shops.**
- 1 8,000 lb. steam hammer, with furnace
 - 1 42 in. x 42 in. x 10 ft. planer.
 - 1 26 in. x 30 in. x 4 ft. planer.
 - 1 axle lathe.
 - 3 7 ft. radial drills.
 - 2 2½ in. hexagon turret lathes
 - 1 alligator chaser.
 - 4 special bolt turning lathes.
 - 8 engine lathes, various sizes.
 - 1 oxygraph cutting machine.
 - 1 screwing machine.
 - 1 nut facing machine.
 - 1 14 in. slotting machine.
 - 1 6½ in. Southwark face welding machine.
 - 1 42 in. Bullard vertical turret lathe.
 - 1 5 in. Barclay & Oliver turret lathe.
 - 1 broaching machine.
 - 1 tool grinder.
 - 1 pneumatic rivetter.
 - 1 bulldozer.
 - 1 Besly drum sander.
 - 1 sand mixer for foundry.
 - 4 electric welding units.
 - 1 No. 3 planing machine.
 - 1 20 ton travelling crane.

- Car Shops.**
- 1 axle lathe.
 - 1 40-ton car wheel press.
 - 1 toolmakers lathe.
 - 1 coping punch.
 - 2 bolt cutters.
 - 1 geared power press.
 - 1 10 ft. breaker.
 - 1 10 ft. gap shear.
 - 1 pipe threading machine.
 - 1 10-ton travelling crane.
 - 3 pneumatic riveters.
 - 1 14 in. slotting machine.
 - 1 No. 3 planing machine.
 - 1 6 ft. radial drilling machine.
 - 1 2 in. flat pressed nut forcing machine.
 - 1 10 in. flat pressed nut forcing machine.
 - 1 2 in. nut tapping machine.
 - 1 spot welder.
 - 1 10 in. flansouled moulting machine.
 - 1 casting 3½ tons.
 - 5 electric storage battery trucks.
 - 1 car straightening frame.

Discussion on Valve Motion.

The paper on valve motion, by F. Williams, Mechanical Designer, Canadian National Rys., Moncton, N.B., which was published in Canadian Railway and Marine World for April, was discussed by Canadian Railway Club members, before whom it was read. Following are the principal remarks:—

W. A. Booth, Engineer of Locomotive Construction, G.T.R.:—The paper states that the Stephenson link motion is a back number, and I think we all agree with that. On account of the increased size of the locomotives now being built, it is not likely that any more motion of this type will be applied.

O. W. Young, Young Valve Gear:—The dynamic operation of a locomotive steam engine is accomplished by four essential acts; steam admission, expansion, exhaust and compression. Admission is the act of directing steam pressure against a piston. It is the motive agent employed for revolving the wheels. The duration of the admission period must be subject to control by the locomotive man. At his option it should be possible to admit steam to the cylinders during nearly the entire piston stroke, in order to ensure positive starting reliability and maximum power for initial train movement. The maximum cut-off must therefore be late. After starting a train it must then be possible to manually shorten cut-offs (the admission period), because less power is required to keep a train moving than is necessary to start and accelerate it, and because, also, small volumes of steam must be used, on account of difficulty of rapid exhaust after speeds become considerable, and further because it is impracticable to design locomotives with proper ratios between boiler capacity and cylinder volume, to permit the use of full cylinder capacity only at low speeds. In addition, late cut-offs are uneconomical since they preclude effective expansion. The range of duty required by a locomotive in starting, accelerating, attaining and maintaining high speed, is so great that it necessitates a wide range of cut-offs subject to control by a locomotive driver. The admission period must begin as early as the beginning of a piston stroke. It may, and usually does begin before the completion of the piston's return stroke and that portion of its period is called pre-admission. Steam is then admitted against a piston, tending to check movement, and cushion its momentum. The pre-admission period should not commence before the crank pin is practically on a dead center, when working in late cut-offs, and consequently slow speed. But it may, and it is desirable that it should, begin considerably earlier, when in early cut-offs (high speed position), because piston velocity is then greater, and greater cushioning power needed to absorb the shock of checking and reversing the direction of piston movement. It is desirable that during the admission period steam flow should be unobstructed, in order that there may be but little drop in pressure against a piston up to the point of cut-off. Any valve actuating mechanism tending to increase the widths of steam port openings is therefore for that purpose basically sound.

Expansion is the act of prolonging steam pressure against a piston after admission ceases. A mass of steam then in a cylinder cut off from further replenishment from a boiler, continues to expand and propel a piston with decreas-

ing pressure until it is permitted to escape to the atmosphere. All piston movement during this process causes rotative impulse to the driving wheels, without further drain on a boiler, and is in the direction of fuel economy. The expansion period should therefore embrace the greatest practicable portion of piston movement. In all successful valve gears, the relative duration of the expansion period increases with shortened cut-offs. Expansion should be continued as late in the stroke as possible, and any valve gear that permits this, is in this respect desirable, provided it does not introduce objectionable features affecting other events in the cycle.

Exhaust is the act of relieving a cylinder of pressure. Its period may be divided into two stages. First, after expansion has been carried as late in the stroke as practicable, all steam tending to propel a piston should be permitted to escape to the atmosphere. Unobstructed means should be provided for escape to the lowest obtainable pressure by the time a piston has reached the end of a stroke, so as to ensure the least possible initial back pressure during the return stroke. This is particularly desirable at high speed, because it is not only then more difficult to accomplish, but the piston speed is then so great that it precludes material lowering of back pressure ahead of the advancing piston, during this, the second exhaust stage. A valve gear therefore that causes rapid valve opening during the first exhaust stage, and maintains liberal opening during the second stage, not only increases effective cylinder pressure, but the increased power is produced economically because of lower negative pressure.

Compression is the act of building up pressure to cushion a piston at the end of its stroke. Compression, together with pre-admission, serve to fill the clearance space between the piston when at either extreme position its nearest cylinder head and valve. These together ensure high initial pressure. All steam pressure remaining in a cylinder at the beginning of compression, together with 15 lb. atmospheric pressure, are concentrated into smaller space and should then approximate steam chest pressure. Compression and pre-admission blend into a common pressure. Compression costs only to the extent that it retards wheel revolution. Pre-admission costs in addition the amount of steam it draws from a boiler. Therefore, the terminal pressure should be largely caused by compression. That is, terminal compression should be so high that it will require but little if any additional pressure from pre-admission to build up a pressure equal to that in a steam chest. Compression should and does in all successful valve gears begin earlier at high speed (in short cut offs) than at low speeds. But at low speed terminal compression is lower and the influence of pre-admission more pronounced and expensive. At high speed it is difficult to avoid excessive compression, and any valve gear tending to lower initial compression logically accomplishes some economy.

That Mr. Williams knows human nature is most evident when he said in introducing his subject, that he hoped he might get on some of our pet theories. He did. Conceding that "valve motion has today reached a point where it cannot be greatly improved upon" does it follow that we cannot consider the constant-

ly increasing cylinder sizes which demand the rapid handling of greater volumes of steam and, consequently, more liberal means of handling this volume? When 20 in. cylinders were the maximum in service the valve travel was 6 in., which was thought sufficient. An analysis of numerous tests with which I am familiar showed excellent steam distribution in 20 in. cylinders with 6 in. travel and 12 in. piston valves. That combination is therefore used as a basis for the arguments herewith presented.

The first duty required of a locomotive in train operation is the start. To ensure this, it is capable of demonstration by an analysis of main rod angles, and it is further proved by actual experience, that the maximum cut-off must be approximately 88% of the piston stroke. If of less than that percentage, a locomotive will frequently fail to start, even though coupled to a comparatively light train, without first slacking back, and not only reducing the initial load resistance, but also changing the crank and rod angles to more favorable leverages. In order to provide for 88% maximum cut-off, the sum of lap and lead must not exceed 19% of valve travel. A valve setting in the following tables is therefore so arranged, the figures representing inches.

Cylinder diameters.	Piston area sq. inch	Valve travel.	Lap and lead 19% of travel.	Lap.	Lead.	Valve Diameter.
20	314	6	1 9-64	57-64	1 1/4	12
25	491	7	1 21-64	1 5-65	1 1/4	17
30	707	7	1 21-64	1 5-64	1 1/4	24
Port length.	25% c.o.	Port area	25% c.o.	Maximum cut-off.		
28.7	9-32	8	8	88%		
42	19-64	12.3	12.3	88%		
60	19-64	17.7	17.7	88%		

It will be noted in the table that for 20 in. cylinders the piston area is 314 sq. in., the valve diameter 12 in. with 28.7 in. port length exclusive of bridges, valve travel 6 in., lap 57/64 in., lead 1/4 in., maximum port opening in 25% cut-off, 9/32 in. which causes 8 sq. in. steam port area. This is equal to 1/40 of the piston area. Assuming that a ratio of piston area to port area in 25% cut-off of 40 to 1 is necessary for rapid steam flow into a cylinder during admission, and assuming that the valve travel for larger cylinders is increased to 7 in. with valve lap of 1 5/64 in. and lead 1/4 in., then for 25 in. cylinders with 491 sq. in. piston area the port area should be 12.3 sq. in. This would require a valve 17 in. in diameter with ports 42 in. long exclusive of bridges. 30 in. cylinders with 707 sq. in. of piston area, 7 in. valve travel, 17.7 in. port area require valves 24 in. diameter with ports 60 in. long. Twenty-five per cent. is considered in the foregoing, because that is the desired running cut-off, as all valve events then combine to produce the best economy and efficiency.

Valve travel of only 7 in. is mentioned, for the reason that with the Walschaert gear greater travel involves such acute angles in the movement of certain members of the gear that designing engineers have been reluctant to introduce them.

It is clearly shown that so far as the admission period is concerned, cylinders of 25 to 30 in. diameters require valves of 17 in. to 24 in. diameter to produce as free steam flow as 20 in. cylinders re-

and with 16 in. valves. When it is considered that 20 in. valves are the maximum size for cylinders, it is apparent that there are more than 10 times as many port openings in the exhaust of a cylinder with 16 in. valves than in a cylinder with 9 in. valves. The larger cylinders are handicapped by insufficient port areas.

Port	Port area	Port area	Maximum cut-off
15-32	12.3	1.14	10
15-32	17.7	1.14	10

The table shows that with 9 in. travel 11 in. valves may be used for 25 in. cylinders and 16 in. valves for 30 in. cylinders and still retain a 40 to 1 ratio between piston and steam port areas in 25% cut-offs. A valve gear arranged for 9 in. travel thus not only permits the use of smaller valves, but it may use valves now standard to large locomotives and greatly improve ratios between port and piston areas, and thus ensure very high initial pressure against the piston up to the point of cut-off, even at high speeds. As a result, it consequently has capacity to either haul heavier trains, or attain and maintain unusual speed, or both so far as the influence of admission extends.

If the sum of lap and lead is 19% of travel and the ratio between lap and lead the same, one gear with 7 in. travel and the other with 9 in. the duration in expansion periods in various cut-offs is alike, providing the exhaust setting is line and line in both cases, but more exhaust clearance may be used with increased travel without relatively shortening expansion.

Due to the fact that steam is cut off at higher pressure because of more adequate port openings the piston pressure is higher during expansion period, particularly at high speed, and increasingly so for increased cylinder diameters than is possible with gears causing less valve travel. It is evident, therefore, that increased power induced by improved admission caused by the gear with greater travel continues during the expansion period.

Initial pressure is applied to a piston at the beginning of its stroke. At that position all back pressure should have disappeared. The valve should have then caused the widest possible opening to the atmosphere. As the valve is displaced from its central position, the amount of lap and lead for the above piston position, and assuming that it is designed for line and line exhaust, the width then of exhaust opening is lap plus lead. Reference to the foregoing table shows that this is more than $\frac{1}{2}$ of an inch greater in one case than the other, and this additional $\frac{1}{2}$ of an inch in width of exhaust port opening, obtains throughout nearly the entire exhaust period and in all cut-offs. Due to its greater valve travel, the exhaust port opens more rapidly in one case and it accomplishes decidedly wider openings during both exhaust stages. Increased capacity is thus provided for rapidly expelling large volumes of steam. Rapid valve opening, during the first exhaust stage, vacates the cylinder to an unusually low initial back pressure, and unusual width of exhaust opening, during the return piston stroke, further permits reduction in back pressure. This results in economically increasing effective pres-

sure, and further augments the cylinder power created by improved admission. It logically follows then that with lowered back pressure, the pressure initially subject to compression is lower, and therefore lower terminal compression results, a further augmentation of cylinder power.

If the premise is sound on which this analysis is based, it is confidently submitted that increased valve travel, with proportionately increased lap, economically increases cylinder power. 1. By adequate steam port openings high pressure is maintained up to the point of cut-off. 2. On account of high cut-off pressure, expansive pressure is high. 3. Due to rapid and liberal exhaust port openings, exhaust is early and completely accomplished and low back pressure obtained. 4. Because of low initial compression, terminal compression is low. The improvement accomplished in these four acts cause high positive pressure, low negative pressure, increased mean effective pressure and result in greater draw bar pull. The practical operating benefits are positive reliability in starting; rapid acceleration; great hauling power, particularly at high speeds, capacity for unusually high speed and economical use of coal and water. It is in the hardest service that these benefits are most pronounced and upon the largest locomotives that they attain their maximum value for these benefits become relatively greater with increasing cylinder diameters.

W. H. Sample, General Superintendent, Motive Power and Car Departments, G.T.R.:—We have quite a few valve motions on the G.T.R. We have some splendid Walschaert valve motion, some splendid Baker motion and also some Young motion. They are all giving good service and I have no partiality to show particularly; but I would like to say, for Mr. Williams' locomotives, that he has some of the best Walschaert motion that I have ever seen. There are other gears besides those mentioned, the Joy, which I had considerable experience with in Costa Rica, and the Southern gear, which is used quite extensively in the United States. The first mentioned, the Joy gear, was applied to locomotives I have references to in Costa Rica in 1885 and 1886, showing that the outside type of gear is not very new, but for some reason or other this type of gear was not adopted generally by Canadian or United States railways until within the last few years; but the dimensions of our locomotives have reached a point now where in my opinion the outside motion should replace the link motion.

T. H. Curtis:—Having had experience with a good many of the different valve motions I was able to follow Mr. Young's remarks very closely. Looking back over some years, the first locomotive I remember had the Hook motion. I do not know if you know what it was, but it had only a cut off at full forward and full back position—you had no intermediate choice whatever. With regard to the link motion; which is said to be a back number, it was a good motion, but as the weight of the locomotives increased and also the diameter of the axles, larger eccentrics were necessary, until we had a 21 in. eccentric with a 63 in. driving wheel, and when the locomotive was making 60 miles an hour the eccentric was slipping one third, or 20 miles an hour in the strap. It was this, and the important matter of lubrication, that put the link motion out of business. The Walschaert gear was used for over 40 years on the European continent before

it was put on the market in America and I do not know what was the matter with our mechanical engineers that they did not adopt it before.

Coming to the matter of valve motion, the point is to get the steam into the cylinder, to accelerate the piston, and then get it out, when we are through with it, and the valve that gives the best opening on the fore part of the stroke of the piston is the one that lets it in the best. Some stationary engines have valves of the Corliss type, that shut and open by vacuum means, which gives a quick closure after leaving the valve open a long time, thus giving a good steam line and a free cut-off, and thus permitting of a long economy. I am not prepared to speak upon the relative values of the different valve gears. Diagram 1, accompanying Mr. Williams paper (see Canadian Railway and Marine World, April, pg. 168), shows how you can lay off the movement of valves. You can do this in your own locomotive house or shop, by getting a board about 36 in. long for a locomotive with 30 in. stroke. Lay off on this board the steam port of the valve, and then lay off each inch of the stroke on the board; then commence with the engine in dead center and mark on the board the zero point position of the valves; then move the piston 1 in. and lay off the valve position again, and so on until the 30 in. of stroke have been designated and you have a valve diagram at the roundhouse, made to order. It is not the square sound of the exhaust, but it is the steam that gets into the cylinders that makes the good working engine. With your locomotive house diagram you may then compare one locomotive with another and get a good idea of the relative valve motions of the different locomotives. In service some engines are good and some are poor, and possibly this valve diagram would tell you why some are poor. Mr. Young spoke about the large opening and high speed of a valve, that gives us plenty of steam and that steam is what makes the engine go.

F. Williams:—Mr. Young questioned my statement that as far as economical steam distribution is concerned valve motion design has today reached a point where it cannot be greatly improved upon. I still stand by that statement. If we take a Corliss stationary engine as possessing the nearest approach to a perfect steam distribution, I do not think that a simple engine running non-condensing will do much better than 20 lb. of superheated steam per h.p. hour and we have been able to get this result on locomotives. Mr. Young also spoke of the size of distribution valves necessary with different diameters of cylinder and based his reasoning on a 12 in. valve for a 20 in. cylinder. Is it not just possible that the 12 in. valve is larger than is absolutely necessary for this size of cylinder? We are getting good results from a 14 in. valve on a 24 in. and a 27 in. cylinder. I think Mr. Comley of the Franklin Railway Supply Co. is here, and I believe his company is advocating a smaller valve than we are using, perhaps he can tell us something about it. I think the results obtained in our service, by the use of the Walschaert valve gear, will compare favorably with other gears. Another point is that when a test is to be made the Walschaert gear is not always given a proper show. If any company has a patent gear to sell, and a test is to be made, they send an expert to supervise the application of the gear, and see that it is tuned up to the highest

point of perfection, whereas the Walschaert gear, as often as not, only receives the attention of the locomotive-house valve setter, and, although these men are usually thoroughly competent, the engine is generally turned out without a complete sequence of valve events being taken or recorded.

W. T. Comley, Franklin Railway Supply Co.—The arrangement referred to by Mr. Williams is known as the Stream-line Cylinder Ports. These ports make application of the well known principles governing the flow of gases, principles recognized as fundamental in the design of steam turbines. The steam port around the bushing is so arranged that, during the admission period, as steam issues from the valve it is divided into a number of streams, depending upon the number of bridges in the bushing. These streams are directed by ribs, so that they do not interfere with each other, but join into one smoothly flowing whole when the main passage is reached. During the exhaust stroke, the steam, as it flows from the cylinder to the valve, is divided by the ribs into a number of equal streams, one to each port in the bushing. Absence of all quick turns, and other baffling obstructions, speeds up the flow of steam, and by properly directing the flow of steam to and from the valve every square inch of the bushing port becomes effective. This arrangement permits the use of 8 and 10 in. valves where 14 and 16 in. valves were considered necessary, and at the same time facilitates the flow of steam, to and from the cylinder, to such an extent that the locomotive is noticeably smarter and faster.

O. W. Young—In answer to Mr. Williams, permit me to say that I merely attempted to point out that, in the proportions that are commonly carried between the smaller and larger locomotives, we are not keeping consistent in the valve sizes and the width of port openings in proportion to the cylinder volumes that are handled. I did not come to this meeting to exploit any particular device, but am merely attempting to give something to think about, with the object of improving the service in the arrangement of steam distribution.

C. P. McGinnis—One of our men was overseas and brought back a book published by the Belgian State Railways. It dealt particularly with the works of A. Walschaert, who was at that time 21 years old. When 27 years old he was Engineer of the State Railways, and it is interesting to note that in 1839, after experimenting with the Stephenson link motion they were then using on the engines, which were very small, he found that 2% and almost 3% of the tractive effort of the engine was absorbed in operating four large eccentrics which are fundamentally the Stephenson motion. Larger eccentrics were later on necessary and with the shorter valve travel they could cut down the wearing surfaces. His efforts to produce an improved valve motion were along the line of cutting down friction, although in this country we have come to believe that it came because the locomotives were getting bigger, and the larger boxes, frame bracing, etc., made it necessary to go to the use of an outside gear. Walschaert's idea was to reduce friction, and do away with the four large eccentrics, and put on an outside gear that would restore the tractive effort to almost 100% of its accredited efficiency. I only mention this to show that it is odd that we did not adopt the outside valve gear before, in

an effort to get away from the friction. I cannot find any difference in the arrangement or size or designs of 1841 as compared with the locomotive of today.

Mr. Williams, in his paper, has outlined some of the fundamental truths of this matter. I remember some time ago in the southwest listening to a paper on valve motion. It was lengthy and many ways were shown that might have been adopted to get the steam in quickly and emit it quickly again, and how that today we do not get a bad starting locomotive because of the constant lead in full gear; and one of the foremost railway men said that as they were spending so much time and money to develop valve gears they should try to get away from the constant lead because it made a bad starting locomotive. I do not think anybody is going to say that about Mr. Williams' paper, because in one paragraph he covered that part of the subject.

I should like to ask Mr. Williams some questions. He says: "Care must be taken that the length of the combination lever adopted will bring the lower end of the lever to the correct level, to connect up with the union link, especially if the union link is connected directly to the wrist pin, which is the practice generally adopted unless the Ripken Kingan main rod arm is used." I should like to ask him if it is not the usual practice, in locomotive construction, that the union link should be horizontal, when the combination link is in vertical position for inside admission valves, and for outside admission valves is it not the practice that the union link should be horizontal at the end of the stroke,—this being necessary to correct inequalities between the front and back ports? I think it was established, some years ago, that, if possible, it was good practice to maintain the union link one sixth the length of the main rod, and if that could be done then all errors could be eliminated.

He also says: "The advantages of this arrangement are that the wear on the link support bearings is diminished, and the link block slip in running position may be kept very small, as the swing link describes an arc which is very similar to the arc struck by a point in the bottom of the link, the concave side of both these arcs being uppermost." On one line in New England I think there are only six locomotives out of some 400 or 500 on which they have not adopted the practice of having the link block at the top of the link in forward gear, and I would like to ask Mr. Williams, if he has not disregarded this practice, if he has not found that he gets better steam distribution by having the link block at the top of the link. A good many roads feel they get better steam distribution, and that one of the best ways to waste coal is to have an unequal steam distribution.

Mr. Williams also says: "We have already seen that reducing the lead will give us a better cut-off in starting position, and have decided, I think, that this is an advantage when starting the load. Reducing the steam lap has the effect of lessening the period of expansion, but by reducing the exhaust clearance the period of expansion is lengthened and thus the ill effects of cutting down the steam lap is neutralized." When you reduce the steam lap and the exhaust, do not both of these changes tend to reduce the opening through which the exhaust must pass? There may be advantages but it seems to me you do these things at the expense of the exhaust opening. If a perfect steam dis-

tribution gives perfect exhaust why does a perfect sounding exhaust not give perfect steam distribution? If the exhaust is regular and the valve setting is known to be correct, does it not indicate leaking valve or cylinder packing? I would like to ask Mr. Williams about changing the eccentric crank to give an engine a greater maximum cut-off. I had an experience on one of the western lines, where a number of the passenger locomotives that took the trains out of St. Paul, stalled on a stiff grade, but after they got a crossed lead they made a much better showing in getting over that particular point; they then went a little farther and set a number of the locomotives in the same way, and it worked all right, but on one occasion a locomotive handling a freight train pulled into a passing track to allow a passenger train to go by and had to back out, but it could not do so, the result was that they took off all the crossed lead on locomotives on that road. Later, on one of the western roads in Canada, 11 locomotives in passenger service were set with the crossed lead. I think it made them slightly blind in full gear. It worked out very well as long as they did not have to back out of any siding or were run in one direction only.

F. Williams—In reply to Mr. McGinnis' question as to the correct level of the bottom of the combination lever to connect up with the union link. When the union link is connected to the wrist pin we have a very short combination lever, and the shorter the lever, the greater is the extreme angularity of the union link. On this account we generally find it advisable to have the bottom connection of the combination lever slightly below the centre line of the wrist pin for inside admission valves, in order to reduce the extreme angularity of the union link, especially if the union link itself is short. When we use a cross-head arm we have more latitude with the length of our combination lever as we can increase or decrease the depth of the crosshead arm to obtain just what we want, but when we make the connection directly to the wrist pin we haven't much choice in the matter.

C. P. McGinnis—I take it that you do not have reference to locomotives that have the combination lever driven from the crosshead pin?

F. Williams—They were new locomotives.

C. P. McGinnis—They were locomotives that had crosshead arms below the level of the guides.

F. Williams—If we make the union link level, when the combination lever is vertical, we get the maximum angularity when the engine is on dead centers and vice versa, and we have found it advisable to follow the practice I have just outlined in order to reduce the extreme angularity of the union link when using the short combination lever. The rule referred to by Mr. McGinnis was always followed when the long combination lever was in vogue.

C. P. McGinnis—In the later designs, has it been possible to so locate the valve stem pin and reduce the bar so as to connect the union link one sixth the length of the main rod?

F. Williams—I have never considered the union link in connection with the main rod, and have never heard anyone mention that subject before. The paragraph in the paper which speaks of reducing the lead has reference to freight locomotives which are generally operated on a long cut-off, and at a slower

and that therefore do not require the same relative exhaust port opening as a valve at the piston end of the stroke. That is, it is possible to get more steam and lap at the end of the exhaust clearance.

C. P. McGinnis. It is seldom used at

sure, if we have too little clearance we have a poorly running locomotive and one that is not economical. I hoped that

Mr. Williams or someone else would touch upon this matter of proper clearance, as it is a very important item.

Birthdays of Transportation Men in June.

T. Williams. If they are *CAUTION* their full thoughts are loaded too heavily to run on a *WHEEL*. Mr. McGinnis asks: "It is not a fact that a better steam distribution can be obtained with the link block on the top of the link?" It may be that on certain locomotives you can get a better steam distribution with the block in the top of the link, but there is no remedy for it. I remember some locomotives we had built with this indirect motion and they had a good steam distribution; on a subsequent duplicate order we specified direct motion, and if we had simply rearranged the power reverse gear and eccentric crank and left the rest of the motion as it was, the steam distribution would have suffered. It was found desirable to change the location of the reverse shaft slightly, in order to eliminate as nearly as possible the link block slip in the new running position, and the locomotives when delivered had as good a steam distribution as the previous order. There is nothing in the idea that a better distribution can be obtained with the link block in the top of the link, but when designing a Walschaert gear, special attention should always be given to the running position in fore gear, whether this is in the top or the bottom of the link, and it would be very poor policy to indiscriminately change direct motion to indirect or vice versa, without first making sure that the steam distribution in running position would not suffer.

In answer to the question: "If a perfect steam distribution gives a perfect exhaust, why does not a perfect sounding exhaust give a perfect steam distribution?" I may say that, in the great majority of cases, a perfect sounding exhaust does indicate a good steam distribution, but it is not absolutely necessary that it should do so. In my own experience I have had occasion to look into the performance of locomotives which were reported as sounding perfectly square, but on being tried over they were found to be considerably out, and yet the combination of valve events gave an even exhaust. Mr. McGinnis' remarks on crossed lead are quite in accordance with my own ideas which were outlined in the paper.

T. H. Curtis:—I would like to mention, in connection with valve motion of locomotives, that when the high pressure steam is at the ends of the piston valve, which is balanced, there is a valve stem having an area of something like 4 sq. in. at one end of the valve chamber, but not at the other end, thus making a pressure of 800 lb. more on the forward end of the valve than on the rear, for 200 lb. steam pressure; this unequal pressure will slip the valve toward the rear, when the inertia of the valve is overcome, thereby causing excessive lead at the front end of the piston stroke which will cause a pound in the driving box, although one may take the valve tram and run over the valves only to find them square." They are square only when the steam pressure is low or off.

Another thing indirectly connected with valve motion; all steam distribution has so-called back pressure, for on the return stroke we do have "back pressure" and the clearance at the end of the stroke is the only place to put this pres-

Many happy returns of the day to:

Allan Purvis, ex-General Superintendent, Ontario District, C.P.R., Toronto, born at Batavia, Java, June 29, 1878.

L. J. Ryeffer, Solicitor, Manitoba and Saskatchewan Districts, C.P.R., Winnipeg, born in Orford Tp., Kent County, Ont., June 20, 1868.

W. F. Sawyer, Assistant Superintendent, Division 5, Quebec District, Canadian National Ry., Edmundston, N.B., born at Drummondville, Que., June 13, 1883.

J. R. Shaw, Passenger Agent, Canadian Pacific Ocean Services, Ltd., Manila, Philippine Islands, born at Montreal, June 28, 1871.

J. L. Simpson, agent, C.P.R., Port McNicoll, Ont., born at Mount Forest, Ont., June 9, 1866.

H. H. Smith, Car Accountant, Canadian National Ry., Toronto, born at Quebec, Que., June 14, 1872.

N. Van Wyck, Purchasing Agent, Can-

Appointment of Managing Committee for Grand Trunk Railway System.

The agreement entered into between the Dominion Government and the G.T.R. Co. of Canada, on Mar. 8, 1920, providing for the acquisition of the G.T.R. Co., and its subsidiaries, by the government, and which was ratified by the Dominion Parliament, contains the following section:—

"4. Committee of Management. — Forthwith after the ratification of this agreement, as provided in the said act, a committee of management of the Grand Trunk System shall be formed, consisting of five persons, two to be appointed by the Grand Trunk, two by the government, and the fifth by the four so appointed. The functions of the Managing Committee shall be to ensure the operation of the Grand Trunk System (in so far as it is possible to do so) in harmony with the Canadian National Railways, the two systems being treated, in the public interest, as nearly as possible

by arbitration, by Sir Walter Cassels, Judge of the Exchequer Court, as chairman, and two others appointed by the Dominion Government, and two by the G.T.R., so that the Managing Committee will act until after the arbitration, and the transfer of the preference and common stocks to the government.

The government has appointed as its representatives on the committee, C. A. Hayes, Vice President in charge of Traffic, Canadian National Rys., and S. J. Hungerford, Assistant Vice President, Operation and Maintenance, Canadian National Rys. The G.T.R. has appointed as its representatives, Frank Scott, Vice President and Treasurer, G.T.R., and W. D. Robb, Vice President, Transportation and Maintenance, G.T.R. These four officials held a preliminary meeting in Montreal, May 21, and elected Howard G. Kelley, President G.T.R. and G. T. Pacific Ry., as the fifth member of the committee and its chairman.

Some of the daily newspapers have published a lot of nonsense in connec-

1890, to June, 1892, General Freight and Passenger Agent, Central New England & Western Ry., Poughkeepsie, N.Y.; June to Oct., 1892, Division Freight Agent, Philadelphia & Reading Rd., while it had control of the C.N.E. & W.R., Hartford, Conn.; Oct., 1892, to June, 1896, New England Agent, National Despatch Line, Boston, Mass.; June, 1896, to July, 1899, New England Agent and acting General Manager, National Despatch Line, Boston, Mass.; July, 1899, to May, 1903, Manager, National Despatch-Great Eastern Line, Buffalo, N.Y.; May, 1903, to Apr., 1908, Assistant General Freight Agent, G.T.R., Chicago, Ill.; Apr., 1908, to Oct. 16, 1911, General Freight Agent, G.T.R., Montreal; Oct. 16, 1911, to June, 1913, Freight Traffic Manager, G.T.R., Montreal; June, 1913, to June 1, 1917, Freight Traffic Manager, Canadian Government Railways, Moncton, N.B.; June 1, 1917, to Dec. 1, 1918, General Manager, East-

H. G. Kelley.
President, Grand Trunk Railway and Grand Trunk Pacific Railway.

C. A. Hayes,
Vice President, Traffic, Canadian National Railways.

S. J. Hungerford,
Assistant Vice President, Operating, Canadian National Railways.

as one system. No contract or agreement shall be made by the Grand Trunk, or by any company comprised in the Grand Trunk System and controlled by the Grand Trunk, other than such as are necessary for the usual and ordinary business of the system, except with the concurrence of the Managing Committee and the approval of the Governor in council. The Managing Committee may, with the consent of the Governor in council, borrow from the government on Grand Trunk notes, or other obligations or securities approved of by the Governor in council, for the carrying on of the operation or improvement of the Grand Trunk System. The committee shall continue to act until the preference and common stocks are transferred to or vested in the government, when it shall be discharged."

The preference and common stocks will not be transferred to the government until their value, if any, has been decided

tion with this matter, the Toronto Globe, for instance, stated that Messrs. Kelley, Robb and Scott had been appointed members of the Canadian National Rys. board, which, of course, was absurd. The managing committee's duties and powers are clearly set forth in the section from the agreement reproduced above. They are entirely confined to the G.T.R. System, and none of its members as such have anything to do with the management of the Canadian National Rys.

Charles A. Hayes, Vice President, Traffic, Canadian National Rys., Toronto, was born at West Springfield, Mass., Mar. 10, 1865, and entered railway service in 1882, since when he has been, to 1884, clerk, Freight Auditor's office, Connecticut River Rd., now Boston & Maine Rd.; 1884 to Oct., 1887, similar position, Boston & Lowell Ry., Boston, Mass.; Oct. 1887, to Nov., 1890, clerk, General Freight Agent's office, Boston & Lowell Ry., and its successor, Boston & Maine Rd.; Nov.,

ern Lines, Canadian Government Railways, Moncton, N.B.; and since Dec. 1, 1918, Vice President, Traffic, Canadian National Rys., Toronto.

Samuel J. Hungerford, Assistant Vice President, Operating, Canadian National Rys., Toronto, was born near Bedford, Que., July 16, 1872, and entered railway service in May, 1886, since when he has been, to Feb., 1891, machinist apprentice, South Eastern Ry., and C.P.R., Farnham, Que.; May, 1891, to Aug., 1894, machinist, at various points in Quebec, Ontario and Vermont; Sept., 1894, to Aug., 1897, charge man, C.P.R., Windsor St., Montreal; Aug., 1897, to Apr., 1900, Assistant Foreman, C.P.R., Farnham, Que.; Apr., 1900, to Feb., 1901, Locomotive Foreman, C.P.R., Megantic, Que.; Feb. to Sept., 1901, General Foreman, C.P.R., Cranbrook, B.C.; Feb. 1903, to Jan., 1904, Master Mechanic, C.P.R., Western Division, C.P.R., Calgary, Alta.; Jan., 1904, to Dec., 1907, Superintendent, Locomo-

Howe, C.P.R. Winnipeg, Jan. 1888, and the Superintendent of the C.P.R. Winnipeg, Mar. 1911. Also, Superintendent of R.R. at Montreal, 1911, 1912, R. Winnipeg, May, 1913, to Nov. 1, 1915, Superintendent of the C.P.R. Winnipeg, Jan. 1, 1916, to Dec. 31, 1918. General Manager, Canadian National Ry., Toronto, Dec. 1, 1919. Asst. Atty. Gen. of the Canadian National Ry., Toronto.

Howard G. Kelley, President, G.T.R., was born at Philadelphia, Pa., Jan. 12, 1853, and entered railway service in 1881, when he was 28 years of age. Assistant Engineer on location, construction and bridge construction, Western and Pacific, Portland, Northern Pacific Ry., 1884 to 1885, engineer in training, 1885 to Jan., 1886, Resident Engineer and Superintendent of Bridges and Buildings, St. Louis Southwestern Ry. System, including St. Louis South Western Ry. of Texas; Jan., 1890, to Mar., 1898, Chief Engineer, same road; Mar., 1898, to July, 1907, Chief Engineer, Minneapolis & St. Louis Rd.; July, 1900, to July, 1907, also Chief Engineer, Iowa Central Ry.; Mar., 1898, to Mar., 1899, also Consulting Engineer, St. Louis South Western Ry.; July, 1907, to Oct. 2, 1911, Chief Engineer, G.T.R., Montreal; Oct. 2, 1911, to Sept. 1, 1917, Vice President in charge of construction, transportation and maintenance, G.T.R., Montreal, and since Sept. 1, 1917, President, G.T.R. and Grand Trunk Pacific Ry. He is also director and Chairman of the Board, Central Vermont Ry. He is a C.E. of the Pennsylvania Polytechnic College, a member of the Institution of Civil Engineers of Great Britain, of the Engineering Institute of Canada and of the American Society of Civil Engineers, and was President of the American Railway Engineering and Maintenance of Way Association for two terms.

W. D. Robb, Vice President, Transportation and Maintenance, G.T.R., Montreal, was born at Longueuil, Que., Sept. 21, 1857, and entered G.T.R. service in 1873, since when he has been, to July, 1882, machinist apprentice, Montreal; July, 1882, to Jan., 1883, charge hand, Montreal; Jan. to Aug., 1883, night locomotive house foreman, Montreal; Aug., 1883, to Jan., 1897, Locomotive Foreman, Belleville, Ont.; Jan., 1897, to July, 1901, Master Mechanic, Toronto; July, 1901, to Sept. 1, 1917, Superintendent of Motive Power, Montreal, and since Sept. 1, 1917, Vice President, Transportation and Maintenance, Montreal.

Frank Scott, Vice President and Treasurer, G.T.R., Montreal, entered G.T.R. service in 1879, in the Audit Department, and passed through all the stages in that department, from that of junior clerk. He was appointed Treasurer in 1901, and in 1906 was appointed also Treasurer of the Grand Trunk Pacific Ry. In 1914 he was also appointed Vice President, G.T.R., and its subsidiary companies.

Central Ry. Co. of Canada Liquidation. In connection with this liquidation, a hearing was given by the referee in the Exchequer Court of Canada at Ottawa, May 10, to the claim of Senator James Donville for \$20,000 as compensation for raising a loan for the company in 1906. He claims that he visited London, Eng., in the company's interests in that year and secured a loan of \$40,000,000. The company has a charter to build a railway between Montreal and Midland, Ont.

Excess of Canadian Railway Cars in the United States.

The Minister of Railways, Hon. J. D. Ross, has appeared in the House of Commons recently to discuss Canadian railway cars now in the United States and have

Frank Scott,
Vice President and Treasurer, Grand Trunk Pacific Ry.

W. D. Robb,
Vice President, Transportation and Maintenance, Grand Trunk Pacific Ry.

many U.S. cars were in Canada. He replied:—Up to Mar. 1, 1920, the following Canadian railway cars were on U.S. railways: Box cars, 42,347; auto cars, 1,380; refrigerator cars, 884; open top

cars, 5,781; stock cars, 1,751; flat cars, 1,428; other cars, 1,024. Total, 59,716. Up to Mar. 1, 1920, the U.S. railway cars were on Canadian lines: Box cars, 24,151; auto cars, 1,380; refrigerator cars, 1,024; open top cars, 11,304; stock cars, 187; flat cars, 1,454; other cars, 138. Total, 40,632. This showed that U.S. railways had 19,084 more Canadian cars than there were U.S. cars on Canadian railways.

The Minister, in answer to another question on April 7, said that the 59,716 Canadian cars in the U.S. on Mar. 1 were owned as follows:—Canadian National Ry., 10,840; C.P.R., 15,482; G.T.R., 21,028; other Canadian railways, 12,366.

The Interstate Commerce Commission issued the following circular April 20:—"The following communication has been received by the Interstate Commerce Commission from the American Railroad Association Commission on Car Service: During the past week the press throughout the country has quite generally carried the following statement dated Ottawa, April 7: 'In the House of Commons today, the Minister of Railways informed Mr. Archambault that of the 59,716 Canadian cars in the United States, 10,840 belonged to the Canadian National Railways, 15,482 to the C.P.R., 21,028 to the G.T.R., and 12,366 to other Canadian railways.'

"In our opinion, the statement that there are 59,716 Canadian cars in the U.S. is misleading, as it seems to invite the inference that the Canadian lines have suffered a depletion of car supply to the extent of 59,716 cars. The fact is that at the last date for which complete reports are available, April 1, although 54,401 Canadian cars were on U.S. lines, 36,245 U.S. cars were on Canadian lines. The net balance against the Canadian lines was therefore 18,156 cars. Further than this the situation varies on the different lines. In the case of some of the Canadian roads they have on line more cars than they own, and the excess usually represents a surplus of equipment from U.S. lines. Also, the situation as to Canadian lines on April 1 was practically a normal one, that is to say, while the Canadian lines, as producers of box car freight, had less than their ownership of box cars, as non-producers and consumers of coal and other open top car freight, they had a surplus above ownership of open top cars."

Canadian Railway and Marine World is advised by the Railway Association of Canada, that its reports at April 1 do not agree with the U.S. Car Service Commission's statement, as they show that at that date there were 63,783 Canadian cars on U.S. lines, and 42,415 U.S. cars on Canadian lines, a balance of 21,368 against Canada.

C.P.R. Station Garden Operations.—A recent report gave some information as to gardening operations carried on by C.P.R. station agents under the direction of its horticultural department. Over 500 station agents and section men are interested in the work, and are reported to have put in requisitions for 150,000 annuals for planting, besides taking advantage of the general distribution of standard packages of seeds. Provision has been made for the planting of 20,000 perennial plants, 10,000 shrubs and 5,000 shade trees by those taking part in the work along the lines. A correspondence school in gardening has been started for the benefit of the men engaged in the work. The usual prizes for the best kept plots will be awarded this year.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John, N.B., Bridge.—A decision is expected to be announced shortly as to the site for the construction of a new bridge across the St. John River's reversible falls, St. John. A press report states that the probable site is about 20 ft. above the present cantilever bridge.

The mayor of St. John and the city commissioner are reported to have inspected the locality recently with a view of the possibility of having the level crossing at Douglas Ave. done away with in connection with the building of the new bridge. It is stated that there are no serious engineering obstacles in the way of carrying the highway over the railway tracks at this point, and that the city engineer will meet C.P.R. engineers to discuss the matter.

Angus Shops, Montreal.—Daily press reports that these shops are to be doubled in size are exaggerated. We are officially advised that the extensions will provide an additional floor area of 223,550 sq. ft. and will cost approximately

ft. It is a 3-floor fire proof building. The construction will be steel frame, concrete foundation, brick walls, steel sash, concrete roof and floors.

PASSENGER CAR SHOPS.—An extension of 102 x 161 ft. between shops 2 and 4, and 137 x 161 ft. between shops 1 and 3; and 137 x 239 ft. east end extension of shop 3, giving a total increased area of 71,000 sq. ft. The construction will be concrete foundation, brick walls, mill type roof, concrete and mastic floors.

These shops will be all served from the present transfer table, the pit of which is being extended.

THE CAR ELECTRICAL SHOP will be a new building 62 x 362 ft., with a floor area of 23,000 sq. ft. The construction will be steel frame, concrete foundations, with brick walls and acid proof mastic floor.

A PLANING MILL SHELTER, 126 x 144 ft. will be built on the west end of the present planing mill to keep ma-

contract right to increase the number of its tracks over the St. Denis St., Montreal, viaduct, which is being widened.

Timiskaming-Des Quinze River Branch. A Haileybury, Ont., press report of May 13 stated that J. M. R. Fairbairn, City Engineer, and other C.P.R. officials had arrived at South Timiskaming and proceeded by steamboat to Ville Marie, Que., to look over the territory through which the proposed line to the Des Quinze River Falls would pass. The C.P.R. has in operation a branch line from Mattawa, Ont., to the foot of Lake Timiskaming, at the point formerly known as Lumsden's Mills, Que., and a branch line therefrom to Kipawa, Que., and under the Interprovincial & James Bay Ry. charter has built 10 miles of line from Kipawa to Mercier Y. Surveys have been completed for the extension of this line to Kipawa River, and we were recently officially advised recently that H. Roberts, Assistant Engineer, was in charge of a party making a survey of the Des Quinze River at

New Station at Moose Jaw, Sask., Canadian Pacific Railway.

\$1,000,000. Following are particulars of the extensions:—

LOCOMOTIVE SHOP.—An addition will be built at each end of the present shop, to give an additional floor area of 58,000 sq. ft. The construction will be steel frame, concrete foundation, brick walls. Mastic floor will be placed on the west end extension, and wood block floor, on concrete, in the east end extension. The east shop extension is to be used as a running shed, and for this reason pits, with mill type smoke jacks will be installed. All of the skylights will be constructed in wood, as metal has been found to deteriorate very rapidly, and for the same reason mill type ventilators will be used throughout this shop.

FREIGHT CAR SHOP.—An extension to the present building at the west end, 106 x 400 ft., to give an additional floor area of 42,400 sq. ft. The construction will be steel frame, concrete foundation, brick wall, wood floor and roof similar to present building.

THE PATTERN STORAGE will be extended at the west end 75 x 50 ft., giving an additional floor area of 3,750 sq.

ft. material under cover as a weather protection and will have an area of 18,000 sq. ft. for this purpose.

DRY KILN.—Four stalls will be added to the present wet dry kiln, increasing the area by 7,400 sq. ft. The construction will be special, with ventilating ducts in walls, built in brick, and concrete foundation.

TRACK SCALE.—A heavy service tapered floor track scale will be installed at the west end, of capacity large enough to weigh locomotives. The construction will be of the most modern type, with self registering beam, scale shelter and concrete pit. The floor of the scale will be steel beams and stands, with a mastic scale platform.

YARDS.—A number of track changes and additions will be made at both ends of the yard, to provide extra car capacity. There will also be installed a 50-ton mechanical coaling plant, as well as a standpipe for switching engines.

St. Denis St. Viaduct, Montreal.—A press report states that the company has acceded to the Montreal Administrative Commission's request not to exercise its

approximately mile 66 from Kipawa. This is the line for which the Quebec Legislature recently voted a special subsidy of \$6,400 a mile (over and above a cash subsidy of \$1,600 a mile), in case the Dominion Parliament did not grant a Dominion subsidy in aid of its construction.

Peterborough Station.—A. D. MacTier, Vice President Eastern Lines, J. M. R. Fairbairn, Chief Engineer, and H. C. Groat, General Superintendent Ontario District, are reported to have had a conference recently with the Mayor of Peterborough, Ont., and city officials regarding the construction of a union station there. The C.P.R. and the G.T.R. stations are a considerable distance apart across the city from each other.

West Moncton Station.—A press report states that the company proposes to build a new station at West Moncton, Ont., on its Guelph and Goderich line.

Woodstock-Zorra Second Track.—We are officially advised that there is no intention of doing any second track construction between Woodstock and Zorra,

One, at present, as stated in a daily press report.

Windsor Freight Yards.—E. W. Beatty, President, is reported to have informed the Windsor, Ont., Chamber of Commerce on the 13th of that city May 13, that it is proposed to lay out new local freight yards there.

London to Sarnia.—E. W. Beatty, President; Grant Hall, Vice President; H. C. Grout, General Superintendent Ontario Division, and other C.P.R. officers, visited Sarnia, Ont., May 14, to obtain information as to the railway situation, and the traffic possibilities of a line from London to Sarnia. The party was received by the mayor, and other representatives of the City Council and of the Chamber of Commerce, who presented maps of the district, and information as to the population, trade, etc., of the district. Mr. Beatty is reported to have stated that there had been a charter for a C.P.R. line from London to Sarnia, but this had lapsed and there was no assurance that the Dominion Government would revive it in view of the fact that the G.T. is to be taken over. He referred to the several plans proposed—Chatham to Sarnia over the Pere Marquette route, Chatham to Sarnia via Dresden, Wallaceburg and Petrolia, and the proposed electric feeders—which would serve a section of country scarcely opened up by railway lines and asked that the company be supplied with all material possible on the subject.

Prior to reaching Sarnia, the party visited Chatham and Wallaceburg, where considerable information was gathered, particularly in connection with the proposal that the C.P.R. should acquire the Chatham, Wallaceburg & Lake Erie Ry. in connection with the carrying out of the proposal.

It is reported that Grant Hall and H. C. Grout crossed over to the Michigan side of the river on May 14 and visited Marysville. A suggestion has been made that connection be established between the Ontario and the Michigan shores by a tunnel, and that Marysville be the site of the Michigan approach.

Western Branch Lines.—The Dominion Parliament has authorized the company to build the following lines:—

From the Pheasant Hills Branch at or near Asquith in Tp. 36, ranges 9 or 10, west of the third meridian, northerly to the Wilkie Northwesterly Branch at or near Cloan in Tp. 42, range 20, west of the third meridian, Saskatchewan.

From the Moose Jaw Northwesterly Branch at or near Rosetown in Tp. 30, range 15, west of the third meridian, northerly and northeasterly to the Pheasant Hills Branch at or near Keppel in Tp. 35, ranges 12 or 13, west of the third meridian.

From near Kelfield, on the Wilkie-Anglia Branch in Tp. 34, range 19, west of the third meridian, easterly direction to Tps. 32 or 33, range 14, west of the third meridian, Saskatchewan.

From the Weyburn-Stirling Branch at or near Amulet in Tp. 8, ranges 20 or 21, west of the second meridian, westerly and northwesterly to the Moose Jaw Southwesterly Branch at or near Dunkirk in Tp. 12, range 28, west of the second meridian, Saskatchewan.

From the Crownstee Subdivision at or near Kipp in Tp. 9, range 22, west of the fourth meridian, easterly and northeasterly to the Suffield-Blackie Branch at or near Retlaw in Tp. 13, range 17, west of the fourth meridian.

These lines are to be commenced within two years of the passing of the act, and to be completed within five years.

The company has also been granted an extension of time for five years for building a line from Tps. 6, 7, 8 or 9, range 30, west of the second meridian, westerly to the Alberta Ry. & Irrigation Co.'s railway at or near Stirling.

Moose Jaw Heating Plant.—Tenders were received to May 15 for the construction of a heating plant building at Moose Jaw, Sask.

The Moose Jaw Southwesterly Branch is already in operation to Assiniboia on the Weyburn-Lethbridge line, and we are officially advised that no decision has been reached as to when the first 30 miles, which a recent press report stated was to be built this year, will be put under contract. The extension from Assiniboia will connect with the Weyburn-Lethbridge line at Consul, Sask. A contract for the first 35 miles southeasterly from Consul was let in 1919, and grading is in progress. A recent press report stated that a further stretch of 25 miles was to be put under contract this year, but we are officially advised that no decision has been reached.

Swift Current Northwesterly Branch. We are officially advised that no decision has been reached as to when a start will be made on building the projected branch line from Sedgewick to Vegreville, Alta., 54 miles. This will be a branch of the Saskatoon-Wetaskiwin line, will cross the Grand Trunk Pacific Ry. near Viking, and reach Vegreville, which is a Canadian Northern Ry. junction point.

Swift Current-Empress-Bassano Line. We are officially advised that it has been decided to proceed with the proposed improvements on this line during this year, to bring it up to main line standard so that the overflow through freight traffic can be diverted to that route instead of taking it through Medicine Hat, Alta. This line is eight miles shorter between Swift Current and Bassano than the main line and has superior gradients. It is intended to take advantage of these conditions and to relieve congestion on the main line, where, during autumn and winter, traffic is exceptionally heavy. The capacity of the main line is further limited by the impracticability of making any considerable extension to the terminal facilities at Medicine Hat. The improvements involve the establishment of a terminal at Bassano, Alta.; the replacement of 65 lb. rails by 85 lb. rails; some slight grade revision between Swift Current and Cabri, and the installation of pipe lines and pumping plants to get water from the Red Deer and South Saskatchewan Rivers to supply water stations.

Leader, Sask., Southerly Branch.—We are officially advised that no decision has been reached with regard to the placing under contract of 25 miles of grading in extension of the contract for the first 25 miles of grading, which was let in 1919.

Weyburn-Lethbridge Line Extension.—We are officially advised that a contract has been let to W. A. Dutton, Winnipeg, for grading 18 miles westerly from Altaman, on the Saskatchewan-Alberta boundary, on the extension of the line to meet the line from Stirling, Alta., which is in operation to Manyberries, Alta. It is expected that the grading will be completed this year, but it is not likely that the company will be able to go on with tracklaying until the spring of 1921.

Acme to Drumheller.—D. C. Coleman, Vice President Western Lines, is reported to have stated recently that the construction on the line from Acme to Drumheller, Alta., had been proceeding very

favorably during the winter. In connection with the construction of this line a recent Calgary report stated that construction would be started at an early date on a line on a branch line from Duchesne or Rosemary, on the main transcontinental line, into the coal mining areas, to connect with the Acme-Drumheller line. We are officially advised that while a charter for the construction of this line has been obtained in 1919 no decision has been reached as to when construction will be started.

Vancouver Pier.—Dredging is proceeding at the site of the new pier at Vancouver, F. F. Busted being in charge. (May, pg. 246.)

Grand Trunk Railway Construction, Betterments, Etc.

Ottawa Cross Town Tracks.—In connection with the project for removing the G.T.R. cross town tracks in Ottawa, a suggestion has been made for the elimination of all the tracks, with one exception, such a line to have short spurs to business plants, and short sidings between certain streets. This, it is contended, would obviate the long haul which would result from the removal of all tracks. The one through track would, it is proposed, be operated by electricity.

The G.T.R. and the Hamilton Highway. The problem of the Toronto Hamilton highway entrance into Hamilton is receiving consideration. A recent press report states that N. Cauchon, who has made several surveys in connection with the railway situation in the city, suggests that the city exchange rights of way with the railway. This would involve the use of the G.T.R. right of way for highway purposes, the G.T.R. being changed over to another route. The suggestion is to divert the highway at a point near the Kings Road to the G.T.R. right of way, the highway would then swing right into the city without the necessity of either bridge or fill, a saving, it is claimed, of something like \$2,500,000 of the cost of the route at present suggested. The G.T.R. would be diverted to what is described as the 0.4 grade, laid out on one of the suggested routes on the Tye-Cauchon map. The whole question rests on the G.T.R.'s willingness to make the exchange.

Hamilton Bridges.—The Hamilton, Ont., City Council's railway committee is reported to have refused the company's application for permission to raise the overhead bridges at Macnab, John, Catharine and Mary Streets, Hamilton. The committee held that if the bridges are not high enough now, the proper remedy would be to lower the roadbed, as recommended in the Tye-Cauchon report on the railway situation in the city.

Hamilton-Sarnia Telephone Dispatching.—A press report states a contract will be let shortly for the installation of a telephone dispatching system between Hamilton and Sarnia, Ont.

London Division Track Relaying.—A press report states that seven miles of the track between Paris and London, Ont., have been relaid with new heavy rails and that the rebalasting is being gone on with. New rails for other parts of the track in the division which is to be relaid are being delivered.

London Division Stations.—A press report states that new stations will be built this summer at Hawtree, Ont., on the Stratford-Port Dover line, and at Clan-Deboye, on the London-Wingham line, the latter replacing the one destroyed by fire in 1919. (May, pg. 239.)

Railway Rolling Stock Orders and Deliveries.

Canadian National Rys. have received 11 mail cars out of an order of 20, placed in 1919 with Canadian Car & Foundry Co.

The C.P.R., between Mar. 16 and May 18, ordered 11 vans and 3 ballast spreaders, and received 4 vans, 3 Pacific locomotives and 2 freight locomotives from its Angus shops, Montreal.

Canadian Locomotive Co. has delivered four 12-wheel (4-8-0) locomotives to Ja-

maica Government Railways, completing an order for 7 placed in January. The chief details of these locomotives were given in our February issue, page 69.

The Timiskaming & Northern Ontario Ry., in addition to the 4 Mikado locomotives ordered from Canadian Locomotive Co., details of which are given on this page, has ordered 2 eight-wheel switch-

same as that of the 10 heavy Pacific type locomotives given in our April issue, page 182, except that Young valve gear will be used.

The Canadian Car & Foundry Co. has made the following shipments of rolling stock since Apr. 15: 2 dining cars, 2 steel mail cars, from Montreal, for the G.T.R.; 440 repaired box cars from Fort William, Ont., for the Grand Trunk Pacific Ry.; 20 steel mail cars from Mont-

real, for Canadian National Rys.; 3 tank cars from Montreal, for Imperial Oil Ltd.

intention to fit up one or two with slightly different arrangements, for experimental purposes.

The G.T.R. 10 horse express cars ordered from the Osgood Bradley Car Co. will be 73½ ft. long, and of the same type of construction as the 60 ft. baggage cars, details of which are given in this issue, except that the Commonwealth six wheel cast steel truck will be used. The cars will be equipped with partitions

Steel Mail Car, Canadian National Railways.

real, for Canadian National Rys.; 3 tank cars from Montreal, for Imperial Oil Ltd.

Canadian National Rys. have ordered 50 steel underframe express refrigerator cars, 30 tons capacity, from National Steel Car Corporation. They will be 45 ft. long over end sills, 8 ft. 11 in. wide over side sills, and will have Commonwealth trucks and Miner friction draft

gear. Of these cars, 20 are for use on the Canadian National Rys., and 30 on the Grand Trunk Pacific Ry.

The C.P.R.'s 500 refrigerator cars which are being built at its Angus shops, Montreal, as stated in our last issue, will be duplicates of those built last autumn, and fully described and illustrated in our Nov., 1919 issue, page 585. They are designed with special reference to the transportation of fruit, and have proved entirely satisfactory for this service. In the lot now under construction it is the

of usual design, M.C.B. type D couplers, Farlow draft gear attachment, Miner draft gear, cast steel truck bolsters, Miner roller rocker side bearings, four point brake beam suspension, Barber lateral motion roller bearing and U.S.R.A. arch bar type truck.

Steel Dining Car, Canadian National Railways.

ing locomotives from Montreal Locomotive Works.

The G.T.R. has arranged for the overhauling and reinforcing of 240 freight cars at its London, Ont., shops. It is probable that another 500 will be dealt with there. Similar work is being undertaken to a number of 30 ton freight cars at its Montreal shops.

Canadian National Rys. have ordered 12 light Pacific type (4-6-2) locomotives from Montreal Locomotive Works, for the western lines. The specification is the

gear. Of these cars, 20 are for use on the Canadian National Rys., and 30 on the Grand Trunk Pacific Ry.

The C.P.R.'s 500 refrigerator cars which are being built at its Angus shops, Montreal, as stated in our last issue, will be duplicates of those built last autumn, and fully described and illustrated in our Nov., 1919 issue, page 585. They are designed with special reference to the transportation of fruit, and have proved entirely satisfactory for this service. In the lot now under construction it is the

of usual design, M.C.B. type D couplers, Farlow draft gear attachment, Miner draft gear, cast steel truck bolsters, Miner roller rocker side bearings, four point brake beam suspension, Barber lateral motion roller bearing and U.S.R.A. arch bar type truck.

The G.T.R. baggage cars, of which the Canadian Car & Foundry Co. is building 50, will be 60 ft. long, of the G.T.R. standard composite construction, with steel underframe, steel side framing and wood exterior and interior, and wood roof cov-

Mainly About Railway People Throughout Canada.

Edward Greig Bowie, who has been appointed Master Mechanic, Brownville Division, New Brunswick District, C.P.R., Brownville Jct., Me., was born at Winnipeg, Aug. 20, 1892, and entered C.P.R. service in May, 1907, since when he has been, to Aug., 1912, machinist apprentice, Winnipeg; May, 1912, to Sept., 1914, machinist, Winnipeg, and on Western Lines; Oct., 1914, to Apr., 1915, Master Mechanic's clerk, Calgary, Alta.; Apr. to July, 1915, machinist, Angus shops, Montreal; July to Oct., 1915, dynamometer car operator, Eastern Lines; Oct., 1915, to Apr., 1916, Assistant Locomotive Foreman, Ottawa; Apr. to Nov., 1916, Assistant Foreman and Locomotive Foreman, Outremont, Que.; Nov., 1916, to May, 1917, Locomotive Foreman, Sherbrooke, Que.; May, 1917, to June, 1918, Locomotive Foreman, Smiths Falls, Ont.; June, 1918, to Apr. 24, 1920, General Foreman, McAdam Jct., N.B.

F. S. Brown, Trainmaster, Michigan Central Rd., Detroit, Mich., and formerly of St. Thomas, Ont., died at Detroit, May 4, aged 52, from pneumonia.

J. A. Burnett, electrical engineer, of Smart & Burnett, consulting engineers, Montreal, has been appointed by the G.T.R. to assist in the appraisal of the electrical equipment of the St. Clair River tunnel, Montreal & Southern Counties Ry., and Oshawa Electric Ry., in connection with the pending acquisition of the G.T.R. by the Dominion Government.

John Robert Caswell, whose appointment as Division Engineer, Sudbury Division, Ontario District, C.P.R., Sudbury, Ont., was announced in our last issue, was born at Coldwater, Ont., Apr. 13, 1892, and entered railway service in 1908, since when he has been, during the summers of 1908 and 1909, chairman, C.P.R., Coldwater and Toronto; Apr. to Sept., 1910, chairman, C.P.R., Toronto; Sept., 1910, to Aug., 1912, rodman and chairman, C.P.R., Coldwater and Guelph Jct., Ont.; Aug., 1912, to Jan., 1915, transitman, C.P.R., Guelph Jct. and Montreal; Jan. to Oct., 1915, transitman, Lake Erie & Northern Ry., Simcoe, Ont.; Oct., 1915, to Oct., 1916, Assistant Engineer, Westinghouse Church Kerr & Co., and Aetna Chemical Co., Drummondville, Que.; Oct., 1916, to Jan., 1917, party chief, Foundation Co., Port Colborne, Ont.; Jan. to Apr., 1917, transitman, Hydro Electric Power Commission of Ontario, Niagara Falls, Ont.; Apr., 1917, to Jan., 1918, senior transitman, C.P.R., London, Ont.; Jan. to Sept., 1918, transitman, H. E. P. C. of Ontario, Niagara Falls, Ont.; Sept., 1918, to Apr. 1920, Division Engineer, London Division, Ontario District, C.P.R., London, Ont.

James Coleman, who has been appointed Assistant to General Superintendent, Motive Power and Car Department, G.T.R., Montreal, was born at Port Huron, Mich., and started work with the G.T.R. as a car department apprentice in 1873. He worked at Port Huron until 1889, when he was appointed foreman at Chicago, remaining in that position until 1899, when he was appointed Master Car Builder, Central Vermont Ry., at St. Albans, Vt. In 1905 he entered the Canada Car Co.'s service at Montreal, taking charge of the manufacturing department, and in 1906 returned to his former position with the Central Vermont. In Jan., 1908, he was appointed Superintendent, Car Department, G.T.R., at Mont-

real, and on May 1, 1920, was appointed to his present position, his former one being abolished. He was second Vice President of the Master Car Builders Association for the year 1916-17, and has been nominated as Vice Chairman, American Railroad Association, Section 3, Mechanical, the election for which will take place at Atlantic City in June.

J. Coleman, Assistant to General Superintendent Motive Power and Car Departments, G.T.R., Montreal, has been nominated as Vice Chairman, American Railroad Association, Section 3, Mechanical, to serve until June, 1922. The election will take place at the annual meeting in Atlantic City in June.

W. R. Davidson, General Superintendent, Western Lines, G.T.R., Chicago, Ill., was entertained at dinner, and presented with a diamond scarf pin by his associates at the end of April, at Montreal,

moved to Hamilton, where he for some years, as long as his health permitted, conducted a steamship ticket agency.

R. H. Fish, General Superintendent, Eastern Lines, G.T.R., Montreal, was entertained Apr. 30, by a number of friends and associates at Stratford, Ont., where he was Superintendent for a number of years, and presented with a silver tea service and cabinet of silver, on leaving Stratford to take up his new duties at Montreal. The presentation was made by W. White, Trainmaster, G.T.R., Palmerston, Ont.

W. R. Fitzmaurice, whose appointment as Superintendent, New Glasgow Division, Maritime District, Canadian National Rys., New Glasgow, N.S., was announced in our last issue, was presented with a travelling bag, May 7, by the staff at Campbellton, N.B., where he had been Superintendent, prior to leaving to enter on his new duties.

Timothy Foley, railway contractor, etc., died at St. Paul, Minn., May 25, after an illness of several months. He was born in Lanark County, Ont., in 1838.

Mrs. T. A. Garland, mother of Mrs. D. B. Hanna, wife of the President of the Canadian National Rys., died at Portage la Prairie, Man., May 11. Mrs. Hanna was there at the time, and Mr. Hanna went from Toronto for the funeral.

Gordon Grant, whose appointment as Chief Engineer, Dominion Highways Commission, was announced in our last issue, was born at Dufftown, Banffshire, Scotland, Jan. 2, 1865, and is a son of the late Peter Grant, a member of Sir Sandford Fleming's staff on the construction of the Intercolonial Ry. and the C.P.R. He was educated at Ottawa, and went to the Argentine Republic in 1881 with his uncle, W. B. Grant, Chief Engineer, Buenos Aires Southern Ry., and remained there for six years. On his return to Canada in 1887, he was engaged, until 1890, on Intercolonial Ry. construction in Cape Breton, N.S.; from 1890 to 1893, on C.P.R. survey work east of Montreal; 1893 to 1897, on construction on the Flagler roads in the U.S.; 1897 to 1900, on construction, Crownstee Pass line and Kootenay and Arrowhead Ry. for the C.P.R.; 1900 to 1903, chief draftsman, Construction Department, C.P.R., Montreal; May, 1904, to Feb., 1905, on location work, C.P.R., in British Columbia; Feb., 1905, to Sept., 1906, on location work northwest of Quebec, Que., National Transcontinental Ry.; Sept., 1906, to May, 1907, Assistant District Engineer, National Transcontinental Ry., Quebec, Que.; May, 1907, to Aug., 1909, Inspecting Engineer, N.T.R. Commission; Aug., 1909, to 1917, Chief Engineer, National Transcontinental Ry.; 1917 to Jan., 1919, Chief Engineer, Quebec & Saguenay Ry.; Jan., 1919, to April, 1920, Consulting Engineer, Department of Railways and Canals.

Phelps Johnson, G. H. Duggan and G. F. Porter were recipients recently of the Gzowski Medal, presented this year for the first time in triplicate, as collaborators of a brochure entitled "The Design, Manufacture and Erection of the Superstructure of the Quebec Bridge," considered by the Engineering Institute of Canada to be the most valuable contribution to engineering literature during the year.

Dr. Thomas Wilson Lambert, who is stated in a press report to have been formerly at St. Thomas Hospital, London,

H. C. Groat,
General Superintendent, Ontario District, Canadian Pacific Railway.

where he was General Superintendent, Eastern Lines, on leaving the district for Chicago, to take up his new duties.

Mathew Cochran Dickson, who died at Hamilton, Ont., May 1, after a long illness, was born at Juniper Green, near Edinburgh, Scotland, Apr. 23, 1846, and was brought to Canada when quite young. He was for a number of years, up to June 30, 1885, Assistant General Freight and Passenger Agent, Northern & North Western Ry. (now part of G.T.R.), Toronto; July 1, 1885, to Feb. 28, 1888, Travelling Passenger Agent, Missouri Pacific Ry., Chicago, Ill.; Mar. 1, 1888, to Aug. 7, 1890, General Freight and Passenger Agent, Erie & Huron Ry., Sarnia, Ont.; Aug. 7, 1890, to May 31, 1902, District Passenger Agent, G.T.R., Toronto; June 1, to July 16, agent, Transportation Department, G.T.R., Wingham, Ont.; July 16, 1902, to Oct. 23, 1909, agent, G.T.R., Woodstock, Ont.; Oct. 23, 1909, to May 1, 1911, Agent G.T.R. Brantford. On May 1, 1911, he retired on pension and

For and afterwards, in medical charge of the western section, C.P.R., died at London, Ont., recently. He is referred to as having been well known in British Columbia as a fish club and an expert salmon fisher. He was born in Hull, Eng., and we are officially advised that between 1890 and 1910 he served as road agent on the North West and Skeena rivers, on the British Columbia District C.P.R., with headquarters at Kamloops.

Herbert J. Lambkin, whose appointment as District Commissary Agent, Sleeping, Dining and Parlor Car Department, Canadian National Rys., Winnipeg, was announced in our last issue, was born at Quebec, Que., July 25, 1881, and entered transportation service in August, 1906, since when he has been, to May 1, 1909, sleeping car conductor, C.P.R., Montreal; June, 1909, to Oct., 1917, Train Agent and Traveling Passenger Agent, Grand Trunk Pacific Ry., Winnipeg; Nov. 1917, to Apr., 1920, Inspector, Sleeping, Dining and Parlor Car Service, Canadian Northern Ry., and Canadian National Rys., Winnipeg.

F. S. MacDonald, Trainmaster, North Shore Section, Pacific Great Eastern Ry., Vancouver, B.C., died recently. This is a local line of 12 miles, operated by gasoline cars.

M. H. MacLeod, Vice President, Operation and Maintenance, Canadian National Rys., Toronto, who, as stated in Canadian Railway and Marine World for May, was spending some time in Victoria, B.C., for the benefit of his health, went to Winnipeg towards the end of May. He will spend some time on the western lines, on business, and is expected to return to Toronto late in June.

George R. Mash, a former Assistant General Purchasing Agent, G.T.R., died at Montreal, May 21, aged 83. He was born at Toronto, educated in Upper Canada College and graduated as a civil engineer. He entered railway service as private secretary to General Manager, Great Western Ry. (now part of G.T.R.), Hamilton, Ont. Later he was on the engineering staff on the construction of the Hoosac Tunnel near North Adam, Mass., and was subsequently appointed General Manager, Detroit, New Haven & Milwaukee Rd., Detroit, Mich., and when that railway was taken over by the G.T.R. in 1884 he was appointed Assistant General Purchasing Agent, G.T.R., at Montreal, which position he held until his retirement in 1890.

W. T. Moodie, Superintendent, Canadian National Rys., Port Arthur, is spending a vacation at Vancouver, B.C., with his wife and family.

Charles R. Moore, who has been appointed General Superintendent of Car Service, G.T.R., Montreal, was born at Hamilton, Ont., Oct. 12, 1867, and entered G.T.R. service in 1883, since when he has been, successively, junior clerk, Mechanical Accountant's office, Hamilton, Ont.; and in the Motive Power, Car, Maintenance of Way and Transportation Departments, Montreal, and at various terminals on the system. In 1911, being then chief clerk to Superintendent, Toronto, he was appointed chief clerk to the then Vice President (H. G. Kelley), and in May, 1916, he was appointed Assistant to Vice President, Construction, Operation and Maintenance (H. G. Kelley), and in Sept., 1917, Assistant to Vice President in charge of Motive Power, Car Equipment and Machinery (W. D. Robb), which position he held at his present appointment.

Reginald Frederick Nicholson, whose

appointment as Assistant Engineer, Portland Division, Eastern Lines, G.T.R., Portland, Me., was announced in our last issue, was born in London, Eng., July 2, 1892, and entered railway service in Aug., 1911, since when he has been, to Feb., 1913, rodman, C.P.R., Vancouver, B.C.; Feb. to Oct., 1913, rodman, Esquimalt & Nanaimo Ry., Union Bay, B.C.; July to Dec., 1914, draftsman, Pacific Great Eastern Ry., Lillooet, B.C.; July, 1916, to Dec., 1917, mining surveyor, Prestea, Gold Coast, West Africa.

J. T. Peer, who died at Indianapolis, Ind., at the end of April, after a short illness, aged 37, was for a number of years in C.P.R. service at Toronto, and for the past few years was in service of the United Grain Growers Ltd., Winnipeg.

Jos. Quinlan, who recently retired from the position of District Passenger Agent, G.T.R., Montreal, under the pension fund rules, after 43 years with the company, was entertained by a number of his friends and former associates at Mont-

W. J. U'ren,
Assistant General Superintendent, Quebec District,
Canadian Pacific Railway.

real, May 4, and presented with a set of diamond studded gold cuff links and a purse of money.

Hon. J. D. Reid, Minister of Railways and Canals, has been elected a member of the Old Time Telegraphers' and Historical Association.

Dr. A. Gordon Rice, Divisional Surgeon, G.T.R., Toronto, died there, May 20, aged 36, after a long illness. He was appointed to the G.T.R. position in 1914.

J. G. Rutherford, C.M.G., one of the members of the Board of Railway Commissioners, will receive the honorary degree of Doctor of Veterinary Science, of the University of Toronto, in June.

Lord Shaughnessy, Chairman, C.P.R. Co., and Sir John Kennedy, Consulting Engineer, Montreal Harbor Commissioners, were presented with gold badges as honorary members of the Engineering Institute of Canada, at a recent meeting of the Montreal branch. The badges are replicas of the one especially struck for

the institute for presentation to the Prince of Wales, on his installation as an honorary member, during his recent Canadian tour.

Mrs. Sutherland, wife of Hugh Sutherland, of Winnipeg, formerly Executive Agent, Canadian Northern Ry., and now President, Western Dominion Collieries, and one of the Winnipeg Electric Ry. directors, died on May 9, at St. Paul, Minn., where she was taken ill, on her way home, after spending some time in Florida.

Charles Henry Worby, whose appointment as Assistant Superintendent, Sleeping, Dining and Parlor Cars and News Service, Western Lines, Canadian National Rys., Winnipeg, was announced in our last issue, was born at London, Ont., May 18, 1883, and entered transportation service in July, 1899, since when he has been, to Aug. 15, 1900, booking clerk, Royal Albert Dock Ry., London, Eng.; Aug. 16, 1900, to Sept. 14, 1906, chief clerk, Central London Ry., London, Eng.; July 2 to Sept. 30, 1913, store clerk, Canadian Northern Ry., Winnipeg, Man.; Oct. 1, 1913, to May 31, 1915, Inspector, Sleeping and Dining Cars, same road, Winnipeg; June 1, 1915, to Apr. 30, 1917, Agent, Sleeping and Dining Car Department, same road, Saskatoon, Sask.; May 1 to Oct. 31, 1917, Agent, Sleeping and Dining Car Department, same road, Winnipeg; Nov. 1, 1917, to May 31, 1918, District Commissary Agent, Sleeping and Dining Car Department, same road, Winnipeg; June 1, to Sept. 16, 1918, acting Assistant Superintendent, same road, Winnipeg; Sept. 17, 1918, to Apr. 30, 1920, District Commissary Agent, Sleeping and Dining Car Department, Canadian National Rys., Winnipeg.

John Anderson Wright, whose appointment as Assistant Foreign Freight Agent, G.T.R., Montreal, was announced in our last issue, was born at Peterborough, Ont., Oct. 27, 1881, and entered G.T.R. service May 1, 1899, since when he has been, to Dec. 31, 1899, junior 1900, to Feb. 28, 1901, stenographer, clerk, General Freight Office; Jan. 1, same office; Jan. 1, 1903, to Sept. 22, 1904, stenographer, Foreign Freight Agent's office; Sept. 23, 1904, to July 31, 1907, stenographer, General Freight Agent's office; Aug. 1, 1907, to May 31, 1915, clerk, Foreign Freight Office; June 1, 1915, to Mar. 31, 1917, chief clerk, same office; Mar. 1, 1917, to Apr. 25, 1920, Grain Agent, Foreign Freight office, all at Montreal.

The Winnipeg Railway Clerk's Association has been incorporated for mutual protection, against loss of wages through illness or accident; the promotion of social, physical and mental welfare of the members; the appointment of a committee to negotiate with employers as to wages, etc., and other purposes connected with the members' interests. The incorporators are:—W. Bone, C. T. Brindle, J. McRoberts, H. O. Hughes, W. B. Marsden, J. Jack, G. A. Winks, L. P. Ross, H. T. Rinnick, and Miss E. G. Hunter, all described as railway clerks.

Sir Robert Reid's Will.—The action brought by Miss Reid, against other members of the family, the Reid Newfoundland Co., Lord Shaughnessy and others, with respect to the late Sir Robert Reid's will came before the Probate Court in Montreal May 7 on an amended plea filed by Miss Reid, and was adjourned for a month, owing to the absence of some of the parties in Newfoundland and in Europe.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Burrard Inlet Tunnel & Bridge Co.—The Dominion Parliament has extended for two years the time within which the company may commence the construction of a tunnel under the first narrows of Burrard Inlet, and a bridge over the second narrows for railway and general traffic purposes, with approaches and railways connecting with existing lines of railway. The charter is owned by the cities of Vancouver and North Vancouver and surrounding municipalities. (Jan. pg. 18.)

Canadian Niagara Bridge Co.—A meeting of shareholders will be held at the Toronto, Hamilton & Buffalo Ry. offices, Hamilton, Ont., June 2, to elect officers and transact other business. E. D. Cahill is Secretary of the provisional directors. This is the company which proposes to build a new bridge across the Niagara River near Welland, Ont.

Dolly Varden Mines Ry.—A press report states that an agreement has been reached between the Dolly Varden Mines Co. and Taylor Engineering Co. of Vancouver under which all matters in dispute have been settled, actions withdrawn, and the application to the Dominion Government to declare the British Columbia legislation, under which the Taylor Engineering Co. obtained a title to the property, declared ultra vires, abandoned. (May, pg. 245.)

Esquimalt & Nanaimo Ry.—The Dominion Parliament has authorized the company to build a line from near the present terminus at Courtenay, on Vancouver Island, B.C., northerly and north-easterly to Duncan Bay, on the east coast of the island. (May, pg. 235.)

The Flinlon Mining Proposition and the projected railway.—A press report says that J. E. Hammell, one of the owners of the Flinlon mine in northern Manitoba, stated recently that \$250,000 will be expended in development work during this year, and that before a return on the money invested can be obtained the total expenditure will amount to \$10,000,000. The company will be in a position to guarantee an output of at least 2,000 tons if not 5,000 tons a day within three years. This guarantee will be forwarded to the Manitoba Government, which has promised to build a railway to the property at a cost of \$2,700,000, the railway to be operated by Canadian National Rys. (April, pg. 177.)

Grand Trunk Pacific Ry.—We are officially advised that it is intended to invite tenders at an early date for the gravel fill into which the piling for the erection of the wharf for Salmon handling at Prince Rupert, B.C., will be driven; and for the construction of the dock, exclusive of the warehouse. The building of the warehouse is being held in abeyance at present. The dock will have a length of 860 ft. along the waterfront, and a width of 173 ft. It is to be built of creosoted piling, where piling is subject to the tredo, and of green piling on the shore side of the wharf, where piling is safe from marine borers. There will be a railway track along the front of the wharf, and two depressed tracks along the shore front. It is intended to provide for the accommodation of two Barlow elevators and for a gantry crane.

The warehouse will be 820 x 146 ft., within which will be a suspended office 58 ft. 4 in. by 30 ft. 10 in. The warehouse will have a capacity of 350,000 cases of salmon, leaving a passage of 26

ft. in the centre, and two of 16 ft. each at the sides, or a capacity of 12,000 tons of ocean traffic, leaving similar passage ways. (April, pg. 175.)

Great Northern Ry.—A press report states that the company proposes to build a permanent station at Crescent Beach, B.C. A number of improvements to the highway approaches to the station site, including a subway under the tracks, were reported to be in progress May 6. (May, pg. 235.)

Hudson Bay Ry.—The Minister of Railways informed the House of Commons recently that the department had been advised by the Canadian National Rys. management that it is intended to renew a large number of ties, to do some surface ballasting, and other work on the line between Pas and the Kettle Rapids of the Nelson River, in order to continue operation on the line. (May, pg. 235.)

Kettle Valley Ry.—The Dominion Parliament has extended for five years the time within which the company may build the previously authorized line from near Grand Forks, B.C., to 50 miles up the north fork of the Kettle River; and from near Otter Summit to the Aspen Grove mineral district, 30 miles. The act also authorizes the company to build a line from near Coalmount on the joint section operated by the K. V. Ry. Co. and the Vancouver, Victoria & Eastern Ry. & Navigation Co., southerly to the Granite Creek coal areas, 12 miles. (May, pg. 235.)

Montreal Central Terminal Co.—A bill providing for an extension for five years of the time within which the company may build its projected tunnels or bridge or tunnel, under or over the St. Lawrence River, and lay out its projected terminals in Montreal, was read a second time in the Senate, May 10, and referred for consideration to the railway committee. On May 11 Hon. R. Dandurand called attention to the fact that on a former occasion the company's bill had failed to pass the railway committee on account of opposition raised by the Minister of Railways, and that he had been informed lately that the government had changed its attitude on the bill and would not now oppose it. Sir James Loughheed promised to ascertain what was the government's attitude to the bill, so as to be able to inform the committee in due time, but he had no knowledge that the government had altered its opinion on the bill since it was last before the Senate's railway committee. (Sept., 1919, pg. 432.)

Montreal, Joliette & Transcontinental Jct. Ry.—The Dominion Parliament has extended for five years the time within which the company may build its projected railway from Maisonneuve, Que., northerly through Hochelaga, L'Assomption and Montcalm counties in Joliette, thence north by northwest to St. Michel des Saints, and thence to Parent on the National Transcontinental Ry., 180 miles. (April, pg. 175.)

Northern Light Rys. Co.—The Ontario Legislature has passed an act incorporating this company. We are officially advised by the Canadian Light Rys. Construction Co., which is behind the project, that it is the intention to proceed immediately with building a 36 in. gauge railway from Elk Lake to Gowganda; Gowganda to Fort Mecheman; and also from Swastika through Kirkland Lake to

Larder Lake, in Skead and Boston Tps. The line will have a 3% gradient as the maximum, 30 lb. rails and oil burning steam locomotives will be used. The surveys for the line between Elk Lake and Gowganda have been completed. J. K. McDonald is Chief Engineer, with office at Elk Lake, Ont. (May, pg. 235.)

Pabos, Amqui & Edmundston Ry.—The House of Commons railway committee reported April 29 that it was not in the public interest to proceed with a bill providing for the incorporation of the Pabos, Amqui & Edmundston Ry. Co. to build a railway from Pabos, Gaspé County, Que., to the Canadian National Rys. at Amqui, thence to Edmundston, N.B., with a branch from some point on the main line to Grand Vallée, a seaport on the St. Lawrence River. The committee's report was adopted.

The promoters of the proposed company are all local men, and it was claimed that the projected railway would open up for development a large area of the Gaspé peninsula not now reached by railway or other means of transportation. The Minister of Railways objected to the passage of the bill on the ground that the line could not be built and maintained by an independent company, and that the government would inevitably have to take it over or to subsidize it. He thought that the day of subsidies had passed, and that if such railways were to be built the provinces interested should make themselves responsible for them as a factor in the development of natural resources. The General Manager of the Atlantic, Quebec & Western Ry. and the Quebec Oriental Ry. opposed the project on the ground that it would take traffic from his lines, as well as from the Canadian National Rys. His lines represent an investment of \$8,000,000 of British capital, and are in danger of having to go into liquidation. Hon. Rodolphe Lemieux and others supported the project, and it was alleged that the main opposition to the bill came from Robin & Co., a Jersey Island concern, which is "a replica on the Gaspé peninsula of the Hudson's Bay Co. in the west," and which seeks to control the country as the H. B. Co. did in the old days. The bill was defeated in the railway committee, April 29, by 31 votes to 29. (May, pg. 235.)

Pacific Great Eastern Ry.—A press report states that the British Columbia Government is arranging to put an engineering party in the field during the summer to make surveys for an extension of the line from the present projected terminus at Prince George, B.C., into the Peace River country. The original proposal was that the line should connect at the British Columbia-Alberta boundary with the Edmonton, Dunvegan & British Columbia Ry.

We are advised that the Canadian Bridge Co., Walkerville, Ont., has been given a contract for the steel work on the bridge across Deep Creek. It will consist of a deck plate girder viaduct of spans from 60 to 100 ft. long, on vents to a maximum height of about 255 ft. from the top of masonry to track level. A description of the bridge was given in Canadian Railway and Marine World, Dec., 1919, pg. 654. It is expected to begin during June and to have it completed by the autumn. (May, pg. 235.)

Quebec Central Ry.—We are officially advised that a contract has been let to J. T. and J. F. Davis, Montreal, for grading and masonry work on the line to be

Bridgeburg-Buffalo Fares.—A press report states that the Bridgeburg, Ont. Town Council has appealed to the Board of Railway Commissioners against an increase of fares on the dummy motor car running between Bridgeburg, Ont., and Buffalo, N.Y. The commutation rate has been increased from 50c. to 75c. for a 10-trip ticket.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines Ltd.—J. H. EDWARDS, heretofore chief clerk, Freight Claims Department, has been appointed Assistant Freight Claims Agent, C.S.L., and Northern Navigation Co. Office, Montreal.

E. S. SMILEY has been appointed Western Claims Agent, C.S.L. and Northern Navigation Co. and will handle all claims on traffic originating in, or destined to, points west of Sault Ste. Marie, Ont. Office, Winnipeg.

Canadian Pacific Ocean Services Ltd. A. W. SNELL, heretofore acting European Freight Agent, Montreal, has been appointed European Freight Agent there. Office, Board of Trade Building.

Canadian National Rys.—S. D. DULMAGE has been appointed Sleeping and Dining Car Agent, Montreal, vice A. T. Landry, transferred.

J. B. JACKSON, heretofore dining car storekeeper, has been appointed sleeping and dining car agent, Calgary, Alta.

J. M. KERR, heretofore Assistant Master Mechanic, Montreal Division, Eastern Lines, Montreal, has been appointed Assistant Master Mechanic, Saguenay Division, Eastern Lines, vice T. S. Lowe, transferred. Office, Quebec, Que.

R. KING, heretofore relieving Superintendent, Kamloops, B.C., has been appointed acting Superintendent at Port Arthur, during the absence on leave of W. T. Moodie.

A. T. LANDRY, heretofore Sleeping and Dining Car Agent, Montreal, has been appointed Inspector, Sleeping, Dining and Parlor Cars there.

T. S. LOWE, heretofore Assistant Master Mechanic, Saguenay Division, Eastern Lines, Quebec, Que., has been appointed Assistant Master Mechanic, Montreal Division, Eastern Lines, vice J. M. Kerr, transferred. Office, Montreal.

J. F. McGUIRE has been appointed acting General Agent, Seattle, Wash., with territory covering Washington and Oregon States, reporting to Assistant General Freight and Passenger Agent, Vancouver, B.C.

W. L. STITT, heretofore Sleeping and Dining Car Inspector, has been appointed acting Sleeping and Dining Car Agent, Ottawa, Ont., C. H. Farr, Sleeping and Dining Car Agent there, having resigned to manage his father's hotel in Southport, Eng.

Owing to a mistake in makeup in our May issue the appointments of W. M. Neal, J. K. Savage, W. J. Uren and A. Williams were classified under Canadian National Rys., instead of under Canadian Pacific Ry. They are repeated under their proper heading in this issue.

Canadian Pacific Ry.—E. A. BARNWELL, heretofore Locomotive Foreman, Calgary, Alta., has been appointed Locomotive Foreman, Kamloops, B.C., vice J. W. Jackson transferred.

E. BOWIE, heretofore General Foreman, McAdam Jct., N.B., has been appointed Master Mechanic, Brownville Division, New Brunswick District, vice W. Wright, transferred. Office, Brownville Jct., Me.

G. D. BROPHY has been appointed District Passenger Agent, Banff, Alta., vice A. L. Powell, resigned.

A. E. EDWARDS has been appointed Locomotive Foreman, McAdam, N.B., vice R. A. Miller, promoted.

JOHN HALSTEAD, Division Freight Agent, Calgary, Alta., has been appointed Division Freight Agent, Winnipeg, vice A. T. McKean, transferred.

J. W. JACKSON, heretofore Locomotive Foreman, Kamloops, B.C., has been appointed Locomotive Foreman, Calgary, Alta., vice E. A. Barnwell, transferred.

W. McILROY, heretofore chief clerk, District Passenger Agent's office, Toronto, has been appointed General Agent, Passenger Department, Detroit, Mich., vice M. G. Murphy, resigned to enter private business.

A. T. McKEAN, Division Freight Agent, Winnipeg, has been appointed Division Freight Agent, Calgary, Alta., vice John Halstead, transferred.

John R. Caswell.
Division Engineer, C.P.R., Sudbury, Ont.

R. A. MILLER, heretofore Locomotive Foreman, McAdam, N.B., has been appointed General Foreman there, vice E. Bowie, promoted.

W. M. NEAL, heretofore Assistant General Superintendent, Quebec District, Montreal, has been appointed Assistant General Superintendent, Ontario District, vice J. K. Savage, promoted. Office, Toronto. Through an error in make-up this appointment appeared under Canadian National Rys. in the May issue.

B. J. QUILTY has been appointed Assistant Superintendent, Sudbury Division, Ontario District, vice R. B. Girouard, transferred. Office, Sudbury, Ont.

J. K. SAVAGE, heretofore Assistant General Superintendent, Ontario District, Toronto, has been appointed General Superintendent, Quebec District, vice J. M. Woodman, transferred. Office, Montreal.

W. J. UREN, heretofore Superintendent, Farnham Division, Quebec District, Farnham, Que., has been appointed Assistant General Superintendent, Quebec

District, vice W. M. Neal, transferred. Office, Montreal. Through an error in make-up, this appointment appeared under Canadian National Rys. in the May issue.

A. WILLIAMS, heretofore Superintendent, London Division, Ontario District, London, Ont., has been appointed Superintendent, Farnham Division, Quebec District, vice W. J. Uren, promoted. Office, Farnham, Que. Through an error in make-up this appointment appeared under Canadian National Rys. in the May issue.

J. H. WILSON has been appointed Locomotive Foreman, John St., Toronto, vice R. V. Carleton, transferred.

Delaware & Hudson Co.—Consequent on the U.S. Government's contract having ceased, the company has appointed officers for its railway, including, among others, the following:—

F. P. GUTELIUS, Vice President in Charge of Operation and Traffic, Albany, N.Y.

C. S. SIMS, Resident Vice President, Montreal.

The officials named occupied similar positions up to the time the railway was taken over by the U.S. Railroad Administration.

Grand Trunk Ry.—J. COLEMAN, heretofore Superintendent, Car Department, has been appointed Assistant to General Superintendent, Motive Power and Car Department, and his former position has been abolished. Office, Montreal.

F. FOUSE, heretofore Master Car Builder, London shops, Ont., has been appointed Master Car Builder, Montreal shops, vice W. A. Pitt, promoted.

T. M. HYMAN, heretofore Assistant Foreman, Montreal shops, has been appointed Master Car Builder, London, Ont., shops, vice F. Fouse, transferred.

C. R. MOORE, heretofore Assistant to Vice President, has been appointed General Superintendent of Car Service, vice J. E. Duval, deceased. Office, Montreal.

C. F. NEEDHAM, heretofore Mechanical and Electrical Engineer, has been appointed Assistant to General Superintendent, Motive Power and Car Department. Office, Montreal.

W. A. PITT, heretofore Master Car Builder, Montreal shops, has been appointed General Master Car Builder, and has also assumed the duties heretofore performed by the Superintendent, Car Department, which position has been abolished. Office, Montreal.

Grand Trunk Pacific Ry.—F. CLARK, heretofore Locomotive Foreman, Melville, Sask., has been appointed Locomotive Foreman, Prince George, B.C., vice A. T. Hannah, transferred.

A. T. HANNAH, heretofore Locomotive Foreman, Prince George, B.C., has been appointed Locomotive Foreman, Melville, Sask.

J. A. C. KELMAN, heretofore circuit manager, has been appointed telegraph supervisor, Central and Western Divisions, vice R. M. MacMillan, promoted. Office, Winnipeg.

R. M. MacMILLAN, heretofore Telegraph Traffic Supervisor, Central and Western Divisions, has been appointed Divisional Superintendent of Telegraphs, and Superintendent of Time Service, Central Division, with jurisdiction over all matters appertaining to construction and maintenance of telegraph and telephone lines, operation of railway and commercial telegraphs and of time service, vice

Great Northern Ry.—**A. L. HAYFIELD**, formerly of Northern Pacific Ry. service, Vancouver, is acting as general agent and authority in Pacific Great East Ry. service, and has been appointed Controller, Freight Agent, G.N.R., Vancouver, B.C.

Greater Winnipeg Water District Ry.—**J. H. ASHDOWN**, one of the commissioners of the Greater Winnipeg Water District, is acting as chairman of the commission, which, among its other activities, owns and operates the Greater Winnipeg Water District Ry., the former chairman, R. D. Waugh, having gone to France as a member of the Saar Valley Commission, appointed by the allied powers; his position being Commissioner in charge of fuel and supplies.

Kettle Valley Ry.—**J. J. WARREN**, having resigned as President, has been elected Chairman of the Board.

D. J. COLEMAN, Vice President, Western Lines, C.P.R., Winnipeg, has

also been elected President, K.V.R., succeeding J. J. Warren, resigned on account of pressure of other business.

Michigan Central Rd.—**A. J. MITCHELL**, heretofore General Foreman, passenger car shop, St. Thomas, Ont., has been appointed Divisional General Car Foreman, Canada Southern Division, vice E. H. Wood, promoted. Office, St. Thomas, Ont.

E. H. WOOD, heretofore Division General Car Foreman, Canada Southern Division, St. Thomas, Ont., has been appointed Master Car Builder, Detroit, Mich., vice J. T. Downs, promoted.

Pacific Great Eastern Ry.—**ROBERT WILSON**, Auditor, has been acting as General Manager, since G. E. MacDonald's resignation, which was mentioned in Canadian Railway and Marine World for May.

Rutland Rd.—**T. M. FALLOM** has been appointed City Passenger Agent, Montreal.

S. LEBORVEAU has been appointed Canadian Passenger Agent, Montreal.

mile 21.9, 10 x 15 ft. f. t. culvert; mile 45.2, two 3 x 15 ft. f. t. culverts, mile 79.8, abutments.

Port Arthur Station.—Tenders have been invited for the construction of an express building at Port Arthur, Ont. A press report states that the new structure will probably be erected at the west end of the station and that it will be 80 or 100 ft. long.

Western Lines Buildings, Etc.—Tenders were received to May 25 for the construction of the following works:—

Port Arthur, Ont.—Express building; standard 75 ft. ash pit.

Rainy River, Ont.—Standard 75 ft. ash pit.

Winnipeg.—Office extension to store building, west yard.

Transcona, Man.—Alterations and additions to coach paint shop.

Dauphin, Man.—Turntable foundation.

Swan River, Man.—Standard 5-stall engine house.

Kamsack, Sask.—Two standard 75 ft. ash pits; turntable foundation.

Humboldt, Sask.—Standard 75 ft. ash pit; turntable foundation.

Prince Albert, Sask.—Extension to station building; 3-stall addition to engine house.

North Battleford, Sask.—Standard 75 ft. ash pit.

Hanna, Alta.—Standard 75 ft. ash pit.

Tenders were received recently for the erection of 225 track miles of wire fencing; for reinforced concrete culverts near Winnipeg, on the Regina, Saskatoon and Kindersley Subdivisions, Sask., and on the Hanna Subdivision, Alta.; and for the construction of a subway at Athabasca St., Moose Jaw, Sask.

Lampman Coal Fields.—A press report states that it is expected construction will be started at an early date on a line from Lampman coal fields just across the Saskatchewan-Manitoba boundary.

Bengough-Fife Lake Extension.—A press report states that it is expected to build about 12 miles of the projected extension of the Bengough line towards Fife Lake, Sask., this year, and that an engineering party was in the field all winter making surveys.

Western Lines Construction.—Tenders will be received to June 1 for grading and culverts on the following lines:—Prince Albert, Sask., northeasterly extension; Turtleford-Meeting Lake extension, Sask.; Maryfield, Sask., extension; Acadia Valley extension, Alta.

Pacific Coast Terminals.—A press report states that at a recent conference of representative of Vancouver and other points with the Minister of Railways regarding the Canadian National Rys. terminals at Vancouver, the Minister stated that it was intended to proceed with the plans for the railway terminals at a cost of several million dollars and that the plans had been under consideration for some time. It is said that in connection with the carrying out of the plans there will be a revision of the agreement entered into between the city and the Canadian Northern Ry. (May, pg. 226.)

Calgary C.P.R. Employees Local Club. The following officers were elected at the annual meeting, May 11: President, A. P. Thompson; Vice President, I. Harrison; General Secretary, V. Cawley; Financial Secretary, H. B. Bridges; Athletic Secretary, J. McRoberts; Treasurer, G. H. Carter. An executive committee of the different departments was appointed.

Canadian National Railways Construction, Betterments, Etc.

Sydney Dry Dock Spur.—We were officially advised May 7 that construction would start in the near future on the spur line to the site of the projected dry dock at Sydney, N.S., and that the spur will be completed in the autumn. The track to be built, including the main spur and sidings, will be 5,300 ft. The siding is to be built on the usual standard siding agreement basis, the lease being the Sydney Foundry & Machine Co.

New Glasgow Station.—Tenders were received to May 31 for the extension of and alterations to New Glasgow, N.S., station.

Salt Springs Station.—Tenders were received to May 24 for the erection of a frame station building and platforms at Salt Springs, N.S.

St. John Station and Yards.—A press report states that the St. John, N.B., City Council has been advised that an appropriation of \$1,000,000 has been made for preliminary work on the new station and extension of yards at St. John, N.B. The station plans have not been submitted, but it is said that the layout will provide for eight new tracks at the present grade, and a viaduct on Mill St., to carry the electric railway and general traffic over the railway approach. The present station building will be used until the new building is sufficiently advanced to permit the old one to be taken down. The yards are to be considerably extended, and it is stated a large area of land has been expropriated for the purpose.

Fredericton Improvements.—A press report states that C.N.R. officials discussed with Fredericton, N.B., city officials recently plans for the construction of a new bridge across the St. John River, a new location of the tracks through the city and other improvements. The new bridge will, it is said, be about 50 ft. south of the present structure, and the approach will be so arranged as to permit of the present station being used. A subway will be provided under the approach near the junction of Queens and Brunswick Streets with Waterloo and University Ave. It is expected that work on the bridge will be started this year, and that it will be ready for use by the end of 1921. The

estimated cost of bridge and approaches is said to be approximately \$2,000,000.

McGivney Jct. to Fredericton, N.B.—Tenders were received up to May 25 for grading near Taymouth, mile 89.94 to 92.80; and near Durham, mile 95.32 to 96.51. Taymouth and Durham are stations about four miles apart on the old Canada Eastern Ry., running from Newcastle to Fredericton, N.B., and on the Fredericton side of McGivney Jct., where the National Transcontinental Ry. crosses. The section of line from McGivney Jct. to Fredericton is being improved in order to carry the increasing through traffic from the N. T. Ry. over the St. John & Quebec Ry. to St. John.

Railway Section Dwellings.—Tenders were received to May 26 for the erection of railway section dwellings at the following points on the National Transcontinental Ry. in Quebec:—La Tuque Subdivision—Gouin, Fitzpatrick. Fitzpatrick Subdivision—Cressman, Joybert. Weymouth, Crespel, Ferguson, Casey. Parent Subdivision—Greening, Langdale, Monet, Bolger. Doucet Subdivision—Doucet, Fisher, Uniacke.

Branch Line to Oka, Que.—Senator Boyer enquired in the Senate May 5:—“Did any officials of the Railways Department or of the Canadian National Rys. attend, during 1919, a banquet at the Trappist monastery at Oka and promise that a branch line of the National Ry. would be built from the Freniere station to the monastery?” Sir James Loughheed answered: “No.”

Ontario District Concrete Work.—We are officially advised that the following are the various concrete works in the Ontario District for which tenders were invited recently:—Pembroke Subdivision—Abutments and pedestals, mile 82.4. North Bay Subdivision—Two 10 x 15 ft. f. t. culverts; mile 100.9, abutments and pedestals. Sudbury Subdivision—Mile 7.6, 10 x 15 ft. f. t. culverts; mile 115.6, 6 x 7 ft. f. t. culverts; mile 120.5, two 5 x 15 ft. f. t. culverts. Ruel Subdivision—Mile 6.2, 5 x 12 ft. f. t. culvert; mile 94.7, 10 x 15 ft. f. t. culvert; mile 126.5, two 8 x 12 ft. f. t. culverts. Long Lake Subdivision—Mile 17.9, 4 x 12 ft. f. t. culvert; mile 111.7, abutments. Nipigon Subdivision—Mile 21.4, abutments;

The C.P.R. Refused Permission to build to Birch Lake.

The C.P.R. Co. made application to the Dominion Parliament recently for an act to authorize a number of branch lines in Saskatchewan and Alberta, including one from a point on the Pheasant Hills branch at or near Cory, in Tp. 36, ranges 5 or 6, west of the third meridian, north-westerly to at or near Birch Lake in Tps. 51 and 52, ranges 15 and 16, west of the third Meridian, Saskatchewan.

When the bill came before the House of Commons railway committee, April 20, the Minister of Railways announced that the Canadian National Railways had completed plans for a line over the same territory as that proposed to be served by the line projected by the C.P.R. from Cory to Birch Lake, and that provision had been made in the estimates for construction to be started this summer. There was, according to reports of the discussion in the committee, no doubt as to the necessity for the construction of the line in question, and both the Minister of Railways and D. C. Coleman, Vice President Western Lines, C.P.R., agreed that there was not room for two lines through the territory. It therefore became a question which of the two should be authorized. Hon. George Langley, Minister of Municipal Affairs for Saskatchewan, made a strong appeal for granting the power asked for, and when the matter came before the committee April 27 the Minister of Railways stated that \$100,000, which was in the estimates for this year, would be spent in grading on the line, and that track would be laid in 1921. D. B. Hanna, President Canadian National Rys., stated that the construction of this line was a pre war promise, and was on the C.N.R. programme long before the C.P.R. had contemplated going there. The C.N.R. management was strongly opposed to any other company serving the territory when all plans had been laid. The C.P.R. might be much better employed attending to other territories where a government owned road was not contemplated. The C.P.R. had waited in the Drumheller district until the C.N.R. had developed the area, and then wanted to reap the fruits of another company's labors. D. C. Coleman is reported to have said that the C.P.R. would have gone ahead with work on this line last year but for the serious labor troubles in Winnipeg. The company proposed to go ahead with all lines for which powers were asked, as fast as possible. After a lengthened discussion the committee, by a vote of 40 to 29, struck the section out of the bill.

On returning to Winnipeg from Ottawa, after the House of Commons railway committee had refused to pass a portion of the C.P.R.'s bill to authorize it to build certain branch lines, D. C. Coleman, Vice President Western Lines, is reported to have said: "The news dispatches sent out from Ottawa at the suggestion of interested parties gave an altogether wrong impression as to the issues involved. The C.P.R. asked for the right to build a railway from Saskatoon to Birch Lake, in northern Saskatchewan. There was no request for a subsidy or assistance of any kind. All that we desired was the charter to construct. This proposed line does not parallel any existing lines of the Canadian National Rys. It does not parallel any proposed lines of the Canadian National Rys. for which it holds charters. It crosses the two lines the Canadian National had constructed and

the one line for which it holds a charter at almost right angles. However, it apparently did conflict with plans of future construction which Canadian National officers had been thinking about, but as they had made no announcement whatever previous to the application, the settlers who were asking for our line and the C.P.R. may be pardoned for assuming that these plans were hastily conceived, after it was announced that the C.P.R. proposed to go into the territory.

"It was argued that as the Canadian National had been operating the only lines north of the North Saskatchewan River in Saskatchewan all the country north of the river should be regarded as Canadian National territory, and that the competing railway should not be allowed to build in, even though it was established that the Canadian National had left large tracts of country altogether unserved and neglected. The C.P.R. will not voluntarily subscribe to any principle of division of territory. The Canadian National Rys. has every right to build into territory in southern Saskatchewan and southern Alberta, which has in the past been exclusively served by the C.P.R., and as a matter of fact has been and is now exercising that right. We do not ask, and will not ask, for authority to construct lines paralleling other railway lines, but we do claim that in ordinary fairness we should be allowed to build into the territory north of our existing lines, providing that it can be established that such lines are necessary to provide service to settlers and to promote further settlement and development.

"The C.P.R. is willing to provide the capital to construct such branch lines, is quite content that there should be every protection against wasteful parallel construction, and submits that it is not fair and not reasonable to deny it the right to build merely because the officers of a competing railway feel that at some future time, when the financial condition of the country justifies it, they may desire to build lines with which the C.P.R. construction plans might possibly conflict. The construction policy of both companies should be to promote production, to increase the population and to avoid waste and the C.P.R. is willing that its programme should at all times conform to such a policy."

Timiskaming & Northern Ontario Railway Commission Estimates.

Further supplementary estimates for the year ending Oct. 31, 1920, submitted to the Ontario Legislature recently, contained the following items:—

General surveys and investigations (re-vote)	\$25,000.00
Change of line for reduction of grade and curvature (re-vote)	10,000.00
Widening cuts and fills	10,000.00
Additional weight of rail and improved fastenings	45,000.00
Additional track material (re-vote \$12,000)	100,000.00
Replacing timber bridges and culverts (re-vote \$34,008.52)	75,000.00
Public and private road crossings (re-vote \$2,800)	3,000.00
Additional yard tracks (re-vote \$20,423.87)	40,000.00
New sidings and spur tracks (re-vote \$34,500)	60,000.00
Roadway machinery and tools (re-vote \$3,000)	10,000.00
Fencing right of way (re-vote)	25,073.05
North Bay maintenance of way, general repair and carpenter shops (re-vote \$2,000)	6,000.00
Employees' dwellings (re-vote \$13,435.02)	20,000.00

Cochrane—Baggage and express buildings, platforms, etc. (re-vote \$10,440.05)	15,500.00
Heating, plumbing and electric lighting in existing dwellings and stations (re-vote \$3,500)	9,200.00
North Bay extensions and alterations, stores, buildings	35,000.00
North Bay—Freight car repair shed (re-vote)	10,000.00
New Lisleard—Freight shed	20,000.00
Swastika—Completion station	1,000.00
Dane—Extension station	1,000.00
Elk Lake, Timmins, Iroquois Falls—Ice houses	5,000.00
Station buildings to provide accommodation at settlements without such facilities	4,500.00
Water stations, additions and improvements (re-vote)	20,000.00
Improvements—Station grounds	2,000.00
Fire protection—Iroquois Falls	4,000.00
North Bay and Englehart coaling plants (re-vote \$30,000)	60,000.00
North Bay Shop tools	2,500.00
Live Stock pens—locations not specified	3,500.00
Snow fences	5,000.00
Additional telephone circuits between North Bay and New Lisleard	2,500.00
Renewing telegraph and telephone pole line equipment and stringing circuit, Matheson to Porcupine Junction	5,000.00
Five metallic telephone circuits—Swastika to Kirkland	2,500.00
Telephone line—Cobalt to Porcupine Jct.	25,834.60
Additional locomotives	225,000.00
Locomotives—Superheaters, coal boxes, etc. (re-vote)	69,500.00
Passenger train cars—betterments (re-vote \$600)	5,000.00
Freight train cars, betterments	10,000.00
Work equipment—additions and betterments (re-vote)	14,500.00
Nipissing Central Ry.—Car barn enlargement (re-vote)	2,000.00
Nipissing Central Ry.—Haleybury yard, bor, increased facilities (re-vote)	8,165.18
	\$1,057,772.83

Canadian Railway Club's Officers, Etc.

The Canadian Railway Club, at its annual meeting in Montreal, May 13, elected the following officers:—

President—W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., Montreal. First Vice President—C. H. N. Connell, District Engineer, Canadian National Rys., Quebec, Que. Second Vice President, W. H. Sample, General Superintendent Motive Power and Car Departments, G.T.R., Montreal. Executive Committee—A. Crumpton, Valuation Engineer, G.T.R.; E. R. Battley, Superintendent Motive Power, Eastern Lines, G.T.R.; R. A. Pyne, Superintendent Motive Power, C.P.R.; H. R. Naylor, Assistant Works Manager, Angus Shops, C.P.R.; B. F. Shortley, Superintendent Terminals, Canadian National Rys.; C. P. Price, Electrical Superintendent Canadian National Rys., Montreal.

Secretary—W. A. Booth, Engineer Locomotive Construction, G.T.R., Montreal. Treasurer—E. E. Lloyd, Auditor of Disbursements, C.P.R., Montreal.

Indian Aerial Tramways.—Projects for the construction of aerial tramways of ropeways, for public traffic in India, are under consideration by the Government Railways Board. In the board's report for 1919 it is stated that this system of transportation is well established in India, for mining and other private industrial enterprises, but has not been used for public service. It is considered that experience in other countries has proved this system suitable for the opening up of mountainous districts, where the cost of railways and roads would be prohibitive, and there is a wide field for its employment for this purpose in India. As there is difficulty in securing engineers, with experience in this line of work, the board is arranging to have an officer trained specially in aerial tramway construction.

Freight and Passenger Traffic Notes.

The first Southwestern Ry. regular tri-weekly train service between St. James and West Ave. Junction, N.B., was discontinued on May 14.

Representatives of various railway companies met at a conference in the British Columbia Ry. Co. building in the city of Victoria, B.C., on May 14, with F. W. Peters, C.P.R., as moderator.

The Minister of Railways stated in the House of Commons that there was no truth whatever in the report that train service on the Hudson Bay Ry. from Pas. Man., was to be discontinued. About 214 miles of the line had been in operation up to that time and it was intended to operate trains on this mileage the same as last year.

The Edmonton, Dunvegan & British Columbia Ry. Co. is reported to have applied to the Board of Railway Commissioners for authority to increase its passenger and freight rates. It is asked that the railway be treated as a colonization railway; and that the rates be fixed sufficiently high to enable operation and fixed charges to be met. It is stated that the increase asked is to be temporary, and that rates will be lowered from time to time as traffic increases.

The C.P.R. will operate three through trains between Quebec and Montreal in each direction, beginning June 6, the new trains being known as the Frontenac Limited and the Viger Limited, and will run daily during the summer season, while the third train will be run on week days only. Trains will leave Palais station, Quebec, at 7.50 a.m., except Sunday, 2 p.m. daily, and 10.45 p.m. daily, and will leave Montreal at 7.50 a.m., except Sunday; 4.10 p.m., daily; and 10.45 p.m. daily.

The Canadian National Ry. put in operation on May 3 the summer schedule for the operation of traffic via the car ferry between New Brunswick and Prince Edward Island. The car ferry leaves Borden, P.E.I., at 9.30 a.m., and 5.05 p.m. daily except Sundays, reaching Tormentine, N.B., at 10.20 a.m. and 6 p.m. The ferry leaves Tormentine at 3 p.m., and 7.40 p.m., arriving at Borden at 3.50 p.m. and 8.30, thus making two round trips a day. Trains leaving St. John, N.B., at 7.10 a.m. and 1.15 a.m. connect at Sackville at 12.28 p.m. and 5.50 p.m. with trains for Tormentine, as also do the 9.25 a.m. and 7 p.m. trains from Montreal. The ferry train from Tormentine connects at Sackville with trains for Moncton, St. John and Montreal. Trains are also run on Prince Edward Island in connection with the ferry service.

The Quebec Court of King's Bench, sitting at Montreal, delivered judgment April 26, in an appeal of the G.T.R. against a decision of the Superior Court giving the Central Fruit Auction Co. \$5,150.21 said to be due under certain traffic arrangements and a lease of certain G.T.R. premises in Montreal, and ordering the G.T.R. to execute a draft agreement, embodying the verbal understanding arrived at. The G.T.R. appealed against the decision on the ground that the employees who were alleged to have made the agreement had no authority to conclude any agreement, and were merely negotiating an agreement which

was to be accepted and executed before it became binding; that the draft agreement had been rejected by the company's executive officers, and that therefore there was no contract or agreement. The Superior Court found that the G.T.R. having acted on the verbal understanding arrived at and set forth in the draft agreement constituted an adoption and notification. The King's Bench Court, after hearing arguments, held that there had not been a ratification or adoption of the verbal understanding by the G.T.R. that would bind it to a 10 years contract, and that the G.T.R. was justified in putting an end to the payment of any allowance for train track traffic. The G.T.R. gave notice, Aug. 30, 1916, that the payment would cease from and after Oct. 1 of this year, and tendered an amount up to that date. The G.T.R.'s appeal was maintained, the Superior Court's judgment was reversed, and the amount of the tender was declared to be sufficient.

Railway and Steamship Terminal for Sydney, N.S.

Canadian Railway and Marine World for May contained on pg. 232 some information in regard to work to be done by the Dominion Public Works Department at Sydney, N.S. We have since been favored by the department with the following information:—The proposed work will be situated near the old railway pier, at Barrack Point. The wharf will be 540 x 74 ft., with a berth on each side 30 ft. deep at low tide, and 100 ft. wide by 350 ft. long. There will also be a berth on each side, at the inner end, 20 ft. deep at low tide and 100 ft. wide by 150 ft. long. The wharf shed will be 450 x 40 ft., with a 4 ft. platform on each side at the same level as the freight car floor. There will be a railway track on each side of the wharf, with 3 ft. clear way between a box car and the outside edge. The wharf will consist of 13 concrete cribs, filled in with earth, and the approach from the shore will be an earth embankment 74 ft. wide. Two railway tracks will extend out over the embankment to each side of the wharf, and a wagon road will lead from the wharf along the shore to George St. There will be a connection with the city water supply and a hydrant at the end of wharf.

Electric Railways Transferred to Canadian National Railways.

Hon. J. A. Calder gave the following information in the House of Commons recently, in answer to questions:—The actual paid up capital of the Toronto Eastern Ry., on Sept. 27, 1918, was \$250,000.00. The provisional officers were: President, W. H. Moore; Vice President, A. J. Mitchell; other directors: R. G. O. Thompson, H. S. Gausby, and E. R. Gossett. As the railway was not in operation there was no general manager. As the Canadian Northern Ry. acquired all the company's assets, by assuming the cost of construction, there was no actual cash transaction between the companies.

The actual paid up capital of the Toronto Suburban Ry., on Sept. 27, 1918, was \$1,500,000.00. The officers were: President, Sir Wm. Mackenzie; other directors: L. W. Mitchell, F. H. Philp,

and G. C. Royce; General Manager, G. C. Royce. As the Canadian Northern Ry. acquired all the company's assets, by assuming its liabilities, there was no actual cash transaction between the companies.

United States Railway Notes.

The American Railroad Association's Committee on lost and stolen equipment May 13 that 235,000 freight cars were tied up or delayed in transit, of which 85,000 were at junction points, with no labor to transfer them.

The U.S. Senate Interstate Commerce Committee agreed, on May 12, on legislation designed to aid railways and shippers in the car shortage situation, by extending the \$300,000,000 revolving fund from 5 to 15 years and also by amending the law in other respects.

W. D. Hines, ex Director General of Railways, U.S. Railroad Administration, has been designated by President Wilson, as U.S. representative in Europe, to enforce the terms of the peace treaty, relating to waterways of various signatory countries.

Canadian National Railways Earnings.

	1920	1919
January	\$ 7,736,862	\$ 6,786,547
February	6,956,909	6,406,562
March	7,761,326	7,140,036
April	8,207,378	6,909,437
	\$29,662,475	\$27,142,582

Approximate earnings for 3 weeks ended May 21, \$9,915,971 against \$8,400,541 for same period 1919.

Canadian Northern Railway System.

	1920	1919
January	\$1,200,700	\$1,026,000
February	3,962,900	3,868,400
March	1,647,700	\$3,341,816
	\$12,600,700	\$10,914,100

Canadian Pacific Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, from Jan. 1, 1920, compared with those of 1919:

	Gross	Expenses	Net	Increase or decrease
Jan.	\$19,911,569	\$15,828,658	\$4,082,911	\$987,371
Feb.	18,457,104	12,408,231	6,048,873	\$267,242
Mar.	15,711,947	14,718,378	1,003,569	418,701

	\$43,187,610	\$39,955,267	\$3,232,343	\$816,092
Inc.	6,220,588	7,587,028		
Decr.			\$816,092	

Approximate earnings for April, \$15,586,000, and for two weeks ended May 14, \$7,096,000, against \$12,750,000 and \$5,815,000 for same period 1919.

Grand Trunk Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, from Jan. 1, 1920, compared with those of 1919:

	Gross	Expenses	Deficit	Increase
Jan.	\$ 5,061,033	\$ 5,862,445	\$ 814,411	\$ 97,406
Feb.	4,900,801	5,179,712	278,911	158,957
Mar.	5,756,372	6,491,239	734,867	575,215

	\$15,718,207	\$16,513,480	\$ 814,411	\$ 861,609
--	--------------	--------------	------------	------------

Approximate earnings for April, \$5,478,080, and for three weeks ended May 21, \$4,625,569, against \$3,557,587, and \$4,413,626 for same periods 1919.

Sir Donald Mann Had No Private Car. P. F. Casgrain, M.P. for Charlevoix-Montmorency, Que., asked in the House of Commons recently:—1. Did Sir Donald Mann have a private car? 2. If so, was it taken over by the government when it bought the Canadian Northern Ry.? 3. If not, why? The Minister of Railways answered the first question, "No."

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Shipbuilding and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transporta-
tion Associations.

Published on the first of each month.

Acton Burrows, Limited, Proprietors,
70 Bond Street, Toronto, Canada.

ACTON BURROWS,
President and Editor.

AUBREY ACTON BURROWS,
Business Manager.

Assistant Editors,
JOHN KEIR and DONALD F. KEIR

United States Business Representative,
A. FENTON WALKER, 143 Liberty St., New York.

Member of
Associated Business Papers,
Audit Bureau of Circulations
Canadian National Newspapers
and Periodicals Association,
Canadian Press Association.

Authorized by the Postmaster General for Cana-
da, for transmission as second class matter.

SUBSCRIPTION PRICE, including postage any-
where, \$2 a year in advance.

SINGLE COPIES, 25 cents each, including
postage.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection. Money cheque is payable at par in
Toronto or Montreal.

Canadian National Railways Re- ceipts and Expenditures.

Sir James Lougheed gave the following information in the Senate May 7, in answer to questions by Senator McSweeney. The receipts of the Intercolonial Ry. for the year ended Mar. 31, 1920, were \$28,104,733.66, and the operating expenses were \$30,908,505.18.

The receipts of the National Transcontinental Ry. between Moncton and Winnipeg for the year ended Mar. 31, 1920, were \$11,592,718.72, and the operating expenses were \$14,584,250.06.

The receipts of the Canadian Northern Ry. System for the year ended Mar. 31, 1920, were \$53,562,177.57, and the operating expenses were \$60,034,023.92.

The receipts of the Grand Trunk Pacific Ry., now in the hands of a receiver, were, for the calendar year 1919, \$12,251,462.13, and the operating expenses were \$17,587,567.37. The figures from Jan. to Mar., 1920, had not been ascertained up to May 7.

Grand Trunk Railway Acquisition Act Passed.

Assent was given in the Senate, May 11, to a number of acts passed by the Dominion Parliament, including the one for the confirmation of an agreement dated Mar. 8, 1920, for the acquisition by the Dominion Government of the G. T.R. capital stock, excepting the 4% guaranteed stock. The act consists of two sections, the first correcting in two details the agreement, and the second ratifying and confirming the agreement as so amended, and a schedule containing the agreement. The two sections were given in full in Canadian Railway and Marine World for May, pg. 251. The bill passed its final stage in the Senate May 7, there being only a formal discussion with reference to undisclosed claims and the position of employees who went on strike in 1910 with regard to the Pension fund.

D. B. Hanna Sues F. S. Cahill for Slander.

A civil action in which D. B. Hanna, President Canadian National Ry., asks for \$50,000 for slander, alleged to have been contained in the remarks of F. S. Cahill, M.P., before the Reform Club of Montreal, in April, has been commenced, and Mr. Cahill has been served with notice of the suit.

The statement of claim in connection with the action has arrived in the city. It sets forth that, by the remarks of Mr. Cahill, it was indicated that Mr. Hanna had acted in a fraudulent manner and in violation of his mandate and duty to the public and Dominion of Canada. It also sets forth that the remarks of Mr. Cahill were false, malicious and defamatory, and constituted a slander of the most damaging character, reflecting on Mr. Hanna's character and integrity and subjecting him to the loss of public confidence. Mr. Hanna's claim is for \$50,000 and interest and costs of the action, and he asks that, in default of payment, Mr. Cahill be subjected to coercive imprisonment.

The statement of claim is a bulky document, and contains reports of Mr. Cahill's remarks in several daily papers, which assert that Mr. Cahill said that Mr. Hanna was putting the Canadian National Ry. into the hands of Sir William Mackenzie and Sir Donald Mann,

that Sir William and Sir Donald were selling coal, ties and other supplies to the C.N.R. and that the government had been "stung" for \$140,000,000 in connection with the Canadian National Ry. The statement of claim says: "The said charges imply a dereliction of duty on the part of the plaintiff as director and President of the C.N.R., and as operating and managing the Canadian National Ry."

Bisaillon & Beique, Montreal, are acting for Mr. Hanna.

Mechanical Conventions at Atlantic City.

The annual meeting of American Railroad Association, Section 3, Mechanical, formerly American Railway Master Mechanics Association and Master Car Builders Association, will be held at Atlantic City, N.J., June 9 to 16, both inclusive. The reports of committees investigating locomotive matters will be received and discussed on June 9 to 11, both inclusive, and reports of committees investigating car matters will be received and discussed on June 14 to 16, both inclusive.

W. H. Winterrowd, Chief Mechanical Engineer C.P.R., Montreal, will read a paper on June 10, on snow fighting apparatus.

The general committee for the convention includes J. Coleman, Assistant to General Superintendent, Motive Power and Car Department, G.T.R., Montreal, who is Vice Chairman, and W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., Montreal. Mr. Coleman, whose term of office expires June, 1920, has been re-nominated to serve until June, 1922. The election will take place on June 14.

The following officials of Canadian railways, and their subsidiaries are members of the committees named:—

I. N. Clark, Master Car Builder G.T.R., revision of passenger car rules of interchange.

J. Coleman, Assistant General Superintendent Motive Power and Car Department, G.T.R., arbitration, arrangements, car construction.

W. H. Flynn, Superintendent Motive Power Michigan Central R.R., fuel economy and smoke prevention.

A. R. Kipp, Mechanical Superintendent, Minneapolis, St. Paul & Sault Ste. Marie Ry., standards and recommended practice.

E. J. Robertson, Superintendent Car Department, Minneapolis, St. Paul & Sault Ste. Marie Ry., loading rules.

W. J. Robider, General Master Car Builder, C.P.R., car construction, repair shop layouts.

W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., car wheels.

Canadian Northern Railway Indebtedness.—The Minister of Immigration stated in the House of Commons recently, in answer to a question, that the total indebtedness of the Canadian Northern Ry. as of Dec. 31, 1919, including funded debt, equipment securities, land securities, advances made by the Dominion Government, and all other liabilities outstanding, was \$566,097,468.10.

Standard time on C.P.R.—The C.P.R. has not made any change in its standard of time, either on the road or in its general or subordinate offices, in connection with daylight saving. Clocks in all the company's offices and buildings remain at standard time and trains are being operated by this time.

Traffic Orders by Board of Railway Commissioners.

Boston & Maine Rd. Sleeping and Parlor Car Fares.

General order 292 B. May 5.—Re application of Boston & Maine Rd. for approval of increases in its Standard Tariff of Maximum Sleeping and Parlor Car Tolls; and of general order 292, April 22, 1920, approving increased Standard Tariffs of Maximum Sleeping and Parlor Car Tolls of various railways. The applicant company's showing increases in its maximum sleeping and parlor car tolls, on the same basis as those approved under the general order 292 having been filed for the board's approval, it is ordered that general order 292, as amended by general order 292-A, April 27, 1920, be further amended by adding thereto, at the end of the order, the words, "Boston & Maine Rd., C.R.C. S-4."

G. 292C, May 10.—Further amending order G. 292 April 22, by adding, at the end thereof the words "Edmonton, Dunvegan & British Columbia Ry. C.R.C. no. S. 3."

G. 292 D, May 11.—Further amending order G. 292, April 22, by adding, at the end thereof, the words:—"Wabash Ry. C.R.C. no. S. 3."

Temporary Doors for Cars Loaded with Grain.

General order 294, April 30.—Re complaints of D. Campbell, Winnipeg; United Grain Growers, Ltd., Calgary; J. B. Stringer & Co., Chatham; and Elliott & Co., Ridgetown, against allowances provided by general order 50, Dec. 10, 1909, as amended by general order 184, Mar. 22, 1917, to shippers who are compelled to furnish temporary doors to cars loaded with grain: Upon hearing the complaints at Winnipeg, Nov. 15, 1919, and Ottawa, Dec. 18, 1919, in the presence of D. Campbell, counsel for, and representatives of the Canadian Pacific, Grand Trunk, Grand Trunk Pacific and Canadian National Railways, Michigan Central Rd., and Montreal Board of Trade, and what was alleged; and upon reading the submissions filed, and the report and recommendation of the board's Chief Traffic Officer, it is ordered as follows:

1. That general order 50, as amended by general order 184, requiring that where shippers upon all or any railways subject to the jurisdiction of the Parliament of Canada are compelled to furnish car doors to enable cars to be used for traffic, allowance therefor to such shippers be made upon the following basis:

(a) At and west of Port Arthur, lower doors, each	\$1.50
lower doors, each	.75
(b) East of Port Arthur, lower doors, each	.50
upper doors, each	.50

be amended to provide that the said allowances for doors so furnished to enable cars to be used for grain, be increased as follows, viz.:

(a) At and west of Port Arthur	
For doorways 5 ft. wide: lower doors	\$2.25 each
upper doors	.75 each
For doorways 6 ft. wide: lower doors	2.60 each
upper doors	.90 each
(b) East of Port Arthur	
For doorways 5 ft. wide: lower doors	\$1.25 each
upper doors	.75 each
For doorways 6 ft. wide: lower doors	1.35 each
upper doors	.90 each

Prepayment of Freight to United States Refused.

General order 295, May 5.—Re complaints of Montreal Board of Trade, Canadian Manufacturers' Association, Toronto Board of Trade et al, against regula-

tion of railway companies, effective Mar. 1st, 1920, directing their agents not to accept prepayment of charges from shippers on freight traffic from Canada to the United States, except on traffic on which the freight classification or tariff requires prepayment. Upon hearing the complaints at Toronto, Mar. 6, and Ottawa, Mar. 16 and 17, the complainants, the Montreal Corn Exchange, certain manufacturers in the Province of Quebec, the Riordon Pulp & Paper Co., the Canadian Lumbermen's Association, the apple and potato shippers of Nova Scotia, the Border Chamber of Commerce, the Ford Motor Co., certain pulpwood industries, the J. B. Belanger Mining Co., the Canadian Carbide Co., F. E. Smith, Limited, Canadian Traffic Agency, Wm. Davies Co., Harris Abattoir Co., the Canadian Pacific, Grand Trunk, and Canadian National Railways, and the Michigan Central Railroad being represented at the hearing and upon reading the submissions filed, it is ordered that, for want of jurisdiction over the subject matter thereof, the complaints be dismissed.

Inclusion of Automobile Springs with Mixed Hardware.

April 10. In the case of J. H. Ashdown Hardware Co. vs. Canadian Freight Association, the board's Chief Traffic Officer, J. Hardwell, made the following report April 9:—Complainants desire to include automobile springs with general hardware, in mixed carloads, at the carload 5th-class rate, under the general mixing rule of the classification. The Canadian Freight Association take the ground that this is not authorized by the classification. Item 88, page 98, in the hardware trade list, includes "vehicle parts (except vehicles and vehicle bodies), as per pages 131 and 132," as changed or added to from time to time being, of course, understood. At pages 131 and 132 of the unamended classification no. 16, the list is headed simply "vehicle parts." In supplement 5, page 14, this heading was changed to read "vehicle parts: not self-propelling vehicle parts," and at pages 7 and 8 a section was added with the heading "vehicle parts: self-propelling." These changes would have limited the hardware list to "vehicle parts: other than self-propelling," had that item also been changed, but it was not changed, and the result, in my judgment, is that the hardware list literally includes all vehicle parts (except vehicles and vehicle bodies), whether qualified as self-propelling or otherwise. The board is asked to interpret the classification literally and not as to intention. In my opinion, the ruling should be in favor of the applicants.

Assistant Chief Commissioner McLean gave the following ruling April 10:—As tariffs and classifications are to be construed strictly against the railway or railways concerned, the language and not the intention of the framers or the practice of the railways being the controlling factor (Pacific Coast Biscuit Company v. S. P. & S. R. Co., et al, 20 I.C.C. 546), I am of opinion that Mr. Hardwell's report should issue as the board's judgment. The Chief Commissioner concurred.

Coal rates from Alberta to Saskatchewan and Manitoba.

29,575. April 26.—Re application of Red Deer Valley Coal Operator's Association for a reduction in existing rates on coal from mines in Alberta to des-

tinations in Eastern Saskatchewan and in Manitoba. Upon hearing the application at Winnipeg, Mar. 3 and 4, 1919, the applicant, the Canadian National and the Canadian Pacific Railways being represented, and upon reading the submissions filed, it is ordered that the application be dismissed.

Supplement to Express Classification.

29,581. April 27.—This order is given in full under "Among the Express Companies," on another page of this issue.

Supplement 13 to Canadian Freight Classification 16.

29,585. April 16.—Re application of Canadian Freight Association, on behalf of railway companies under sec. 322 of the Railway Act, 1919, for approval of a proposed Supplement 13 to Canadian Freight Classification 16, containing certain increased, reduced, and additional ratings. Notice having been given by the railway companies in The Canada Gazette, as required by sec. 322 of the Railway Act, 1919, and to the mercantile organizations enumerated in general order 271, Sept. 10, 1919, and the proposed supplement having been reviewed at a conference of representatives of the Grand Trunk, Canadian Pacific, and Canadian National Railways, the Canadian Manufacturers' Association, and the Montreal and Toronto Boards of Trade, the Board of Railway Commissioners being also represented, held at Montreal, Feb. 19, 1920, when various objections filed with the board were considered, and the proposed changes and additions agreed to, modified, or eliminated; and upon the consideration of what has been filed, and upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the proposed supplement, as finally revised and submitted for approval by the Chairman of the Canadian Freight Association, by letter dated April 10, 1920, be approved; subject to the omission therefrom of the proposed ratings under the general heading of polishing compounds.

And it is also ordered that general order 190, May 25, 1917, be rescinded. And it is further ordered that order 11,866, Oct. 4, 1910, be amended in so far as rule 6 is concerned, by the addition of the following:

"A box or stock car, as referred to herein, is one whose dimensions do not exceed 36½ ft. in length by 8½ ft. in width by 8 ft. in height (inside measurement), the centre side doorway of which does not exceed 6 ft. in width, by 7½ ft. in height."

C.P.R. Tariff for Special Train Movements.

29,587. May 4.—Re application of Canadian Pacific Ry., under sec. 334 of the Railway Act, 1919, for approval of its Local Standard Passenger Tariff, C.R.C. 189, containing tolls for special train movements in connection with special events, effective May 17, 1920: Upon the recommendation of the board's Chief Traffic Officer, it is ordered that the said tariff be approved; the said tariff, with reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

The Reid Newfoundland Co. is reported to have insured its employees under the group insurance plan. The policies cover disability or death, and remain in force during the time the holder is in the company's employ.

The Chief Railway Commissioner Speaks at London.

Hon. F. R. Carvell, Chief Railway Commissioner, who was in London, Ont., on May 2, in connection with grade separation, was a guest at a luncheon of the Canadian and Rotary Clubs. Following are extracts from his remarks, as reported in local papers. He did not hope for much improvement in the grade separation question in the very near future, in spite of the fact that the work must be carried out and that there was no place in Canada where the condition of affairs was as bad as in London, unless it was in some of the prairie towns of the west. He pointed out that the more one examines the great transportation system of the Dominion, the more one realizes the great difficulties of ordering expensive work to be done. This is due to the great and complete economic revolution of the last five years. Prior to the war there was no difficulty in ordering the roads to make large expenditures, but this period had passed. He and the Mayor had gone carefully over the matter and there was no doubt that the work must be carried out. He watched the traffic at one of the G.T.R. crossings near the down town district and said that he wondered that people were not hit oftener than was the case. It has always been his practice to visit the scene of needed changes, and he said that there was scarcely an occasion on which he did not learn something new about the business. He thought it would be a great deal better if more public men would do likewise.

He said that the G.T.R. is passing through a period that to a great many people is little less than a tragedy, but if the company is unable to pay the interest on its bonds it has no one to blame but itself.

There are great possibilities for the system of publicly owned roads in Canada. The Canadian Northern is the best situated road in the west, with the G.T.R. the best in Ontario and Quebec. The two put together should become a splendid system. "This road will never succeed under heaven, however," he continued, "if the politicians do not keep their hands out. Unless they let D. B. Hanna alone and let him run them there will be the greatest tragedy in the history of Canada. With an admitted indebtedness of \$47,000,000 it must be run on a cold business basis. I have lived along side the Intercolonial Ry., which has been a political football, and I have seen the results. If the railway is run as a railway there is no reason why the system should not be a huge success. I believe that there is a great future for railroading in Canada. The only qualification is that there must be sufficient revenue to pay the way."

Declaring that he had no special reference to the local street railway situation, as he did not know the particulars of the trouble, he said that the people must realize that they cannot get something for nothing and that it is not possible to get the kind of transportation wanted for the same prices as formerly. He pointed out that the prices of shoes and clothes and practically every necessity of life have doubled in five years, and there is not nearly as much an objection raised as when a man is asked to pay a little more for transportation.

He continued:—"If this applies to the City of London, take it. I don't know anything about the matter, but I suppose it is in connection with wages. You

must face the situation and realize that you are coming to the time when you must pay a little more for transportation than in the past."

He pointed out that there had been an increase of 15% in passenger transportation and 25% in freight rates, and that during the past five years the cost of labor, which he said was about 70% of the cost of operation, had increased more than 100%.

"I don't know how they have done it. I suppose it can be attributed to the fact that Canada is prosperous and that the railways have been carrying enough more passengers and freight to make a profit. The C.P.R. has continued to pay 10%, but it is getting near the point where it must call on outside investments to continue this dividend."

Hamilton East End Incline Ry.—The question of the operation of the incline railway in the east end of Hamilton, Ont., is being negotiated between the company, of which E. Webb is President, and the city council. The railway is reported to have started operations on May 7, after a stoppage on account of wages troubles. The Hamilton City Council is taking legal advice as to whether the railway is a public utility and under the jurisdiction of the Ontario Railway and Municipal Board.

Quebec Central Railway Report.

The Quebec Central Ry., which is a C. P. R. subsidiary, had the following operating results for the calendar year 1919:

Freight revenue	\$ 953,943.44
Passenger revenue	344,246.49
Mails	14,972.24
Express, miscellaneous, etc.	41,963.49
	\$1,374,830.88
Maintenance of way and structures	\$ 226,602.46
Maintenance of equipment	204,459.48
Traffic expenses	16,316.65
Transportation expenses	508,412.53
General expenses	48,417.88
Taxes	10,000.00
Expenses outside operations	12,409.79
Total operating expenses	1,028,298.79
Balance carried to Net Revenue Account	346,532.09
	\$1,374,830.88

The officers are: Grant Hall, President, Montreal; I. G. Ogden, Vice President, Montreal; J. H. Walsh, General Manager, Sherbrooke, Que.; H. C. Oswald, Secretary, Montreal; R. D. Morrison, Asst. Sec'y, London, Eng.; Wilfrid S. Fry, Treasurer, Sherbrooke; G. D. Wadsworth, Gen. Freight and Pass. Agt., Sherbrooke; T. J. Maguire, Accountant, Sherbrooke; John T. Reid, Superintendent, Sherbrooke.

Grain in Store at Terminal Elevators, Interior Terminal Elevators and Public Elevators in the East.

Prepared by the Dominion Bureau of Statistics, Internal Trade Branch.

Week ending May 7th, 1920.	Wheat. Bush.	Oats. Bush.	Barley. Bush.	Flax. Bush.	Rye. Bush.	Totals. Bush.

Track Section Prize Competition on Canadian Pacific Railway, Eastern Lines.

For the past seven years an annual track section prize competition has been carried out on the C.P.R. Eastern Lines, which has aroused a healthy spirit of rivalry and keen competition among the section forces of the different divisions and districts. Sixty-three prizes are awarded in the competition, as follows:—A General Manager's prize to the foreman having done the best season's work on Eastern Lines. Four general superintendent's prizes, to the foreman on each district who has done the best season's work, exclusive of the winner of the General Manager's prize. Fourteen division superintendent's prizes, to the foreman on each division who has done the best season's work, exclusive of winners of higher prizes. Forty-four roadmaster's prizes, to the foreman on each roadmaster's territory who has done the best season's work, exclusive of winners of higher prizes.

Under this system no man can win more than one prize, and all foremen have an equal chance, as the quality of the work done throughout the season is the deciding factor, and not the actual physical condition of the section at the end of the season. The basis on which the sections are judged is entirely efficiency, and careful consideration is given throughout the season to the condition of, and work done on, ditches, gauge, spiking, line, surface, bolts, rail wear, so far as it can be controlled by the section forces, switches, sidings, right of way and station grounds, track signs, cattle guards and fences. The amount of work done and the hours of labor put in, both by regular force and extra gang, are also carefully considered, and the foreman accomplishing the best work with the least amount of labor—the physical condition of the section, as to grade, alignment, drainage, and character of roadbed being taken into consideration—wins the first prize.

The number of hours of regular labor and the number of hours of extra labor on the section are figured against the number of ties renewed, tie plates installed or changed, rails changed over on curves and ditching done, etc. The amount of track handled, right of way, spikes and bolts is fairly uniform on all sections, so that the condition with respect to these items at the end of the season is usually a criterion of the amount and quality of the work done thereon throughout the season. Where special conditions affect such work they are taken into consideration. Some idea of the care exercised in judging a foreman's work can be formed by following the work in connection with the selection of a prize section. Towards the end of the season, on each of the 44 roadmasters' territories, a section is picked out as the most deserving in point of work done during the season with the material and labor available. These are carefully inspected by the superintendent and resident engineer, who select the best one on each district for inspection by the general superintendent and division engineer. All divisions of a district are covered by these two officers, and the section selected which they consider eligible for the General Manager's prize. The judging for the General Manager's prize is done personally by the General Manager, the Engineer of Maintenance of Way, the Assistant Engineer of Maintenance of

Way, and district officials.

Following is a list of the successful section foremen for 1919:—General Manager's prize, \$100—Albert Elliot, Cavan, Sec. 7, Peterborough Subdivision, Trenton Division, Ontario District. boro Subdivision, Ontario District.

New Brunswick District, General Superintendent's prize, \$50—A. Badeau, Sec. 6, Moosehead S'd.

Brownville Division, Superintendent's prize, \$25—J. Conley, Sec. 8, Moosehead S'd. Roadmasters' prizes, \$10—O. Maillette, Sec. 2, Moosehead S'd.; E. A. Finlay, Sec. 3, St. John S'd.; A. Grant, Sec. 1, Shore Line S'd.

Woodstock Division, Superintendent's prize, \$25—A. E. Lewin, Sec. 6, St. Stephen S'd. Roadmasters' prizes, \$10—R. Allen, Sec. 2, Shogomoc S'd.; M. B. Clarke, Sec. 5, Gibson S'd.; A. Peluso, Sec. 4, Arrostook S'd.

Quebec District, General Superintendent's prize, \$50—Sec. Foreman J. Daoust, Sec. 3, Waltham S'd.

Farnham Division, Superintendent's prize, \$25—J. Gandreau, Sec. 3, Newport S'd. Roadmasters' prizes, \$10—A. Laurendeau, Sec. 16, Sherbrooke S'd.; J. Cloutre, Sec. 12, Adirondack S'd.; J. McManus, Sec. 4, Drummondville S'd.; J. Partridge, Sec. 7, Newport S'd.

Montreal Terminals Division, Superintendent's prize, \$25—A. Belec, Montreal West. Roadmaster's prize, \$10—P. Laviolette, Mile End.

Laurentide Division, Superintendent's prize, \$25—A. Fiset, Sec. 3, Three Rivers W. S'd. Roadmasters' prizes, \$10—M. Langlois, Sec. 21, Three Rivers E. S'd.; P. Lafontaine, Sec. 11, Three Rivers W. S'd.; D. Robertson, Sec. 18, Laclute S'd.; A. Morin, Sec. 6, Ste. Agathe S'd.

Ottawa Division, Superintendent's prize, \$25—J. McGregor, Sec. 7, Maniwaki S'd. Roadmasters' prizes, \$10—M. Tanguay, Sec. 12, M. & O. S'd.; A. Martineau, Sec. 3, Maniwaki S'd.; R. Whalen, Sec. 10, Waltham S'd.

Smiths Falls Division, Superintendent's prize, \$25—P. Lapier, Sec. 11, Winchester S'd. Roadmasters' prizes, \$10—T. Giles, Sec. 7, Brockville S'd.; C. Montroy, Sec. 18, Winchester S'd.; A. Austin, Sec. 18, Chalk River S'd.

Ontario District, General Superintendent's prize, \$50—C. Stewart, Sec. 12, H. & G. S'd.

Trenton Division, Superintendent's prize, \$25—C. Dowdall, Sec. 14, Havelock S'd. Roadmasters' prizes, \$10—B. Locking, Sec. 13, Port McNicoll S'd.; J. Leggett, Sec. 13, Peterboro S'd.; M. Long, Sec. 12, Belleville S'd.; G. Fagg, Sec. 3, Oshawa S'd.; W. Davis, Sec. 8, Havelock S'd.; H. Roberts, Sec. 5, Bobcaygeon S'd.; G. Sproule, Sec. 4, Kingston S'd.

London Division, Superintendent's prize, \$25—A. Fairbanks, Sec. 4, Windsor S'd. Roadmasters' prizes, \$10—A. Hawkins, Sec. 4, Galt S'd.; R. Babcock, Sec. 11, Windsor S'd.; H. Doll, Sec. 8, H. & G. S'd.; J. Cox, Sec. 15, St. Marys, St. Thomas & P. B. S'd.

Bruce Division, Superintendent's prize, \$25—T. J. Smith, Sec. 9, MacTier S'd. Roadmasters' prizes, \$10—H. Hawke, Sec. 15, MacTier S'd.; J. Hiscoc, Sec. 2, Orangeville, Elora, Teeswater & Wing S'd.; W. Carr, Sec. 3, Owen Sound & Walkerton S'd.

Toronto Terminals Division, Superintendent's prize, \$25—L. Francis, Sec. 1,

Don. Roadmaster's prize, \$10—F. Tuckley, Sec. 8, Islington.

Algoma District, General Superintendent's prize, \$50—C. Smith, Sec. 1, Parry Sound S'd.

Sudbury Division, Superintendent's prize, \$25—E. Morin, Sec. 12, North Bay S'd. Roadmasters' prizes, \$10—S. McCarthy, Sec. 2, North Bay S'd.; W. Evans, Sec. 6, Cartier S'd.; J. Penfold, Sec. 6, Parry Sound S'd.; D. Vitone, Sec. 9, Thessalon S'd.

Chapleau Division, Superintendent's prize, \$25—E. Nelson, Sec. 23, White River S'd. Roadmasters' prizes, \$10—M. Hakkinnon, Sec. 24, Nemegos S'd.; M. Stasco, Sec. 7, White River S'd.

Schreiber Division, Superintendent's prize, \$25—H. Patritti, Sec. 15, Nipigon S'd. Roadmasters' prizes, \$10—L. Zanni, Sec. 15, Heron Bay S'd.; B. Michaud, Sec. 19, Nipigon S'd.

The Board of Railway Commissioners' report for the year ended Mar. 31, 1918, was distributed from Ottawa in April. We are advised that the report for the year ended Mar. 31, 1919, is being printed, but will not be ready for distribution for some little time.

Additional Hand on Watches. — Grand Trunk Ry. employees have been notified that the addition to their watches of another hand, to indicate standard and daylight saving time, will not be allowed by the company, in the interests of safety first.

Among the Express Companies.

The Canadian National Ex. Co. has opened an office at MacDairmid, Ont.

The Canadian National Ex. Co. has opened an office at Ragged Rapids, Ont., and has closed its temporary office at Kylemore, Sask.

The Board of Railway Commissioners has approved the location and details of the express building for the Canadian Ex. Co. at the G.T.R. station at Paris, Ont.

The Board of Railway Commissioners passed general order 296 May 15, granting the Express Traffic Association of Canada's application for approval of regulations for transportation by express of acids, inflammables, oxidising substances, etc., after making certain alterations therein.

Under the Corporation's Tax Act 1920, passed by the New Brunswick Legislature recently, it is provided that every express company doing any express business within the province shall pay \$100 for each city in which it transacts business, \$50 for each town, whether incorporated or not, having a population of 3,000 or more people in which it transacts business, \$25 for each town or village with a population of at least 2,000 in which it transacts business and \$10 for each office with an agent in any other place having a population of more than 200 people.

The American Railway Express Co. will from July 1 keep a duplicate copy of every receipt it issues when receiving business from shippers. The duplicates will be retained by the company for record and reference, and will be held at the shipping office. Shippers who have been accustomed to prepare their own receipts, or who have their own forms, have been requested to make provision for supplying duplicates to the express driver or receiving clerk who signs them. As a matter of convenience to shippers,

The Board of Railway Commissioners delivered judgment May 21 on the application of telegraph companies for permission to increase tolls. The completed judgment has not been received at the time of going to press, but it is stated that the companies will be authorized to subdivide the existing rate zones east of Sudbury, Ont., and extend them to Quebec province. Flat rates for the zones will be increased from 25c. to 30c. a message, and additional words will be 2c. instead of 1c. a word. Scaled increases from 10c. to 25c. a word will be allowed on the \$1 transcontinental rate, with a special provision to allow the Grand Trunk Pacific Telegraph Co. to charge \$1.55 to Prince Rupert, B.C. The increased rates do not apply to press dispatches or messages for the West Indies. The average increase in rates is 32% east of Fort William, Ont., and 20% west of Fort William.

Proposed Wireless Telegraph System for the British Empire.

The Marconi Wireless Telegraph Co. has submitted a proposal to the British Government for the establishment of a series of wireless telegraph stations throughout the empire. The congestion at present prevailing on the submarine cables emphasizes the necessity for additional lines of communication. The knowledge gained, and the great strides made in wireless telegraphy during the war, render it quite possible to design a wireless system which it is claimed may be guaranteed to give a service, between any two places, equal to that given by the submarine cable.

The principles governing in any such scheme as is proposed, are broadly, as follows: That such trunk routes and branch routes be provided as will enable Great Britain to communicate with any part of the empire; that any part of the empire be capable of communicating with any ships equipped with modern wireless receivers in any sea between lat. 60N and 50S; that no submarine cable be relied on to form part of this proposed network of wireless communications; that the use of land telegraph lines be avoided as far as possible, and these lines restricted to the passage of messages between the public and the nearest wireless station; that where alternative routes are available, such as between England and South Africa, via the east coast or the west coast, both routes be provided; that on the trunk routes, automatic transmission and reception at a speed of not less than 100 words a minute be provided, and that separate transmitting and receiving stations be erected, in order that the service may be duplexed; that as much foreign traffic as possible be attracted to the network, in order that the system may at least be self supporting as a commercial enterprise, preferential treatment being accorded to British traffic.

The routes proposed are as follows:—England to India and thence to Singapore, Australia and New Zealand, with a branch from Singapore to Hong Kong; England to Egypt and thence to East

Africa and South Africa; England to Egypt and thence to India, Singapore, and Hong Kong; West Africa to South America; England to West Indies; England to Montreal and thence to Vancouver; Australia to Vancouver (only night service to be worked). This system would facilitate the creation of many telegraph stations in England, 3 in Egypt, 3 in India, 2 in East Africa, 2 in Montreal, 2 in Vancouver, 2 in South Africa, 1 in West Indies, 2 with 1 auxiliary, in West Africa, 2, 1 auxiliary, in Singapore, and 2 with connection to New Zealand by main feeder station, in Australia.

The company has offered to build, maintain and operate such a chain of stations at its own cost, and to pay to the Government in each of the territories where one or more stations is erected, 25% of the net profits earned by such stations. On the expiration of 30 years from the inauguration of the service, it will become the property of the government concerned, if so desired, without any payment. Thetrunk stations to be completed within three years from the date on which permission to begin work is given. The governments concerned will have the right to take over any of the stations at any time, by paying for them the value at which they stand in the company's books, plus any sum which may have been expended on the creation of the services, and by paying to the company 10% of the gross receipts for the balance of the 30 year period. The government will also have the right to take over and control the stations in the case of war or of national emergency.

Old Time Telegraphers' and Historical Association.—The annual meeting of this association will be held at Toronto, Aug. 31, Sept. 1 and 2, G. D. Perry, General Manager, Great North Western Telegraph Co., Toronto, being President. A committee meeting was held at Toronto recently, to make the preliminary arrangements for the reunion. The association has only met once before in Canada, since its organization in 1880, that being at Montreal in 1901. In the endeavor to make the forthcoming meeting a record one, the committee purposes enlisting the co-operation of all telegraphers and ex telegraphers in Canada, eligible for membership, and elaborate arrangements are being made for the entertainment of the visitors. Committees have been formed to take charge of the various sections under the names of membership, finance, entertainment, publicity, hotel, badge and supply, and ladies.

Government Telegraph Operators.—The Minister of Railways stated in the House of Commons recently, in answer to questions:—Government telegraph operators have not received the bonus granted to other civil servants, and it is not the government's intention to grant them the bonus in future. Standard rates of pay, corresponding to those of the commercial telegraph companies, are paid government telegraph employees, and being in receipt of prevailing wages they are not entitled, under the regulations, to receive any bonus.

Telegraph and Telephone Line Estimates.—The further supplementary estimates for the year ended Mar. 31, 1920, submitted to the House of Commons recently contain the following items for telegraph and telephone lines:—British Columbia: Mainland, further amount required, \$14,000; Alberta: Further amount required, \$8,500.

Telegraph, Telephone and Cable Matters.

The British Columbia Telephone Co. is reported to have ordered an additional submarine cable to connect Vancouver Island with the mainland, thus duplicating its present service.

The Great Northern Western Telegraph Co. has opened offices at Shippegan, N. B., Barre, Que., Landienne, McCarthy, Que., Cardinal Canal, Ont., Bethany, Man., Ashmont, Burbank, Leslieville, Saunders, Smoky Lake, Alta., and has closed its offices at Callander, Grafton, Kabina and Norwood, Ont.

The Commercial Cable Co. is reported to have decided to add another cable ship to its service, for operation out of Halifax, N.S. It is stated that Capt. F. H. Landner is in Great Britain superintending the construction of this ship, which will be larger than the existing cable ship Mackay-Bennet. The company has completed new sheds at Upper Water St., Halifax, at a cost of over \$100,000.

The New Brunswick Legislature has passed a Corporation Tax Act which provides, among other things, for a tax up-

Electric Railway Department

The Engineering Features of Tramway Operation.

By D. E. Blair, B.Sc., A.M.E.I.C., Superintendent of Rolling Stock, Montreal Tramways Co.

The author has had many doubts as to the best direction in which a discussion on tramway matters should be guided, in order that the results of his labor should be of general interest as well as be of some value in a constructive sense. A decision was made, that it would be appropriate to apply our efforts to a discussion of matters that have a direct bearing on further improvement of car service rather than to offer a critical or descriptive treatise on existing conditions. The object of the paper will, therefore, be to point out some things that may be done to effect a more complete solution of the transportation problems that face us today. Further progress must be guided by an appreciation of sound engineering principles, unfettered by consideration of established custom, expediency, ward politics, and selfish wire pulling. The highest ideals attainable should be kept in plain sight. It will then be in order to stick as closely as possible to standards of maximum efficiency, and to depart therefrom only because of sound practical reasons. The subject can thus be approached with an open mind and we can realize more quickly, and with less effort, that certain existing conditions have no sound reason for existence except that they have been established by custom. These conditions must be improved if we are to enjoy a higher standard of service for a minimum of cost.

The matter of urban transportation has always been a vital factor in the life of city dwellers, but in a passive sense. The public at large are now active partners in the operation, as well as the users or patrons, of the street car services of many cities, and we should now realize that the street car service in any large community serves a greater number of people, and is of greater importance, than any other form of traffic, and should therefore be given prior rights, within reason, over all other vehicular traffic. Since the rate of fare and the quality of service rendered depend entirely on the overall efficiency of operation, it seems to be an opportune time to direct attention to the great importance of educating street car users to a fuller understanding of the fundamental factors that make for efficient and satisfactory transportation. It is of great importance that they should know, and fully appreciate how, and to what extent, the hearty co-operation and good will of the public, and of the municipal authorities, is necessary to the consummation of the carefully worked out plans of the management of public utility organizations toward further improvements.

The present equipment available, and in general use, has reached a very high standard. No consideration of cost or lack of engineering skill stands in the way of further progress, and the art has reached a stage where little remains to be done, that is within the control of railway managers, to improve the standards of modern car service. Under existing conditions we have reached a point very near to maximum theoretical efficiency, and this question presents itself: Can existing conditions be modified, without injury to other interests,

so as to result in improvements that are worth while?

The development of street transportation has not been confined to any particular locality on this continent, but is the composite result of painstaking effort distributed from coast to coast. Methods and practices have always been wide open for comparative study, and full advantage has been taken of this fact. Many recognized opportunities for improvement still remain undeveloped, owing largely to a strange unreasoning attitude of the public against any reforms that are suggested by the capitalistic monsters who thrive in idleness

but it is well that we should realize that increase of speed, within the practical limitations of street traffic, will tend toward greater economy, without necessarily affecting the question of safety, and higher speed will add very materially to the efficiency of the service. Speed of transportation may in fact be considered as the fundamental requirement of a satisfactory service, and it should, therefore, be the outstanding objective of all effort toward improvement. By speed or schedule speed is meant the average or effective speed with which a car covers distance, and this should not be confused with velocity at any given moment or with maximum speed attained between stops. In order to intelligently analyze the question of schedule speed it is necessary to introduce a very convenient figure which allows us to dissect and study the fundamentals of all traffic movement, viz.: the speed time curve.

Speed Time Curve.—The movement of a street car from one end of a line to the other is made up of a series of hops, or cycles, from station to station, or from stop to stop, and it will be one of the chief purposes of this paper to show to what extent the public would benefit by a radical increase of the distance between stops. If they would once realize this fact, they would insist upon an immediate change. These cycles vary in length, and the time necessary to operate over each one is subject to conditions of grade, density of traffic, etc., but a study of a single average cycle will bring out all the characteristics of a series of such cycles which constitute any run. What happens in such a cycle can be represented very accurately by a diagram constructed of four distinct elements, representing each of the four factors of which any typical run or cycle is constituted. The variation in speed of any moving object may be represented graphically by a series of points, the height of these points above a base line being in proportion to the speed, and the distance from a vertical line of reference being a measure of the time, after the beginning of the cycle, at which each speed is observed. Thus a constant speed would be represented by a horizontal line joining the observed degrees of speed or velocity. Thus also a line slanting up ward represents the movement of an object whose speed is increasing, and a line sloping downward indicated a decreasing rate of motion.

The four component elements of our curve are as follows: 1. Period of acceleration from rest to maximum speed, under the action of propelling forces. 2. Period of coasting, without applied power, and without restriction of motion other than from friction. 3. Period of deceleration or slowing down, under the retarding action of brakes and friction. 4. Period of rest at stopping points. Each of these periods is subject to certain practical limitations, but each one is also affected by variable elements, some wholly within the control of the operating crew, some depending entirely upon the passengers, and others subject to motor capacity, interference of independent traffic, physical conditions, etc. The ef-

upon the fabulous wealth wrung from the hands of those who toil. This is the mental fog that must be dispelled by education, before much further progress can be made. The financial operations of many of the larger transportation ventures of this country are now laid bare to public scrutiny. Public commissions now supervise every transaction, and have more than a theoretical control of actual operation. It is interesting to note that the rapidly increasing rates of fare are coincident with the increasing effectiveness of public supervision.

General Argument.—The primary requisites of a satisfactory system of transportation may be stated as follows: 1, Speed. 2, Safety. 3, Comfort. 4, Continuity of service. 5, Frequency of service. 6, Convenience of service. In addition to, and closely associated with each of these, is the question of economy, but it is not the writer's intention to preach economy where depreciation of any of these factors is the result.

Any increase in the standards of the last five items is likely to add to the cost,

Coasting Period.—It was previously stated that a large part of the total energy required to operate a street car is utilized to overcome inertia and impart speed. The kinetic energy stored up in the car at a given speed during each cycle is equal to one half its weight, multiplied by the square of its velocity in feet per second. If the operating conditions are such that the brakes must be applied as soon as the power is turned off, practically all of this energy is absolutely wasted in the form of heat developed at the brake shoes. This is undesirable. If, however, the run characteristics are such that after a certain maximum speed has been promptly reached, power can be shut off and the car allowed to roll, or coast, for a greater or less distance, before the application of brakes, then a certain proportion of this stored energy is utilized to good advantage, in overcoming the frictional resistances during the remainder of the run. During this period the car will slow down gradually, losing about one mile per hour of speed in every five seconds. The brakes are applied at a lower speed than in the previous case, and, besides the saving of power, there is a dis-

ting reduced speed is effective to overcome distance.

Period of Rest.—Since movement is the primary object of transportation, it is evidently desirable that the stops should be as short as possible, and here is where the co-operation of the passengers is of greatest importance. In order that this fact may be impressed upon the mind while further discussion proceeds, it may be stated that since the rates of acceleration and braking can be fixed at a practical maximum, every second wasted while a car is at rest is equivalent to a loss of distance equal to one second's travel at maximum speed, say 20 miles an hour, viz.: about 30 ft. per second. Experience and careful recording of actual conditions has shown that good traffic control, prompt movement of passengers, alert action by the conductor and immediate response of motorman to his signals will result in practical loading and unloading delays as low as one second per passenger in fairly large batches and three seconds per passenger when only one or two passengers are handled.

The average length of stop in some cities is less than three seconds. Actual

4. Provision by the municipal authorities of safety zones at congested points, where intending passengers may form in queues at the exact location where the car stop will be stopped. 5. Better control of promiscuous traffic, at certain crowded intersections at busy hours. At certain points the public should demand that all but street car traffic be prohibited at rush hours. At other points, left hand turns of vehicles should be prohibited, and automobiles and other vehicles should not be allowed to park at the curb, within a block on the near side of intersections. This allows moving vehicles to remain on the roadway rather than encroach on the car tracks. 6. Prevention of overcrowding of cars. Delays from this cause are very serious, and reforms in this direction will require the serious and well organized co-operation of the police with the more thoughtful element of the public.

It will perhaps be some time before the public will realize that a company is losing money when cars are crowded to the point where length of stops are appreciably increased, and further to appreciate the fact that if crowding were not permitted, anyone could afford to let half

Chart Two

ting saving in wear of brake shoes and wheels. The length of this coasting period in the analysis of any run gives a very definite indication of the efficiency of the motorman. This desirable period can be lengthened by cutting down the other three, viz.: accelerating, braking and rest periods.

Braking Period.—The rate of acceleration or braking, is under the control of the motorman, and subject to conditions of rail friction and comfort of passengers. A maximum rate of $3\frac{1}{2}$ miles an hour per second is possible, but seldom reached on open streets. A high practical standard is about 2 miles an hour per second. The only point of special interest here is that, for the same reasons as given under the heading of acceleration, a maximum rate of braking should be developed at the beginning of the period when the speed is greatest. It is evident that as much distance as possible should be covered while the car is running free at a high speed, and that the brakes should be applied for as short a time as possible. The average speed during the application of brakes is only half of the initial speed at which brakes were applied and it is evidently desirable to shorten the time during which

conditions existing in Montreal do not compare favorably. The reasons are perhaps not so much due to lack of energy, or to inherent slowness of movement of the local population, but rather to the fact that the public has not been educated to a realization of the great advantages to themselves that would result from a snappier movement when in the vicinity of the steps of a standing street car. It must be remembered that each car on a busy line is just one of many links in a moving chain, and any delay suffered by one car is reflected back to every other car in the line, so that the speed of the whole is limited to the speed of the slowest car.

Other means of eliminating these wasted moments, which, when all added up, result in considerable loss of time and speed, are as follows:—1. Passengers having change or tickets ready, and in hand for deposit, when boarding car. Fumbling in pockets and handbags, on crowded platforms, and tender of bills when purchasing tickets, are very efficient methods of annihilating speed. 2. Clearing of entries and exits, thus assisting free movement. 3. Movement of descending passengers toward doorways, in advance of actual stoppage of car.

Chart Three

a dozen cars go by, and still get home sooner than they do when overcrowding exists. The cause of congestion at certain downtown loading points is that during certain periods the number of people requiring transportation is larger than can be handled by the number of cars that can be operated past these points on limited track facilities. A sufficient number of cars is usually available. These form a long procession, ready to perform useful work, but are forced to crawl along at snail's pace, owing to the excessive time lost in loading by each unit at the head of the procession. There are times when, because of the danger attendant upon starting cars while a crowd is surging around the steps, more than a minute elapses between the dispatch of successive cars. Each of these may carry 125 passengers. Three times as many cars could be sent away, loaded with 80 to 100 passengers each, if crowding were eliminated, and the company, as well as the public, would profit by the change. Elementary arithmetic will show that six equally spaced cars, running around a loop at 12 m.p.h., will transport as many passengers as 12 cars running in the same loop at half speed, or 6 m.p.h. Why then should the public

important points to consider here: safety and cost.

The factor of safety of car operation may be described as the ability of the car to stop quickly in emergency. If we consider that the possible stopping distance is proportional to the square of the speed at which the car was travelling when the brakes were first applied, it will be apparent that the safest way of operating is that in which the car has the lowest maximum speed. A calculation of power consumption reveals the fact that method A required 570 watt hours for the trip; method B, 390 watt hours, and method C 330 watt hours. So from the point of view of economy also, once the distance and time are fixed, the practice should be to accelerate and brake fast, and coast as far as possible. This completes the part of car operation directly in the hands of the motor-

in which the public and the operating companies are directly and jointly interested, viz.: schedule speeds and operating costs. Certain portions of the costs are fixed, others are functions of the schedule speed. We will confine ourselves to the latter, and see in what manner increased schedule speeds affect public convenience, and also operating costs, which of course in turn reflect to some extent on the rates of fare. It is necessary to show the relative effect of varying the principal factors that bear on the subject of schedules. These are:—Motorman's performance or efficiency of car handling; gear ratio; time of stop; distance between stops. Motorman's performance, though very important in some respects, has relatively very little to do with schedule speed. As we have seen, it is to everybody's interest to accelerate and brake as quickly as pos-

sible offsets the increase in platform labor cost.

A still further increase in coasting reduces the schedule speed to a point where further saving of power is more than offset by increased platform labor, so that for any given distance between stops and time of stop, there is a schedule having minimum cost. This condition obtains when coasting is from 30 to 40% of total time. Note that costs as well as speed are almost entirely dependent upon the question of stops. At 10 stops a mile and 10 seconds a stop the following examples are noted:—

With 0 coasting 9 m.p.h. as maximum possible schedule, costing 15.7c a car mile for power and platform labor.

With 35% coasting, 8.6 m.p.h., which is the highest practicable speed with all motormen highly efficient; costing 14.4c a car mile.

With 50% coasting 7.7 m.p.h., costing 15.8c a car mile.

It is generally conceded that at 10 stops a mile the best that can be expected from average motormen is 8 miles an hour. The important point to keep in mind, however, is that no matter how we force a car, with unlimited motor capacity, under the conditions given, it is not possible to exceed a 9 mile schedule.

Gear Ratio.—This subject is rather technical, of interest mainly to equipment engineers. It has been discussed so frequently, to the exclusion of other matters of far more importance, that the fact is frequently overlooked that those other matters do exist. Within the narrow range of gear ratios available for city service, it is of quite minor importance, as will be appreciated from the statement that 30% change in gear ratio of a Montreal Tramways Co.'s car, allows a variation in schedule of only 6%. The only point worth noting here is that, with higher speed gearing, power costs tend to increase, and that, therefore, once a schedule is decided on we should use the lowest gearing that will maintain that schedule with sufficient flexibility. If, however, the question should arise as to the advisability of changing existing gear ratios, in order to economize in power cost, it may be suggested that it might first be well to study the results that would follow an increase of speed without change of gears. It may be found that the service will be vastly improved, and equal or greater economies effected at the same time, if the efficiency of operation is improved by increasing the speed, rather than by lowering the gear ratio to suit prevailing speeds. These are too low to meet modern requirements of transportation. There is little to be hoped for by altering equipment, and whatever results can be brought about by efficient car handling should certainly be taken advantage of by the operating companies, since it makes for economy at the same time. The only remaining factors of importance as affecting schedules are the time of stop and the distance between stops, and it will be seen that these have far more effect than any of the factors that are directly under the control of the operating company.

Time of Stop.—When the car is at rest, it is benefitting neither the passengers nor the company, for time standing still is absolutely lost, and it should be evident that the sooner the car gets started again, the better for all concerned. But here is a point in which all street car passengers are vitally concerned, for without their co-operation practically nothing can be accomplished.

(Chart 1 has been prepared from a

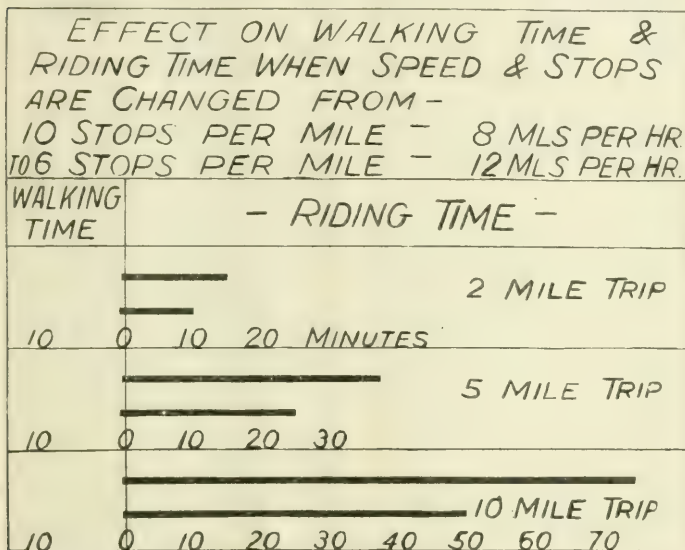

Chart Six

men. The crew do not fix schedules, and they can only partially assist in speeding up the remaining element of the cycle, viz.: the time at rest.

Before passing on, however, attention should be drawn particularly to the fact that in this matter of car operation, safety and economy are coincident. Since there are such wide variations in possible power consumption for a given run, it is quite plain that for economy's sake the companies will do all in their power to encourage motormen to operate efficiently. Many companies have made marked improvements in this direction by educational campaigns supplemented by instruments which record each car's performance, and have incidentally lowered the maximum speeds thought to be necessary for satisfactory operation. The subsequent argument for higher schedule speeds bears this in mind, and nowhere in this paper is a schedule speed mentioned that if efficiently operated will necessitate a higher maximum speed than is frequently observed with inefficient operation at 8 miles an hour.

Schedule Speeds.—Passing now from individual car runs to the larger question of operation in general, we will connect the argument with the two large factors

in which the public and the operating companies are directly and jointly interested, viz.: schedule speeds and operating costs.

Chart 3 shows to what extent, with a given equipment, schedule speeds may be varied, by allowing different coasting periods, accelerating and braking rates remaining fixed at the practicable maximum of two m.p.h. p.s. The highest schedule speed is of course obtained when no coasting is allowed, i.e., power is left on till the moment brakes are applied. Thus for any condition of stop, and time of stop, there is a definite maximum possible schedule speed. This is fundamental, and shows up the fact that no marked improvement in present schedules can be obtained by any manipulation of the car itself. For instance, at 10 stops a mile, 10 seconds a stop, the highest schedule speed possible is 9 miles an hour. There is no way of increasing this, by any changes of car equipment, within the practicable limits imposed by acceleration and braking rates. However, in order to have reasonable flexibility, i.e., to allow lost time to be made up, we cannot insist on maximum possible schedules. Furthermore, by increasing the coasting period up to a certain point, the decrease in power consumption more than

of speed time saved, and we are assuming that a 10% increase in the number of stops will result in a 10% increase in the time of travel. This is a very rough estimate, but it is a fair one.

Assuming that the average speed of a car is 10 m.p.h. and that the time of travel is 10 minutes, then the time of travel at 8.6 m.p.h. is 11.2 minutes.

With a 10% increase in the number of stops, the time of travel is 12.5 minutes.

Increased costs, we will have to find a way to pay for them.

Under the conditions stated, power will cost 3.93c a car mile at 1c a k.w. hour. Platform labor at 45c an hour will cost at 8.6 m.p.h., 10.47c a car mile, and at 10.1 m.p.h., 8.91c, so the combined costs are 14.4c and 12.84c respectively.

Coincident, therefore, with the marked increase in possible schedule speed that can be brought about by the assistance of the public, is an equally marked reduction in operating costs.

Number of Stops.—Building on this promising result, let us see what the remaining factor, viz.: number of stops, will do. Chart 4 was calculated for 528 ft. stops. Using the four second stop which we saw was of advantage to both public and company, chart 5 gives the results of lengthening out these stopping points, within practical limits.

Calculating from similar speed time curves, it is found that at 8 stops a mile, instead of 10, under equally efficient car handling, a speed of 11.2 m.p.h. can be reached, and at 6 stops a mile, 12.55.

Figuring power and platform labor as before we see them to be:—at 10.1 m.p.h., 12.84c; at 11.2 m.p.h., 11.57c; and at 12.55 m.p.h., 10.2c. Charts 4 and 5 are drawn to the same scale, to show that reducing the number of stops is of far greater influence on possible schedules than even the time of stop, and we saw that time of stop had more influence than car equipment and handling.

Let us see if the increased distance between stops imposes any serious inconvenience. Ten stops a mile means 528 ft. between stops, or 176 ft. average walking distance, aside from cross street travel. At three miles an hour, this requires 30 seconds to walk. Six stops a mile means 880 ft. between stops, or 220 ft. average walking distance, requiring 50 seconds. Now by having our stops 880 ft. apart and obtaining co-operation for quick movement at stops, we saw that a schedule of 12.55 m.p.h. is possible, or let us say 12 m.p.h. Please remember that this is the only way by which a 12 mile service can be made.

Chart 6 gives some idea of what the difference between 8 mile service and 12 mile service means to the average street

car riders. It is suggested that the average passenger save 10 seconds further. If he is going 2 miles, he can save 10 seconds, or 100 seconds. If he is going 10 miles, he can save 10 minutes, or 600 seconds. This for an extra 10 seconds of time.

Medical time is 100,000 car miles a year. At 12 m.p.h. and average time at 2 miles. The annual saving of time to the public by 12 mile service, as against one of eight m.p.h. is 17,500,000 hours, or 2,000 years.

It is worth remembering that this saving to the public in general would be accompanied by a substantial reduction in operating costs, and also a marked saving in capital investment, since the same service can be maintained with 800 cars at 12 m.p.h. as with 1,200 cars at 8 m.p.h. Cars of a type suitable for heavy traffic in Canadian cities cannot be bought just now for less than \$20,000 each. Car house facilities, car house expense, etc., would of course be in proportion. It would seem, therefore, that in view of the prohibitive cost of equipment, during the present period of false values, it would be a sane policy to find ways and means to use existing equipment to better advantage, before we talk of undertaking capital expenditures to meet the growing demand for transportation.

It might well be asked, can the above reasoning be carried further. The answer is, very much further; but with the provision that the general public will have to realize, much more fully even than is necessary for the carrying out of the suggested changes, that street car traffic is by far the most important kind of city traffic and that nothing should stand in the way of improving it. With nonprotected tracks, and even well regulated vehicular traffic schedule, speeds higher than 12 m.p.h. begin to approach dangerous conditions, on account of the higher maximum speeds necessary. Provide a curb protected strip 6 or 8 in. high, for tracks, on certain streets reserved for express service, stops about 1,500 or 2,000 ft. apart, and protected crossings, and there is nothing to prevent a 20 mile schedule. The unthinking part of the public might regard this as a restriction on their right to wander all over the highway, but, in actual time, the gain would much more than offset any imagined inconvenience. However, let us get the 12 mile service first.

The outstanding features to be remembered are:—

1. That higher schedule speeds are desirable from every point of view. They can be obtained without extra cost and without affecting safety of operation.

2. That higher speeds will result in an improved degree of comfort and frequency of service, because of less overcrowding and shorter headway between cars.

3. That speeds higher than those now prevailing depend almost entirely on reducing the number and time of stops, and that a decrease in the number of stops is of more importance than a decrease in the time of stops.

4. That convenience is only a relative factor. An extra walking distance of a few feet is of no real moment when compared with the outstanding advantage of quick transportation. One cannot have private taxi cab service at tramway fares, but there is no reason why the speed of taxi cab service cannot be approached.

5. That appreciably higher speeds cannot be obtained by any possible means within the control of operating com-

panies. Improved service rests in the hands of the users of street cars. Questions of car design, motor equipment, routing of cars, etc., are all of some importance, but their effect on the quality of service is negligible, when compared with the possibilities of improvement along the lines suggested.

6. That the bogie of high cost cannot be used as an argument against faster service, for the higher speeds of existing transportation tend toward lower operating costs.

7. Higher speeds will result in a more efficient use of existing equipment, with the result of curtailing the demand for the non-essential production of rolling stock, in favor of the real necessity for greater production of essentials.

8. It may be stated that it is absolutely essential to investigate every possible means of increasing the efficiency of existing rolling stock, in order that we may partly offset the radical demands for increased wages.

The foregoing paper was read before the Engineering Institute of Canada recently.

Montreal Conductor Charged with Assault.—Alex. Despuis, a Montreal Tramways Co.'s conductor, with 20 years service, was charged before Judge Lancetot, at Montreal, recently, with assaulting three passengers with a switch lever.

One of the passengers was so injured that he had to be attended by a doctor. That the complainants were struck by the conductor with the switch lever was not denied, but the evidence showed that one of the complainants was drunk and was so conducting himself that a complaint was made to Despuis, who started to put him off the car. The other two men interfered and the three were so aggressive that the conductor, to defend himself, took up the switch lever, and one of the men, in endeavoring to take it from him, was struck in the face with it. The judge held that there had been no intention to injure any of the men; that the conductor had used no more violence than was necessary, and that it was his duty to preserve order and to protect women from insult on his car. The whole fault was that of the young man who, in his evidence, admitted he was so drunk he could not remember what happened. The case was dismissed.

Speed Limit in Montreal.—Police Constable M. Herscovitch brought an action in the Quebec Superior Court, May 10, against the Montreal Tramways Co. to recover \$15,000 for injuries to a minor son who was knocked down by an electric car on St. Lawrence Boulevard about five years ago. The evidence showed that the average speed of the car was 8.60 miles an hour including stops, which was in contravention of the Quebec Railways Act, which prohibited tramway companies incorporated within the province running cars in excess of 6 miles an hour unless the lines were properly fenced in, or unless the charter expressly provided that this speed limit might be exceeded. The Montreal Tramways Co.'s new charter authorizes it to run its cars at 10 miles an hour, subject to the Quebec Public Service Commission's approval. Advantage was not taken of this provision, counsel for the plaintiff stating that the sanction for the higher speed limit did not take effect until May 1, 1920. The action was settled, judgment being given for plaintiff for \$2,000, thus obviating a legal decision on the point of law raised, viz., whether the company was limited until May 1, 1920, to a speed of 6 miles an hour by the Quebec Railway Act.

Increases in Electric Railway Passenger Rates.

Cape Breton Electric Ry.—We are officially advised that in May, 1918, the company made an application to the Nova Scotia Public Utilities Commission for authority to charge a 6c. fare on all city lines, and a 6c. fare in each zone of the Sydney & Glace Bay Ry., the fares prevailing at that time being 5c. Public hearings were held in Sydney in July and Aug., 1918, and in Nov., 1919, and a decision was given by the Commission authorizing the company to put the 6c. fare into effect. This was done as of Mar. 15, 1919. In April, 1920, the company applied to the commission for authority to charge a 7½c. fare. If this increased fare is granted the company proposes to use metal tickets, similar to the ones now being used and would sell them 2 for 15c., 4 for 30c., 6 for 45c., etc. Each metal ticket would be good for one ride on any city line or in any one zone of the interurban line. The company feels it would be a hardship for anyone to buy so few as two tickets at a time and has therefore asked that in cases where a metal ticket is not tendered that the cash fare should be 10c., thus doing away with the use of copper coins. On the Sydney & Glace Bay Ry. the ticket fare in each zone would be 7½c., and the cash fare, if a ticket was not tendered, would be 10c. A person travelling through two zones would pay 15c. in metal tickets, or since it is no more trouble for passenger and conductor to handle a 10c. piece and a 5c. piece than it is to handle two metal tickets, the cash fare would be 15c. In three zones a passenger could pay by using three metal tickets or 15c. in cash or one metal ticket; in four zones he could pay either 30c. in cash or four metal tickets or 15c. in cash and two metal tickets. In other words, the ticket rate could be obtained at any time by tendering one or more metal tickets. The public hearing of the application was scheduled to come before the Public Utilities Commission on May 18. In preparation for this hearing the company's Manager, C. C. Curtis, waited on the councils of the various municipalities recently and explained the proposal. He is reported to have said that the fares should really be increased to 10c., instead of the 7½c. asked for. The company's pay roll for 1919 was 115% greater than for 1915, and 130% greater than for 1913, and certain repairs which cost \$220 a few years ago had cost this year \$590.

Levis County Ry.—The question of a proposed increase of fares necessary to meet the company's employees' demands for higher wages, came before the Quebec Public Service Commission May 11. Representatives of Levis and Beauceville municipalities stated that they would accept the Commissioners' arbitration of the matter, but it was stated that Lauzon and St. Romuald municipalities would stand by the terms of their contracts with the company. Counsel for the employees stated that the company had expressed its willingness to do something for them, but that its present resources did not permit it to do so; therefore they asked the Commission to take up the question of increasing fares. The commission decided to take up the matter and fixed May 19 as the date when the assent or refusal to accept the commission's arbitration be filed by all parties concerned, and fixed May 25 or 26 as the date for hearing the case.

A press report of May 20 states that in consequence of St. Romuald and Lau-

zon municipalities having intimated to the Quebec Public Service Commission that they would not agree to a proposal to increase fares, the Levis County Ry. ceased to operate its cars in those municipalities on the night of May 19, the employees having refused to operate the cars in the municipalities on account of the refusal to allow higher fares, which would result in higher wages. The cars were reported to be running only to the Levis boundary on May 20. Lauzon municipal council has instructed its solicitor to take action to compel the company to operate its cars in the municipality.

Montreal & Southern Counties Ry.—Under the Board of Railway Commissioners' order 29,571, April 26, published in Canadian Railway and Marine World for May, pg. 253, the company filed its standard tariff of maximum tolls, cancelling standard tariff 10, as follows:—"The maximum passenger fare between Montreal and St. Lambert, Que., is 20c. Between all other stations on this company's lines, 3.45c. a mile. Fractions of 2½c. and under to be waived, over 2½c. and up to 5c., to be counted as 5c."

The new tariff became effective May 10. In connection with this increase of fares the company notified passengers that 55 and 46 ride commutation tickets sold prior to May 10 will be accepted until June 10; and that 10 trip tickets issued prior to May 10 will not be accepted but must be turned in for redemption. Ten trip tickets, good for three months; scholars' tickets, good for 40 rides in 30 days; and 55 trip tickets, good for 30 days, will be sold on the new basis for commutation fares.

Nova Scotia Tramways & Power Co.—The Nova Scotia Legislature was asked recently to pass an act authorizing the company to increase its fare to a flat rate of 7c. a trip, and to sell 4 tickets for 25c.

Regina Municipal Ry.—D. W. Houston, Superintendent, recommended recently that the fares charged on this railway should be raised, in the event of the proposition for the operation of one-man cars not going through. A bylaw to provide for the operation of such cars is to be submitted to the ratepayers at an early date; consequently the city commissioners have not taken any action on the suggestion to increase fares. The present fare schedule and that proposed is as follows:—

	Present.	Proposed.
Cash	5c.	6c.
Unlimited tickets	5 for 25c.	9 for 50c.
Book tickets	21 for \$1	None
Labor 16 to 8 am. pm.	8 for 25c.	None
Children	10 for 25c.	8 for 25c.

With the present travel the suggested new fares would give an increased revenue of \$1,000 a week.

Sarnia St. Ry.—A press report states that the Sarnia St. Ry. Co. has announced that it will make an early application to the Sarnia, Ont., City Council for authority to increase fares 6c. to 7c.

Woodstock, Thames Valley & Ingersoll Electric Ry.—The Board of Railway Commissioners passed order 29,620, May 12, approving this company's standard passenger tariff C.R.C. 1, effective May 24. The fare from Woodstock to Varesy, 3.05 miles, is 7c., and from Woodstock to Ingersoll, 10.20 miles, 25c. From Ingersoll to the park, 4.55 miles, the return fare is 20c.

London Street Railway Fares and Wages.

The questions of an increased fare on the London, Ont., St. Ry., and of an increase of wages for the employees are bound up together, and have been under discussion from various points of view for months. Early in 1919 the city council passed a bylaw authorizing the company to collect an increased fare. Action to quash the bylaw was taken and in Oct., 1919, Chief Justice Falconbridge declared it invalid, holding that the city had no power to pass such a bylaw. The company appealed against this decision to the Court of Appeal, which gave judgment April 9, four of the five judges deciding in favor of reversing the decision quashing the bylaw. The bylaw authorized the company to sell 6 unlimited or 8 limited tickets for 25c. instead of 7 or 9 as formerly.

The city in an omnibus bill introduced in the Ontario Legislature at its present session, asked for authority to grant an increase of fares, but this is reported to have been dropped when the bill was before a committee. Be that as it may, the company's employees pressed their demands for increased wages, and the company expressed its willingness to meet this demand if it could increase its fares permanently. The men demanded an increase of wages from the present rate, ranging from 39c. to 44c. an hour to from 60c. to 65c. an hour, according to length of service, together with certain working conditions. These terms not being agreed to, the men went out on strike on April 30. On May 3, efforts having failed to bring the company and its employees together, the city council authorized the Mayor to appeal to the Ontario Railway and Municipal Board to operate the line. Members of the board arrived in London May 4 and decided to operate the line, the service being resumed May 6. The men returned to work at the old rates, but were promised that from any balance remaining after meeting operating costs and bond interest were met, an increase of wages would be granted. One of the features of the operation of the line by the board is that cars are being operated on Sundays, notwithstanding the fact that the city bylaw granting such permission has expired. The board had an audit made of the company's books so as to prepare a report on the situation for presentation to the city council, and on May 19 a press report states that the board has advised the council that additional revenue was necessary if the line was to continue in operation.

A press report of May 24 stated that the employees had agreed to accept an increase of 8c. an hour, based on the condition that the city allow the company to charge a cash fare of 5c. and sell 6 limited tickets for 25c.

Port Arthur Civic Ry.'s Future.—A press report states that Hydro Electric Power Commission of Ontario engineers were expected in Port Arthur, Ont., May 18 to value the Port Arthur Civic Ry. with a view to its being taken over and operated by the Commission.

Moncton Tramways, Electricity & Gas Co.—The New Brunswick Legislature has passed an act authorizing the City of Moncton to buy the electric lighting plant, and electric tramways in the city from the Moncton Tramways, Electricity & Gas Co.

Electric Railway Projects, Construction, Betterments, Etc.

Calgary Municipal Ry.—The Calgary Municipal Ry. Co. has been authorized to extend its line from the city to the town of Canmore, a distance of 100 miles. The line will be operated by the Calgary Ry. Co., which is a subsidiary of the Canadian Pacific Ry. Co. The extension will be completed by the year 1925.

The Cape Breton Electric Co.—The Cape Breton Electric Co. has been authorized to extend its line from the city of Sydney to the town of Chatham, a distance of 10 miles. The line will be operated by the Cape Breton Electric Co., which is a subsidiary of the Canadian Pacific Ry. Co. The extension will be completed by the year 1925.

Fort William Electric Ry.—We are officially advised that half interlocking will be installed on the Fort William Electric Ry. by the year 1925.

Victoria and Franklin St. Ry.—The Victoria and Franklin St. Ry. Co. has been authorized to extend its line from the city of Victoria to the town of Nanaimo, a distance of 10 miles. The line will be operated by the Victoria and Franklin St. Ry. Co., which is a subsidiary of the Canadian Pacific Ry. Co. The extension will be completed by the year 1925.

London and Port Stanley Ry.—The London and Port Stanley Ry. Co. has been authorized to extend its line from the city of London to the town of Port Stanley, a distance of 10 miles. The line will be operated by the London and Port Stanley Ry. Co., which is a subsidiary of the Canadian Pacific Ry. Co. The extension will be completed by the year 1925.

A press report of May 12 stated that the building of a second track through St. Thomas, Ont., was expected to be completed early in June. This will give about four miles of what will be practically a double track line, not continuous, but including sidings at certain points and passing tracks along the line. It is also reported that it is proposed to consider the building of six miles of second track between Whites and Yarmouth in the near future. (May, pg. 202.)

Montreal & Eastern Counties Ry.—The Dominion Parliament has extended for five years the time within which the company may build lines from the northern limit of Chambly County to Sherbrooke, Que., and lines in the counties of Beauharnois, Chateauguay, Huntingdon and Napier. The company is a G.T.R. subsidiary, and with the other G.T.R. lines will pass under Dominion Government ownership. (Feb., pg. 81.)

New Brunswick Power Co.—A press report states that as soon as the company's electric railway can be extended from Fairville to Manchester, N.B., a through service will be operated from King St., St. John, to Manchester Corner, on the Manawagonish Road. An agreement between the company and the municipality is under consideration. (Mar., pg. 145.)

Quebec Ry. Light & Power Co.—The extension of the Beauport line from the Canadian National Ry. tracks to the teryond Beauport Asylum, Quebec, to have been opened for traffic. The Beauport line was completed as far as the C.N.R. tracks and put in operation Nov. 17, 1919, and construction of the extension opened recently was put in hand immediately thereafter. (May, pg. 257.)

Quebec Ry. Light & Power Co.—The extension of the Beauport line from the Canadian National Ry. tracks to the teryond Beauport Asylum, Quebec, to have been opened for traffic. The Beauport line was completed as far as the C.N.R. tracks and put in operation Nov. 17, 1919, and construction of the extension opened recently was put in hand immediately thereafter. (May, pg. 257.)

Regina Municipal Ry.—The Regina Municipal Ry. Co. has been authorized to extend its line from the city of Regina to the town of Moose Jaw, a distance of 10 miles. The line will be operated by the Regina Municipal Ry. Co., which is a subsidiary of the Canadian Pacific Ry. Co. The extension will be completed by the year 1925.

Regina Municipal Ry.—The Regina Municipal Ry. Co. has been authorized to extend its line from the city of Regina to the town of Moose Jaw, a distance of 10 miles. The line will be operated by the Regina Municipal Ry. Co., which is a subsidiary of the Canadian Pacific Ry. Co. The extension will be completed by the year 1925.

Sandwich, Windsor & Amherstburg Ry.—We are officially advised that nothing is being done by the Hydro Electric Power Commission of Ontario with regard to an extension of the railway in land from the Detroit River, as reported in the daily press.

Toronto Civic Ry.—The Ontario Legislature's private bills committee on Nov. 7 defeated the section of the City of Toronto's bill to give the city authority to issue debentures for \$943,000 for the construction of the Mount Pleasant car line.

The city council had before it on May 10 a recommendation from the board of control to ask the ratepayers to vote on a bylaw to issue these debentures, at the municipal elections on Jan. 1, 1921. The council passed a resolution providing that as soon as the bill before the legislature is passed the proposed transportation commission shall be appointed, and that it be requested to proceed with the construction of the Mount Pleasant line with all possible despatch. (April, pg. 203.)

Waterloo-Wellington Ry.—The Ontario Legislature's railway committee refused to pass the company's bill to enable it to extend its line from Bridgeport to Guelph, on the ground that it would interfere with the Hydro Electric Power Commission of Ontario's plans. (April, pg. 203.)

Winnipeg Electric Ry.—We are officially advised that it is proposed to remove half a mile of single track on Marion St., St. Boniface, extending from Rue de Meurons to the C.P.R., and in lieu of this to operate a bus line on Marion St. from the corner of Rue de Meurons to the stock yards, a distance of one mile. This service is being undertaken in lieu of electric car service on account of the company not being able to cross the railway tracks on Marion St. with a car line. The company has ordered 1½ ton chassis for the busses, which are being built in Winnipeg. They will each accommodate 20 passengers seated and 15 standing. (May, pg. 257.)

Postmen's Transportation in Toronto.—The further supplementary estimates for the year ended Mar. 31, 1920, submitted to the House of Commons recently, contained the following item:—Arrears due Toronto Ry., for conveyance of letter carriers, during fiscal years 1917-1918, and 1918-1919, \$27,187.

The Calgary, Alta., City Commissioners on May 10 recommended the purchase of \$1,146 worth of machinery for the car barns, and three 200 k.w. transformers.

British Columbia Electric Railway Restored to Provincial Jurisdiction.

The British Columbia Electric Railway, which was transferred to the Dominion Parliament, contained the following provisions:

"(a) every railway company incorporated elsewhere than in Canada and owning, controlling, operating or running trains or rolling stock upon or over any line or lines of railway in Canada either owned, controlled, leased or operated by such company or companies, whether in such case such ownership, control, or operation is acquired by purchase, lease, agreement or by any other means whatsoever;

"(b) every railway company operating or running trains from any point in the United States to any point in Canada;

"(c) every railway or portion thereof, whether constructed under the authority of the Parliament of Canada or not, now or hereafter owned, controlled, leased, or operated by a company wholly or partly within the legislative authority of the Parliament of Canada, or by a company operating a railway wholly or partly within the legislative authority of the Parliament of Canada, whether such ownership, control, or first mentioned operation is acquired or exercised, by purchase, lease, agreement or other means whatsoever, and whether acquired or exercised under authority of the Parliament of Canada, or of the legislature of any province, or otherwise howsoever; and every railway or portion thereof, now or hereafter so owned, controlled, leased or operated shall be deemed and is hereby declared to be a work for the general advantage of Canada."

The effect of this section, which was an amendment of the previous act, was that the British Columbia Electric Ry. as a whole was brought under the Board of Railway Commissioners' jurisdiction, and that the commissioners, upon application granted increases of fares to the company, full details of which were given in Canadian Railway and Marine World for Dec., 1919, pg. 606. Another was to bring to an end the investigation into the British Columbia Electric Ry.'s affairs, by the Public Utilities Commissioner of British Columbia, who had been authorized by the Legislature to determine whether the temporary increase of fare granted by the City of Vancouver was justified, and to fix the fare for the future. The abolition of the B.C. Public Utilities Commission followed at the legislature's last session.

The Minister of Railways, Hon. J. D. Reid, introduced Bill 135, in the House of Commons, May 17, which was read a first time, as follows:—

"1. Section 6 of the Railway Act, 1919, chapter 68 of the statutes of 1919, is amended by adding thereto the following subsection:

"(2) The provisions of paragraph (c) of this section shall be deemed not to include or apply to any street railway, electric suburban railway or tramway constructed under the authority of a provincial legislature, and which has not been declared to be a work for the general advantage of Canada otherwise than by the provisions of the said paragraph."

The Minister in explaining the bill said: "Sec. 6 of the Railway Act, passed at the last session, provided that any rail-

way under provincial jurisdiction which was leased or operated by another road wholly or partly within the legislative authority of the Dominion Parliament should be regarded as a work for the general advantage of Canada and therefore subject to the jurisdiction of the Board of Railway Commissioners. This clause was inserted to cover the case of the Quebec Central Ry., which, being part of the C.P.R. system, was under provincial as well as Dominion jurisdiction. We found afterwards that the clause had been so worded as to have the effect of taking in street railway lines, electric suburban railways and tramways built under the authority of a provincial legislature. This bill proposes to place these electric lines again under the jurisdiction of the provincial government. If I read the main clause of the bill its purpose will be explained."

The effect which this bill will have apparently, is that rates fixed by the Board of Railway Commissioners for B.C.E. Ry. lines, which are not definitely under its jurisdiction, through being operated under Dominion charters and declared to be works for the general advantage of Canada, will cease to be operative, and the fares fixed in the municipal charters under which the lines were built will again come into effect.

Electric Railway Notes.

The Brantford, Ont., Railway Commission is reported to be considering the desirability of operating one-man cars on the municipal railway.

The Regina, Sask., City Council put a bylaw for the operation of one-man cars on the Regina Municipal Ry. through its initial stages, May 4. It will be voted on by the ratepayers at an early date.

The Brantford, Ont., Municipal Ry. Commission is, we are officially advised, considering one-man car operation, with the idea in view that in case any additional cars may be ordered this year, that type may answer the city's requirements.

A deputation representing the Toronto against the proposed purchase of one-street railway men's union waited on the board of control recently to protest from cars for Toronto Civic Ry. on the hackneyed ground that their use would slow up traffic and endanger the lives of passengers and pedestrians.

The Cape Breton Electric Co. expects to be in the market shortly for two or more passenger cars to replace those destroyed by fire at Glace Bay, N.S., in March. It is possible that some of the company's large steel cars may be diverted from city to suburban use, and safety cars bought for city service. The purchase of a new, or second hand, combination express car, line car and sweeper, is under consideration.

The Ontario Railway and Municipal Board advised the St. Thomas, Ont., city council recently that it was prepared to approve of the operation of one-man cars on the municipal railway there as soon as it was advised of the routes upon which they would be operated. A press report says the Board of Railway Commissioners has given the city authority to operate one-man cars on its line over certain crossings of steam railways in the city, upon the installation of semaphores and provision for the maintenance of watchmen. Another report states that seven of the city's cars have been converted for one man operation.

Mainly About Electric Railway People.

J. M. Ahearn, heretofore Assistant Superintendent and Purchasing Agent, Ottawa Electric Ry., has been appointed Assistant Manager and Purchasing Agent.

F. D. Burpee, heretofore Superintendent, has been appointed Manager, Ottawa Electric Ry., Ottawa, Ont. He was born at Ottawa, Ont., Apr. 25, 1876, and commenced railway work in 1891 on District 4, Eastern Division, C.P.R., Ottawa, and transferred to Ottawa Electric Ry. service in 1893, since when he has been, to 1896, stenographer, 1896 to 1898, cashier and paymaster, 1898 to Aug., 1912, accountant, during which time he also acted as assistant to the Secretary-Treasurer, and to the Superintendent. In Aug., 1912, on the resignation of J. E. Hutchison, to become General Manager Montreal Tramways Co.'s service, he was appointed Superintendent. He enlisted in the 207th Battalion, C.E.F., in Feb. 1916,

Captain F. D. Burpee,
Manager, Ottawa Electric Railway.

and assisted in recruiting the battalion, and sailed for England as second in command in May, 1917, with the rank of Captain, where his battalion was eventually broken up. He then transferred to the Canadian Railway Troops, reverted to the rank of lieutenant and went to France July 7, 1917, and was engaged at points all over the British front. He returned to Canada early in 1919, and resumed his duties as Superintendent, Ottawa Electric Ry., in March of that year.

J. P. Daugherty, Manager, St. Thomas, Ont., Municipal Ry. for seven years, has resigned.

Capt. F. R. Glover, General Executive Assistant, British Columbia Electric Ry., is recovering from a broken knee cap.

John Patterson.—A life size picture of the late John Patterson was unveiled at the Dominion Power & Transmission Co.'s station in Hamilton, Ont., recently, by the company's President. Mr. Patterson was the principal promoter of the

electric power development and electric railway lines in Hamilton and vicinity, now owned by the company.

A. J. Tobin, heretofore Chief Inspector, Car Service Department, Ottawa Electric Ry., has been appointed Superintendent. He has been in the company's service for over 25 years, originally as a conductor.

W. N. Warburton, Manager, London & Lake Erie Transportation Co., now in liquidation, the line having been dismantled, died at London, Ont., May 27, aged 65, after a long illness.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:

	9 mos. to Mar. 31, 1919	9 mos. to Mar. 31, 1920
Gross	\$761,182	\$619,120
Expenses	\$519,487	\$477,000
Net	\$241,695	\$142,120

Cape Breton Electric Co.:

	3 mos. to Mar. 31, 1919	3 mos. to Mar. 31, 1920
Gross	\$114,751	\$129,241
Expenses	\$11,411	\$22,559
Net	\$103,340	\$106,682

Niagara Falls, Wesley Park & Clifton Tramway Co.—We are officially advised that the City of Niagara Falls, Ont., has not taken any further action in the direction of taking over the line in the city, and nothing has been done, so far as the company is aware, by the Ontario Railway and Municipal Board, in arranging for an arbitration as to the price to be paid for the property. The line is still being operated by the Niagara, St. Catharines & Toronto Ry., which owns it.

Ottawa Electric Ry.—Under the provisions of a mortgage trust dated June 29, 1897, 15 debentures, of \$1,000 each, have been drawn for redemption, and will be paid with current coupons for interest thereon, July 5, at Ottawa, after which date interest on the debentures ceases.

St. Thomas Municipal Ry.—A press report states that the deficit on operation for April was \$588.60, the smallest for some years. The number of passengers carried was 45,442, against 39,636 for April, 1919.

Toronto Ry., Toronto & York Radial Ry. and allied companies:

	3 mos. to Mar. 31, 1919	3 mos. to Mar. 31, 1920
Gross	\$1,255,668	\$1,083,285
Expenses	\$941,421	\$817,404
Net	\$314,247	\$265,881

Winnipeg Electric Ry. and allied companies:

	3 mos. to Mar. 31, 1919	3 mos. to Mar. 31, 1920
Gross	\$200,000	\$200,000
Expenses	\$100,000	\$100,000
Net	\$100,000	\$100,000

Winnipeg Electric Ry. Co.—At a meeting of shareholders in Winnipeg, May 3, a resolution was passed authorizing the issue of \$3,000,000 of new preferred stock to the funded floating debt. Subscribers will be given one share of common stock as a bonus, with every five shares of preferred stock allotted.

New Brunswick Electric Railway Taxation.—The New Brunswick Legislature has passed an act imposing taxes on certain incorporated companies and associations, as follows:—"Upon all street railway companies operating their lines within the province, not less than \$50, nor more than \$100 for each mile operated by any such company, in the discretion of the Lieutenant Governor in council."

Electric Railway Employees' Wages, Working Conditions, Etc.

Brantford Municipal Ry.—Employees asked recently for increased wages. The rates for 1919 for motormen and conductors for 54 hours per week are as follows: 1st year, \$4.00; 2nd year, \$4.25; 3rd year, \$4.50; 4th year, \$4.75; 5th year, \$5.00. The increase asked for is approximately 10%. The men now work 54 hours a day.

Cape Breton Electric Co.—C. C. Curtis issued the following bulletin to trainmen all over the May 4. "From May 1, 1920, wages of motormen and conductors, all divisions, will be as follows: 1st year, \$4.00; 2nd year, \$4.25; 3rd year, \$4.50; 4th year, \$4.75; 5th year, \$5.00. Every effort is being made to pay good wages in all departments, and I wish to again impress upon each and every one of you, that the man who does his work faithfully, loyally, conscientiously, and without constant thought of the clock and pay envelope, is going to get, under this management, just a little better treatment than the man who is always complaining, asking for more money and less work, and helping to increase the high cost of living. The one simple way in which each individual can help to reduce high costs, is to work a little harder and more intelligently, spend more carefully and save consistently. Application has been made for a 7½c. tram fare, but even when this is obtained gross earnings will hardly do more than pay daily operating expenses and taxes. Matters are really very serious and we are depending upon each and every one of you to co-operate in every way so as to promote the best interests of the company, the public and yourself." The wages paid heretofore ranged from 37c. to 42c.

Guelph Radial Ry.—We are officially advised that wages have been advanced on this municipally owned line. The old and new rates per hour are as follows:—

	Old.	New.
Motormen and conductors:		
First year	40c.	42c.
Second year	42c.	44c.
Third year	44c.	46c.
Fourth year	46c.	48c.
Fifth year	48c.	50c.
Track men	40c.	42c.
Trainmen (10 hours)	42c.	44c.

Hamilton St. Ry.—A board of conciliation, consisting of Judge C. G. Snider, Chairman; G. S. Kerr, representing the company, and F. Bancroft, representing the employees, commenced its sittings in Hamilton, Ont., May 11, to deal with matters in dispute between the company and its employees respecting wages, working conditions, etc.

International Ry.—A press report states that employees of the International Ry., Buffalo, N.Y., which operates the Niagara Falls Park & Island Ry. in Canada, are asking for an increase of wages ranging from 83c. to 88c. an hour. The men now work a 9-hour day and are paid time and a half for overtime. It is further reported that the company recently refused to grant an 8-hour day, but offered an increase of wages with a maximum of 60c. an hour.

London & Port Stanley Ry.—The board of conciliation appointed on the London Railway Commission refused to accede to the demands of the men for a maximum rate of 65c. an hour, consisting of Judge C. G. Snider, Hamilton, Ont., chairman; J. M. Campbell, Kingston, Ont., representing the Commission, and B. W. Bennett, Sarnia, Ont., representing the men, sat in London, Ont., May 4

to 6, and presented a majority report to the Labor Department in which the following rates of pay per hour were recommended:

Position and length of service	Rate
1st year	40c.
2nd year	42c.
3rd year	44c.
4th year	46c.
5th year	48c.

99th year	2.36
100th year	2.38

In each case time and a half for overtime was awarded. These rates were those offered by the commission and rejected by the men prior to the formation of the board of conciliation. At a meeting of the commission May 13, it was decided to uphold the award. B. W. Bennett, representing the men, made a minority report, in which he recommended an increase of 15c. an hour over the old rates, to date from Feb. 1. The men refused to accept the majority award and went on strike May 14. A partial service was put in operation at once, after some repairs had been done to the overhead work, which was stated to have been maliciously damaged. The management improved the temporary service daily until on May 23, when it was nearly normal again, the strike collapsed and the men returned to work on the terms of the board of conciliation's award, a press report stating that an understanding was arrived at that if the management finds it favorable to pay higher wages in the future it will be done.

Montreal Tramways Co.—As stated in Canadian Railway and Marine World for May, pg. 256, the company's conductors and motormen had applied for very large increases in wages, the present rates and those asked being as follows per hour:—

	Present	Asked
First year	37c.	40c.
First 12 months	37c.	40c.
Next 12 months	37c.	40c.
Second year	40c.	43c.
Third year	44c.	47c.
After third year	48c.	51c.

The men also asked an 8-hour day, and that no overtime be worked. The company on May 7 declined to accede to the demands, informing the men's representatives that the allowances made by the Montreal Tramways Commission did not permit of any increase of wages, and that the revenue at present is only just sufficient to meet the present expenses.

On the same day, some of the company's officials waited on the Montreal Tramway Commission to discuss the matter, and were advised that in 1918 the men were given increases totalling \$750,000, and in 1919 increases totalling \$1,250,000, and now they are asking for increases totalling \$3,500,000. This amount could not be provided unless by increasing fares by at least 2c., and the commission was determined not to increase the fares this year. The commissioners further stated that it might be possible to provide funds for a bonus, but it would fall far short of the amount asked for by the men.

On May 10, another delegation waited on the commission and was informed what amount of bonus might be available (the amount of which, however, was not made public), and was further advised that the commission had not changed its attitude as to increasing fares this year. A press report stated that the amount offered as a bonus was approximately \$300,000, while another report stated that it was between \$250,000 and \$300,000, and was to be distributed between the shopmen, the commission con-

sidering that the men on the cars were sufficiently paid. The commission is also reported to have offered an insurance and pension plan on the following basis:—A life insurance policy for \$500, to be increased to \$1,000 at the end of 5 years' service, and a pension at the age of 60, of 2% of wages earned, multiplied by the number of years' service. These offers were declined by the men on May 17, when it was decided to apply for a board of conciliation.

The Montreal Tramways Commission commenced on May 17 the publication of a series of full page advertisements, addressed to the Montreal public, giving reasons why the employees' demands could not be granted.

Niagara, St. Catharines & Toronto Ry. Disputes having been developed between the company and its employees, an ultimatum was presented to the management April 29, threatening an immediate strike unless the alleged grievances were redressed. E. W. Oliver, General Superintendent, intimated that the company was willing to submit the differences to arbitration. This was agreed to and a board consisting of County Judge Campbell, chairman, W. J. Burkyne, St. Catharines, representing the men, and C. G. McGhie, representing the company, was agreed to, and began its sittings in St. Catharines, Ont., May 5.

Nova Scotia Tramways & Power Co.—We are officially advised that a conditional increase of wages has been granted to all the company's employees. The maximum for motormen or conductors is 52c. an hour, and for operators on one-man cars 5c. an hour extra. The pay of operators, motormen and conductors is to be graduated according to length of service. The increases of pay will, it is stated, add \$100,000 a year to the company's pay roll. The increases had not gone into effect when we were advised on May 3, but are said to be contingent upon the granting of authority by the Nova Scotia Legislature to the company to charge increased fares.

Ottawa Electric Ry.—A board of conciliation has been appointed by the Labor Department to arbitrate between the Ottawa Electric Ry. and its employees as to wages and working conditions. We are advised that G. D. Kelley is the company's representative, and A. E. Fripp, K.C., M.P., is the men's representative.

Quebec Ry., Light & Power Co.—The following joint schedule of rates, rules and conditions, governing employment of trainmen on the Montmorency Division was put in effect Mar. 16. Back time from Nov. 1, 1919, to Mar. 15, 1920, was paid on the basis of 9 hours a day on rates on this schedule, for employees in steam train service, and on the basis of 10 hours a day for employees in electric train service. The following table gives the new rates per day, and the old rates per hour, with a minimum of 10 hours:

	New per day	Old per hour
Way freight, steam or electric:		
Conductors	\$5.00	45c.
Engineers & drivers	5.00	45c.
Experienced brakemen	4.00	35c.
Firemen	4.00	35c.
Passenger and work steam trains:		
Conductors	5.10	45c.
Engineers	5.10	45c.
Experienced brakemen	3.70	33½c.
Firemen	3.70	33½c.
Passenger and work electric local trains:		
Conductors	5.10	45c.
Engineers	5.10	45c.
Experienced brakemen	3.70	33½c.
Trolleyman	3.70	33½c.

Electric trains—

Conductors over 1 year in service	5.00	42c
Conductors less than 1 year in service	4.60	39c
Drivers	5.00	42c
Experienced brakemen	3.45	30½c
One hundred miles or less in steam or electric locomotive service, or 8 consecutive hours or less in service (exclusive of meal hour) constitute a day. Overtime miles or hours to be paid pro rata.		

One hundred miles or less in electric train service, or 8 hours or less in service, constitute a day. Overtime miles or hours to be paid pro rata.

Quebec Railway, Light & Power Co.—A Quebec press dispatch says that the company has recognized the Quebec National Fraternity of Street Railway Employees and has agreed not to employ conductors and motormen who are not members of it. It also says that wages on the city division, which theretofore ranged from 31c. to 38c. an hour, have been advanced to from 34c. to 48c. an hour, according to length of service.

Sandwich, Windsor & Amherstburg Ry. The employees of the Sandwich, Windsor & Amherstburg Ry., operating in Windsor and adjacent municipalities, which was taken over by the Hydro Electric Power Commission of Ontario, Mar. 31, were reported May 18 to be agitating for an increase of wages. The present scale ranges from 50c. to 60c. an hour, according to length of service.

Sarnia St. Ry.—A press report states that the employees have asked for a 50% increase of wages, and for an 8-hour day and time and a half for overtime. The men now work a 10-hour day, the average wages being stated to be \$4 a day.

The Sarnia City Council is reported to have approved, May 17, of the following increased fare schedule for Sarnia St. Ry.:—Cash fare, 7c.; four tickets to be sold for 25c.; workmen's tickets, 6 for 25c.; children's and beach tickets to remain as heretofore. Notice was given of a bylaw to confirm the new rates. The company will now, it is said, increase the wages of its men, who were asking for increases totalling \$12,000 a year, which they were advised could not be granted without an increase of fares.

Toronto Ry.—The employees have presented a draft of a new wage agreement which they ask be put into effect on the expiry of the present agreement on June 15. The rate of wages asked for conductors and motormen is a flat one of 85c. an hour, the present rate being 52½c. for the first three months and 55c. for the next 9 months.

Winnipeg Electric Ry.—We are officially advised that the board of conciliation appointed to deal with the dispute as to wages, etc., between the company and its employees consists of Judge R. H. Myers, Winnipeg, chairman; C. E. Daffoe, Winnipeg, representing the company, and R. S. Ward, Winnipeg, representing the men.

The draft of the new agreement which the men asked the company to adopt was submitted April 8, and was proposed to run from May 1, 1920, to April 30, 1921. The proposed schedule of wages for motormen and conductors, compared with the schedule under the old agreement is as follows per hour:—

	Old	Proposed
Week-days	Sundays	Week-days
First 6 months	45c. 31c.	80c. 50c.
Second 6 months	49c. 54c.	85c. 55c.
After 1 year	52c. 57c.	90c. 58c.
After 2nd year	55c. 59c.	

The proposed schedule also included the wages asked for all other employees, the increases asked for being on approximately the same scale. Some notable instances are:—

	Old scale.	Proposed Scale.
Machinists	70c.	\$1.00
Machinists' helpers	48c.	71½c.
Wheelmen	50c.	82½c.
Blacksmiths	70c.	\$1.00
Car Carpenters	65c.	\$1.00
Car Inspectors	49c. to 52c.	85c.
Car cleaners	40c.	75c.
Track laborers	10c.	75c.

A. W. McLimont, Vice President, addressed the following letter to the Secretary of the Employees' Union, an receipt of the request for advances:—"I have carefully studied the draft agreement which you submitted intended to cover wages and working conditions of certain employees of this company for the ensuing year. Your demands are so extreme that the company is deprived of even being able to consider them as a basis for negotiations, and the amount involved (approximately \$1,250,000) is so large that were it granted the railway fares would necessarily have to be increased to such an extent that many citizens who depend upon the service now supplied to them by this company would be deprived of it. As the revenue now derived would not provide the additional money, it must be apparent to you that, conceding any further wages demands must add to the fare the general public has to pay, and as the public is directly interested, the whole matter will have to be dealt with by the proper authorities."

Proposal to Acquire Windsor, Essex & Lake Shore Rapid Ry.

Municipal authorities in the municipalities served by the Windsor, Essex & Lake Shore Rapid Ry., in Western Ontario, have been supplied with copies of a blank resolution to be passed by municipal councils, as follows:—

Copy of resolution of the municipality of

Moved by, second by

That the Hydro Electric Power Commission of Ontario be requested to approach the said railway on behalf of the municipalities through which it operates. And (if the company indicates, its willingness to sell) that the said commission be also requested to supply the municipalities with a report showing the estimated cost of the line equipment ready for satisfactory service, the probable future earnings and expenses. And that copies of this resolution be sent to the Secretary of the said commission and company respectively, as well as a request to the councils of the other municipalities interested, asking them to take similar action.

.....Reeve or Mayor.

I hereby certify the above to be a true copy of a resolution passed in open council by theofClerk.

Dated..... 1920.

Dominion Power & Transmission Co.'s Properties.—A press report of May 21 stated that the Hydro Electric Power Commission of Ontario had secured an option on the Hamilton Radial Electric Ry. from Hamilton to Oakville, Ont. E. P. Coleman, General Manager, Dominion Power & Transmission Co., is reported to have said, on the same day, that the situation as to the negotiations between the company and the commission was in no way changed. The commission's engineers had valued the company's plant and railways, and there were negotiations as to price. It was highly improbable that the commission would secure

The Hydro Electric Power Commission of Ontario's Proposed Electric Railways.

Ontario's Prime Minister, in addressing a delegation from municipalities interested in the building of the projected electric railways east and west of Toronto, recently, is reported to have said that as soon as the government is convinced that there will be no unnecessary duplication, and that the financial situation is such that the enterprises would not be unduly loaded up, and that labor and equipment are not so costly as at present, the government will be prepared to guarantee the bonds for construction. He counselled caution in regard to the situation.

Toronto City Council on May 10 decided to ask the Hydro Electric Power Commission to go ahead with the construction of the Toronto-Bowmanville line, independently of a provincial guarantee of bonds. Pickering Tp. is reported to have passed a similar resolution. This would involve the purchase of the uncompleted Toronto Eastern Ry. from the Canadian National Rys.

It is, however, to the lines west of Toronto that attention is being more particularly directed at present. Bylaws for the construction of a line from Toronto via Port Credit, Guelph and Stratford to London; for a line from Port Credit to Hamilton; a line from Hamilton via Guelph to Elmira, and for lines in the Niagara peninsula have been passed, and of these the commission desires to proceed with the construction of the Toronto-Port Credit section, 15 miles, and from Port Credit to St. Catharines, 60 miles, which with the Toronto Eastern Ry. would give a continuous line from Bowmanville to St. Catharines, 118½ miles.

Questions in the Ontario Legislature on May 7 elicited the fact that the commission had secured authority by order in council, or otherwise, to proceed with the construction of an electric railway from Port Credit through St. Catharines; that municipal bonds had been actually issued to finance construction; that the government had guaranteed the bonds and otherwise endorsed the financing of the line, and that the right of way was being secured. A press report states that an issue of bonds for \$11,360,000 was authorized Aug. 8, 1919, and that of these \$1,050,000 worth had been endorsed by the present government.

In order to provide for the construction of the line from Toronto to Port Credit, as part of the line to St. Catharines, the municipalities have passed resolutions of agreement. The right of way for the line is reported to have been bought.

Niagara, St. Catharines & Toronto Ry.'s future.—In connection with suggestions that certain sections of the Canadian National Ry. and the Grand Trunk Ry. be taken over by the Hydro Electric Power Commission of Ontario and electrified, the question of the purchase of the Niagara, St. Catharines & Toronto Ry. and its incorporation in the commission's Niagara peninsula plans has been discussed. Some conferences between Sir Adam Beck and the Minister of Railways have taken place at Ottawa, and it is reported that the Dominion Government is of opinion that it would be poor business policy to get rid of any of its lines that are paying.

consideration their new tonnage, would not nearly equal per ton deadweight the cost of the Canadian Government Merchant Marine Ltd. fleet. Your ships will also be competing on some trades against ships carrying foreign crews. It will be seen, therefore, that while a satisfactory business is being done, and much new trade developed, large profits should not be looked for.

Management.—Your directors are pleased to be able to say that the management of your ships is entirely in the hands of Canadians. All of the officers of the boats are British, and 80% of them Canadian. The organization of the company has entailed heavy work on the part of the company's officers and staff. To them the board wish to express their thanks for the loyal and efficient services rendered throughout the year.

Balance Sheet, Dec. 31, 1919.

ASSETS.	
Current assets:	
Cash in banks and on hand.....	\$ 482,176.39
Dominion of Canada, Victory Loan, 1919	500,000.00
Accounts receivable	502,155.18
Advances to captains, crews and agents	28,270.88
Insurance claims, estimated amount recoverable	21,893.35
Interest receivable accrued	4,583.33
Inventories of stores and supplies.....	1,959.71
	\$1,489,338.84

Accounts payable	\$ 330,632.84
Balances of uncompleted voyages	415,724.92
Surplus, profit for period from Mar. 2 to Dec. 31, 1919	1,056,767.38
Contingent liabilities, none ascertained	
	\$2,003,125.14

The directors are: D. B. Hanna, President, Toronto; A. J. Mitchell, Vice President, Toronto; E. R. Wood, Toronto; R. Hobson, Hamilton; Major G. A. Bell, Ottawa; Sir Hornmisdas Laporte, Montreal; A. P. Barnhill, St. John, N.B.; Thos. Cantley, New Glasgow, N.S.

The officials are: R. C. Vaughan, Assistant to President, Toronto; R. P. Ormsby, Secretary, Toronto; C. E. Friend, Comptroller, Toronto; H. G. Foreman, Assistant Treasurer, Toronto; R. B. Teakle, Manager, Montreal; Wm. Phillips, European Manager, London, Eng.; H. Milburn, Asst. to Manager, Montreal; I. J. Tait, Superintendent Engineer, Montreal; D. O. Wood, Traffic Mgr. Exp. and Imp. Dept., Toronto; W. A. Cunningham, Exp. and Imp. Frt. Agent, Montreal; Geo. Bunting, General Agent, Toronto; F. A. Young, General Agent, New York, N.Y.; B. C. Keeley, General Agent, Vancouver, B.C.

Panama Canal Tolls on British Ships.—A Washington, D.C., dispatch states that the British Embassy there has announced that it is authorized to deny reports that the British Government is rebating to British ships the tolls paid for passage through the Panama Canal, it only paying such tolls in cases where it has ships on time charter.

Pacific Coast Tide Tables.—The Naval Service Department's Tidal and Current Survey has issued tide tables for the Canadian Pacific Coast for 1920, including Fuca Strait, Georgia Strait, and the northern coast, with data for slack water in the navigable passes and narrows, and information on currents. It will be mailed free, on request to the Tidal and Current Survey, Naval Service Department, Ottawa.

Canadian Pacific Ocean Services, Ltd., Pacific Service.

W. T. Marlow, General Freight Agent, Canadian Pacific Ocean Services, has given the following particulars regarding the sailings of the company's ships from British Columbia to the Orient:

Up to recently we had a very large movement of coolies returning from France to China to take care of, which movement lasted during the latter half of 1919, and throughout the early part of this year. This transportation has been completed and the space that was utilized for their accommodation is now available for commercial cargo. There is no congestion at Vancouver, and space is available for all cargo offering from Canada; in fact, to supply the cargo required, we have to book largely from the United States market. At present we maintain three sailings monthly with the following ships:—

Empress of Russia, Yokohama, Kobe, Nagasaki, Shanghai.

Empress of Asia, Hong Kong and Manila.

Empress of Japan, Yokohama, Kobe, Nagasaki, Shanghai, and Hong Kong.

Monteagle, Yokohama, Kobe, Moji (Japan), Shanghai and Hong Kong.

Methven, Yokohama, Kobe, Shanghai, Hong Kong, and Singapore.

This service will be augmented by the addition of the Mattawa, which will leave England shortly via the Suez for the Orient, and should arrive in Vancouver in time to load from that port, June 28. This ship will make the same ports of call as the Methven in the Orient.

In the development of the trans-Pacific trade, we are confining ourselves exclusively to our regular ports of call, as our present arrangements admit our acceptance of shipments for interior points in China and Japan, as well as outports in Borneo, Celebes, Ceylon, Formosa, French Indo-China, India, Java, Korea, Manchuria, Philippines, New Guinea, Siam, Sumatra, Straits Settlements, Siberia, etc. Through bills of lading are issued to such ports from any point in Canada or the United States by the C.P.R.

Proposal for Government Supervision of Steamship Companies.

J. E. Armstrong, M.P. for East Lambton, Ont., gave notice recently that he would move in the House of Commons as follows:—"That, in the opinion of this house, the recommendations set forth in the final report of the Royal Commission on the Natural Resources, Trade and Legislation of certain portions of His Majesty's Dominions, and presented to both Houses of Parliament by command of His Majesty, in Mar., 1917, showing that it is not desirable that the operations of the steamship companies carrying passengers and freight between the Dominion of Canada and the United Kingdom should remain longer without some measure of government supervision, should be given effect; and that this government should take immediate steps to assist the Imperial Government in bringing about government control of the ocean carriers doing business (or, from time to time, doing business) between ports in the United Kingdom and ports in the Dominion of Canada, and that a permanent commission representing all parts of the Empire be established, which shall be invested with wide powers relative to transportation on the high seas; such powers, as far as possible, to be similar or analogous to those

which have been conferred in Canada and in other Dominions upon permanent commissioners charged with the supervision and control of railway and steamship rates and their methods and conditions of operation."

On the order for the motion being reached in the House of Commons May 5, Mr. Armstrong asked if the acting Prime Minister was prepared to accept it. Sir Geo. Foster replied: "No, I am afraid not. I would advise my friend to drop it. But if he wishes to make any remarks in reference to it, he may let it stand and I am prepared to hear what he has to say." Mr. Armstrong then said that under the circumstances he would drop it.

Is There a Ship Brokers' Combine in Winnipeg?

Lt.-Col. C. W. Peck, V.C., M.P. for Skeena, B.C., asked the following questions in the House of Commons May 5: Is the Government aware of any combination of vessel brokers in the Winnipeg Grain Exchange formed since 1914? Was this combination in the nature of pooling their interests? Was such pool recognized by the Canadian Wheat Board and did such board authorize its continuance and recognize it as a proper and reasonable organization for such a purpose? Did the government aid such pool? Who were the members of the Winnipeg Grain Exchange who compose this combination or pool? Was the present chairman of the Canadian Wheat Board or his immediate business associates connected with the combination? Who were the vessel brokers who were members of the Winnipeg Grain Exchange at the time of the outbreak of the war? Among these, who enlisted for overseas service and in what capacity? Are any of these overseas men still members of the Exchange, and who are they? Did any of these men apply for admission to the pool mentioned above after returning from the war, and if so, with what result? Does the government or Canadian Wheat Board purpose the allowance of the continuation of such a pool, and if so, will members of the Exchange who performed overseas service be permitted to become associated with and enjoy the benefits derived from such organization?

Sir Geo. Foster replied:—"These questions refer to matters entirely within the competence of the non-governmental agencies and agents therein mentioned, with the organization and operation of which the government has nothing to do and of which it has no records."

Government Shipbuilding in Great Britain.—A dispatch states that the British Ministry of Shipping's expenditure has exceeded its estimates by £100,000,000, the actual excess in expenditures being £85,000,000, with a deficiency of £15,000,000 in the amounts realized on account of appropriations. The expenditure included £8,800,000 for shipbuilding abroad, for which the final accounts had not been received. The concrete shipbuilding plan, for which special yards were laid out, shows a loss of £2,500,000.

Saguenay River Dredging. The Minister of Railways and Canals stated, in the House of Commons, recently, that the cost of dredging the Saguenay River was \$522,867.41. The depth of the channel is 16 ft. The government is not aware that at certain places there are land slides which may block the channel.

Canada Shipping Act (Pilotage) Amended.

That it is expedient to amend the Canadian Shipping Act by repealing one and three fourth percent in the scale of stevedore storage rates for and below 500 tons, and to provide that the said one and three fourth percent be charged to the cargo owner instead of the stevedore.

piloting now in force for and below Quebec shall not be altered unless at any time the share of the net income of the Quebec Pilots Corporation, annually accruing to each member of the said corporation, shall be at least equal to the share of and below the harbor of Quebec, has been less than \$600 in any averaging for three consecutive years immediately preceding; in which case it shall be the duty of the Minister to submit to the Governor in council, for approval, a bylaw establishing such increased rates of piloting as may be determined necessary for the purpose of securing to each such pilot an average annual share of not less than \$600 of such net income, and in like manner thereafter, to submit for approval a further bylaw whenever such annual average share for three successive years, for each pilot shall not amount to \$600.

"2. Nothing in this part shall be construed to give power to the Minister to make regulations respecting the management or maintenance of pilot boats, or respecting the administration or distribution of the earnings of pilots and pilot boats."

The proposed resolution was discussed as follows:—

Mr. Bantyne: Under the Canada Shipping Act, sec. 434, no alteration can be made in the pilotage dues for the Quebec District unless the average income for each pilot for three years had been less than \$600 a year. This is a statute that was framed very many years ago, and we all know that the cost of living has very greatly increased since and especially during the past few years. Although the Quebec pilots have made an arrangement with the Marine Department, and also with the shipping interests, for the season of 1920, the object of this resolution is to enable me to introduce a bill eliminating this restriction of \$600, so that if it should be deemed advisable in the future to change the tariff it can be done.

T. Vien: Will it open the door to a reduction?

J. H. Sinclair: Why does the Minister

Mr. Ballantyne: I submitted this to the Justice Department, which pointed out to me that owing to chap. 48 which was assented to on June 12, 1914, it would be necessary to make this resolution and the bill based upon it date from June. It is purely a technical, legal matter to conform to the regulations of the Shipping Act.

Mr. Sinclair: Will it have the effect of increasing the salaries of the pilots from 1914 up to the present?

Mr. Ballantyne: All arrangements have been made for the future of the pilots of Quebec will ask in the future for an increase in the tariff or not, but in view of the fact that no change can be made in the tariff under sec. 434 unless their income is less than \$600 a year for three

move that restriction, so that if the Quebec pilots should at any time in the future make a request to increase the tariff the department would be able to do so provided their claims were well based.

Hon. W. S. Fielding: Will the Minister specify any figure or eliminate it altogether?

Mr. Ballantyne: Eliminate it altogether.

Mr. Fielding: There will be no limit?
Mr. Ballantyne: No.

H. E. Lavigne: Are the Quebec pilots making a demand for an increased tariff?

Mr. Belantyne: The Quebec pilots did make a request to the department and also to the shipping people. We were unable to alter the tariff owing to this clause in the Shipping Act, which stated that their minimum income must be less than \$600 for three years to enable us to increase the tariff, but as some compensation there has been an arrangement arrived at whereby they will receive a bonus.

The resolution was reported, read a second time and concurred in, and Mr. Ballantyne then introduced bill 94, to amend the Canada Shipping Act (Pilotage), in accordance with the resolution.

The bill was read a second time May 4 and, on the House going into committee, was discussed as follows:—

D. D. McKenzie: I understand the system of pilotage, or the laws dealing with pilotage, in Halifax and Sydney have been changed. Is there any change in method, or is there any proposed change in method of operating those pilotage systems or combinations in other parts of the country, or are they to go on as before?

Dr. Ballantyne: The member will no doubt recall that, at the session of Parliament, a year ago, I introduced in the house a bill that was passed giving the Governor General in council authority to make the Minister of Marine the pilotage authority and to take over such districts as Sydney, St. John, Vancouver and Victoria. The pilotage districts of Montreal and Quebec have been under the Minister of Marine for quite a number of years, and the pilotage authority at Halifax was placed under the same minister under the War Measures Act in 1918. The bill that I introduced a year ago vested the pilotage districts that I have mentioned in the Governor in council and the Minister of Marine. I shall be very glad to give further details when the pilotage items in the main estimates are reached. The object of the present bill is merely to make a change in the shipping law, so that it will be possible for the Quebec pilots to get an increase in tariff if that is found necessary. If we do not make the change that the bill calls for, there can be no increase in the pilots' tariff until the minimum salary of the Quebec pilots for three consecutive years falls below \$600 a year. I am sure members will agree that \$600 a year as a remuneration for pilots may have been all right a great many years ago, but is altogether too low at present. While the subject is not up at present, I am having this change made in the act so that if it was thought fit in the future to make any change in the tariff with respect to the Quebec pilots I might be free to do so.

Mr. Sinclair: What was the average amount received by the Quebec pilots

Mr. Ballantyne: The average earnings

of the 41 plots in the Quebec district
just were presented to S. J. G. in

Mr. Sinclair: Then this bill relates not to the salaries of the pilots but to the rates to be charged by the pilots on shipping coming up the St. Lawrence. Am I not correct in that? There is a restriction in the law at present against increasing the rates to be charged ships by the pilots until the salaries of the pilots shall be less than \$600. That is not likely to take place, because the pilots are getting about four times as much at present, but this legislation, as I understand it, opens the way to an increase in the pilotage rates.

Mr. Bahlentyne: The member is quite correct, but even if it were mutually agreed between the Quebec pilots, the Marine Department and the shipping interests that the present tariff of the pilots should be increased, which would mean that their earning power would be greater than the average I have given, I would be quite unable to make the increase, because of the existence of the old statute referred to, which provides that no change can be made in the pilotage tariff unless the annual income of the pilots is less than \$600 a year for three consecutive years. No such restriction as this exists in the case of any other pilotage system, and I desire to have it eliminated, so that if the time should ever come when it was deemed fair and right to increase the tariff we may be able to do so.

Mr. Sinclair: Then it is not intended at present to make any increase in the rates?

Mr. Ballantyne: No.
The bill was then reported, read the third time and passed.

Litigation over French Steamship built in British Columbia.—A series of actions were commenced in British Columbia recently, by Raymond Van Hemelryck, a Belgian residing in France, against the Northern Construction Co., the Pacific Construction Co., and the New Westminster Construction & Engineering Co., for the return of money paid on deposit, less certain allowances for material purchased, etc. It appears that plaintiff ordered through Anderson & Co., ship brokers, New York, 10 wooden steamships of 3,200 tons each, and these orders were distributed by Anderson & Co., as follows: 4 to Northern Construction Co., 3 to Pacific Construction Co., and 3 to New Westminster Construction & Engineering Co., at an average cost of \$640,000 each. A deposit of 15% was made with bankers in New York, and a further deposit was to have been made, but was not, and the builders exercised their right to cease the work. The defence set up was that there was no contractual relation between the parties, and on the hearing of the case against the New Westminster Contracting & Engineering Co., that point of law was argued and held, and the case was dismissed. As the cases against the other defendant companies were precisely similar, they are being dealt with accordingly.

Shipping Rates and Wages.—At the Cunard Steamship Co.'s annual meeting in Liverpool, Eng., recently, Sir Alfred Booth, Chairman, is reported to have stated that he was quite prepared for a slump in freight rates, that the sooner the storm was over the better, and that he hoped it would result in a definite break in the vicious circle of rising wages and rising prices.

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Contracts Placed Without Tenders.—Canadian Railway and Marine World for May contained a full report of the Minister of Marine's speech, in the House of Commons, on Mar. 23, on the government's shipbuilding programme. When the debate was continued on Mar. 30, the Minister replied to Hon. Mr. Mackenzie King's contention that public tenders should have been asked for building the ships, and was reported to have said:—"The statute from which he (Mr. King) has quoted makes it plain that the Minister has power to use his best judgment, and the government to purchase by the best means, what it requires."

We are officially advised that what Mr. Ballantyne did say was: "The statute from which he (Mr. King) has quoted makes it plain the Minister has the power to place contracts where an emergency exists, without calling for public tenders. I claim that two emergencies existed: (1) The absolute necessity of having the ships built as speedily as possible, as they were urgently required, and (2) To find employment for both skilled and unskilled labor, and also for the large number of returned soldiers who were coming back to Canada after the signing of the armistice. Therefore, there can be no question about the existence of the emergencies, and that the government was quite justified in placing the contracts in the manner in which it did, and which I assert was in the best public interests."

Keels Laid.—Since Canadian Railway and Marine World for May was issued, we have been advised of the laying of the following keels of steel cargo steamships for Canadian Government Merchant Marine Ltd.

S.s. Canadian Coaster; Marine Department contract 58; builder's yard no. 16; approximately 3,890 d.w. tons; Collingwood Shipbuilding Co., Kingston, Ont.; May 6.

Marine Department contract 59; builder's yard no. 8; approximately 2,800 d. w. tons; Nova Scotia Steel & Coal Co., New Glasgow, N.S.; May 4.

Launchings of steamships.—Since Canadian Railway and Marine World for May was issued, we have been advised of the following launchings of steel cargo steamships for Canadian Government Merchant Marine Ltd.:—

May 7, S.s. Canadian Hunter; Marine Department contract 18; builder's yard no. 460; approximately 5,100 d.w. tons; Davie Shipbuilding & Repairing Co.; Lauzon, Levis, Que.

May 8, S.s. Canadian Runner; Marine Department contract 32; builder's yard no. 43; approximately 4,575 d.w. tons; Port Arthur Shipbuilding Co., Port Arthur, Ont.

Deliveries of steamships.—In addition to the steel cargo steamships mentioned in Canadian Railway and Marine World previously, the following deliveries have been made to Canadian Government Merchant Marine Ltd.

April 28; s.s. Canadian Farmer; Marine Department contract 46; builder's yard no. 65; approximately 3,990 d. w. tons; built by Collingwood Shipbuilding Co., Collingwood, Ont. This ship went to Huron, Pa., and took a cargo of coal to Montreal, where she was loaded with general cargo for Havana, Cuba, and sailed May 19.

May 7. The s.s. Canadian Planter, Marine Department contract 28; builder's yard no. 72; approximately 8,390 d.

w. tons; built by Canadian Vickers Ltd., Montreal, which was delivered to the Marine Department, at Quebec, Dec. 27, 1919, and which remained there all winter, made her trial trip to Montreal recently, and was delivered to Canadian Government Merchant Marine Ltd., for operation May 7. She was loaded at Montreal for South America, with paper, malt, lumber, agricultural machinery, etc., and sailed May 15.

May 7; s.s. Canadian Miner; Marine Department contract 41; builder's yard no. 6; approximately 2,800 d.w. tons; built by Nova Scotia Steel & Coal Co., New Glasgow, N.S. This ship is carrying coal between Sydney, N.S., and Levis, Que.

May 11; s.s. Canadian Beaver; Marine Department contract 31; builder's yard no. 15; approximately 3,990 d.w. tons; built by Collingwood Shipbuilding Co., Kingston, Ont. She sailed for Montreal the same day, where she loaded cargo for Jamaica and Cuba, and sailed May 18.

May 12; s.s. Canadian Sealer; Marine Department contract 40; builder's yard no. 5; approximately 2,800 d. w. tons;

Sinclair, M.P. for Antigonish and Guysborough, N.S., asked the following questions in the House of Commons recently, the answers being given by the Minister of Immigration, Hon. J. A. Calder:

"Who are the shareholders of the corporation known as Canadian Government Merchant Marine?" Answer: "All of the issued capital stock of the Canadian Government Merchant Marine, Ltd., less directors' qualifying shares, are owned by His Majesty the King and held by the Minister of Finance and Receiver General of Canada."

"Did the shareholders invest any of their own money in this venture? If not, who furnished the capital?" Answer: "The total investment in the Canadian Government Merchant Marine is made by the Government."

"Who are the directors?" Answer: "D. B. Hanna, Mr. A. J. Mitchell, Major G. A. Bell, E. R. Wood, Robt. Hobson, Sir Hormidas Laporte, A. P. Barnhall, Thos. Cantley."

"Is there a separate company or corporation for each ship?" Answer: "Yes."

"In what names does the title to the

Steel cargo steamship, Canadian Beaver; approximately 3,990 d.w. tons; built for Canadian Government Merchant Marine Ltd., by Collingwood Shipbuilding Co., Kingston, Ont.

built by Nova Scotia Steel & Coal Co., New Glasgow, N.S. She is carrying coal between Sydney, N.S., and Levis, Que. This ship was delivered to the Marine Department Dec. 20, 1919, but was not transferred to Canadian Government Merchant Marine until May 12.

Officers of Steamships.—The following officers have been appointed by Canadian Government Merchant Marine Ltd. The first column contains the names of the ships, the second those of the captains, and the third those of the chief engineers:—

Canadian	A. St. A. Robertson L.	O. Lamoreux
Farmer	W. Larmour	A. J. Griffiths
Canadian	F. Ferguson	S. Evans
Planter	H. E. Webb	D. Cameron
Canadian		
Seigneur		

Freight Rates.—J. H. Sinclair, M.P. for Antigonish and Guysborough, N.S., asked in the House of Commons recently: "Are the rates of freight charged by Canadian Government Merchant Marine subject to the control in any way of the United States Shipping Board?" The Minister of Marine answered "No."

Inquiries re C. G. M. M. Ltd.—J. H.

ship stand on the registry?" Answer: "Title to each vessel will stand on the registry in the name of the separate ship company, with a mortgage thereon in favor of His Majesty the King."

"Does the Department of Railways and Canals receive a statement at stated periods from the Canadian Government Merchant Marine showing the profits and loss of the business? If so, how often?" Answer: "A statement of the operations of the Canadian Government Merchant Marine, as furnished to the directors at their regular meetings, is supplied both to the Department of Railways and to the Department of Marine."

"Who is responsible to the ratepayers for the conduct of the business carried on by the Canadian Government Merchant Marine?" Answer: "The Government."

"Is a separate account kept for each ship?" Answer: "Accounts are kept showing, separately, the operation of each vessel."

"What rate of insurance is being paid on the hulls of ships belonging to this company?" Answer: "Arrangements for insurance and rates are made by the operating company. Rates of insurance

and from time to time and lowest tenders are accepted.

The s.s. Canadian Recruit, which after being wrecked in the St. Lawrence Gulf, east of the mouth of the Saguenay River, was abandoned to the underwriters, will probably be salvaged, the work having been taken in hand by the Canadian Salvage Association. The wrecking steamer, L. R. Stratton, with a tug and barge, were dispatched to the ship during May, and a new type of salvage gear, imported from England recently, and similar to that used during the war for salvaging sunken vessels, is to be used.

British American Shipbuilding Co., Welland, Ont., as stated in Canadian Railway and Marine World for May, launched the s.s. Canadian Otter; Marine Department contract 44; builder's yard no. 4, approximately 4,575 d.w. tons, in two sections, the aft section on Mar. 25 and the forward section April 13. The so-called contract was accomplished as follows: A theoretical line of cutting was established in a convenient place; in this instance between frame 108 and 109. All plates and angles which came in the way of this line were left unriveted. All plates and angles adjacent to the plates removed were left unriveted, for a distance sufficient to allow of the removal of these plates, but everything was kept well bolted up, to keep the hull in true shape, until it was necessary to undo the loose portion, prior to launching. The ship has a wooden bulkhead, fitted on frame 94, acting as a reserve bunker. This was taken advantage of, and used to float the aft part. After completing the boilers and machinery, and all fittings, the ship will be towed in two parts to Montreal to be put together.

The British American Shipbuilding Co. expects to launch the s.s. Canadian Squatter; Marine Department contract 45; builder's yard no. 5; approximately 4,575 d.w. tons, during June.

Collingwood Shipbuilding Co., Collingwood, Ont., delivered the s.s. Canadian Farmer; Marine Department contract 46; builder's yard no. 65; approximately 3,990 d.w. tons; April 28.

Collingwood Shipbuilding Co., Kingston, Ont., laid the keel for steel cargo

steamship, Canadian Hunter; Marine Department contract 18; builder's yard no. 460; approximately 5,100 d.w. tons; for Canadian Government Merchant Marine Ltd.; May 5.

Halifax Shipyards Ltd., Halifax, N.S., advises us May 11 that it expected to launch the steel cargo steamship Cana-

4,575 d.w. tons, May 8, for Canadian Government Merchant Marine Ltd.

Tidewater Shipbuilders Ltd., Three Rivers, Que., expects to launch two steel cargo steamships, each approximately 5,100 d.w. tons, for Canadian Government Merchant Marine Ltd., as follows:—S.s. Canadian Fisher; Marine Department 15;

Steel cargo steamship Canadian Otter, approximately 4,575 d.w. tons, for Canadian Government Merchant Marine Ltd., being built in two sections by British American Shipbuilding Co., Welland, Ont., for taking through the Welland and St. Lawrence canals.

dian Mariner; Marine Department contract 21; builder's yard no. 1; approximately 8,390 d.w. tons, on June 21.

Midland Shipbuilding Co., Midland, Ont., advised us May 10 that it had not been able to obtain steel to lay the keel of the steel cargo steamship Canadian Racer; Marine Department contract 54; builder's yard no. 10; approximately 3,390 d.w. tons; but that it hoped to lay the keel within three weeks thereafter.

Nova Scotia Steel & Coal Co., New Glasgow, N.S., laid the keel of a steel cargo steamship, Marine Department con-

builder's yard no. 7; in June; s.s. Canadian Forrester; Marine Department 16; builder's yard no. 8; in July.

Noronic Floating Inn, at the Brush St. Dock, Detroit, Mich., was opened for business May 1, for the accommodation of visitors to Detroit who are unable to secure accommodation in hotels, and the service will be continued until further notice. By arrangement with the Northern Navigation Co., the s.s. Noronic is being used for this purpose, until she takes up her ordinary summer schedule.

Launchings of aft and fore sections of steel cargo steamship Canadian Otter, approximately 4,575 d.w. tons, for Canadian Government Merchant Marine Ltd., by British American Shipbuilding Co., Welland, Ont.

steamship Canadian Conster; Marine Department contract 58; builder's yard no. 16; approximately 3,890 d.w. tons; May 6.

Collingwood Shipbuilding Co., Kingston, Ont., delivered the steel cargo steamship Canadian Beaver; Marine Department contract 31; builder's yard no. 15; approximately 3,990 d.w. tons; to the Marine Department; May 11.

Davie Shipbuilding & Repairing Co., Montreal, Lower Que., launched the steel

tract 59; builder's yard no. 8; approximately 2,800 tons; May 4.

Nova Scotia Steel & Coal Co. delivered the steel cargo steamship Canadian Miner; Marine Department contract 41; builder's yard no. 6; approximately 2,800 d.w. tons; to the Marine Department, May 7.

Port Arthur Shipbuilding Co., Port Arthur, Ont., launched the s.s. Canadian Runner; Marine Department contract 32; builder's yard no. 43; approximately

She has 279 rooms, and the prices are as follows: Rates per night, inside rooms, \$2 single, \$3 double; outside rooms, \$3 single, \$4.50 double; rooms with bath \$5 single, \$8 double; running hot and cold water in every room; table d'hôte meals, regular Northern Navigation service, breakfast 7 to 10 a.m. \$1, luncheon 12 to 2 p.m. \$1.25, dinner 6 to 8.30 p.m. \$2. Dancing will be arranged for guests each evening, except Sundays, to 11 p.m., and a concert on Sundays.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out. The figures given in the column headed "Long tons d.w." and which are preceded by an asterisk (*) show the total deadweight capacities as determined after the ships have been completed. The other figures, which are preceded by a dollar sign (\$), show the estimated ultimate total deadweight capacities, subject to modification as they may vary above or below the figures given and as may be ascertained after the ships are completed. Where the total price does not agree with the finally ascertained deadweight tons multiplied by the price per ton, the extra amount is for changes from specifications, additional equipment, accommodation, etc.

Contract	Name	Builder	Yard	Long tons d.w.	Price per ton d.w.	Total price	Type	Classification	Speed knots	Keel laid	Launched	Delivered.

Legislation Respecting Sick and Distressed Mariners.

The following legislation was introduced in the House of Commons May 24, on motion of Hon. N. W. R. Hall:

That it is enacted that the following be added to the Canada Shipping Act, 1894: "Sick and Distressed Mariners."

1. That Part V of the said Act, relating to Sick and Distressed Mariners, be repealed, and in lieu thereof it be enacted,—

That the Minister, with the approval of the Governor in Council, may rent and equip and maintain premises for reception for the care and treatment of sick mariners, and may, with the consent of the person having the control and management of any hospital, designate such hospital to be, during his pleasure, a hospital for the care and treatment of sick mariners, and contract with such persons for the care and treatment of sick mariners, and may discontinue the use of any such hospital for the purposes aforesaid; and that the Minister may make regulations for the government of any such hospital, and prescribe the duties and powers of the medical and other officers and employees of such hospitals, and of the port physicians and of all other officers required to perform any services in carrying out the provisions of this legislation or of any regulation made hereunder; and all hospitals devoted exclusively to the treatment of sick mariners shall be under the exclusive control and management of the Minister; and that any shipwrecked, destitute or otherwise distressed seamen may, by authority from the Minister, be temporarily boarded and lodged and taken care of at any marine or seamen's hospital devoted exclusively to the reception, care and treatment of sick mariners;

(b) That there shall be levied and collected on every ship arriving in any port in Quebec, Nova Scotia, New Brunswick, Prince Edward Island, or British Columbia, hereinafter called "the provinces", a duty of 2c. for every ton which such ship measures, registered tonnage, but in no case shall the duty payable by any ship be less than \$2 in any year; that such duty shall be payable on each ship three times during each calendar year by the master or person in command of such ship, or by some person on his behalf to the collector or other chief customs officer at the port at which such ship is entered, at the time of making such entry, and such entry shall contain on its face the tonnage of such ship, and no entry shall be made and no clearance shall be granted unless such duty is paid;

(c) That no ship otherwise liable to pay the duty shall be exempt from the payment of the said duty by reason of her voyage being one not requiring entry or clearance at the Custom house. If the ship does not require entry, the duty shall be paid immediately on her arrival;

(d) That no ship engaged in the coasting trade of Canada and arriving at any port in any of the said provinces from any other port in the same province, or arriving at any port in the province of Quebec from any port in the province of Ontario, shall be subject to the payment of the duty: provided that no ship arriving at any port in Canada from any place out of Canada, and afterwards continuing her voyage to another port in Canada, shall be exempt from the payment of the duty at the last mentioned port, unless she has paid it at the first men-

tioned or some other port on the same voyage;

(e) That an exempted fishing vessel, the duty shall not be payable on ships employed exclusively in fishing or arriving at a port in the provinces when on a fishing voyage, but the master or person in command of a ship registered in Canada used exclusively in fishing or to be employed on a fishing voyage, may, if he so desires, pay the said duty of 2c. for each registered ton before the said ship makes its first fishing voyage in any year, at the first port at which the ship receives any part of her outfit for the said voyage, and thereafter before each subsequent voyage during the year, but not exceeding three payments in all in any calendar year;

(f) That every collector or other chief officer of the Customs shall account for the sums received by him under these provisions in such manner as the Minister may from time to time direct;

(g) That sick mariners on ships paying duty, shall be received and treated in any hospital for sick mariners as heretofore, and receive the care of a collector or other chief officer of Customs where there is no marine hospital; but no sick mariner taken ill or injured outside of Canada, and arriving in any of the said provinces otherwise than in a ship to which he belongs, shall be entitled to the benefits conferred by these provisions, nor for a period longer than one year without written authority from the Minister, nor shall he be entitled to treatment or care thereunder when suffering from permanent insanity, and no sick mariners belonging to ships exempted from or not paying the duty levied under these provisions shall be entitled to the rights or benefits of sick mariners hereunder;

(h) That all expenditures made under these provisions shall be paid out of such moneys as Parliament may appropriate for the purpose; and be accounted for, with attested vouchers, as the Minister may direct; and an annual report thereof, with a statement of receipts and expenditures, shall be laid before Parliament.

2. That section 207 of the said Act be repealed, and in lieu thereof it be enacted that the Minister may whenever he deems it necessary pay out of any moneys applicable to the relief of distressed seamen and appropriated by the Parliament of Canada for that purpose, such sums as he deems requisite for the temporary relief in such manner as he deems advisable, of shipwrecked, destitute or otherwise distressed seamen not entitled to relief under any of the provisions of the Merchant Shipping Act, 1894; and may also on the production of the bills of the disbursements with the proper vouchers and such other evidence as the Minister requires, pay out of such moneys any reasonable expenses incurred by the Board of Trade of the United Kingdom or by any officers of His Majesty in any British possession other than Canada or in any foreign country, on account of subsistence or transport back to Canada of any seamen or apprentices who have been domiciled in Canada for twelve months and who have been found in distress either on account of shipwreck or otherwise in any place out of Canada; and persons serving in ships registered in Canada shall for this purpose be deemed to be domiciled in Canada while so serving.

A bill based on the resolution was introduced accordingly, and read a first time.

Seamen's Convention at Genoa.

Under the provisions of the Peace Treaty, the League of Nations' International Labor Office has arranged for a conference to be held at Genoa, Italy, opening on June 15, to deal with labor questions affecting seamen. The convention creating a permanent organization for the promotion of the international regulation of labor conditions, provides that meetings of the general conferences of representatives of the members shall be held at least once a year, and that the representatives of each member shall consist of two government delegates, and two others representing respectively the employees and the working people of each of the members.

The following delegates have been appointed for Canada:—Sir George H. Perry, High Commissioner for Canada in England; and G. J. Desbarats, Deputy Minister of Naval Service, Ottawa, representing the government; Thos. Robb, Manager, Shipping Federation of Canada, Montreal, representing Canadian employers; and J. C. Gauthier, of the National Association of Masters, Mates and Pilots and of the International Seamen's Union of America, Montreal, representing Canadian workpeople.

The Labor Department at Ottawa, at the request of the International Labor office, circulated a questionnaire among Canadian vessel owners, submitting a great number of questions to assist the Ottawa Government in considering its attitude. It included the seamen's conference agenda as follows:—

Application to seamen of the convention drafted at Washington in Nov., 1919, limiting the hours of work in all industrial undertakings, including transport by inland waterways, to 8 hours in the day and 48 in the week.

Consequential effects as regards manning, and in the regulations relating to accommodation and health on board ship. Supervision of articles of agreement. Provision of facilities for finding employment for seamen.

Application to seamen, of the convention and recommendations adopted at Washington in Nov., 1919, in regard to unemployment and unemployment insurance.

Application to seamen of the convention adopted at Washington, prohibiting the employment of children under 14 years of age.

Consideration of the possibility of drawing up an international seamen's code.

Navigation Regulations for Lower Detroit River.—The regulations for the navigation of the lower Detroit River, while the Livingstone channel is being widened, and which were published in our May issue, as effective on the opening of navigation, were suspended subsequently, and the previous regulations put in force, temporarily. The new regulations as published in our last issue have been revised, and made effective as from May 15, with the following change: "Upbound vessels leaving Livingstone channel must proceed above gas buoys 83D and 84D, marking the north end of Ballards Reef, before crossing the path of downbound vessels." The former regulation covering this last point provided that upbound vessels leaving Livingstone channel must cross the path of downbound vessels in the vicinity of Ballards reef.

Steamship Communication with Magdalen Islands.

Senator J. McLean, of Souris, P.E.I., moved in the Senate April 30, that a select committee of the Senate be appointed to enquire into the management of the steamship Canadian Sealer, now lying at Souris, P.E.I., laden with fishing and other supplies for the Magdalen Islands, and the reason why such steamship was not dispatched at the opening of navigation to the Magdalen Islands, and that the committee be empowered to send for persons, papers and records and employ a stenographer and such clerical aid as may be necessary, the committee to be composed of Senators Crosby, Murphy, Tanner, Thompson and the mover.

In supporting the motion he said:—In asking for this committee I may say that the people of the Magdalen Islands have been very badly used. The steamship they have needed so sorely all winter was not dispatched this spring as early as navigation would allow her to go. It seems ridiculous that one of the government steamships should leave England and get up to Montreal a week or so before this steamship was fitted out for that place, while the people were waiting ever since last autumn for goods that they should have had before the session opened. I had a telegram from my son on April 28 stating that the steamship was expected the next day, but I learned that the captain had arrived in Charlottetown, looking for a crew, and up to the present I have had no report that the crew has arrived or that the steamship has gone forward. I notified the Marine Department on Mar. 29 that the Gulf was then clear as far as the Magdalen Islands, and was told the steamship would be fitted out at once. When I got the telegram on April 21 asking that she be dispatched through to the Magdalen Islands I called up the Marine Department and was referred to the Railway Department, which in turn sent me to the Trade and Commerce Department, and the latter had no information, and referred me back to the Marine Department. I understand the trouble to be that the steamship they had on hand, the Lady Evelyn, was not able to make the two trips a week. On this matter we will have more information when Senator Tanner of Pictou gets his information as to the nature of the contract. For the last 30 or 40 years the government has been paying a large subsidy for carrying mails and passengers and freight from Pictou and Souris to the Magdalen Islands, and the only service that was satisfactory was that given by the Lady Sybil, which was built by the Magdalen Islands Steamship Co., especially for that route. She is capable of making 12 or 13 knots, and can make two round trips a week; but the Lady Evelyn, a smaller steamship, could not make a trip twice a week, except in June and July, when there was not a large amount of freight offering; in the spring and autumn, when there was a large amount of freight, she was not able to keep the freight clear.

My object in having this committee appointed is to find who are responsible for the neglect, delay, and hardship imposed upon the people of the Magdalen Islands, and put it before the proper department. As the government is building steamships now, I believe the time has arrived when it should build one of the capacity of the Lady Sybil, which would take the round trip twice a week

and clean up the freight, because it must have been a great expense, either to the contractor or to the government, last autumn, to send the car ferry down to Pictou and take out this new steamship of 2,500 tons that was lying there, send her over to Souris, have her unsuccessfully attempt to go down; then replace her with the Montcalm; take part of the goods out of the Canadian Sealer; and then spend six weeks getting down to the Magdalen Islands; whereas if her contractor had a steamship suitable for the purpose there would have been no trouble whatever; the freight would have all been cleaned up, and the people would have had their freight last autumn. I believe if the Government built a steamship a little larger than the Lady Sybil, with proper speed, and put her on that route, it would save the ship subsidies that are now being paid to the contractors, and take the mails, and passengers and freight, down there. There would be a further saving to the government if that steamship was put in connection with the railway that carries the goods that are taken down to the Magdalen Islands. Those people do not raise any goods for export, and all the freight that goes down there in the shape of supplies, flour and goods of that kind, would come over the Canadian railways. If the steamship was taken over, the railways would have control of that, which I think would be of great service. For these reasons I ask that this committee be appointed with power to investigate matters.

The resolution was adopted.

Vancouver Harbor Officials' Salaries. An Ottawa press dispatch of May 21 says an order in council has been passed, fixing annual salaries to be paid the Vancouver Harbor Commissioners officials, as follows:—Secretary, \$4,500; Chief Engineer, \$4,500; Assistant Chief Engineer, \$3,000; Harbormaster, \$3,600; Port Warden, \$3,600; Chief Accountant, \$3,000; Assistant Accountant, \$3,400; Port Superintendent, \$2,400.

The s.s. M. Moran, owned by the British War Office, has been transferred from Canadian to the British register. She was built at Camden, N.J., in 1912, and is screw driven by engine of 54 h.p., her dimensions being,—length 109 ft., breadth 25.7 ft., depth 14.5 ft.; tonnage 315 gross, 111 net.

Pictou, N.S. Harbor Control Transfer.

The Minister of Marine in introducing a bill in the House of Commons, May 10, to repeal the acts relating to Pictou harbor, to provide for the transfer to the government of the property, rights and assets held by the harbor commissioners, and to provide that the government assume and discharge all the commissioners' obligations and liabilities, said:—"The reason for the transfer is that the revenue of Pictou harbor is less than the expenditures in connection with it. The revenue for the seven years from 1913 to 1919, inclusive, was \$3,388, and the expenditure \$3,840. While the harbor is under a commission, no moneys can be spent to repair the wharves there unless the revenue permits of that being done; and according to the figures I have given the expenditure during the period referred to has been greater than the revenue. The commission is unable to make the necessary repairs to the wharf as matters stand, and therefore it is proposed that the harbor shall be transferred from the Marine Department to the Public Works Department."

Trawler Sales.—The Anderson Co. of Canada has sold the Admiralty trawlers 42 and 43, to the Pecheries at Armentis de la Rochelle Ocean of Havre, France, which also bought no. 41, as mentioned in a previous issue. Mexican interests have been negotiating for the purchase of three of these ships, but on account of the political troubles in Mexico, the deal is suspended temporarily. Other negotiations are reported to be in progress, on behalf of the British Government, and it is said that an option has been secured on 40. It is also stated that some sales are expected to French parties in the near future.

Sorel Shipyard Superintendency.—Referring to the Civil Service Commission's notice that applications would be received for appointment to this position, as per particulars published in Canadian Railway and Marine World, we were advised by the commission, on May 11, that the Marine Department had requested that no appointment be made to the position, and that therefore the question of an appointment would be held in abeyance for some time. We are advised by the Marine Department that Louis Lacouture is acting officer in charge.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during April, 1920:

Canadian canal opened Apr. 23, U.S. canal opened Apr. 19.

The Pilotage Situation in British Columbia.

Canadian Railway and Marine World for May mentioned a press report stating that a message had been received in Vancouver early in April from the Deputy Minister of Marine, to the effect that when B.C. pilots accepted the Government's terms regarding wages and working conditions, open pilotage would become effective on the B.C. coast on May 6. Just after our May issue had gone to press, the Marine Department supplied us with the following memorandum as regards the matter:

"From and after May 6 next, the compulsory payment of pilotage dues, in what was heretofore the British Columbia Pilotage District, will be discontinued. This district comprised the whole of B.C., with the exception of the Fraser River, and hereafter all vessel owners and agents will require to make their own arrangements for such pilotage services as they may require in these waters. The adoption of this policy is the outcome of attempts made by the Marine Department to make effective the main recommendations submitted by the royal commission that enquired into pilotage matters in B.C. during 1918. For a great many years, representations were forthcoming from B.C. interests that the pilotage service as then conducted was not satisfactory nor calculated to advance the trade of Canadian Pacific ports. These representations, so persisted in, resulted in the appointment of the royal commission alluded to. The chief of the recommendations submitted by the commission was that the Minister of Marine should supersede the various local pilotage authorities, and become the pilotage authority in B.C. waters, with all pilots operating directly under him, at salaries to be determined by him. The recommendation of the royal commission was that this salary should be \$250 a month. By order in council of Sept. 10, 1919, it was resolved to put this recommendation in effect, and accordingly the several local pilotage authorities were abolished, and one pilotage district, embracing all the coast waters of B.C., under the authority of the Minister of Marine was constituted to be effective as from Jan. 1, 1920.

"A General Superintendent of Pilots was appointed by the Minister, with extensive and intimate knowledge of B.C. ports and their requirements. Under his supervision bylaws for the administration of pilotage in the new district were prepared, and approved by the government. These bylaws provided inter alia that pilots might receive a salary up to the maximum of \$325 a month, provided the business to the several ports would yield enough revenue to enable such payments to be made, in addition to defraying other necessary and legitimate expenses. Based on the annual reports submitted to the department by local pilotage authorities, the remuneration recommended by the General Superintendent and approved by the government was in excess of any remuneration previously received by pilots. From the outset of the negotiations, the pilots insisted upon a higher rate of pay which they plainly intimated should not be under \$350 a month, in addition to expenses incurred in carrying on their work. The department declined to accept a proposal of this kind and after some further negotiations on the spot, between the pilots and the Superintendent, it was agreed that the department's proposals should

have a three months trial, each side to have the privilege of terminating the agreement at the expiration of this period, upon giving one month notice. During the three months after January, it was found that the revenue was sufficient to pay the pilots a salary of \$325 a month, and in addition \$4.50 a day for living allowance while on duty, together with all costs for transportation. The department also agreed to acquire the launches owned by the pilots, at a fair valuation, and to provide employment on shore for two pilots who were over 70 years of age, at a salary of \$100 a month, notwithstanding a recommendation to the contrary by the royal commission.

"Towards the end of the three months period, the pilots renewed their demand for a salary of \$350 a month, together with excessive requests for expenses and also a request to provide a salary of \$150 a month for the two retired pilots alluded to above. For obvious reasons the department was not disposed to accede to the pilots' requests, with the result that, on Mar. 19, the latter telegraphed to say that at a general meeting it was resolved they would not accept the department's proposals or submit to the pilotage bylaws as approved. This telegram was interpreted by the department as a notice to terminate the agreement then in force, and the pilots were so advised. The acting Superintendent of Pilots at Victoria was further instructed by telegram, on April 3, to advise the pilots that their attitude, if persisted in, would leave no alternative to the department but a termination of the agreement. The department emphasized that the period of uncertainty had already continued too long and unless the pilots signified their intention of accepting its proposals, notice of termination of agreement should date from the day on which they would be so advised. The acting superintendent was also informed that if the pilots declined to come under the pilotage authority, shipping interests would be notified that at the expiration of one month the compulsory payment of pilotage would cease, thus leaving both parties free to make their own arrangements respecting pilotage. It was felt that this position would prove more acceptable to the pilots, as they might have some reasons to assume that they could make more satisfactory arrangements with the shipping interests.

"The Minister of Marine has, throughout all the negotiations, endeavored to give most reasonable consideration to the representations submitted by the pilots directly and by the Canadian Merchant Service Guild on their behalf. Inasmuch, however, as B.C. ports, more especially Vancouver, Victoria and Prince Rupert, are great national ports, and destined early to become even greater, it is felt that the public interests will benefit by the adoption of a policy which is more in harmony with that which obtains at competing United States ports on the Pacific, while not jeopardizing any local interest or the individual interests of the pilots."

As stated in Canadian Railway and Marine World for May, Commander B. L. Johnston, D.S.O., who was appointed Superintendent of the British Columbia Pilotage District, at Victoria, from Jan. 1, resigned in April, and Chas. Eddie, Supervising Examiner of Masters and Mates, Western Division, Vancouver, was ap-

pointed to act in his place. The latter's duty as acting Superintendent ceased on May 5, when the B.C. Pilotage District and the compulsory payment of pilotage dues therein came to an end.

The order for the abolition of compulsory pilotage in B.C. waters became effective May 6, and the B.C. Pilotage Association, embracing all pilots serving formerly under the pilotage board notified all shipping companies that the services of its members would continue to be available for the navigation of ships between the William Head quarantine station and Victoria and Vancouver, as well as to and from Island and northern B.C. ports. The association has prepared a scale of rate, which is said to be very little different from the government scale, and this has been submitted to the shipping companies. The association's headquarters are at Vancouver, with a sub office at Victoria. The old pilotage office, at Dallas Road, Victoria, is being maintained by the association, which operates a launch out of William Head for the use of pilots boarding vessels.

Quebec Steamship Company's Sale.

The Quebec Steamship Co., which was controlled and operated by Canada Steamship Lines, Ltd., has been sold to Furness, Withy & Co., which is closely allied with Canada Steamship Lines Ltd. The Quebec Steamship Co. came under the control of Canada Steamship Lines, Ltd., on the formation of the latter company in 1913, by the acquirement of at least 80% of its shares. At that time it operated a steamship service from Quebec to ports on the Lower St. Lawrence and to New York, and from New York to West Indies ports, but of late, the service has been confined to the New York-West Indies route.

The company owned the steamships Guiana, Korona and Parima, which are included in the transfer. The s.s. Guiana was built at Sunderland, Eng., in 1907, and is screw driven by engine of 445 h.p., and has the following dimensions,—length 345 ft., breadth 44.2 ft., depth of hold 24.9 ft.; tonnage, 3,657 gross, 2,294 net. The s.s. Korona, formerly Monmouthshire, was built at Govan, Scotland, in 1886, and is screw driven, by engine of 600 h.p., her dimensions being, length 344 ft., breadth 44.2 ft., depth of hold 26.5 ft.; tonnage, 2,874 gross, 1,871 net. The s.s. Parima, formerly Bungearee, was built at Newcastle upon Tyne, Eng., in 1889, and is screw driven by engine of 450 h.p., and has the following dimensions,—length 335 ft., breadth 42.1 ft., depth of hold 24 ft.; tonnage, 2,990 gross, 1,875 net.

Hydrographic Charts.—The Naval Service Department's Hydrographic Survey has published the following charts, no. 405 Hudson Bay and Hudson Strait, corrected to Oct., 1919; no. 211 St. Lawrence River from Father Point to Pointe aux Orignaux; and no. 209 Saguenay River, St. Fulgence to Shipshaw, corrected to Apr., 1920. Copies may be obtained from the department at 15c each.

Victoria, B.C., Harbor Improvements. The further supplementary estimates for the year ended Mar. 31, 1920, submitted to the House of Commons recently, contained an item: "Victoria harbor improvements. Further amount required, \$24,600."

General Shipbuilding Matters Throughout Canada.

B.C. Marine Ltd., Vancouver, is reported to have been awarded a contract by the Hudson's Bay Co. for an auxiliary powered schooner for carrying supplies to its trading posts in the Arctic circle. The ship is, it is said, to be strongly built, to withstand the severe northern weather and ice, and delivery is to be made about October.

Canadian Vickers, Ltd., Montreal. — The s.s. *Tatjana*, the launching of which at this yard was mentioned in our last issue, is the third steamship built by this company for Norwegian interests, and is owned by Winge & Co., Christiania, Norway. She was built under the supervision of Norwegian Veritas, and was expected to be fully completed and ready for her cargo by the end of May. She is fitted with triple expansion engines, and 3 Scotch boilers, adapted for either coal or oil fuel, and the boilers are fitted with Howden's forced draft system. The double bottom tanks, and a deep tank amidships, will carry about 1,500 tons of fuel oil. The cargo handling equipment is thoroughly up to date, the cargo winches

representative, Apr. 23, and sailed from Vancouver, Apr. 24, for Tacoma, Wash., to load grain for Alexandria, Egypt.

The company has under construction for subsidiary companies, 2 steel cargo steamships of approximately 8,800 d. w. tons each, similar to the s.s. *Braheholm*. The keel of the first was laid March 4, and on her launch she will be named *Margaret Coughlan*.

Harbour Marine Co., Victoria, B.C.—At a meeting of the company's employees at the end of April, a resolution was passed that the Harbour Marine Veterans Association make a strong appeal to the Dominion Government for further contracts for the company, the granting of which would relieve the unemployment situation among returned soldiers. It was stated that the work carried on at the yard had very materially assisted the work of re-establishment, as many of the men originally taken on as unskilled labor, after demobilization, have developed into skilled workmen. As the work on the two steamships now under construction, Marine Department's con-

April. This is the second ship of this type to be launched by the company, the keel having been laid in January. Her dimensions are,—length overall 100 ft., breadth 18½ ft., depth of hold 9½ ft., draft 6 ft. 10 in. She carries 2,000 gal. of oil in her tanks and has fresh water tanks with capacity of 11 tons. The propelling machinery consists of a 150 h.p. Fairbanks-Morse type C.O. oil engine using about 1/12 of a gallon of fuel oil per h.p. hour with the engine under full load. The auxiliary machinery is operated by a Fairbanks-Morse 6 h.p. type Z engine, driving a line shaft mounted on SKF ball bearings. The hoisting equipment is operated by a Fairbanks-Morse 10 h.p. type Y semi Diesel engine. The speed of the ship is approximately 9½ knots an hour.

Polson Iron Works, Ltd., Toronto.—This shipbuilding plant, which was offered for sale by tender by the liquidator recently, under order from the Exchequer Court, is being offered for sale by private treaty, no tenders having been received.

Shelburne Shipbuilders, Ltd., Shelburne, N.S., launched the three masted schooner, *Nellie T. Walters*, May 3, for the trans-Atlantic fish carrying trade. She is owned by T. Walters, Garnish, Nfld., and is of 175 tons registered, and classed for 11 years in Bureau Veritas. The company has another schooner of 190 tons registered, under construction for Newfoundland parties.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C.—The keel of the first of the four wooden barquentines of 2,400 tons capacity each, which are being built under aid by the Dominion Government, in order to relieve unemployment in British Columbia, was laid at the Cholberg shipyard, Victoria, May 1. These ships will be built to Lloyd's specifications, and under the supervision of a marine architect appointed by the Dominion Government. Full details of the agreement under which the ships are being built were published in Canadian Railway and Marine World for May, page 276. The company's directors are:—J. W. Spencer, President and Chairman; C. Hoard, Vice President; J. O. Cameron, Capt. H. C. Hansen, W. Meed, Capt. M. D. Harbord, and F. B. Pemberton. Edwin Tomlin is Secretary-Treasurer.

G. E. Wagstaff, Port Greville, N.S., launched the tern schooner *Burpee L. Tucker* recently. She is 465 tons register, and equipped with auxiliary engine for hoisting sails and anchors. She was chartered to load plaster at Walton, N.S., for New York and is in charge of Capt. S. T. Salter, Farrisboro, N.S.

Wallace Shipyards, Ltd., North Vancouver, B.C., has been given a contract for repairs to the Grand Trunk Pacific Coast Steamship Co.'s s.s. *Prince John*, which was damaged in collision with the same company's s.s. *Prince Albert*, near Dead Tree Point, recently. The contract price is stated to be \$49,000. In addition to the repairs necessary, it is stated that the passenger accommodation will be increased.

Yarrows, Ltd., Victoria, B.C., has been given a contract for repairs to the Grand Trunk Pacific Coast Steamship Co.'s s.s. *Prince Albert*, which was damaged in collision with the same company's s.s. *Prince John*, near Dead Tree Point, recently.

Steel cargo steamship *Braheholm*, approximately 8,800 d.w. tons, built for Swedish-American-Mexican Line, Gothenburg, Sweden, by J. Coughlan & Sons, Ltd., Vancouver, B.C.

and windlass being of Clarke-Chapman design, the steering gear of Bow-McLachlan (Mcintosh patent) direct acting type, all manufactured by Canadian Vickers, Ltd. The steering from the navigating bridge is by means of a MacTaggart & Scott telemotor, and it is also controlled mechanically from the poop deck, where there is also a hand steering arrangement, and a complete equipment of mechanical engine room and steering telegraphs. Her dimensions are,—length over all 413 ft., beam 52 ft., depth 31 ft. 0½ in., and her draft when loaded with 8,300 tons cargo will be 25 1/3 ft. A sister steamship was launched May for A. Monsen, Toensberg, Norway, and this will be followed later in the year by two similar steamships, but of 6,400 tons, for the Norwegian-America Line.

J. Coughlan & Sons, Ltd., Vancouver, B.C.—The s.s. *Braheholm*, the launching of which for the Swedish American Mexican Line, Gothenburg, Sweden, was mentioned in our last issue, underwent her trial trip Apr. 22, and maintained a mean speed of 12.6 knots an hour, six times over the measured mile, her highest run being 13.5 knots an hour. She was delivered to J. A. Sturrock, the owners'

tracts 29 and 30, Canadian Winner and Canadian Traveller respectively, each approximately 8,390 d.w. tons, is proceeding, men are being laid off, thus increasing the labor difficulties.

The C.P.R. is reported to have ordered a steel car ferry from this company for service between the mainland and Vancouver Island. It is stated that the price is approximately \$200,000 and that it is to be delivered during October. It will have capacity for 18 cars and will be of the following dimensions,—length 270 ft., breadth 48 ft., depth 12 ft.

Leclaire Shipbuilding Co., Sorel, Que. P. L. Turgeon, 55 St. Francois Xavier St., Montreal, curator in the insolvency of this company, offered for sale by public auction, May 10, the company's movable assets, including the following,—bills receivable \$5,000, a steam barge with scow named *Richelieu*, a compound marine engine, a tug hull, 2 motor cars, certain lumber rights, shares and sundries and the balance of purchase price, \$5,500, due by virtue of a deed of sale.

Pacific Construction Co., Coquitlam, B.C., launched the motorship *Kiltsu* for the Western Packers Association during

Atlantic and Pacific Ocean.

The *Canada Transportation Co.* is operating a steamship schedule out of New York, as mentioned in our issue of March 24, 1919. It is now called *Canada* and is owned by the *Canada* Steamship Co.

The *Canadian Pacific Ocean Services' s.s. Empress of Britain*, St. John, Nfld. arrived at Glasgow, Scotland, May 3, 1920, having spent the winter in the *St. John* dock.

The *St. Lawrence* navigation season is now under way. The arrival at Montreal of Canadian Government Merchant Marine's s.s. *Canadian Aviator*, from Glasgow, Scotland.

A *London* dispatch dated May 1, 1920, states that the *Anglo-American* firm is likely to undertake the raising of the *Irish* coast, which was torpedoed by the Germans during the war, off the Irish coast.

The first passenger steamships of the *St. Lawrence* navigation season to arrive at Quebec were the *Anchor-Donaldson* Line s.s. *Saturnia* and the *Canadian Pacific Ocean Services' s.s. Victorian*, on May 3, in the order named and within an hour of each other.

The *Ulster Steamship Co. (Head Line)* announce that it will commence a direct steamship service between Montreal and Rotterdam, June 5, with the s.s. *Dunaff Head*, 8,000 d.w. tons capacity. Other steamships of the same class will be put in the service if trade warrants it.

Canadian Pacific Ocean Services' s.s. Empress of Britain is being equipped with fuel oil burning apparatus and is being generally overhauled and refitted for service on the *St. Lawrence* route. She did considerable war work, and carried a number of troops to and from Mediterranean ports, especially to Gallipoli.

The *Red Star Line's* steamship service between Montreal and Antwerp, Belgium, was commenced May 22, when the s.s. *Western Star* sailed from Montreal, after having been overhauled by *Canadian Vickers Ltd.* It is intended to make three sailings each month; the other steamships which will be used, being, *Western Ally*, *Aledo*, *Westpool* and *Henry Clay*.

Maritime Provinces and Newfoundland.

T. M. Kirkwood, Montreal, is reported to have bought 10 wooden drifters, built in Canada for war purposes, and anchored in Halifax harbor since the signing of the armistice.

The *Reid Newfoundland Co.* was reported to be negotiating in Great Britain recently, through its Vice President, R. G. Reid, for two steamships, to replace the two wrecked steamships, *Dundee* and *Ethie*, for its coastal service.

Canada Steamship Lines Ltd., is reported to be considering the establishment of a steamship service between Montreal, Charlottetown, P.E.I., Sydney, N.S., and St. John's, Nfld. Prior to the war a freight and passenger service over this route was operated by the *Black Diamond Steamship Co.'s* steamships, *City of Sydney* and *Morwenna*.

The *Montreal Transportation Co.'s* s.s. *Atikokan*, which was laid up at Sorel, Que., for the winter, was expected at Sydney, N.S., during May, to enter the ore and coal trade. She was built at West Superior, Wis. in 1895, and named

after J. C. Fraser, and is of the *Atikokan* type. She was in the *Great Lakes* trade for a number of years, and was taken to Quebec last year, having been cut in two to pass through the canal. She is a screw driven by engine of 145 h.p. and has the following dimensions,—length 362 ft., breadth 38.8 ft., depth 18 ft.; tonnage 2,004 gross, 1,292 net.

The report of the port of St. John, N. B., for the year ended Mar. 31 shows that 412 steamships, and 191 sailing ships, with a total tonnage of 1,167,801 entered from sea, and 483 steamships and 178 sailing ships with a total tonnage of 1,037,876 cleared outward. The tonnage increases over the previous year are 241,604 in arrivals, and 266,614 outward. During the winter, between Nov. 1, 1919, and May 1, 1920, 12,004,157 bush. of grain passed through the C.P.R. elevators at St. John, compared with 17,863,766 bush. for the same period in the previous year. The *Canadian National Ry's* elevator at St. John handled 3,241,289 bush. of grain, against 1,378,654 bush. during the same period in the previous year.

The *Dominion Coal Co.*, operating the *Black Diamond Steamship Line*, is reported to have bought the s.s. *Daghill* from the British Ministry of Shipping. She was built at Sunderland, Eng., in 1916, and is screw driven by engine of 570 h.p. Her dimensions are,—length 455 ft., breadth 58.1 ft., depth 33.2 ft.; tonnage, 8,000 gross, 4,862 net. She was owned formerly by *Jenkins Bros.*, Cardiff, Wales, and, prior to the war, was chartered to the *Dominion Coal Co.*, but was requisitioned by the Ministry of Shipping for war purposes. The *Dominion Coal Co.'s* charters, unexpired at the commencement of the war, still hold good, and the balance of the charter terms will, it is said, be carried out by the steamships, *Rose Castle*, *Kamouraska*, *Lord Strathcona*, *Wabana*, *Lingan* and *Hochelaga*. The first named ship is expected to arrive at Sydney, N.S., during June, the others following at intervals.

Province of Quebec.

The *Quebec Harbor Commission* as re-constituted by order in council of Apr. 21, consists of Major General Sir David Watson, K.C.B., C.M.G., Chairman; Alfred Samuel Gravel, and Birgardier General T. A. Tremblay, D.S.O.

The *Gulf of St. Lawrence Trading & Shipping Co.* has been placed under the management of T. Harling & Co., Montreal, and it is stated that the service will be considerably improved between Quebec and lower gulf ports. It is also stated that a number of ships will be added to the fleet, either this year or next.

The s.s. *Alberta*, owned formerly by *La Cie Generale d'Enterprises Publiques* Ltee, Levis, has been dismantled and removed from the register. She was built at Sorel in 1905, and was screw driven by engine of 42 h.p., and had the following dimensions,—length 96.4 ft., breadth 17.7 ft., depth 6.9 ft.; tonnage, 125 gross, 62 net.

The s.s. *General Morrison*, one of a number of steel steamships built by the *Dominion Shipbuilding Co.*, Toronto, during 1912, on yard account, most of which have been sold to Norwegian owners, has also been sold to Norwegian interests, and transferred from the Canadian register. Her dimensions are,—length over all 261 ft., length between perpendiculars 251 ft., breadth 43½ ft., depth 24½ ft.; tonnage, 2,490 gross, 1,512 net.

Ontario and the Great Lakes.

The Governor of New York State has signed a bill appropriating \$1,850,000, to complete the *large canal* between Buffalo, Rochester, and New York City.

It is proposed to form a *Trent Valley Canal Waterways Association*, amongst municipalities along the *Trent canal*, with the object of promoting tourist traffic to and from various points of interest along the route.

The *Dominion Public Works Department* has awarded a contract for the building of a sea wall at Toronto Island to *Randolph McDonald Co.*, Toronto. The plant and material are being assembled on the site and work was expected to commence at the end of May.

It was reported May 13 from St. Catharines that work on the *Welland ship canal* had been resumed on a small scale, some dredging on section 5 having been started. It was also stated that the *Dominion Dredging Co.* was assembling its material for work on section no. 1 in the harbor at Port Weller.

The *Pittsburg Steamship Co.* is reported to have made arrangements for the construction of a dock with cargo handling machinery at Sault Ste. Marie, Mich. The dock will have a frontage of 748 ft. and will cost approximately \$100,000. The contract has been awarded to the *Great Lakes Dredge & Dock Co.*

The steamships *Bickerdike*, *Cadillac*, *Fairfax*, *Haddington*, *Ionie*, *Maplehill*, *Murray Bay*, *Omaha*, *St. Irene*, *Taylor* and *Wyoming*, owned by *Canada Steamship Lines*, have had their names changed to *Maplebrook*, *Maplehurst*, *Maplegrave*, *Maplehill*, *Maplebranch*, *Maplegrange*, *Cape Diamond*, *Maplegreen*, *Cape St. Francis*, *Mapleheath* and *Mapleglen* respectively.

The *U.S. Lake Survey* reports the stages of the *Great Lakes* in feet above mean sea level for April, as follows:—Superior, 602.26; Michigan and Huron, 580.54; St. Clair, 574.80; Erie, 571.64; and Ontario, 245.55. Compared with the average April stages for the past 10 years, Superior was 0.62 ft. above; Michigan and Huron, 0.26 ft. above; Erie, 0.76 ft. below, and Ontario, 0.81 ft. below.

After a visit of *Public Works Department* engineers to Port Stanley, at the end of April, it was stated that the work of improving the harbor there would be undertaken immediately, this year's work to consist of dredging the turning basin, channel and outer harbor, the removal of the most dangerous portion of the submerged east pier, and the continuation of work on the west pier, which was stopped at the commencement of the war.

G. Sudds, as owner of the schooner *Robert McDonald*, which sank at the foot of Brock St., Kingston, last autumn, was summoned to the police court there, May 6, for refusing to comply with an order to remove the wreck. He pleaded that, having no funds, he would have to abandon the ship, and allow the city to remove the wreckage, but it was explained that although he was willing to abandon the wreck, that did not relieve him of the responsibility of clearing it up.

The s.s. A. E. Ames, owned formerly by *Merchants Mutual Lines Ltd.*, and operated by *Canada Steamship Lines Ltd.*, has been sold to U.S. parties, and transferred to U.S. register. She was built at Wallsend-on-Tyne, Eng., in 1903, her dimensions being, length 246 ft., breadth 37 ft., depth 24 ft.; tonnage, 1,637

gross, 1,020 net. She is equipped with triple expansion engine with cylinders 20½, 33 and 59 in. diam. by 36 in. stroke, and supplied with steam by two Scotch boilers, each 13½ ft. diam., by 10½ ft. long, at 180 lb.

The s.s. Lakeside, bought recently by John E. Russell, contractor, Toronto, from M. J. Hogan, contractor, Port Colborne, Ont., has had her name changed to Joseph L. Russell. She was built at Windsor, Ont., in 1888 and has an oak hull with the following dimensions,—length b.p. 121 ft., breadth moulded 26 ft., depth moulded 9¼ ft. She is equipped with a fore and aft compound engine, having cylinders 19 and 32 in. diam. by 26 in. stroke, 240 i.h.p., at 100 r.p.m., and supplied with steam by a single fire box boiler 8½ ft. diam. by 14 ft. long at 114 lb.

The s.s. North West, owned by C. A. Barnard, Montreal, was seized May 11, while at the Davie Shipbuilding & Repairing Co.'s yard at Levis, on account of Buffalo parties, for an amount of \$76,997.62 which is stated to be on account of a mortgage held in Buffalo. It is stated that the Davie Shipbuilding & Repairing Co. have a claim against the ship for \$600,000. The ship, which came from Buffalo, N.Y., was cut in two, to pass through the canals, and is still in the same position. The name of the ship is stated to have been changed to Maple-court and to have been transferred to the Canadian register.

The s.s. Wyoming, owned by Canada Steamship Lines, Ltd., and which was bought recently from the Wyoming Steamship Co., Buffalo, N.Y., has been transferred to the Canadian register under the name of Maplelegn. She was built at Buffalo, N.Y., in 1887, and has an oak hull with the following dimensions,—length b.p. 241 ft., breadth moulded 40 ft., depth moulded 24 ft. She is of the spar deck type, with steel boiler house, diagonal strapping on frames, steam pump wells, etc. She is equipped with fore and aft compound engine, with cylinders 24½ and 50 in. diam. by 52 in. stroke, 600 i.h.p. 79 r.p.m., supplied with steam by two fire box boilers, each 13½ ft. long by 10 ft. 8 in. diam. at 110 lb.

The Montreal Transportation Co. has bought the s.s. Pawnee, owned formerly by H. McMorran, Mich., and has transferred her to the Canadian register, under the name of Maplefig. She was built in 1889 and underwent large repairs in 1910. Her hull is of oak and she is of the well deck type, with steel arches, iron lined boiler house, and with bow sheath for operation in ice. Her dimensions are,—length b.p. 174 ft., breadth moulded 32 ft., depth moulded 13 ft.; tonnage 639 gross, 475 net. She is equipped with a Steeple compound engine, with cylinders 22 and 44 in. diam. by 40 in. stroke, 390 i.h.p., at 80 r.p.m., supplied with steam by a single firebox boiler 10 ft. 2 in. diam. by 16 ft. long at 120 lb.

The s.s. C. W. Chamberlain was damaged by fire at Cornwall, Ont., April 30, while undergoing extensive repairs. She is stated to be owned by the Martin Transportation Co., Kingston, Ont. She has an oak hull and was built at Walkerville, Ont., in 1881, and named C. N. Pratt, was rebuilt in 1890, and her name changed to C. W. Chamberlain. Her dimensions are,—length b.p. 127 ft., breadth moulded 26½ ft., depth moulded 9 ft. 7 in.; tonnage, 385 gross, 243 net. She is equipped with fore and aft compound engines, having cylinders 18 and 32 in. diam. by 26 in. stroke, 280 i.h.p., at 100 r.p.m., by Cuyahoga Furnace Co.,

Cleveland, Ohio, and supplied with steam by a Scotch boiler 10 ft. diam. by 11 ft. long, at a working pressure of 100 lb., by J. Inglis & Co., Toronto. Until recently she was owned by James Swift & Co., Kingston, Ont., who bought her about two years ago from Midland Transportation Co., Midland, Ont.

Manitoba, Saskatchewan and Alberta.

A party of about 30 men were reported leaving Victoria and Vancouver early in May for Fort Smith, Alta., to build a number of wooden river boats for the Edmonton, Dunvegan and British Columbia Ry. for operation on the Peace River in connection with the railway.

British Columbia and Pacific Coast.

A Victoria press report states that the H.M.C.S. Rainbow will be offered for sale by tender, prior to which her guns will be removed.

Reports from Yukon, about the middle of May, stated that the ice was rapidly breaking up on the Yukon River south of Dawson, and that steamboats were preparing to sail for the south for supplies for Dawson and lower river points.

A steamship service will be inaugurated early in July between Victoria, B.C., and Havre and Calais, France, via the Panama canal. The s.s. Pacific, 6,500 tons, will take the first sailing, and it is expected that grain will form the chief part of the cargo.

The C.P.R. is reported to be contemplating additional passenger accommodation to the s.s. Princess Royal. This, it is stated, will be placed in a new deck house, situated on the after boat deck, and will consist of 10 rooms for 10 passengers, thus giving a total accommodation for 164 state room passengers.

The Atlantic Salvage Co., which is working on the wrecked s.s. Platea, at Sable Island, expects to have the ship in Halifax harbor about the end of May, unless unforeseen difficulties are met with. The s.s. Platea, which was owned formerly by the Thomson Line, St. John, N.B., was sold, about a year ago, to Greek interests, and was wrecked on Sable Island last autumn.

The schooner Lady Mine has been bought by the Lady Mine Shipping & Fishing Co., Vancouver, for operation in the coasting trade from Prince Rupert to Stewart, Anox and Alice Arm. She was built at Port Ludlow, Wash., in 1880, her dimensions being,—length 76 ft., breadth 21.9 ft., depth 8.4 ft.; tonnage, 55 registered. She is equipped with auxiliary power.

C.P.R. British Columbia Coast Service employees are negotiating with the management for changes in their general working conditions. The company has proposed an increase of \$10 a month in wages, on the understanding that the present hours of work are maintained, or in lieu of this a change to an 8-hour day at the present rate of wages. It is also proposed to reclassify the men, whereby there would be two classes instead of three as at present. The whole proposals are said to have been laid before D. C. Coleman, Vice President, Western Lines, C.P.R.

H. G. Kelley, President, Grand Trunk Pacific Ry., replying to a letter from a committee of Prince Rupert men, relative to the operation of the Grand Trunk

Pacific Coast Steamship Co. from Prince Rupert, instead of from Vancouver, has written to the effect that it must be admitted that the original selection of Vancouver as headquarters for the steamship line was justified by conditions at the time of organization. Certain changes have been made, and it is felt that conditions have warranted them, and acting on this the accounting office has been removed to Prince Rupert, and a Superintendent has been appointed there. The work on the company's ships is now all being done at the Prince Rupert ship-building plant. The force remaining at Vancouver is small in respect to the number of employees, and the whole matter of removal is under consideration, and will probably be dealt with when the whole situation as regards the operation of the company is settled.

Harbors and Rivers Estimates.

The further supplementary estimates for the year ended Mar. 31, 1920, submitted to the House of Commons recently, contain the following items, under public works, chargeable to income:—

NOVA SCOTIA.

Avon River bridge at Windsor, to pay Nova Scotia Provincial Government in full final settlement of all claims whatsoever for damage done or that may be done to the bridge by the construction by the Public Works Department in 1897-8 of a shear dam from the bridge abutment on the Falmouth side of the river..... \$7,164.57

QUEBEC.

Port William, wharf repairs and improvements, further amount required \$ 350.00
Verchers, wharf, further amount required 1,504.43

ONTARIO.

Belleville harbor, improvement to wharf and warehouse, further amount required 916.35
Midland, repairs to wharfs, further amount required 1,800.00
Port Hope, repairs "to pier, further amount required 1,800.00

MANITOBA.

Little Pehina river, diversion to Pelican Lake, further amount required \$1,146.37

MISCELLANEOUS.

Surveys and inspection, further amount required \$15,000.00

Mail Subsidies and Steamship Subventions.

The further supplementary estimates for the year ended Mar. 31, 1920, submitted to the House of Commons recently, contain the following items:—

Victoria, Vancouver, way ports, and Skagway, steam service between, further amount required \$12,600.00
Vancouver and ports on Hox, Sound, steam service between 3,334.00
Expenses in connection with supervision of subsidized steamship services, further amount required 500.00

Contracts Let for Marine Public Works.

The Dominion Public Works Department has let the following contracts: General restoration and fitting up of interior, including electric elevator, of marine stone building on King's wharf, Quebec, Que., Apr. 21, L. H. Peters Ltd., Quebec, Que., \$8,205; construction of crib work extension to wharf at Sober Island, N.S., Apr. 22, M. Naugle, West Lawrencetown, N.S., schedule of prices; construction of harbor works, turning basin, ventilation channel, breakwater at Toronto, Roger Miller & Sons, Toronto, on basis of cost plus 7½%; construction of wharf at Stewart, B.C., Apr. 22, W. T. Muse, Prince Rupert, B.C., schedule of prices; repairs to dredge no. 1 (Quinlan & Robertson), May 11, Montreal Dry Dock & Ship Repairing Co., Montreal, \$13,625.

Cutting in Two of Steamship North Land.

The *North Land*, 400 ft. long, 44½ ft. beam, 25 ft. moulded depth, 17 ft. draft, 4,810 tons net tonnage, 2 quadruple expansion engines of 1,000 h.p. each and 16 Scotch marine boilers, built, owned and operated by the Northern Steamship Co. to carry passengers between Chicago and Buffalo, and Duluth and Buffalo, in connection with the Northern Pacific R.R., which it used to have been the only steamship of U.S. registry built to carry passengers and no freight, having a capacity of 500

owner. The sister ship, *North West*, was taken through the same route in 1918, her boilers were taken off and engines and boilers removed, and the ship placed in drydock to be cut in two at a cost of about \$250,000. The cost of cutting the *North Land* in two while afloat and making her ready for the voyage was less than \$60,000. Benj. L. Cowles, President, and David Welch, Superintendent, Cowles Shipyard Co., agreed to do the work on the *North Land*, as heretofore outlined, and guaranteed the passage

Parsons & Eggert, insurance brokers, N.Y. An enquiry to him was replied to by Henry Parsons, Vice President, Paragon Shipping Corporation, New York, who stated that he was taking care of all matters in connection with the *North Land* and that the only information he could give was that, in order that other ships might go through the Coteau Landing lock, the *North Land's* stern section would probably be moved to the bow section's present location, which, as above stated, we understand to be at Sorel, Que.

Since the above was put in type, we were advised, on May 10, that the *North Land's* stern section had been taken to Montreal, pending instructions from the Northern Steamship Co.'s directors, as to whether the ship will be sold as it is, or whether the two sections will be joined together again.

Steamship *North Land*, before being cut in two.

first class passengers, was cut in two parts last autumn at the Cowles shipyard, Buffalo, N.Y., while afloat alongside of its wharf in Buffalo River; wooden bulkheads were placed in the ship about 10 ft. apart and made water tight. The ship was then ballasted with pig iron, so as to float properly after being separated in to two sections, a canvas jacket was placed around the ship on the outside of the hull, and the ship was separated by burning with an acetylene torch. The burning was done

through the canal for not to exceed \$75,000. The work was done in 6 weeks time. She left Buffalo in two sections, the forward section leaving on Nov. 9, 1919, in tow of the Reid Wrecking Co.'s tugs Smith, and Manistique. She passed through the Welland Canal and laid at Port Dalhousie until Nov. 25, when she left there in tow of the Montreal Transportation Co.'s tugs Bronson and Thompson, arriving in Sorel Dec. 6. The after section left Buffalo Nov. 13 in tow of the tugs Smith and

Rebates on Newfoundland Shipbuilding.—A bill to amend the Shipbuilding Act passed the Newfoundland House of Assembly May 6, providing rebates of duty paid on materials used in the construction of ships built in the colony, the keels of which were laid after the passing of the act, and of a greater tonnage than 150, and on ships of greater tonnage than 120, the keels of which were laid after Oct. 19, 1917, and before the passing of the act. It also provides that no bounty, as provided in chap 176 of the statutes, shall be paid on any ship, the keel of which was laid after the passing of the act, whose tonnage on builder's measurement exceeds 150 tons, provided, however, that if the tonnage does exceed 150 tons and does not exceed 160 tons, and it is certified that the builder bona fide attempted to confine the measurement to 150 tons, the bounty may be paid on 150 tons. Considerable opposition was shown to the retroactive clause of the bill.

B. C. Yacht and Boat Builders Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$10,000 authorized capital, and office at Victoria.

Steamship *North Land*, after being cut in two and separated.

in 2 days of 8 hours each, the number of feet burned was 80 below the water line or under water, and in some places, and especially at the keel place at the bottom of the ship, were 3 thicknesses of ¾ in. steel plate. The cutting was begun at the bottom of the ship and proceeded from that to the top of each side. Some experts are said to have declared that this could not be done in water, and the ship made to draw 14 ft. of water to pass through the Canadian canals and St. Lawrence River to Lauzon, Que., where the ship was to be joined together by the Davie Shipbuilding and Repairing Co., which is the new

Manistique, passed through the Welland Canal and left Port Dalhousie on Nov. 28, arriving at Coteau Landing, Que., Dec. 12.

It has been impossible to get any definite information as to when and where the *North Land's* two sections are to be re-joined. It was first reported that the ship had been sold to the Davie Shipbuilding & Repairing Co., and would be re-joined by that company at Lauzon, Que. On enquiring of that company's President, C. A. Barnard, Montreal, we were informed that the ship had been re-transferred to the Northern Steamship Co., represented by E. Parsons, of

to build and repair mercantile and pleasure ships of every description, and carry on business as engineers, ship chandlers, sail makers, etc. It is stated, locally, that the incorporators are about 12 veterans of the recent war, and that they have obtained a grant of \$10,000 from the British Columbia Government, to assist them in the business.

C. G. S. Canada.—The Minister of Marine stated in the House of Commons recently, in answer to a question, that no instructions had been issued that the C. G. S. Canada is to be sold, and added that this ship had been replaced by the C. G. S. Hochelaga.

Dominion Wreck Commissioner's Enquiries and Judgments.

Enquiries have been held and judgments delivered respecting the following casualties:—

Canadian Voyageur-Howard D. Troop Collision.

Held at St. John, N.B., Apr. 23, into the collision of Canadian Government Merchant Marine's s.s. Canadian Voyageur, and the St. John pilot boat Howard D. Troop, in the Bay of Fundy, Apr. 17, resulting in the loss of the latter ship, by Capt. J. B. Henry, commissioner, and Capt. A. J. Mulcahy and S. Orr, as nautical assessors. The Howard D. Troop was a schooner rigged ship, with 60 h.p. auxiliary engine, for a 7 knot speed, and at the time of the collision had 4 licensed pilots and 3 apprentice pilots on board. On Apr. 17, when the

lee of the steamship, did not feel the effect of the breeze on her sail, and the auxiliary engine was not going long enough to enable her to get out of the way. On the Voyageur, the pilot having ordered full speed ahead, and the telegraph having been moved accordingly, the answer came from the engine room, "Stop," and the master went to the engine room to ascertain how long before the engines could proceed, notwithstanding the fact that there is a speaking tube. He returned to the bridge, after an absence of two minutes, and found the pilot boat 30 or 40 ft. from the ship's side, heading at an angle of about 45 deg. from the starboard beam. About two minutes after, he was informed by the engine room that the engines were all right, but it was then too late.

After Section of Steamship North Land, after being separated, showing wooden bulkhead.

schooner sighted the steamship, the weather was dark and clear, with a strong east breeze, and a heavy sea, and she was running down the south channel, between Petit Passage and Grand Manan. The usual blue flare was shown by the schooner, and answered, and as the ships approached, the Voyageur's head veered to north and east, showing all three lights, also the lantern on the port side, to indicate the ladder. When the small pilot boat was leaving the schooner, the Voyageur's head veered to south, then making the starboard the lee side, the boat passing round the stern. The schooner then ran down across the Voyageur's bow for about half a mile, under sail only, and when she tacked she was about abeam, or slightly abaft the steamship's beam. After tacking, the helm was put down, preparatory to picking up the small boat, and it was noticed that the Voyageur was not going ahead as expected, but drifted down on the schooner. The schooner, being in the

The court found that the Canadian Voyageur's engines could not proceed, on account of being choked, and not responding as quickly as the occasion demanded. The master should not have left the bridge without leaving a competent officer in charge, ignoring the speaking tube, when it was of vital importance that he should have remained and signalled the pilot boat that his vessel was temporarily out of control. The opinion was also expressed that the pilot boat did not make sufficient allowance for the lee drift of the steamship, according to the ordinary practice of seamen, and it found that the master of the pilot boat adopted a wrong maneuver in putting his auxiliary engine full speed ahead, instead of astern, away from danger, at a critical time, and criticized the fact that the man who attended the engine was away on the small boat, and that the master left the wheel to attend to the engine. Everything was done in the Voyageur's engine room that the oc-

casian required, and it was found that Capt. J. D. Mackenzie, of the Canadian Voyageur, and Capt. F. McKelvey, of the Howard D. Troop, committed errors in leaving their respective decks when their duties were to overcome the accident, and that therefore they both contributed to the collision, and were cautioned accordingly.

Toronto Harbor Improvements.—T. Foster, M.P. for York, Ont., asked in the House of Commons recently: "Is it the government's intention to contribute to the improvements in Toronto harbor in the same proportion as in the other large harbors of the Dominion? If not, why not?" Hon. J. D. Reid, acting Minister of Public Works, replied:—"Up to the commencement of the Canadian Stewart Co.'s contract for Toronto harbor improvements, which was the portion of the comprehensive scheme of development to be done at the direct cost of the government, there has been expended by the Public Works Department in the improvement of Toronto harbor \$2,323,191.75. Since that date, there has been expended on the harbor by the Public Works Department \$3,691,068.01, and further work, estimated to cost \$1,500,000, is to be proceeded with during the construction seasons of 1920 and 1921."

Ships under Board of Railway Commissioners.—J. E. Armstrong, M.P. for Lambton, Ont., asked in the House of Commons recently, how many ships are under the Board of Railway Commissioners, as regards rates, tolls, tariff agreements, and arrangements, what are their names, the deadweight tonnage of each, and the routes on which they run? The Minister of Railways replied that the Board of Railway Commissioners had not the definite information that would enable it to reply to these questions. Tariffs filed in conformity with the Railway Act, secs. 336 and 358, do not show the names of the ships or their tonnage, nor does the act call for this information.

The C. G. S. Champlain has been sold by the Marine Department to the Gulf of St. Lawrence Shipping & Trading Co. for \$61,050. She was built at Paisley, Scotland, 1904, and has the following dimensions,—length 120 ft., breadth 30½ ft., depth 17½ ft.; tonnage, 522 gross, 235 net. She is equipped with compound surface condensing engine, with cylinders 22½ and 46 in. diam. by 24 in. stroke, and supplied with steam by a Scotch boiler, 16 ft. diam. by 11 ft. long, at 120 lb. working pressure. The company has appointed Capt. A. Fournier as master, and J. Costin as chief engineer.

Toronto Grain Elevators.—T. Foster, M.P. for York, Ont., asked the following question in the House of Commons recently:—"In view of the strong representations made for the construction of elevators in Toronto harbor, is it the policy of the government to build such elevators or grant a bonus to assist in building them?" Sir Geo. Foster replied: "It is not the present intention of the government to construct or to aid in the construction of grain elevators in Ontario ports."

The Atlantic Coast Shipbuilders' Association states that on April 1st, 104 tankers, or 722,549 gross tons were building in U.S. yards on private account. New orders started during March totaled 129,455 gross tons. Revision of tonnage figures, however, would indicate an increase in tankers under construction at end of March of 133,984 tons, as compared with February.

Mainly About Marine People.

F. H. Beasley, Managing Director, The Allan Line of British Columbia, Vancouver, was killed May 24 while en route to Seattle, which he was to inspect. Mr. Beasley was on board the S.S. A. R. Baker, which was en route to Seattle, when the accident took place. He was on the bridge at the time of the accident, and was preparing to make a landing at Minor Park, when the accident took place. He was taken a flight in the machine and witnessed the accident.

Robert Bell, superintendent of the Grand Trunk Pacific Coast Steamship Co., Ltd., Prince George, has been appointed Superintendent Engineer, Canadian Fuel & Coal Storage Co., Prince Rupert, B.C.

Capt. R. Cann, who died at Yarmouth, N.S., recently, aged 66, was in Hugh Cann & Son's service there for a number of years, in charge of sailing ships, and later was engaged with a New York shipping company, but retired from active service a few years ago.

G. M. Bosworth, Chairman, Canadian Pacific Ocean Services, Ltd., and Mrs. Bosworth, who spent the winter at the Ritz-Carlton, Montreal, have gone to their summer home at Senneville, Que.

Harry F. Bradley, Assistant General Passenger Agent, Canadian Pacific Ocean Services, Ltd., Montreal, died at Gaspe, Que., May 19, where he had gone for his health. He was born at Waterville, Que., July 20, 1876, and entered transportation service in 1898, since when he has been, to 1906, in various positions in the Passenger Department, Montreal; 1906 to 1912, General Agent, Toronto; 1912 to July 15, 1917, Manager, Passenger Department, all with H. & A. Allan, General Agents, Allan Line Steamship Co., and from Nov., 1917, was Assistant General Passenger Agent, Canadian Pacific Ocean Services Ltd., Montreal.

Clarence I. de Sola, who was prominently engaged in the steamship business in Montreal, and acted as Canadian representative for Swan Hunter and Wigham Richardson, Ltd., shipbuilders, Wallsend-on-Tyne, Eng., died at Boston, Mass., May 12. He was born at Montreal, Aug. 15, 1858, and was appointed Consul for Belgium at Montreal in 1904, in recognition of his services in promoting commerce between Canada and Belgium. From 1887 he was Managing Director of the Comptoir Belgo-Canadien, a syndicate of leading Belgian steel manufacturers, and in this capacity he carried out several contracts in Canada, among them being lock gates, etc., on the Soulanges and Trent Canals, the re-tracking of portions of the Intercolonial and Prince Edward Island Rys., and the construction of several public bridges. As a director and Canadian representative of Swan Hunter and Wigham Richardson Ltd., he was responsible for building several steamships for Canadian trade on the coast of the St. Lawrence River and the Atlantic Ocean, many of these being for Canadian Government service. He was President, Ocean & Inland Transportation Co., director, Donald Steamship Co., Canadian Marine & Commercial Co., President, Ocean Steamship Co. of Canada; Managing Director, Walford Forwarding Co., and was associated with several other transportation companies. During the war he acted as an official of the Canadian Patriotic Fund, was Vice

President of the Belgian War Relief Fund, and for his services was made a Chevalier of the Order of Leopold, by the King of the Belgians.

Capt. Frederick Elliott, President and Manager, Victoria Navigation Co., Thurso, Que., died suddenly on the train at Calumet, while travelling between Thurso and Montreal, May 9. He was one of the best known navigators on the Ottawa River.

R. B. Glenn, a member of the International Joint Waterways Commission, which is holding sittings at various points in the west in connection with the proposals for the improvement of the St. Lawrence route, died suddenly, from heart failure, at Winnipeg, May 16.

Capt. H. S. Hilton, master of the Canadian Government Merchant Marine s.s. Canadian Aviator, was presented with a gold mounted walking stick, by the Montreal Harbor Commissioners recently, his being the first ocean steamship to arrive at Montreal this season, viz., Apr. 25.

Capt. C. Hinckley, one of the oldest navigators on the St. Lawrence River, died at Kingston, Ont., May 13, aged 79. He served for many years under the Folger Co., out of Kingston, and later under the Richelieu & Ontario Navigation Co.

Commander B. L. Johnston, D.S.O., who resigned as Superintendent of British Columbia Pilotage District, Victoria, B.C., recently, is reported to have been appointed Manager of a new whaling company, with a station on Barclay Sound, and to have left for England with the view of buying two steamships for whaling purposes.

R. Knox, heretofore chief engineer, Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Albert, has been appointed chief engineer of the same company's s.s. Prince George, vice R. Bell, resigned.

Sir James McKechnie, K.B.E., Managing Director, Vickers Ltd., of London, Eng., is visiting Canada, and is touring the properties owned and controlled by the various companies with which his firm is associated, as well as inspecting several ports on the Canadian seaboard and the Great Lakes.

C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C., has been appointed a special commissioner for British Columbia, in connection with the aerial derby round the world, which is to take place between July 4 and Jan. 3, under the auspices of the Aero Club of America and the Aerial League of America. He will supervise the arrangements necessary for the convenience of the flying men on their flight up the Pacific coast en route to Japan.

J. W. Norcross, President, Canada Steamship Lines, and H. B. Smith, President, Northern Navigation Co., left Sarnia, Ont., May 19, on the s.s. Harmonic, for the head of Lake Superior, accompanied by Sir James McKechnie, Managing Director, Vickers Limited, England, and a number of persons engaged in North Atlantic shipping.

H. B. Smith, President, Collingwood Shipbuilding Co., and Northern Navigation Co., and a director Canada Steamship Lines, etc., has removed from Owen Sound, Ont., to Toronto, where he has bought a house at 355 St. Clair Ave. West.

General Steamship Inspector for Collingwood.

The Civil Service Commission gave two months ago an application would be received from persons qualified to fill the following position:—A Steamship Inspector (General) at Collingwood, Ont., in the Marine Department, at an initial salary of \$2,700 a year, which will be increased upon recommendation for efficient service at the rate of \$180 a year, until a maximum of \$3,240 has been reached. In addition to the above compensation, the salary will be supplemented by a bonus as provided by law.

Duties.—To inspect the boilers and machinery and hulls and equipment of steamships during construction, and from time to time as required by law, to determine whether they are sufficient for the service intended and in good condition; to examine plans of ships and their equipment, marine machinery and boilers submitted for the purpose of determining by calculation of the strength of the various parts whether they can receive approval; to advise builders, owners and others concerned in the matter of construction of ships and materials required to keep the same in efficient condition; when satisfied as regards the sufficiency of ships, their boilers and machinery, and that the law as regards certified officers, etc., has been complied with, to issue a statutory certificate of inspection; to examine candidates for mining engineer certificates; to act as a member of the Board of Steamship Inspection occasionally as required; to investigate the report on accidents and breakdowns happening to ships, their boilers and machinery; to supervise and report on repairs to government ships, their boilers and machinery; and to perform other related work as required.

Qualifications.—Education equivalent to graduation in engineering from a technical school of recognized standing with a thorough knowledge of the theory and practice of marine engineering and ship construction; at least 12 years practical experience in the design, construction, maintenance or operation of ships, marine engines and boilers. While a definite age limit has not been fixed in this competition, age may be a determining factor when making a selection.

Examination.—Subjects and weight as follows: Education and Experience, 300; Oral Interview, if necessary in the opinion of the Commission, 100.

Welland Canal Lock Gate Accident.—The first lock gate accident of the season took place Apr. 29, when the Montreal Transportation Co.'s s.s. Stormont, while upbound and light, struck the upper gates of lock 3, carrying them out, and unstepping and damaging the tow path lower gate, necessitating the placing in position of three spare gates. The accident took place at 5.15 p.m., and the gates were in position and navigation was resumed by noon the next day, and, as there were no ships in the immediate vicinity, there was practically no delay to navigation. The ship was damaged to a minor extent, a line chalk being pulled out from its moorings, a plate in the compressor broken, several rail stanchions and part of the bulwarks broken, and the rudder slightly damaged. The rear slope of the easterly bank at the head of lock 2 was washed out, but not seriously. The cost of repairing the damage was about \$7,500. It is stated that the cause of the accident was difficulty experienced in reversing.

United States Ships to go via the St. Lawrence to the Sea.

During the ensuing navigation season 57 steamships of about 4,250 d.w. tons each and 26 ocean going ships built on the Great Lakes for the United States Shipping Board, Emergency Fleet Corporation, will be taken through the Welland Canal, Lake Ontario, and the St. Lawrence River and Canals to the sea. We are advised by the Emergency Fleet Corporation's Montreal office, E. Quack-

enbush, agent, and M. A. Baisaire, Port Captain, that 35 of the ships are ready for delivery at the opening of navigation, and that the following is the estimated expenditure on them preparatory to their sailing from Montreal:—

57 Ships of about 4,250 d.w. ton.		
Repairs, at \$300 each	\$17,100
Engineer stores, at \$400 each	17,100
Steward supplies, at \$2,000 each	114,000

Deck stores, at \$300 each	17,100
Fuel oil estimate	200,000
26 Ocean going tugs, coal burners.		
Fuel	\$ 5,000
Stores, engineers, deck and steward, etc.	2,800
Repairs	1,500
Total	\$375,600

Following is a list of the ships and tugs. The number given of each is the Emergency Fleet Corporation's.—

Ships to be delivered in 1920.			Tugs to be delivered in 1920.

Canadian Notices to Mariners.

The Marine Department has issued the following notices:—

British Columbia, Cousins Inlet, Wallace Bay.—T. S. Guns, a British Columbia pilot, Victoria, reports the existence of a rock near Wallace Bay, Cousins Inlet, about ½ mile, 128 degrees, from the light on Weaving Point, at a depth of 8 ft. The locality will be examined by the Hydraulic Survey as soon as possible.

British Columbia, Vancouver Island, Esquimalt Harbor. Uncharted shoal spots have been found in Esquimalt harbor, at 4 points, at 21, 35, 34 and 33 ft. deep, respectively.

Nova Scotia, South Coast, Lunenburg Harbor.—The black can buoy on south-east point of Long shoal will be replaced by a black steel cylindrical gas buoy, showing an occulting white light, without further notice.

Ontario, Lake Erie, Pelee Passage.—During July the submarine bell, on the southeast shoal lightship, will be run continuously, to enable masters of ships equipped with submarine apparatus to test their apparatus and familiarize themselves with the use of submarine signals.

Ontario, Lake St. Clair.—At the mouth of the Thames River, at the outer end of the dredged cut, 1½ miles from the Thames River main light, the gas buoy is adrift; further notice will be given when it has been replaced.

Ontario, Lake Superior, Otter Island. It is proposed to establish a fog alarm at Otter Island light station on the north-

west end of the island, and the establishment of a light will be deferred until construction is commenced, which will be about midsummer.

Ontario, Presqu'ile Bay. The Brighton no. 1 range light tower has been blown down, and until it is re-erected, a temporary fixed white light, shown from a lantern on a pole, has been placed on the pier.

Ontario, Rideau Canal.—All lights on floats and tripods on the Rideau canal between Smiths Falls and Kingston have been discontinued.

Quebec, River St. Lawrence, Ile Verte. On the opening of navigation the fixed white range lights on Government wharf, 312 ft. from its outer end, will be changed to fixed red lights.

Quebec, River St. Lawrence, Ship channel between Quebec and Montreal.—On the opening of navigation, the spar buoy 79M, on the south side of the channel, south of Ile au Boeuf, will be replaced by a black, steel cylindrical gas buoy, showing an occulting white light.

Quebec, River St. Lawrence, Ship Channel between Quebec and Montreal.—On the opening of navigation, the buoys between curve 2 and curve 3, Lake St. Peter, were rearranged. The black spar buoys 45.1 and 69.1 were replaced by black steel cylindrical gas buoys showing occulting white lights. The black gas buoys 47.1 and 67.1 were replaced by wooden spar buoys. A black spar buoy 47 M. has been established on the east side of the channel, in Contrecoeur traverse curve, 1,400 ft. south of black gas buoy 45 M. and other buoys in this curve have been rearranged. At Pointe aux

Trembles, the buoys have been rearranged, and a red spar buoy has been established opposite black can buoy 163 M., and numbered 164 M.

United States, Detroit River.—On or about May 3, the fixed white light on the east shore of Grosse Isle will be replaced by a flashing white light, showing a flash every two seconds.

United States, St. Clair River.—On the opening of navigation, St. Clair Flats canal east pierhead light was discontinued, and the east channel gas buoy 4 was established in lieu thereof; light, occulting red every 10 seconds, at an elevation of 13 ft., in a depth of water of 22 ft. The east channel revetment will be dredged away at this point.

Hill & Co. (Exports & Imports) Ltd., has been incorporated under the Ontario Companies Act, with \$200,000 authorized capital and office at Toronto, to carry on a general import and export business in Canada, for British, colonial and foreign commercial houses, and to conduct a navigation, transportation and warehousing and grain elevating business, and in connection therewith, to own and operate steam and other ships, warehouses, wharves, docks and elevators. The provisional directors are: E. N. Armour, D. C. Skinner, N. F. Allan, H. R. Hollinshead and I. R. McKibbin.

Harbour Navigation Co. Ltd., has been incorporated under the British Columbia Companies Act, with \$100,000 capital, and office at Vancouver, to own and operate steam and sailing ships of every description and to carry on a general shipping and forwarding business.

Harbor, River and Drydock Estimates for 1920-1921.

The Public Works Department's estimate for the year ending Mar. 31, 1923 submitted to the House of Commons yesterday, contains the following items:

Canadian Railway and Marine World

July, 1920

The June Mechanical Conventions at Atlantic City.

The two great annual railway mechanical conventions of the American Railway Master Mechanics' Association and the Master Car Builders' Association, held principally at Atlantic City, N.J., for many years, were suspended after 1916, in consequence of the United States having entered the war, but meetings of the executive committees were held in Chicago in 1917 and 1918, at which reports of various committees were presented.

In 1919, the Director General of the U.S. Railroads decided to provide, during the period of federal control, a responsible channel through which he might obtain recommendations for the advancement of railway practice. The American Railway Association revised its organization, changed its name to the American Railroad Association, and enlarged its scope by covering the former activities

of a number of other railway associations, etc., including among others, the American Railway Master Mechanics' Association, and the Master Car Builders' Association. The American Railroad Association was divided into five sections, viz.: operating, engineering, mechanical, traffic and transportation, respectively. The mechanical section took over the former activities of the American Railway Master Mechanics' Association, and the Master Car Builders' Association, the committee consisting of three representatives of the U.S. Railroad Administration, two representatives of each of the operating regions into which the U.S. was divided and two representatives of Canadian railways. Under the mechanical section's management a convention was held at Atlantic City in June, 1919.

The re-organized American Railroad

Association has been continued as outlined above and the mechanical section held its annual convention at Atlantic City this year, June 9-16, the chairman of the general committee being W. J. Tollerton, General Mechanical Superintendent, Chicago, Rock Island & Pacific Rd., the vice chairman being J. Coleman, Assistant to General Superintendent Motive Power and Car Departments, G. T.R., Montreal. W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., Montreal, was also a member of the committee. Locomotive matters were dealt with on June 9-11, the election of officers was held on June 14, and car matters were dealt with on June 14 to 16. The most important features of the convention were, as usual, reports of the standing and special committees, and individual papers presented. The principal ones are given on this and following pages, either in full or in abstract.

Scheduling and Routing Systems for Locomotive Repair Shops.

The committee, of which Henry Gardner, Supervisor of Apprentices and Shop Schedule Systems, Baltimore & Ohio Rd., was chairman, reported as follows:—Scheduling and routing in railway shops is not new. The first schedules recorded were used in the Chicago & Northwestern shops in 1904. These consisted simply of working sheets, and assigned dates made out and followed up by the shop supervision. Since that time more than 15 railways have adopted some form of schedule system for repairing locomotives, all of which are more or less alike in basic principles. Briefly, the locomotive is brought to the shop on a predetermined date or order, tank disconnected and engine forwarded to the stripping pit. Stripping is handled by a special gang in charge of a leader, and all parts are delivered to each department of the shop. Predetermined dates are then assigned for completing all parts in time to assemble the engine in best practical and logical sequence. These dates are obtained from master schedules which are compiled for each class of repair and for varying numbers of days required to complete the engine. All delays of material or operations are checked daily, and foremen are notified of the delays in their department. No definite time is given in which operations shall be performed and it is only necessary that the work shall be finished on a certain day or date. The result of scheduling the complete capacity of the shop will automatically develop for each operation a stated number of hours which will very closely approximate the minimum number of hours in which that operation can be performed.

The following items cover the necessary steps to be taken for installing an up-to-date and adequate scheduling and routing system as now in operation on some railways: 1—Supervisor of shop schedules and assistant. 2—Schedule office for supervisor. 3—Schedule and planning boards. 4—Shop or job black-

boards. 5—Printed forms, master sheets, etc. 6—Calendar slide rules. This list may be modified for smaller shops, but as the general methods and principles are the same, the above installation will be described. It is the committee's opinion that it is not advisable to introduce this shop system where less than 10 locomotives a month are given classified repairs. It is also found inadvisable to employ these methods in locomotive houses and shops making heavy running repairs exclusively. Details covering the above listed subject are given in order below:

1. Supervisor of shop schedules should be a man with practical experience, capable of handling men, and with sufficient technical education to make clear reports and records; preferably a man who has served an apprenticeship and is familiar with all trades. He should report to the superintendent or assistant superintendent of shops. At large shops an assistant may be required.

2. The schedule office should be located conveniently with respect to the machine and erecting shops, preferably in the general foreman's office, or leading from it. A room 10 x 12 ft. will be sufficient, but should be larger if possible. It is important to have this office so located that the supervision can frequently consult with the schedule supervisor and have ready access to and examine the records on the schedule boards.

3. Schedule boards are made to suit local conditions in shops and should be about 36 x 58 in. in size, or smaller. Two boards are necessary, one for current month and one for following months, continuing in succession from month to month. The planning board is used for assigning engines to the shop, with reference to adjusting the class of work to be done to the existing organization, and particularly to avoid overloading any department. This board simplifies the work of the schedule supervisor.

4. Small blackboards are used for con-

vveying dates work is due finished, directly to the man on the job. These blackboard may be employed to the extent of 15 or 20, as may be found desirable. Foremen of gangs, or departments, are expected to keep up these blackboards, crossing out engines and dates when work is completed and delivered.

5. About 20 forms are used for operating this system to best advantage. These forms cover constant or master schedules, delay sheets, check sheets and shop sheets used for conveying dates directly to the department interested. All forms, excepting master schedules, should be printed.

6. The calendar slide rule is indispensable for transferring the constant intervals of time on the master schedules into actual dates on the shop sheets. By the use of this simple device a large number of dates can be assigned quickly and one setting of the rule is sufficient for one schedule on an engine. Items 3, 4, 5 and 6 are covered by figs. 1 to 9 appended to this report.

The above discussion contemplates only the handling of the locomotive and its parts after arriving at the shop and is not directly concerned with the assignment of engines to the shop and their selection for repairs. But this feature is important and has a decided bearing upon the success of the system. Overloading departments with too much boiler work, or too many broken cylinders or frames, will result in delays, and prevent schedules based upon evenly apportioned work from operating effectively. The shop superintendent should have absolute control over engines to be repaired, as he is in best position to adjust the incoming work to his organization and with relation to the work being performed in the shop.

It is not perhaps pertinent to this discussion to treat at length the subject of proper inspection of incoming engines, although this matter has considerable bearing upon successful operation. One

engineers for the purpose of inspecting and checking the condition of the engines and the work done on them. A detail corner board is used for this purpose. The board is divided into columns and rows. The columns represent the engines and the rows represent the work done on them. The board is used to record the date of inspection, the name of the inspector, the condition of the engine, and the work done on it. The board is also used to record the date of repair, the name of the repairman, and the work done on it. The board is a very useful tool for the engineer and the repairman.

The practical operation of this schedule board system may be described as follows: As a ship is thoroughly examined by boiler and machinery inspectors, who make report as to condition. One copy of this report goes to supervisor of shop schedules, enabling him to define the classification of repairs needed, and assign the proper schedule and number of working days required for completing repairs. The engine is next forwarded to the stripping pit and an itemized list of repairs needed is then forwarded by pit inspectors to supervisor of shop schedules, who is then in a position to assign exact dates and issue sheets to all departments concerned. These dates are posted by supervisor on the schedule boards. At least once a day the supervisor and his assistant visit each foreman, with the check sheets, and examine the work on the engines under repair in the shop on that date. Returning to the schedule office a daily sheet is made out and issued to the supervision, calling their attention to the material and operations delayed, the number of days delayed in the schedule and the cause. These delays are then posted in red ink on the schedule boards, where foremen and workmen can see quickly how their department stands, and determine the status of their delays for the month. An excessive number of red marks in any one vertical column on the schedule board indicates forcibly that this job or department, represented by that particular vertical column, is probably the cause for delaying the engine. The supervisor of schedules has other duties, such as issuing work-pit sheets, re-

Fig. 1. Detail corner of Schedule Board.

chinery inspectors, who make report as to condition. Fig. 3. Shop Blackboard.

these scheduling and routing methods are considerable. Schedule boards indicate infallibly where delays periodically, or persistently, occur and such departments

promptly. Under the day work plan the system acts as a stimulant, and to some extent takes the place of interest in the work automatically removed through abolition of piecework methods. Friction between departments is almost entirely eliminated. It is not possible to unload on one department causes for delay which belong to another.

which system to some extent establishes tasks or jobs. Every conscientious foreman or workman likes to have certain work to perform in a stated time, and feels confident that this is exactly what is wanted. Each schedule date delivered to the foreman or workman becomes a written order to that man to deliver the work on that date. Unnecessary driving will be brought to a minimum. Dates are assigned, and if the work is done on these dates no criticism or censure is necessary. The constant reappearance of the daily delay report stimulates fore-

men and workman to better purpose than criticism.

A visit to shops where this system is in operation resulted in unanimous favorable comment from superintendents and foremen due to its operation. The general foreman's duties are greatly simplified. Heretofore he might go from one department to another trying to fix the responsibility for delays. No system can take the place of foremen, but this system can eliminate a large amount of travelling, by supervision from one department to another.

No definite figures are possible giving the saving in money resulting from the different methods. We may, however, consider one saving from the standpoint of the potential value of the power. Assuming that the service of a locomotive is worth, on an average, \$50 a day, and if one day is saved in the time that each engine is held on the pit the money saving in a shop having 25 pits and delivering 2 engines per pit, per month, would be \$2,500 a month, or \$30,000 a year. This statement is based upon the assumption that quicker deliveries of power are

Feed Water Heaters for Locomotives.

The committee, of which F. M. Waring, Engineer of Tests, Pennsylvania Rd., was chairman and of which W. H. Sample, General Superintendent Motive Power and

before them the very valuable individual paper by J. Snowden Bell, Associate Member. (See 1917-1918 proceedings.) The author's conclusion, stated in par. 95 of his paper, as "beyond question," is, that a feed-water heater "can and will be developed and adopted with the most substantial benefit in locomotive operation" and this, after giving the history and description of most or all of the important devices of this character, as applied to locomotives, during the preceding 116 years.

Paragraph 4 of the paper classifies feed-water heaters as of two different types which may be termed respectively, (a) surface or closed heaters, and (b) injection or open heaters. At the same time mentioning the fact that the type (a), in which the heat transfer, to the feed-water, is effected through walls of comparatively thin metal, has been the more frequently experimented with, and, for several reasons, has heretofore seemed to be the more practical and desirable of the two types. Your committee wishes to draw careful attention to this latter statement, because, while this opinion has no doubt been more or less generally held, the latest developments suggest that the open heater, which operates under practically atmospheric pressure, has no small tubes as heating surface, and delivers the heated feed water and condensed exhaust under suction to the boiler feed pump, using an oil separator, has fully as good, if not a better chance of final success, considering the conditions which should obtain in an efficient heater.

Your committee, for the present at least, is not considering heaters using waste gases from the flues, but only the exhaust steam as the heating medium; because these two sources of heat are independent of each other and require separate heaters, and where both of them are employed in conjunction, the exhaust steam must or should be used first, although usually in tandem with the other and the exhaust steam carries much larger portion of the waste heat, (approximately six times that in the waste gases) and this heat is more readily available, and with the open heater especially, it is believed has been much more successfully employed than that of the waste gases, without interference with the working of the locomotive.

Your committee began its work by endeavoring to accumulate information by means of a circular addressed to the members, and replies were received from 86 railways. Seven roads report that they now have, or very recently have had, feed-water heaters in service and give full replies to the circular. Four roads that they they contemplate the use of heaters. The remainder of the replies are to the effect that 76 roads have, had no recent experience in the use of feed-water heating appliances. A tabulation of the replies, which were made in full, describing feed-water heating systems in use at present, or but recently removed from service, is given in appendix 1 to the report. Appendix 2 gives data on open and closed heaters tested by the Pennsylvania Rd. Appendix 3 gives comments by the Baltimore & Ohio Rd. on its experience. Appendix 4 gives some comments by Boston & Albany Rd. Appendix 5 gives comments by the Canadian Pacific Ry.

It appears from this survey, that at the present, there are in use in this country but two general types of feed-water heaters, the closed heater, having a number of small tubes; and the open heater, in which the exhaust steam is condensed by a jet of cold feed-water.

X—Renew.
B—Rebore.

Car Departments, G.T.R., was a member, reported as follows:—The conditions now appear to your committee to be favorable for a renewal of interest in feed water heaters for locomotives, and while the trials of them have been somewhat retarded by the unusual conditions of the past few years, we appear to be upon the eve of an extensive application of heaters, under more favorable conditions than at any previous time, on account of the high cost of fuel and the greater need for its conservation. After consideration of the development and present state of feed water heaters for locomotives, your committee believes that the early phases of the subject have been very fully covered in reports and individual papers, and they will, therefore, confine their discussion to heaters of recent production, either in use or immediately available for application.

The members of the association have

From some of the reasons to not consider it necessary that attempts be made for the feed-water while in the boiler may have been made to pump the water into the boiler for this purpose. The question here is not entirely a question of superheating, but one of the necessity of heating the feed-water to the boiler. When the temperature of the water has been raised to its boiling point, it is then too late to do anything.

It has been suggested that water having a high percentage of impurities will be boiled from heating superheaters, or pumps of the water heated in the boiler. Such water would not do much good, as it would be a closed type heater. The open type heater, however, could be expected to handle such water with no more difficulty than when injectors are used.

The location of the heater apparatus on the locomotive is of considerable importance. The exhaust steam should have short and direct passages into the heater; and heater, pumps and piping should be placed so as to be easily changed.

The attachment of the heater and pumps to the side of the boiler has been found of advantage in the prevention of freezing. It has been found that the expansion of the steam is reduced when the feed heater is used, and a new basis should be established for determining the necessary superheating surface for feed heater locomotives. It is thought, however, that an enlargement of the superheater should be considered for new construction only, the reduction in superheat not being sufficient to require a revision of existing superheaters when feed-water heaters are applied to old locomotives. It appears from present indications, that feed-water heating for locomotives, is about to be given a thorough trial on a few roads, and, with the improved heaters now available, we believe that a satisfactory arrangement of heater can be developed and that the association members should assist by installing heaters on their various roads in order that data may be obtained under as many different operating conditions as possible.

Appendix 1. Canadian Pacific Ry. officials state that they have experimented for the past 15 years with various types of waste gas and exhaust steam feed water heaters. A great deal of information has been obtained, although practically the majority of arrangements throughout the past have proved unsuitable for one reason or another. They are now designing a feed water heater which they propose to try thoroughly in competition with other feed water heaters on the market. They feel there is a considerable amount of experimental work to be done yet, before any satisfactory heater is discovered for their own climatic conditions, but they feel that the future will bring forth a heater which can readily be applied to any type of locomotive. In their past experiments the heater was placed crosswise over the door of the smokebox, and in front of the stack. They are also experimenting with an entirely new design, the details of which are not complete. This heater will be an integral part of the locomotive.

Repair Shop Layouts Committee's Report.

The committee, of which I. S. Downing, General Master Car Builder, Cleveland, Cincinnati & St. Louis Rd., was chairman, and of which W. J. Robider, General Master Car Builder, C.P.R.,

Montreal, was a member, reported as follows:—Preliminary considerations of the subject assigned to this committee clearly indicated that the efforts of the first year should tend to establish cer-

tain basic principles rather than to develop a complete and concrete report. The committee is submitting a tentative shop layout, embodying general features in such detail as is deemed immediately

Proposed A.R.A. Freight Car Repair Shop. Plan of buildings and tracks.

essential, together with their general observations on the subject. Criticism is invited, which should tend toward the development of complete and specific recommendation some time in the future. From the progress so far to be reported, and discussions it is anticipated will follow, it is felt there will be currently available considerable information which it is hoped the members of the association will take advantage of in consideration of their immediate needs and work contemplated. The work of the committee thus being progressively constructive.

It was decided in the preliminary layout of a repair shop to submit the general characteristics of a shop with an ultimate 100 car a day output, such units providing for 25 cars a day, and recommendations being submitted in the expansion programme so mapped out that the layout would be expanded in units of 20 cars a day until the ultimate capacity of 100 was reached.

Some investigations developed the fact that space should be proportioned from the following data:

(A) Steel Car Plant.

(1) Twenty-five steel car spots for heavy repairs will turn out from each spot one car every six 8-hour days, or 4 cars a day.

(2) Twenty-five steel car spots for medium heavy or heavy light repairs will turn out from each spot one car every three 8-hour days, or 8 cars a day.

(3) Fifty steel car spots for light repairs will turn out one car from each spot every 8-hour day, or 50 cars a day.

(B) Wood Car Plant.

(1) Twenty-five wood car spots for heavy repairs will turn out from each spot one car every six 8-hour days, or 4 cars a day.

(2) Twenty-five wood car spots for medium heavy or light repairs will turn out from each spot one car every three 8-hour days, or 8 cars a day.

(3) Fifty wood car spots for light repairs will turn out one car from each spot every 8-hour day, or 50 cars a day.

While the committee provides, in the general plan of the 100-car shop, space for wood cars, and while it is recognized that for a great many years there will be wood cars to consider, and for a considerable time longer, steel cars with a certain amount of wood work to be performed, the major part of the committee's considerations are devoted to steel cars.

Consideration of the units of measure decided above is invited in order to develop what the actual conditions are over the country as a whole; and to what extent they vary for various sections of the country; and as to just why these variations occur, as certain modifications will have to be made ultimately of such specific recommendations as are made should these limits of measure vary between considerable limits.

The construction of buildings, it is be-

lieved by the committee, when ultimately developed, should be the joint work of the engineering and car shop committee. For the present, it is thought sufficient to conform to buildings which are in plan practically square. Roof construction involves the geographical location of the buildings and their layout relative to the points of the compass. Several materials are largely construction matters, not essential to the general subject other than in final consideration of the cost. Briefly, the development of the plant and facilities as to capacity, efficiency and economy of operation should first be completed, and construction as reflected in first cost worked out as secondary considerations.

It is believed that track spacings such as shown for larry and service tracks are representative. Height of buildings will be largely governed by operations taking place therein and the extent to which cranes are installed. Where cranes are used, a clearance from rail to bottom of crane girder of 22 ft. is suggested. All larry track should be of standard gauge, and plan between rails for tractor service.

Gas and electric cutting stations should be considered in general, but specific advantages should be more clearly established before final recommendations are made.

The distribution of compressed air is largely one of local preference and conditions, but the ultimate capacity of

Proposed A.R.A. Freight Car Repair Shop. Plan of buildings and tracks.

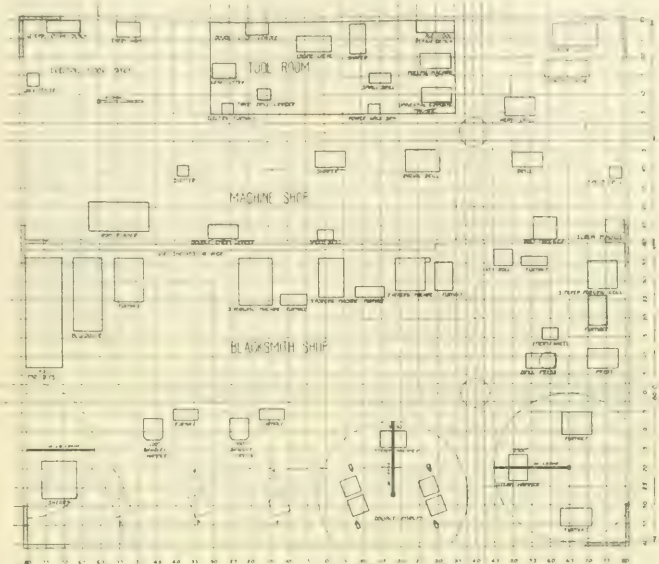

and arrangement on equipments, as furnished by the several manufacturers, that should be maintained. This is, of course, for the express purpose of obtaining prompt interchangeability in service, and reduction in the stock of renewal parts where different makes of machines are used and locomotives are interchanged. It will be apparent that the bolt spacing of the base should be the same on all equipment, also that the size of steam pipe required should be the same. In this same connection, it would be advantageous if the location of the steam exhaust and drain connections were identical on all makes of headlight turbo-generators. As to the renewal parts, the ball bearings can be made similar, brushes can all be the same size and all bolt and screw threads should be standard.

In locating the turbo-generator on the locomotive four details must be considered, all of approximately equal importance. In the first place, short steam pipes are necessary. Long pipes are difficult to maintain and they do increase radiation losses. The location must be one that is accessible for inspection, and also not interfere with the inspection and care of other parts of the boiler or machinery that require both inspection and renewal. It must not in any way interfere with the vision ahead of the locomotive crew, and the exhaust steam cannot be permitted to cloud up the front cab windows, condense over the cab roof, or in any way become a nuisance to the locomotive man or fireman. It is desirable, therefore, and seems to be the general practice, to have the generator set placed near the cab. Many roads are placing it longitudinally with the boiler and on the left-hand side where the wire conduit to the headlight is placed. The

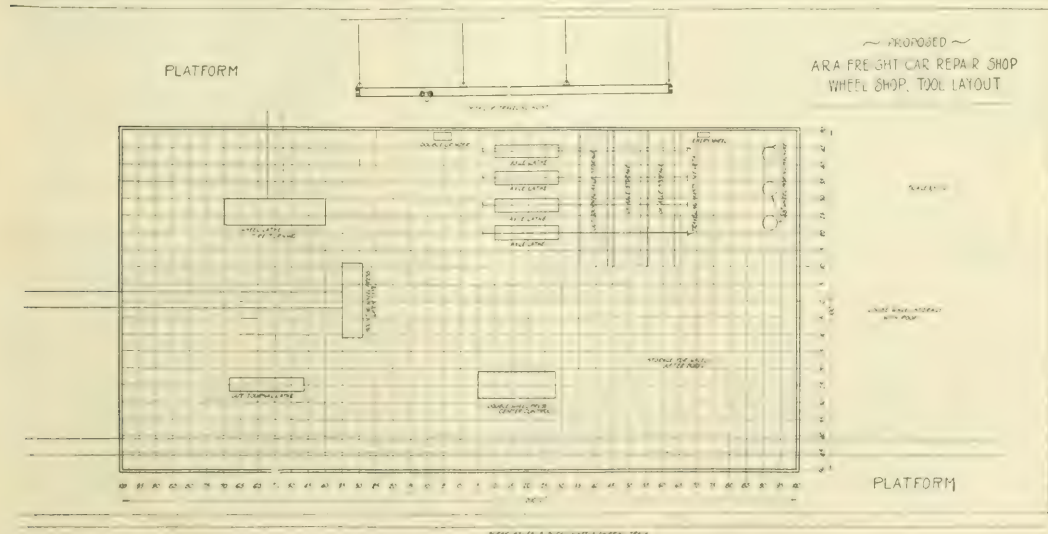

collects in and around the unit from the whistle and safety valve discharge and leaks of steam therefrom, particularly when it is placed on top of the boiler just ahead of the cab.

There is a rather strong preference

With either open or metal conduit wiring in the cabs, all drops should be made through suitable fittings, so that in ordinary maintenance or the overcoming of trouble on the road no joints in the wires will have to be disconnected.

Proposed A.R.A. Freight Car Repair Shop, Blacksmith and Machines Shops, Tool Layout; 25-car output per day.

generator end is usually set toward the cab to avoid the collecting of snow and ice or water inside the generator and commutator protection. This position has a further advantage in being able to be reached by a man standing on the running board, as well as being away from the condensation and moisture that

indicated for the use of metal conduit in wiring of cabs. For outside wiring, that is, to the headlight and the lamps, both at the front of the locomotive and the rear of the tender, this is the general practice. When used in the cab, the conduit placed on the ceiling and on the sides should not be rigidly connected.

The use of a 250-watt, G-30, 32-volt concentrated filament lamp for headlights of road locomotives and of a 15-watt, S-17, 32-volt special cab lamp for all lights in cabs, classification signals, markers, etc., is practically standard everywhere. For switch locomotive headlights there is still considerable and very

Standard Method of Packing Journal Boxes.

The committee, of which C. J. Bodermer, Assistant Superintendent of Machinery, Louisville & Nashville Rd., was chairman, reported as follows:—Your committee respectfully submits the following report covering a standard method of packing, cleaning and assembling of journal boxes on locomotive tenders and cars, and recommends that it be submitted to letter ballot for adoption as recommended practice:

Preparation of New Packing.—The waste must be loosened, placed in a saturating vat and kept completely submerged in car oil, at a temperature of not less than 70 degrees Fahrenheit, for at least 48 hours to ensure thorough saturation. It shall then be drained for the

Figure 1.

purpose of removing the excess oil, until the packing is in a resilient or elastic condition.

Prepared packing in storage should be turned over at least once each 24 hours, or the oil which has accumulated in the bottom of the container shall be drawn off and poured over the top of the prepared packing.

Preparation of Renovated Packing.—All packing, when removed from journal boxes for the purpose of periodical re-packing or renovating, should be pulled into a container, avoiding contact with the ground or any other place where it may pick up dirt, and taken to the waste-

oil, then drained for the purpose of removing the excess oil.

Cleaning Boxes.—Before packing a journal box the oil cellar shall be thoroughly cleaned of all dirt, sand, scale and grit, and if water is present it must be removed. When new journal boxes are

The surface of the journal should be smooth and thoroughly clean before bearing is applied. When applying a journal bearing, a coat of lubricating oil must be applied to the bearing surface of same. Never wipe the bearing surface of the journal bearing with waste.

Fig. 3. Waste Reclaiming Plant, using steam to heat water.

applied, or when reapplying journal boxes, the interior of the box, including the dustguard well, shall be so treated, and close-fitting dust guards and lids should be applied.

Cleaning and Applying Bearings.—Before applying journal bearings they

Application of Packing.—(a) Inner.—In packing a journal box, twist somewhat tightly a rope of packing and place it in the extreme back part of the box, as shown at A in fig. 1. Make sure that it is well up against the journal so as to properly lubricate the fillet on the journal and keep out the dust.

(b) Main.—Apply sufficient packing (preferably in one piece) to fill the space shown at B in fig. 1. Take care to have

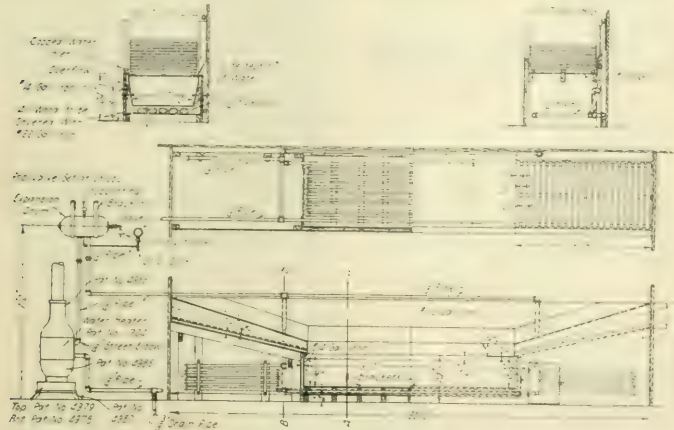

Fig. 2. Waste Reclaiming Plant, using stove to heat water.

reclaiming plant. This packing must not be reused until renovated.

In reclaiming packing it should be first picked over carefully, and dirt, metal, etc., shaken out, the knotted strands of waste pulled apart, and then placed in hot oil in renovating tank for a short time, working it with a fork for the purpose of thoroughly washing and loosening it. It should then be rinsed in clean

shall be thoroughly clean, have a smooth bearing surface, free from irregularities, and shall have a proper bearing. Under no circumstances is it permissible to use sand paper, emery paper or emery cloth for the purpose of removing irregularities from the bearing surface. A half-round file or scraper should be used. Care must be taken that the wedge has a good contact on the crown of journal bearing.

Fig. 4. Journal Box Packing Tools.

this packing bear evenly along full length of the lower half of the journal. The packing should not be too tight, but should be tight enough to overcome any tendency to settle away from the journal. The packing should extend to approximately the center line of the journal but not above at any point, and should be pressed down evenly at sides that no loose ends may work up under the journal bearings.

(c) Outer.—Apply a third piece of firmly twisted packing as shown at C in fig. 1, and pack tightly, in order to prevent displacement of the main packing. There should be no loose ends hanging out of the box as they would tend to draw out the oil.

General Remarks. In addition to the general remarks made in the last report, the committee has been particularly concerned with the question of the handling of journals and bearings. It is recommended that the practice of using a journal for a bearing should be discontinued. The committee has also been particularly concerned with the question of the handling of journals and bearings. It is recommended that the practice of using a journal for a bearing should be discontinued. The committee has also been particularly concerned with the question of the handling of journals and bearings. It is recommended that the practice of using a journal for a bearing should be discontinued.

It is suggested that the attention of all concerned be directed to the necessity of fully protecting journals against rust and corrosion during storage and that due care should be exercised in the handling and shipment of mounted wheels, to guard against the damage which journal and bearings to the axle, as a result of improper handling, or otherwise, in handling around shop yards.

It is also highly desirable that rigid instructions be issued to effect a more careful practice in the handling of journal bearings, especially for shipment, to prevent the indiscriminate tossing of journal bearings against each other, thus nicking and needlessly damaging the smooth bearing surface of the babbit metal lining.

Drawings showing two representative waste-reclaiming plants and a representative set of journal box packing tools are shown in figs. 2, 3 and 4.

Drawings showing two representative waste-reclaiming plants and a representative set of journal box packing tools are shown in figs. 2, 3 and 4.

Car Wheels Committee's Report.

The committee, of which W. E. A. Henry, General Superintendent Motive Power, Southwest Region, Pennsylvania System, was chairman, and of which W. H. Winterrowd, Chief Mechanical Engineer, Canadian Pacific Ry., was a member, reported as follows:—The report of your committee submitted to the 1919 Convention referred to cast-iron wheels of the so-called arch plate design of 700 and 850 lb. weight respectively, adopted in 1911. We now wish to recommend, for adoption as recommended practice, wheels of the same several design, and of 650 and 750 lb. nominal weight respectively, to take the place of the present 625 and 725 lb. wheels. These designs are in accordance with recommendations of the Association of Manufacturers of Chilled Car Wheels and we are recommending them for adoption on account of the universally favorable reports on the performance of the 700 lb. arch plate wheel in comparison with the 650 lb. wheel of the former design. Figs. 1 and 2 show proposed designs for the 650 and 750 lb. wheels. If adopted, these wheels would be marked "A. R. 1920," and specifications changed accordingly.

There has again been referred to your committee for recommendation the proposition of increasing the thickness of flanges of cast-iron wheels, and a copy of a letter from the American Railway Engineering Association, giving its views on this subject, is appended. No information has been received that causes your committee to change its opinion as expressed in the report submitted to the 1916 convention, and, after full consideration, it is still the opinion that nothing will be gained in the interests of safety or economy by adding material to any portion of the flange of cast-iron car wheels in such location as will affect track clearances, and, furthermore, that such change is unwarranted and inadvisable.

It has been recommended that the present method of stenciling tape size of cast-iron wheels be discontinued and instead a permanent record of this information be provided as follows: Five small lugs $\frac{3}{8}$ in. in diameter by $\frac{3}{8}$ in. high, to be cast on inner plate near hub as shown on sketch, fig. 3. As each wheel is taped the necessary number of lugs to be broken or cut off, those remaining to indicate the tape size. For example, for a normal wheel tape size 3, two lugs to be broken or cut off, the three remaining indicating a tape 3 wheel. This practice is now being followed by some roads and the information is found to be of value when grinding second-hand wheels. This recom-

mendation is concurred in by your committee.

Fig. 1. Recommended practice for 33 in. cast-iron wheels, for cars of maximum gross weight not to exceed 95,000 lb.

Fig. 2. Recommended practice for 33 in. cast-iron wheels, for cars of maximum gross weight not to exceed 161,000 lb.

Attention has been called to the fact that when the gauging points of maximum and minimum flange thickness

gauge for cast-iron wheels (M. C. B. sheet 16) wear, it is necessary to condemn the gauge; whereas, if the sides of the opening above the gauging points were made parallel and perpendicular it would be possible to regrind the gauges and bring them back to standard; and it is recommended that these gauges be changed accordingly, as shown in fig. 4.

In 1912 the contour of the back of flange of steel and steel-tired wheels was changed so as to be identical with the flange contour of cast-iron wheels between the base line and top of flange, the total width of rim being increased from $5\frac{1}{2}$ to $5\frac{19}{32}$ in., which is the same as the corresponding portion of the cast-iron wheel. The process of manufacture of wrought-steel wheels is such that the present contour is very difficult to produce, and as far as your committee is able to learn, it is not being furnished by any of the manufacturers, but instead all wrought-steel and steel-tired wheels are being manufactured with flange in accordance with design adopted in 1909. Under the circumstances, it is felt that the present contour should be withdrawn from the standards and the 1909 contour adopted. In this connection, we wish to state that the design of the wheel check and mounting gauge is such that no errors will be introduced on account of this change in the back of the flange.

Complaint has been made of errors in billing for service metal in steel and steel-tired wheels and the matter has been referred to your committee by the arbitration committee, with the recommendation that we outline a method of measuring service metal and a simpler gauge than the present one. The amount of service metal in a wheel is dependent not only upon the thickness of the tread, but upon the thickness and contour of flange as well, and only the metal remaining after restoring standard contour can be considered as service metal. Gauge for measuring steel wheels to restore contour (M. C. B. sheet C-1) is simple in operation and gives accurate readings, and we do not feel that it will be possible to design a simpler gauge that will take into account all the dimensions necessary to determine the service metal remaining in wheels. The errors in billing complained of are very evidently due to lack of care in taking measurements and it is also apparent that the gauge above referred to is not being generally used.

In order to correct the conditions complained of, we would recommend that the second paragraph, rule 98, 1919 Rules of Interchange, be modified as follows,

the modification being shown in bold face type.

The price for new wrought-steel wheels shall be based on the scrap value of \$8 for metal inside the condemning limit (which is $\frac{1}{4}$ in. above the limit groove) plus \$1.75 for each 1/16 in. of service metal (on radius of tread) in connection with standard full flange contour, as determined by gauge for measuring steel wheels to restore contour, M. C. B. sheet C-1, also base of limit groove must not be less than 29 $\frac{1}{2}$ in. in diameter; in no case shall a charge or credit for service metal be made in excess of 1 $\frac{1}{2}$ in."

It is also recommended that the present recommended practice gauge for measuring steel wheels to restore contour, as shown on M. C. B. sheet C-1, be advanced from recommended to standard practice.

The minimum diameter of base of limit of wear of grooves of wrought-steel wheels should be added to sheets as follows, and arrangements have been made accordingly:

M. C. B. sheet 25 Not less than 29 $\frac{1}{2}$ in.
M. C. B. sheet 25A Not less than 32 $\frac{1}{2}$ in.
M. C. B. sheet 25B Not less than 34 $\frac{1}{2}$ in.

Recommendation has been made by one of the companies manufacturing steel wheels that our specifications require wheels to be machined exact to diameter. Your committee can see no justification for this added expense, together with the loss of service metal, which is, from the standpoint of wear, the most useful in the wheel. The recommendation, therefore, is not concurred in.

Recommendation has been made by certain of the manufacturers of wrought-steel wheels that the 38 in. wheel be dropped from our standards. Replies to circular of enquiry indicate that the number of such wheels used is small and that their use is being discontinued as a general practice. It is, however, necessary to use wheels of this diameter in certain cases under motor cars in order to afford proper clearance between motor housing and track. While the use of the 38 in. wheel should be discouraged in the interest of keeping down the number of sizes that have to be carried in stock, we feel that, as it is a recognized standard of the association, it should be allowed to remain among our standards as long as there is need for wheels of this diameter.

It appears to be desirable to revise and amplify the recommended practice of this association for mounting wheels and the following is submitted with recommendation that it be adopted in place of the present recommended practice for mounting wheels:

1. Standard table of mounting pressure:

Mounting Pressure in tons.

Axle.	Wheel seat diameter.	Cast iron wheels.		Steel Wheels.	
		Minimum	Maximum	Minimum	Maximum
A	5 $\frac{1}{2}$ in.	30	45	45	60
B	5 $\frac{3}{4}$ in.	35	50	50	70
C	6 $\frac{1}{2}$ in.	40	60	60	80
D	7 in.	45	65	65	85
E	7 $\frac{1}{2}$ in.	50	70	70	95

2. Wheels having flanges worn so as to take limit gauges for remounting cast-iron wheels shown on M. C. B. Sheet 16-A shall not be remounted.

3. The thickness of flanges of wheels fitted on the same axle should be equal and should never vary more than 1/16 in.

4. In mounting of wheels, new or second-hand, the standard wheel mounting

and check gauge should be used in the following manner:

After one wheel is pressed into position, place the stop A or B of the check gauge against the inside of the flange of the wheel, with the thinner flange with the corresponding tread stop C or D against the tread of the wheel. Press the other wheel on the axle, until opposite tread stop comes in contact with the tread of the corresponding gauge point E or F, in contact with the outside of the thicker flange.

Fig. 3. Wheels will be made with five small lugs cast on the hub. When taping the wheel a sufficient number of these lugs are to be cut off, allowing the proper number to remain to represent the tape size. Under no circumstances are any of these lugs to be cut off after the wheel is received from the foundry. These instructions are for new wheels coming from the foundry.

Maximum Flange Thickness Gauge for Cast Iron Wheels and Minimum Flange Thickness Gauge for Steel Tread Wheels

Minimum Flange Thickness Gauge for Cast Iron Wheels and Maximum Flange Thickness Gauge for Steel Tread Wheels

Figure 4.

5. The wheel seats on all axles must be turned to uniform diameter throughout the entire length of each wheel seat and must be smooth and free from ridges, so as to provide even bearing for the wheel fit throughout. The mounting of wheels on axles having the wheel fit tapered is not permissible. The wheels must also have a straight bore, with the exception of the chamfering, for not more than $\frac{3}{8}$ in. at the back hub face which may be allowed to facilitate application to axles.

6. Wheels should be mounted centrally on the axle. All axles should be center punched and some form of gauge be used to measure the location of the wheel

from this center punch mark. The central mounting of wheels is necessary, in order to secure proper running of the wheels and to prevent hot boxes.

7. Wheels should ordinarily be fitted to (word "used" eliminated) axles and not axles fitted to the wheels. It is usually unnecessary to turn the wheel seat of second-hand axles unless they are found a tapered fit.

8. In mounting, either new or second-hand wheels, care should be used to see that the wheels are of the same diameter. In the case of new wheels, the wheels should be taped, to check the tape size marking, and, in no case, should wheels of different tape sizes be applied to the same axle.

9. The alignment of axle lathe, the trueness of the centers and the jaws on boring mills should be checked frequently in order to ensure proper mounting of the wheels.

10. While the wheels are being bored the high spots on the flange should be marked, and, in mating, the high spots should be put opposite low spots on the mate wheels.

The following is the letter from the American Railway Engineering Association referred to in the report:—Contour of chilled car-wheels and throat clearance for frogs, guard rails and crossings. Referring to your letter of April 20, 1917, referring back to this association the question of widening of the flange of the wheels as suggested by the wheel manufacturers' committee. This topic has been under consideration by the American Railway Engineering Association Track Committee, and the following report is made thereon by this committee, and is transmitted to you for your information: "The track committee is willing to agree that the flanges can be increased, as recommended by the chilled car wheel people, without any serious detriment from a track standpoint, provided:

"1. That the wheels are in all cases accurately mounted to 3/16 in. additional spread gauge.

"2. That the allowable flange wear before wheels are removed be changed so that wheels will be removed when the flange is worn to within 3/16 in. of the present limit of removal.

"3. That more care be used in matching wheels on any given axle, on account of the reduction in play and the corresponding reduction in compensation from coning.

"4. That this flange width be confined to flanges of four-wheel freight car trucks.

"5. That this conclusion on the part of the track committee be not construed as an invitation to increase the axle load.

"With the above provisions, it is believed that it will be unnecessary to make any difference in the width of flangeway of frogs and crossings, or change the present method of track construction."

Locomotive Repair Costs.—C. A. Gauvreau, M.P. for Temiscouata, Que., asked in the House of Commons recently, "Is the government, or the Minister of Railways, aware that the amount for repairing a locomotive at the Canadian National Rys. shops at St. Malo, Quebec, is five times higher than it was at the Riviere-du-Loup shops, before the machines of the latter were transferred to St. Malo?" The Minister of Railways replied: "Neither the Government or the Minister of Railways has any such information."

Design and Maintenance of Locomotive Boilers.

The committee believes that it should at this time present as recommended practice of the association the arrangement of water glass and gauge cock as developed and approved by the committee on standards, at Washington, as illustrated by its drawings X-100, which is reproduced in this report.

Water Glass Fittings and Mountings.—The committee has received many suggestions for the improvement of the water glass and gauge cock. The results: One states that the reflex glass is better than tubular; another, that the tubular with a protector was found more satisfactory; another, that the tubular has less visibility but lower maintenance cost, and another that after trial the reflex glass was regarded as unsatisfactory. These tests in a general way appear to favor the tubular glass, although it is conceded that both types of glass have their adherents, and it is likely that local conditions have a great deal to do with this question. The committee thinks that no valid objection can be taken to either type of glass, where properly installed and maintained.

Regrinding of reflex glasses was reported as successful by 4 roads, with fair results by 2, and without success by 1.

The cost of regrinding was reported as varying from 7½c. to 45c. a glass. The principal thought to be extracted from the replies is that regrinding reflex glass is of questionable value.

Specifications for use in the purchase of gauge glasses were reported as not used by 30 roads and in use by 6; 4 of which use specification prepared by the New York Central Rd. The Pennsylvania Rd. also has a specification which has been adopted by the Union Pacific. A test of the various bullseye tubular and reflex glass by the digester and dipping methods will readily convince the observer of the necessity for such a specification, and the committee recommends that the committee on specifications for materials be requested to prepare a specification for gauge and water glasses for this association.

No trouble was reported from packing washers expanding, and clogging the passages. The precautions taken include care in packing, the use of a proper design of connections and repacking at regular intervals, if necessary.

Results of experience with water columns were reported as follows: One road regards the water column as superior to all other arrangements; 11 state that it furnishes true readings; 6 state that it is satisfactory; 5 regard it with disfavor, while 5 state that it is not satisfactory; one member stating that he believes it does not give true readings, and another states that there is a siphon action when gauge cocks are open, which causes the readings to vary as much as 5 or 6 in. from the true water level in the boiler. In commenting on the latter statement, it is the belief of the committee that some other unusual and undesirable condition existed, such as insufficient opening or proximity to a water tube.

With the same type of mounting, the committee believes that it should at this time present as recommended practice of the association the arrangement of water glass and gauge cock as developed and approved by the committee on standards, at Washington, as illustrated by its drawings X-100, which is reproduced in this report.

Beading Tools for Boiler Tubes or Flues.—From a comparison of the drawings of beading tools submitted, it appears that the essential detail of the tool is the throat or surface from which the bead is formed. In some cases the

tool is shown straight in the circumferential direction of the flue. The curve in the radial plane of the tube determines the radius of curvature and the size of the bead. In most cases a slightly larger radius for beading tools is used on superheater flues than on ordinary boiler tubes. In some cases the same tool is used for both classes of tubes. Some use a slightly different tool for maintenance of tubes than that used in resetting new work, thus making at least four different beading tools.

Arrangement of water glass and gauge cock, developed by committee on standards, Washington, D.C.

For beading the regular boiler tubes, the radius of curvature reported for heads varies from ¼ to 11/64 in. The radius of curvature of the throat of the tool in the other direction is usually made the same for boiler tubes and superheater flues, and varies from ½ to 2 in., although, as stated above, some were made straight. The committee thinks that there is no essential reason for all of this variation, except the variation in the size of the bead, which is a function of the thickness of the flue. Reports indicate that practically all beading tools are maintained to size by regular periodical checking with standard gauges.

In regard to the method of expanding flues, there is considerable variation in the details of operations. Most roads use both the flue roller and the prosser expander, and follow closely in details of tools and in practice the recommendations of the Locomotive Superheater Co.

The committee believes that it should at this time present as recommended practice of the association the arrangement of water glass and gauge cock as developed and approved by the committee on standards, at Washington, as illustrated by its drawings X-100, which is reproduced in this report.

Proper Location of Blow-Off Cocks in Locomotive Boilers, and Recommendations.

The number of blow-off cocks per locomotive varies from 1 to 10. Some have one cock on each side of firebox with one on the throat sheet at the water level. Some have only two blow-off cocks, one on each side of firebox, sometimes located near the center of the side,

and possibly more frequently near the front corners. Two roads reported the use of a single blow-off, located on one side at the back corner of firebox, and connected to a perforated pipe lying along the mud ring in the back water leg under the fire door. Quite a number report the use of one blow-off cock located over the mud ring at the center of the throat sheet. The number and location of blow-off cocks is determined to a considerable extent by the kind and quality of water used for boiler feed. Very few failures, or troubles, with any of the blow-off valves in use were reported. Some failures occasionally occur from pieces of staybolts lodging in the valve. Trouble from leaking has been ascribed to lack of care in maintenance.

To reduce the danger of obstruction from scale and sludge, a great many blow-off valves are provided with some form of strainer. One road places the valve about 12 in. above the mud ring, with the idea of leaving the scale in the water leg below the valve when blowing off.

The practice of blowing off on the road is employed only by roads where water conditions make such practice necessary. Of 42 roads reporting, 22 do not open the blow-off cock on the road, and 8 only occasionally, or in emergency. The recommended essentials in construction to permit blowing off and closing on the road are; a valve rigging designed to be

operated from the cab, or from a safe position on the running board, the valve should be located so as to be in view of the operator when blowing off, the valve should be designed so that the boiler pressure will assist in closing and hold it to its seat. An auxiliary valve should be provided that can be closed in case the main valve fails. There should be a strainer to prevent scale and other obstructions from lodging in the valve. The valve should open full, have straight full passage, and be rigid in construction and positive in action.

Combustion Chambers.—The number of engines reported with combustion chambers was 2,152, with chambers varying in length from 5 to 88 in. Of these about 300 are reported with back flue sheet welded in place while the others are riveted. Out of 23 roads reporting combustion chambers, 18 use a transverse weld across the crown sheet at the rear, but 6 of these express a preference for continuous crown sheets, and the intention to apply continuous crowns on renewals.

One road with about 200 combustion chambers, is of the opinion that the cost of their maintenance overbalances any fuel economy obtained from their use. One road states that the combustion chamber permits of construction of longer boilers than otherwise would be practical. Another, without definite tests, can see no advantage in the combustion chamber over those of other designs. Three believe that flue troubles are reduced from the application of combustion chambers, and 11 believe that fuel economy is obtained from their use.

Troubles reported from combustion chambers include: the collection of cinders in the chamber resulting in the warping of sheets. Six have reported trouble from cracks in the throat sheets, one reports trouble from broken stays on long combustion chambers, which was corrected by the application of flexible stays, another reported trouble in keeping the water space under the chamber free from mud, one is of the opinion that the trouble from combustion chamber increases the cost of maintenance, ten report no troubles in maintenance, and one reported some trouble due to faulty design, and one says the flue sheets are easier to

apply with combustion chambers. Six roads reported experience with bridge walls, three of which were of the opinion that they are desirable and three were not. One thinks a bridge wall should be used only when necessary.

One road is of the opinion that the combustion chamber is essential in aiding the distribution of weight on large engines, one that it has little effect, and 14 consider that it is not essential for that purpose. It is the committee's view that on large modern engines a combustion chamber is practically a necessity, as a function of proper wheel base and weight distribution, proper length of tubes and superheater equipment, and that the additional direct heating surface of the combustion chamber added to the firebox heating surface is of distinct value in aiding evaporation, and further that if the use of combustion chambers is attended by increased maintenance, this has now become a necessary evil attending the large locomotive, and that these so-called evils can be largely reduced by proper design and proportion.

The minimum distance from crown sheet to inside of wrapper sheet is given at 25 in. by one, 23½ in. by another, and 20 in. by one. Some vary the distance with the size of the boiler, two giving the rule of making it equal to 15% of the diameter of the largest course; four endorse the standards followed by the locomotive builders, and eight have no standard practice.

In regard to lowering the crown sheet at the expense of the heating surface, 14 do not consider it justifiable, while two roads do, if necessary to maintain the standard minimum, and four state that it would depend upon the design. The recommended minimum distance between bottom flues and waist sheet varies from 2 in. to 7 in., and one recommends 10 in., with combustion chamber.

To lessen the entering of water into the dry pipe, 14 report the use of no special devices for this purpose, while four use a special throttle with inlet at the top of dome.

Three roads report on the test of special devices for promoting water circulation in boilers, two of which gave unsatisfactory results, while one claims

economy by the use of the Harter circulator plate for promoting water circulation in boilers. The latter consists of a horizontal baffle plate, extending from side to side of boiler, and extending to approximately 2 ft. from the front flue sheet to within 6 in. of the back flue sheet. It also has a series of 2 in. tubes at intervals along each side to conduct steam formed beneath the baffle plate to the space above same. The Nicholson thermic syphon is also referred to as a water circulating device.

Conclusions and Recommendations.—A review of the replies received to this circular fails to reveal much that is new. Apparently little out of the ordinary is being planned at the present time to develop locomotive boiler design. Briefly, the results of the evidence obtained on the different subjects of this circular are as follows:

Tubular water glasses suitably protected against accidents appear to be more popular than the reflex. Regrinding of reflex water glasses appears to be of doubtful value.

Beading tools in use are quite similar, and could probably be easily standardized if such a result is considered desirable. The same is true of the prosper expanders. The only variations apparently necessary are those required to care for the different thicknesses of tube sheet and the different thicknesses and diameter of tubes.

The number and location of blow-off cocks required per locomotive boiler depends on the conditions of service, and the quality of feed water used.

Combustion chambers, in general, improve combustion, and promote fuel economy, also tend to lessen tube troubles, but are subject to troubles in maintenance unless care is taken in their design.

In regard to water and steam space above the crown sheet, no evidence was submitted that would warrant the drawing of any definite conclusions thereon.

Your committee recommends the presentation of a specification covering tubular and reflex water glasses, and bulls-eye glasses for lubricators.

The committee endorses water glasses and gauge cocks applied to modern boilers in accordance with method approved by committee on standards.

Installation, Operation, Care and Maintenance of Superheater Equipment for Locomotives.

The committee, of which H. R. Warkock, General Superintendent Motive Power, Chicago, Milwaukee & St. Paul Ry., was chairman, reported as follows: Before outlining the recommended practice on this subject, we will present an item that received some consideration at one of the committee meetings, and about which it was not considered that, on account of the contradictory results obtained, it should be included in the recommended practice. It is the matter of providing swabbing on piston rods. Very little concrete data were furnished the committee relative to the value of maintaining swabbing on piston rods, only one road reporting at length on this subject.

This road has been making a study of the value of swabbing on different types of piston-rod packings, the identity of which packings is withheld. The information that has been reported is shown in the accompanying table. On the 5 in. diameter rods considerably better service

was obtained from packings without swabs. This was true in the first three types of packings mentioned, but on the D packing there was a slight difference favorable to the swabbing. On the 3½ in. diameter rods the results are in support of the use of swabbing when we consider the results as a whole, but it will be noticed that exceptionally good service has been obtained from some of the packings without the use of swabbing. The results do not strongly support the opinion that piston-rod swabbing is essential to good service and, on account of the limited information that has been furnished along this line, your committee hesitates to make recommendation either for or against the use of swabbing.

Proposed recommended practice for installation, operation, care and maintenance of superheater equipment for locomotives.

Installation.—When parts are received from manufacturers they should be coat-

ed with some protective coating and stored under shelter until used. Care should be taken to see that the wooden protection blocks over ends of units and joints in headers are in place and used.

In the installation of the header the perfection of the joints should be thoroughly established, and care exercised to see that the header is placed in a level position before it is finally secured to the boiler. The same care with reference to the condition of the ball joints on the units and their seat in the header should be exercised. It is recommended that all ground joints should be bolted in place, metal to metal, without any medium other than a coating of oil to bring the joints to set without causing any undue friction.

Bolts, either heat treated or of special steel, should be employed in securing the units to the header.

Care should be exercised to see that the operating cylinder is properly located on the damper shaft so as to give the

the superheater for the locomotive.

If the superheater should be found to be defective, the engine man should be notified immediately. A special warning should be given to the driver that it is not to be used until it has been repaired. A special warning should also be given to the driver that it is not to be used until it has been repaired. A special warning should also be given to the driver that it is not to be used until it has been repaired.

After superheater header and units, piston and valves have been applied, the throttle valve should be blocked down and steam shut down back through steam chest and superheater units. When these parts become heated, tighten all joints.

When superheaters are installed some provision should be made for supplying

Superheater locomotives should be handled only when the air brakes are in operative condition.

It is essential that the oil supply for the lubrication of the valves and cylinders on a superheater locomotive should be constant, as the high temperature will cause serious damage to these parts if there is an interruption of their lubrication. When locomotives are not equipped with drifting valves the throttle should be slightly open when drifting, in order to avoid the suction of hot gases into the steam chests and cylinders. The position of the superheater damper can be determined by observing the position of the counterweight attached to the damper shaft, and the engineer should know that the damper is wide open when steam is being used.

Care and Maintenance. — At regular periods, and preferably when the monthly Federal inspections are made, there should be a thorough inspection of all parts which come in contact with the fire

bricks and flues.

The superheater should be inspected by the locomotive superintendent or his assistant and any defective superheaters should be replaced.

When the superheater units are removed from boiler they should be tested before being returned, with a cold water pressure of at least 20% in excess of nominal boiler pressure.

Unit bands and supports should be inspected whenever units are removed, and renewed if necessary, to ensure units always being properly supported and in correct relation to the flues.

When replacing superheater units, bolts should be renewed when there is any evidence of deterioration either in the condition of the thread or worn or pitted condition of the bolt. In all cases, a new nut should be applied and used as the pulling nut in setting the unit in place. An old nut can then be applied as a locking feature after the unit has been properly seated.

In regrounding the ball joint of the unit and the socket joint of the header, the original contour of these surfaces should be maintained.

After removal of the units, seats should be protected with a protecting coating and covered to prevent injury to seats, and entrance of foreign substances into unit pipes.

All dirt should be removed from the top of the header or T bolt slots before the superheater is reassembled.

Comparative merits of hydrostatic and force-feed lubrication for locomotive cylinders and steam chests and best method of application.—The committee gave this matter considerable study, and for the reason that there is no definite information available on which to base conclusions, is unable to make any recommendations at this time. The committee proposes, if continued, to further study the subject and outline a programme of tests to be followed on several different railways, the data obtained from these tests to furnish a basis for drawing some definite conclusions as to the relative value of hydrostatic and force-feed lubrication.

Economical diameter of piston valves of superheater locomotives, with recom-

Comparison of service of piston-rod packings as influenced by the use of swabbing on piston rods on superheater locomotives.

a limited amount of steam for use when drifting.

A limited number of pyrometers should be applied to superheater locomotives on each division for the educational value they would possess.

When superheaters are applied to existing equipment the front end door should be made sufficiently large to permit working to advantage in removing or applying units. It is recommended that the clear opening be 42 in. in diameter. This dimension can easily be arranged on new locomotives.

Operation.—Locomotives equipped with superheaters should, in general, be operated in the same manner as locomotives using saturated steam. The cylinder cocks should normally be open when the locomotive is standing under steam, and when the locomotive is started they should remain open until dry steam appears. In starting a superheater locomotive, the reverse lever should initially be placed for full travel of the valves, and at all times the water level in the boiler should be such that there will be no possibility of water being carried into the superheater. Water carried into the superheater will be evaporated into saturated steam or steam with a low degree of superheat, seriously affecting the economies available through proper operation; also water carried into the superheater may flash into steam after the throttle has been closed, placing the locomotive to that extent beyond the control of the locomotive man. Water carried into the superheater in quantities sufficient to reach the valves and cylinders will remove the lubrication from these parts and may result in knocking out cylinder heads or other damage.

or with the products of combustion. There should be a careful inspection for steam leaks, and the entire front end arrangement should be carefully examined.

When the locomotive receives this periodical inspection, each flue in the boiler must be thoroughly cleaned by blowing out with compressed air supplied through

Inner periphery of piston rod
Steam pipe and outer periphery
of piston rod by hydrogen
Sealing ring

a pipe of sufficient length to extend entirely through the flues; the flues also should be cleaned whenever necessary between the periods when the periodical inspections are made.

At the time of the periodical inspection, the superheater damper should be connected to the shop steam or air line, in order that the damper may be operated and the rigging checked for lost motion and the damper opening also checked; it should also be known that the damper piston travels through the full stroke and makes a steam-tight joint

in accordance with standard practice in connection with various cylinder diameters. This question has been studied at quite some length, and a number of roads reported to the committee relative to the dimensions of their leading locomotives for passenger, freight and switching services. Among the items reported were the valve diameter, the cylinder diameter, the stroke of the piston, diameter of drivers, area of steam ports, maximum cut-off, port opening at said maximum cut-off, and several other items tending to work out a relation between the valve

diameter and steam demand of the cylinders.

Among the variables encountered are the travel of the valve, the port openings, the cross sectional area of the various elements of the entire steam passageway

between the boiler and the cylinder. By giving this subject a little thought it will be appreciated that no one item can be fixed as long as there are any variables to take into consideration. If such items as port area and valve travel are

fixed, then the diameter of a valve can be ascertained that will supply the proper amount of steam for a certain piston displacement.

For the above reasons, we are unable to make recommendations at present.

Car Construction Committee Report.

The committee on car construction, of which W. F. Kiesel, Jr., Mechanical Engineer, Pennsylvania System, was chairman, and of which J. Coleman, Assistant to General Superintendent Motive Power and Car Departments, G.T.R., and W. J. Robider, General Master Car Builder, C.P.R., were members, reported on questions referred to the committee, suggesting changes to existing standards and practice, with reasons therefor, as follows:—

Pressed Steel Journal Boxes.—An opinion was requested whether the application of pressed steel journal boxes in repairs constituted wrong repairs.

Sheets 8 and 8-A, standard journal box for journal 5 by 9 in.; sheet 11, standard journal 6 x 11 in., contain notes per sheet 12-B, standard journal box for journal 6 by 11 in., contain notes permitting the use of cast iron, malleable iron, pressed steel, or cast steel, provided all the essential dimensions are adhered to. In the opinion of your com-

mittee is opposed to any consideration of the rebuilding of existing cars providing them with wide side doors, as the framing will be inadequate, unless entirely rebuilt, and does not recommend that all box cars should be built with wide doors to facilitate the loading of automobiles, for the reason that the cost of cooping such cars will be approximately twice the cost of cooping a car with 6-ft. doors. The failures of double doors in service will result in a very considerable increase in the number of cars out of service for defective doors. The first as well as the maintenance cost will be increased. For the reasons given above, the cars with wide side doors should be considered as special cars; only to be provided in such numbers as traffic conditions warrant. It is recommended that the association's executive committee endeavor to bring about very close co-operation between railways and manufacturers who ship raw materials or parts to automobile manufacturers, to

tom door guides from 1 to 1½ in., increasing the depth of bottom Z-bar to correspond.

It is the observation of the committee that car doors equipped with door fastenings, bottom Z-bar and door guides in accordance with, or equivalent to, the designs shown on sheet 30, are very seldom found defective as to these parts. There are, however, many thousands of cars in service which have no metal protection on the bottom edge of door, so that the corners of the door decay, and may readily be forced over the guides and opened at the back edge without breaking the seals. There are thousands of cars in service with hasp cored so that the metal is barely ⅜ in. thick, and with the door lock, consisting of a small malleable casting, fastened on the face of the wooden door stop with only two bolts and the door hasp fastener or staple, consisting of a small hook, fastened with only one bolt. It is the usual condition of cars equipped with this small staple

Figure 1.

mittee the bottom lugs on these boxes are an essential part of the box, both in strength and location, for all trucks which depend for their integrity on the proper holding power of the bottom tie bars, but that these bottom lugs are not an essential part of the box for trucks with cast steel or other sides frames which do not require the bottom tie bar.

Recommendations.—1. Add the following note to each sheet showing standard freight car journal boxes: When used with side frames of such design that the bottom tie bar is omitted or is not an essential strength member for carrying the load, the bottom box lugs may be omitted. When used in connection with other side frames, the bottom box lugs must be equivalent, both in location and strength, to those shown."

2. Add the completed notes to all other freight car journal box drawings.

Automobile Side Doors.—The committee's 1919 report made reference to a request of the General Motors Corporation that 10 ft. double side doors with movable post should be used on all box cars. This request has been renewed, and your committee has adopted the following resolution, and recommended sending it to the American Railroad Association's executive committee: "That the

end that orders for cars for such shipments shall specify that automobile cars are to be furnished to as great an extent as available. This arrangement will automatically return to the automobile manufacturers many automobile cars which are now being sent elsewhere."

Car Doors and Fixtures.—The subject of box car doors has been brought very prominently to the committee's attention, in many different phases, and demands immediate, decisive and constructive action by this association. A number of communications relating to defective door fastenings have been received, the causes for complaint being broken door fastenings, door guides fastened with lag screws, or fastened with bolts in such a way that guides could easily be removed.

Standard sheet 30, revised in 1914, made several changes from previous practice, as follows:

1. Increased the number of bolts holding door locks from 2 to 3, the third bolt being placed on the side of the car where it would support the lock against tipping.
2. Provided a wrought iron strap extension to the door hasp fastener, making it 24 in. over all.
3. Increased the height of lip of bot-

tom door guides from 1 to 1½ in., increasing the depth of bottom Z-bar to correspond.

In 1914 the committee revised several of the important details on sheet 30, standard box car, outside hung side door, and submitted specification for reinforcing doors on existing box cars, which specification, however, was not adopted and when again submitted in 1916 was again rejected. Your committee believes that the complaints previously referred to in this report are legitimate, and that it is our duty to remove the causes for them, and, if this is to be done, it is necessary that this association should adopt some form of specification governing the reinforcement of doors on existing cars. Your committee submits, for the third time, specification for this purpose, which has been amplified to include, among other things, a Z-bar at the bottom of the door. It is believed that most of Mr. Crawford's complaint in regard to opening of doors without breaking seals comes from cars having doors without bottom Z-bar protection, so that the doors decay at the corners and can readily be lifted over the bottom guides.

That portion of the loss which is made possible by the removal of bottom guides would be eliminated by the use of guides which cannot be removed when door is

Figure 2.

the committee is of the opinion that the design shown on sheet 30, in view of the greater weight and inertia of such doors; but, as the all-wood doors are comparatively few in number, the committee feels that it is preferable to have the present standard designs of the association cover wooden doors only, including steel framed doors covered by special designs. The design provided for the all-steel doors should interchange with the American design.

Figure 3.

mended on sheet 30, in view of the greater weight and inertia of such doors; but, as the all-wood doors are comparatively few in number, the committee feels that it is preferable to have the present standard designs of the association cover wooden doors only, including steel framed doors covered by special designs. The design provided for the all-steel doors should interchange with the American design.

Recommendations: The addition of notes in the present specification for complete new doors, as follows:

1. The adoption of the modifications of sheet 30, as described in this report.
2. Door starters should be provided to move the door 2 in. or more from its fully closed position.
3. Means shall be provided, where necessary, for forcing the door into its fully closed position.
4. Lumber used in the construction of doors shall not contain more than 5 per cent. moisture.
5. Door rollers must be carried on turned or cold rolled steel pins. Pins must be a driving fit in bracket or housing. Rollers must be drilled not more than 0.01 in. larger than pin, and outside of roller must be turned or ground so that it will be round and concentric with the bore.
6. If bottom supported door is used, the lap of the Z-bars, both top and bottom, shall be equivalent to bottom Z-bar, as shown on sheet 30. Rollers must conform to the above specification, and there shall be sufficient rollers provided so that door is always carried on at least two rollers.
7. That the specification for new car doors, adopted in 1915, and revised as above, should be extended to cover the application of complete new doors and door fixtures to existing cars.
8. The adoption of the following specifications for reinforcing existing car doors:
 8. Top of door shall be reinforced by a 1 1/2 in. x 1/2 in. Z-bar, or its equivalent, extending horizontally the full width of the door and not more than 12 in. from the top.
 9. Bottom of door must be reinforced by a 1 1/2 in. x 1/2 in. Z-bar, or its equivalent, applied as shown in sheet 30.
 10. Depending leg of Z-bar, or other construction which engages bottom guides, must not be less than 1 1/4 in.
 11. There shall be not less than 4 bot-

tom door guides on each side of car door, or the equivalent of the same or equivalent design.

12. If the fastener of door guide is that the removal of the door guide must be by the door guide must be pulled the door to be pulled away from the car, then the door guide must be of the design as shown on sheet 30, or its equivalent, for this particular location.

13. Door hasp fastener shall be at least 24 in. long, the same as, or equivalent to, the design on sheet 30, fastened with not less than five 3/8 in. carriage bolts, with nuts on inside of door, and bolts riveted over. Fastener shall be of such design that hasp cannot be removed without removing bolts from fastener.

14. Door locks shall be secured by not less than two 1/2 in. carriage bolts through the closed door stop, and one additional 1/2 in. bolt through the side of car, with all nuts on inside and bolts riveted over nuts.

15. Closed door stop shall have 2 or more lips extending at least 1 1/2 in. over the door, to support it against bulging outward. Where all-wood closed door stops are used, they should be strength-

Figure 4.

ened against splitting, and should have at least 2 metal reinforcement brackets similar to closed door stop casting on sheet 30.

16. Open door stops, if all-wood, should extend the full height of the door, and be strengthened against splitting.

17. Door starters shall be provided to move the door 2 in. or more from its fully closed position.

18. Means shall be provided, if necessary, for forcing the door into its fully closed position.

19. Lumber used in the construction of doors shall not contain more than 5% moisture.

20. Lap of door over door post shall not be less than 2 1/2 in.

21. The proper clearance must be provided, so that 3/8 in. bulging of side of car will not interfere with the free movement of the door.

22. Door rollers must be carried on turned or cold rolled steel pins. Pins must be a driving fit in bracket or housing. Rollers must be drilled not more than 0.01 in. larger than pin, and outside of roller must be turned or ground so that it will be round and concentric with the bore.

23. Door must be designed and vertical clearance provided, so that under any service conditions there will be no binding of the door on account of vertical interference of door guides or track.

24. If the bottom supported door is used, the lap of the Z-bars, both top and bottom, shall be equivalent to bottom Z-bar, as shown on sheet 30. Rollers must conform to the above specification, and there shall be sufficient rollers provided so that door is always carried on at least 2 rollers.

Fastening of End Doors. Resolved, that the Association of Railway Car Builders, in cooperation with the R. S. M. Association, the Police Section, recommending the fastening of end doors on the inside of the door before loading, and removal of all fastening from doors that are to be loaded by 1911, the American Railway Association adopted as recommended practice, that end doors must be constructed that, when closed, they lock automatically from the inside of the car, thus avoiding the necessity of taking seal records. Sheet 30 shows a design of inside fastening which is not automatic, and your committee recommends that recommended practice adopted in 1913 should be advanced to standard, and that the design of inside latch shown on sheet F should be removed, and a note substituted that the fastening should lock the door automatically from the inside of the car. Your committee has made this recommendation to the executive committee, and has advised Mr. Trenholm accordingly.

Revision of Manual.—Your committee has modified certain details on sheet 30, and has added others for your consideration, as follows:

(a) Door hasp has been strengthened by the addition of ribs, and certain unimportant dimensions have been modified, which will greatly increase its strength. The new design is entirely interchangeable with the former design. (See fig. 2.)

(b) The bottom door guide has been considerably strengthened by the addi-

Figure 5.

tion of ribs, and two designs have been shown, one for use where the guide is riveted directly to steel side sills, and the other, which is extended downward to provide more bearing surface for use when bolted against wooden sheathing. (See figs. 3 and 4.) A note has been added that door guide bolts should be applied with nuts on the inside of the sill, and bolts thoroughly riveted over the nuts.

(c) A design of burglar proof bottom door guide has been added, in which the guide is fastened with carriage bolts, with the heads inside, and the nuts applied with a socket wrench. When the door is in place the bottom Z-bar covers up the nuts so that the guide cannot be removed. This design has another advantage in having the fastening bolts directly behind the point where the strain

comes on the guide so that the tendency to pull guides downward and away from the side of the car will be much less than with designs where the bolts are lower down. (See fig. 1.)

(d) The construction of the door itself has been changed to eliminate four diagonal braces and add one more horizontal batten, the object being to reduce the

sill as construction will permit. After the sheathing has been thus thoroughly secured the space between the ends of floor boards and sheathing shall be carefully filled with a plastic compound which does not become brittle in cold weather. It should then be further protected with triangular grain strips, not less than 3 in. by 3 in.

Fig. 6. Tabulation of Axles.

cost of constructing the door, and at the same time provided greater stiffness and strength. (See fig. 5.)

(e) The section at C-D has been modified to show a distance of 1 in. from the face of the sheathing to the edge of floor at doorway, to permit the use of a spark strip at the back of the door. A detail has been added to show one form of spark strip; the door clearance provided will permit the use of other forms.

(f) The cross section at C-D, also the side elevation of the complete door, have been modified to show the additional of 5/32 in. steel plates, inside and outside, for the purpose of supporting the bottom Z-bar.

(g) The cross section through closed door post has been modified to reduce the width of the wooden door stop to 3 in. and increase the lap of the door over the door post to 2 1/2 in. to provide better waterproofing.

Prevention of Grain Leaks and Retention of Grain in Pockets Behind Lining of Box Car.—A number of communications were submitted, including statistics showing considerable loss, both on account of grain leaks between side sills and loose siding boards, and on account of pockets back of lining, which cannot be emptied without cutting the lining.

Recommendation: Section 10, of circular 8, issued by the Assistant Director, Division of Operation, U.S. Railroad Administration, modified as indicated in the text below, should be made standard:—"Where sheathing is nailed to the outside of sills it should be further held in place by angle iron, channel iron, or strap, securely bolted in place to ensure sheathing being held tight against side sill, to prevent grain leaks, bolts to have single nuts and be riveted over. The spacing of bolts shall not exceed 12 in. The preferable construction is to use dropper bar D-24, Jones & Laughlin catalogue, 0.84 lb. per ft. These reinforcing bars shall be located as near top of side

"When wooden lining is used it should have a space between floor and bottom of lining of about 2 1/2 in. Where diagonal braces meet posts, thereby forming pockets, opening shall be provided in the lining of sufficient size to permit free passage of any grain that may possibly lodge behind wooden side linings. The ver-

Association, at Milwaukee, Sept., 1918.

Brine Dripping on Rail, Etc.—Reports presented to the American Railway Engineering Association, on injury to signal equipment, bridges and tracks, due to brine drippings from refrigerator cars, indicate a necessity for definite action. The following rules, which are now recommended practice, should be advanced to standard:

1. All salt water drippings should be retained in the ice tanks and drained off at icing stations.

2. The total capacity of drain openings should not exceed the capacity of traps, and the capacity of both drains and traps should be sufficient to release all drippings within the time limit of icing the train.

3. The mechanism adopted for handling drain valves should be simple and positive, and so designed as to ensure closing the valves before hatch plugs can be returned to their places.

4. Salt drippings should be conducted from ice tanks through the regular traps and drain pipes.

5. Paragraph F, of Interchange Rule 3, has been extended from time to time. It is recommended that no further extension be made, and that this rule be enforced beginning October 1, 1920.

After affirmative action on the above, refrigerator car owners should be advised.

Minor Adjustments of Standards.—On account of additions to standards at intervals of time by different committees, some of the present standards differ slightly in unimportant dimensions. It is, therefore, deemed advisable to establish uniformity.

Breakage of lugs on journal bearings has been reported, and strengthening of same has been suggested.

Journal box lids now standard are claimed to be unsatisfactory, and request was made to improve same.

Fig. 7. Tabulation of Journal Bearings.

tical dimension of the opening for this free passageway above the point of pocket, formed by the intersection between post and brace, shall be about 2 in."

Note.—These recommendations are based on resolutions adopted by a joint conference of terminal grain weighmasters and committee on uniform grain weighing, of the National Scale Men's

Present axle capacities increase by steps, which can be made more uniform by increasing the capacity of the axle with 5 1/2 x 10 in. journals from 38,000 to 40,000 lb., the present dimensions being such that the allowable stresses will not be exceeded. It was suggested to add another axle with 6 1/2 x 12 in. journals, capacity 60,000 lb. and bearing, wedge and box to suit.

While committee members had the opportunity to see the axle and journal, they were not able to see the axle and journal, but they have received permission to see the axle and journal.

Values for axle and journal at center of axle and at wheel fit 24 in. from center

Fig. 8. Tabulation of Journal Wedges.

so from the American Railroad Association. When asking permission for this increased marking they shall present evidence that the trucks and cars are of a strength commensurate with the proposed increase in the load of the axle. In no case shall cars be changed by other than the owner.

To avoid the usual confusion in nomenclature of axles, boxes, trucks and cars, it is thought advisable to classify the axles according to their letter, and to use this as a classification basis for boxes and contained parts also for trucks and cars.

The committee on axles, in their splendid report of 1896, did not specifically cover the locus of the points of application of load for calculating the part of axle between wheel seats. In 1901 this was referred to in connection with a report on chemical composition of all steel car axles.

Frames above the journals of the same axle cannot spread more than 1 in., therefore, the calculations for diameters of axle sections between wheel fits should be based on length between center of journals plus 1 in.

The following may be considered a continuation of the 1896 axle report, the only addition being the assumed distance between load application:

$$\text{Allowable stress} = \frac{22,000}{1.26} = 17,460 \text{ lb.}$$

$$\text{Required diameter} = \sqrt{\frac{W \times L}{M \times S}} = \sqrt{\frac{W \times L}{M \times S}}$$

As given in the 1896 Proceedings. Values for standard axles, based on distance between load applications of L (distance between centers of journals) plus 1 in.

Axle	Capacity lb.	L, 1 in.
A	22,000	76 in.
B	31,000	76 in.
C	40,000	76 in.
D	50,000	76 in.
E	60,000	76 in.

and arm of force (X) on which these values are based.

Axle	Near center.			Inside of collar		At wheel fit.	
	N	R	X	R	X	R	X
A	36 1/2 in.	7.85014	15 1/2 in.	11.91714	14 in.	11.91714	14 in.

Brake Power and Brake Beams.—An important question in connection with car design is necessary brake power. The present standard is that the brake power shall be 60% of the light weight of the car based on 50 lb. unit cylinder pressure. Cars in which the ratio of light weight to loaded weight is very low will then have a very low brake power, when cars are fully loaded. Cars in which this ratio is high have a relatively high brake power when cars are fully loaded. It is, therefore, deemed advisable to make a change, and to base the total brake power of the car on 40% of the sum of the light weight plus 1/4 of the maximum

allowable load, and in cases that of 50 lb. unit cylinder pressure. This will serve to fairly equalize the brake power on freight cars with average loads. The possible maximum per cent of brake power for the lightest cars would be 75% of the light weight of car, based on 50 lb. unit cylinder pressure. The formulae for brake power will then be as follows:

$$0.40 \left(\frac{W + w}{4} \right) = 0.1W + 0.3w$$

but not more than 0.75w.

in which W=Loaded weight of car, maximum,

w=Empty weight of car,

W-w=Maximum allowable load.

As this is based on 50 lb. air pressure per sq. in. in the cylinder, and the maximum unit pressure may be from 85 to 90 lb. the maximum brake pressure will be 1.75 (0.1W+0.3w), which, divided by the number of brake beams, will be the required deflection load per beam.

The brake beam set load, which should be somewhat within the elastic limit of the beam, should be approximately 1% of this amount.

Recommendations: 1. That the brake power on cars be as follows:

W=Loaded car weight, maximum,

w=Empty car weight,

N=Number of brake beams on the car.

Required brake power = 0.1W+0.3w,

which, for cars having four and six wheel trucks, will be:

Axle	BRAKE POWER	
	Four-wheel trucks	Six-wheel trucks
C	13,200—3w	19,800—3w
D	16,000—3w	24,000—3w
E	21,000—3w	31,500—3w
F	25,000—3w	37,500—3w

2. That the brake beam deflection load be— $\frac{1.75}{N} (0.1W + 0.3w)$.

3. That the brake beam set load be— $\frac{3}{N} (0.1W + 0.3w)$.

If the above is adopted the 12,000 lb. beam will be required as follows:

Car class	Car weight
4 B	All cars.
4 C	Less than 50,000 lb.
4 D	Less than 40,000 lb.

The 15,000 lb. beam will be required as follows:

Car class	Car weight
4 C	50,000 lb. and over.
4 D	40,000 lb. to 60,000 lb.
4 E	Less than 45,000 lb.

4. That the 6,500 lb. capacity beam be dropped from the standards and that the 12,000 lb. capacity beam be denominated as the no. 1 beam, and that the interchange rules should be amended to conform to the foregoing.

Figure 9.

Recommendations:—1. Make radii of fillets for all axles $\frac{1}{8}$ in. on journals at collar, and $\frac{3}{4}$ in. on journals at dust guard seat, on dust guard seat at wheel seat, and on wheel seat at collar. (See tabulation of axles, fig. 6.)

2. Increase all lugs on journal bearings, as shown in columns 12 and 13 in tabulation of bearings. (See tabulation of journal bearings, fig. 7.)

3. Make slight changes in dimensions, as shown by asterisks in tabulation of bearings.

Note.—Recommendations 1, 2 and 3 do not interfere with interchangeability.

4. Adopt classification of axles by letters A, B, C, etc., as indicated in tables.

5. Adopt same classification for boxes and contained parts. (See tabulation of journal wedges, fig. 8.)

6. Adopt classification 2A, 2B, 2C, etc., for 2-axle trucks, and 3A, 3B, 3C, etc., for 3-axle trucks, the letter designating the axle used.

7. Adopt classification 4A, 4B, 4C, etc., and 6A, 6B, 6C, etc., for cars, the letters designating the axle used, and the figures designating the number of axles under the car.

8. Raise the capacity of the D axle to 40,000 lb. without changing dimensions.

No existing cars shall be marked up in capacity on account of this increase in allowable axle load until it has been determined that the body and trucks are safe under such a load.

9. Add axle F, journal box F, journal bearing F, wedge F and dust guard F, as given in tabulations. (See figs. 6, 7, 8 and 9.)

10. Make distance from center of dust guard to top such that when in place with box, bearing, and wedge of full standard dimensions, the top of dust guard is $\frac{1}{8}$ in. below the top of dust guard cavity in box; the boxes not now provided with an offset at dust guard

opening to hold wedge to be so provided. Increase width of dust guard cavity in the $3\frac{3}{4}$ in. by 7 in. box to $6\frac{1}{2}$ in., and in the $4\frac{1}{2}$ in. by 8 in. box to 8 in.

11. The committee's attention was called to the fact that the standard passenger car pedestals have shown weakness and a large number of them break, indicating a necessity for redesign.

NOTE.—Section of Box may be made either circular or square below the center line, provided all the essential dimensions are adhered to.

When Journal Box is made of Malleable Iron, reduction in thickness of metal and coring to lighten weight is permissible, provided all the essential dimensions, which affect interchangeability and the proper fitting of contained parts are adhered to.

If the method of molding does not permit of placing the letters A, R, A. on the side of the Journal Box, they may be placed on the top between hinge-lug and the arch bar seat.

Recommendations:—1. That sheets 21 and 22 of the book of standard drawings showing standard passenger car pedestals for $3\frac{3}{4}$ in. x 7 in., $4\frac{1}{2}$ x 8 in. and 5 x 9 in. journals be eliminated.

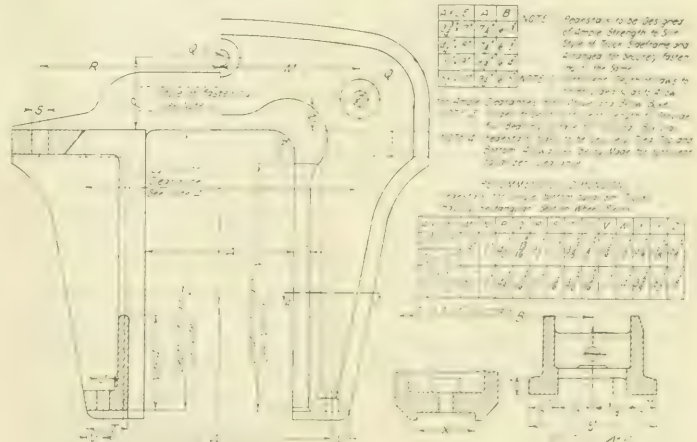

Figure 10.

2. That pedestals shown in fig. 10 be substituted for these pedestals for use on trucks with single bottom equalizers.

12. The present standard journal box lids and bolts should be withdrawn and the following specification for lids substituted:

1. Scope.—This specification covers all lids for use on A. R. A. standard journal boxes.

2. Material.—Lids may be made of malleable iron or pressed steel. Ma-

terial to be not less than $\frac{3}{32}$ in. thick. 3. Functions.—(a) Lid must protect the journal by preventing the entrance into the journal box of dust, sand, fine coal, or other foreign matter.

(b) Lid should prevent oil from working out of the end of the journal box.

4. Construction.—(a) Lid to be attached to the journal box by a fastening so arranged that it can be easily opened and closed, but it must retain itself in a fully open position without danger of closing.

(b) When closed, the tension between the lid and fastening must be sufficient to prevent vibration of lid or any parts thereof.

(c) Lids of the hinged type to have the hinge located at the top of the journal box, so arranged that the lid will open outward and upward to an angle of 90 deg. with the lid face of the journal box. Lids of other types should provide an equivalent opening.

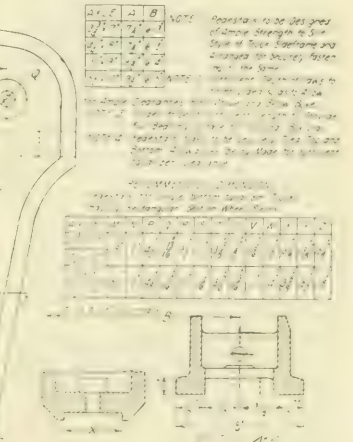

(d) A tight contact between the lid and the face of the journal box must be maintained in order to meet the requirements as stated under item 3. For journal boxes used on passenger train equipment a machined fit is recommended.

(e) A ledge, flange, or other suitable arrangement, should be provided on the inside of the lid, particularly along the lower part, so that oil thrown against the inside face will drain back into the box.

(f) Springs should be of the coiled type when possible.

(g) The eyes of the lid must be interchangeably closed.

13. For calculating the diameters of axles between wheel seats, assume that the loads take effect $\frac{1}{2}$ in. from center of journal at each end of axle, making the distance between assumed points of load application 1 in. more than the distance between centers of journals.

14. For calculating the diameters of axles outside of wheel seats, assume a lever arm from the section under consideration to the center of journal, plus one-fourth of the standard journal diameter, and allow a unit stress of 10,500 lb. per sq. in. to determine the diameter for minimum road limit.

15. The committee on standard and recommended practice suggested revision of center plate drawings to show contour only, and recommend definitely spe-

If the carbon content of steel the center plate may be more.

It is recommended that the steel used in the construction of the center plate be of a grade which will permit the use of the standard and advance sheet F, which permits of greatest practice to be used.

If the center plate of steel is used, it is recommended that the steel used be of a grade which will permit the use of the standard and advance sheet F, which permits of greatest practice to be used.

Center plates shall be made of steel of a grade which will permit the use of the standard and advance sheet F, which permits of greatest practice to be used.

Quality of Steel. Specifications for materials used in car construction are varied from time to time. It has been found that the tendency to lower the requirements for elastic limit and elongation for steel have endangered details which have been based on certain stresses, also the close adherence to requirements for ultimate strength and chemistry has caused rejection of material which was superior to material acceptable under the specifications. It is suggested that the basic requirements which will ensure meeting unit stresses allowed in the past be fixed by this committee, that unnecessary restrictions be eliminated, and that the committee on specifications and tests embody these basic requirements in a specification.

Unit stresses commonly allowed for detail parts of cars made of steel, and which are subject to variable loads and occasional light shock, are 12,500 and 16,000 lb. per sq. in. The minimum elastic limit should be double this amount, and the product of elastic limit and elongation should not be less than 50 times the allowable stress. As the test piece usually shows better physical properties than the casting or forging, the requirement for product of elastic limit and elongation should be increased by 50,000, making it 50 times the allowable stress plus 50,000. The reduction of area is considered secondary in importance. It should be 75 times the allowable stress. An addition of 50,000 for variation between test piece and the casting or forging may be made, but is considered unnecessary. The ultimate strength, content of carbon, manganese and silicon should be left optional, as the other requirements control these sufficiently and the restrictions used in specifications heretofore have caused rejection of good serviceable material.

The specifications should clearly circumscribe annealing and methods of making tests, the latter to ensure uniformly comparative results from different laboratories. The resulting specifications should be made optional for at least one year, to permit manufacturers to adjust themselves thereto.

Recommendation:—Provide specifications for all forged and cast steel used in car construction of two grades, based on fundamental requirements given below:

Grade of steel	A	B
Minimum elastic limit (psi)	20,000	25,000
Product of elastic limit and elongation	700,000	800,000
Product of ultimate tensile and elongation of test	900,000	1,000,000

The ultimate strength, carbon, manganese and silicon shall be optional. Sulphur shall not exceed 0.05%. Phosphorus shall not exceed 0.05%. The elastic limit shall be determined by extensometer. The elongation shall be measured in a length of 2 in.

Grade A steel shall be annealed if the carbon content exceeds 0.30%, or if the manganese content exceeds 0.75%. Grade B steel shall be annealed if the carbon

content exceeds 0.25%, or if the manganese exceeds 0.05%.

Pieces of irregular shape, and of less carbon or manganese content, where shrinkage or other internal strains may be suspected, should also be annealed. Unimportant details may be accepted on surface inspection only.

Fundamentals of Design.—In order to prepare the way for the design and adoption of additional standards, it is advisable to confirm or change existing fundamentals and add thereto. The existing fundamentals, both actual and implied, have been discussed in committee. Those recommended for change and those which are added are presented below with reasons for the recommendations. All others given in the list, under the heading of recommendations, are now either standard or recommended practice and should be affirmed as standard. The committee can then proceed with the consideration of standard detail designs.

Height from Rail to Center Plate Bearing Surface.—This subject was discussed at length in a number of meetings. Consideration was given to the standard height of 27½ in. and to the U. S. R. A. height of 25½ in. The former height would result in a distance from bottom of sills to center line of draft gear of about 4 in., an ideal condition for sills 10 in. deep, and generally satisfactory for sills 12 in. deep. The latter height is ideal for sills 14 or 15 in. deep, and moderately satisfactory for sills 12 in. deep. The reason for its use was apparently to eliminate bottom angles in the center sill construction, and to somewhat speed up production. However, the elimination of the bottom angles, in connection with the 12 in. channel sills, results in an unbalanced section. A balanced section of the same area will have about 20% greater resisting moment.

With a height of 26½ in. from rail to center plate bearing face, 12 in. center sills can be arranged as a balanced section, and the preferable relation of center line of draft to neutral axis of center sill construction can be maintained, making this the ideal arrangement. A center sill construction with 10 in. channels can also be made generally satisfactory. Little difficulty will be experienced to adjust existing equipment of either 27½ in. or 25½ in. height to center plate bearing surface to the proposed height of 26½ in. The height from rail to top of truck side bearing will necessarily have to be adjusted to suit, to maintain the relative distance of ¾ in. from center plate bearing face to top of side bearing.

Distance Between Centers of Side Bearings.—The present rules allow various distances, and it is desirable to concentrate on one distance. The committee has selected a distance of 50 in. between centers of side bearings.

Strength Requirements for Sills and Draft Attachments.—In 1913 this committee adopted a basic figure for strength of draft attachments of 10 sq. in. of steel equivalent to grade A material for tension. This strength requirement was somewhat in excess of the strength of the coupler used at that time. A stronger coupler, type D, has now been adopted, and the strength value of which is equivalent to at least 12 sq. in. of steel of the same material. In order to meet the increased requirements, and compare closely with the increased strength of the coupler, it is desirable to increase the strength requirements for draft gear attachments and center sills by about

20%. The formulae on which the former requirements were based are as follows:

Unit stress	1	X
Ratio	1	X
End load	A	SM
A = Area of section in square inches.		
X = Eccentricity of load in inches.		
SM = Section modulus.		

For draft gear and draft attachments:

- The minimum tension area = T.
- The minimum shear area = 1.25 T.
- The minimum bearing area = 1.563 T.

- The maximum ratio R = —

For center sills between rear followers:

- The minimum tension area = 2.5 T.
- The minimum shear area = 3.125 T.
- The minimum bearing area = 1.563 T.

- The maximum ratio R = —

Our recommendation is to increase the area T from 10 to 12 sq. in. of grade A steel, or an equivalent area of other grades of steel, and change the other values approximately in accord therewith, which will be given in the recommendations.

Distance from Center of Bolster to Face of End Sill Casting.—In order to have uniform construction for draft and draft attachments, it is important that this dimension should be definitely fixed. The committee has selected this distance as 5 ft., which seems to meet all necessary requirements for cars with four-wheel trucks.

Draft Gear Travel, Coupler Horn Clearance, and Coupler Side Clearance.—Many cars of a length of 40 ft. and more are deficient in side clearance for couplers, and we believe it imperative that the side clearance be increased. Experience with cars with the draft gear located between center sills indicates that it is undesirable to permit the horn of the coupler to strike the end sill, and that all of the strain should be carried through the rear follower into the center sills at a distance of about 1 in. below the neutral axis of the center sill construction. Until the committee on couplers and draft gear has had an opportunity to demonstrate by test that some other travel is preferable, we recommend adopting a draft gear travel with draft gear in place on the car of 2½ in. The coupler horn clearance should be ¼ in. more, or 3 in. The total coupler side clearance should be increased from 2½ in. to 3 in. In this connection the minimum draft gear capacity of 150,000 lb. is recommended.

Recommendations:—The values given in the tabulation below should be approved as standard fundamentals for future design:

- Height from rail to center of brake shoe face . . . 17 in.
- Height from rail to brake beam hanger . . . 17 in.
- Height from rail to bottom of truck springs . . . 20 in.
- Height from rail to top of springs . . . 24 in.
- Height from rail to center plate bearing surface . . . 26½ in.
- Height from rail to top of truck side bearing . . . 27½ in.
- Distance from center to center of side bearing . . . 50 in.
- Average clearance per side bearing per truck:
 - Minimum . . . 3 in.
 - Maximum . . . 3.16 in.
- Height from rail to floor of box car . . . 42 in.
- Height from rail to floor of refrigerator car . . . 48 in.
- Distance between center sills . . . 12½ in.
- Area of center sill construction between rear followers (minimum) . . . 30 sq. in.
- Distance from center of truck to end sill face for cars with double trucks . . . 5 ft. 0 in.

14. Draft gear travel (on cars)	2 1/2 in.
15. Coupler horn clearance	3 in.
16. Minimum draft gear capacity	15,000 lb.
17. Coupler shank side clearance, total	3 in.
18. Draft gear follower thickness	2 1/2 in.
19. Ratio of unit stress to end load (maximum) for center sills05
20. Ratio of unit stress to end load (maximum) for draft attachments125
21. For draft attachments the area of steel in square inches equivalent to the tension required strength values is:	
Minimum compression (square inches, grade A steel)	12
22. For shear (sq. in.)	15
Inside dimensions of box cars:	
Length	40 1/2 ft.
23. Width	8 1/2 ft.
24. Height	8 1/2 ft.
25. Hardwood, when used, must have strength values for times those given for steel.	

Minor Car Construction Matters.—Various enquiries on the subject indicate the necessity of adopting fixed rules for repairs to existing box car ends.

Recommendation:—1. When ends of cars are broken they should be replaced with ends specified for new cars.

2. The rules for box car ends should be modified by eliminating paragraphs 5 and 6 permitting hard wood or yellow pine posts and braces, thereby making use of steel posts and braces obligatory.

The revised rules are as follows:

Box Car End, Design and Strength.—New cars should have corrugated steel ends, or steel plate ends 3/4 in. thick, reinforced between corner posts with the equivalent of either two vertical steel braces with a total section modulus of not less than 9; or one vertical and two diagonal steel braces with a total section modulus of not less than 10; or three horizontal steel braces with a total section modulus of not less than 10.

New cars may have the following alternative arrangement: Three or more steel braces, two of which run diagonally, with a total section modulus of not less than 12 1/2, and wood lining 1 1/4 in. thick.

To concentrate strength at a point near floor line on vertical center line of car, diagonal braces should extend from the center sills to the side plates, and not from the bottom corner to the ridge.

The attachments for the braces and the members to which they are attached must be sufficiently strong to realize the full strength of the braces.

Lining at car ends should be supported at intervals not greater than 30 times the thickness.

Two 4 by 3 in. Z-bars, 12.4 lb. per ft. have a total section modulus of 9.34.

Two 5 in. I-beams, 9.75 lb. per ft. have a total section modulus of 9.6.

Three 4 in. I-beams, 9.5 lb. per ft. have a total section modulus of 10.2.

Three 3 in. Z-bars, 14.2 lb. per ft. have a total section modulus of 10.3.

The corrugated ends referred to may be made of one or more pieces. If made of one piece it should not be less than 3/4 in. thick. If made of more than one piece the lower third must be not less than 3/4 in. thick, and the remainder should be not less than 3/16 in. thick.

Hopper and Gondola Car Cross Ties.—Request was made for specification of the proper number of cross ties to be used in hopper gondola coal cars.

Recommendations:—The distance between cross ties or braces in hopper or high side gondola cars shall be less than 20 times the width of the top chord of car side. Consideration should be given to providing necessary space for use of clam shell buckets in loading or unloading. If the dimensions for distance between cross ties is less than the space required for operating clam shell buckets, the ties shall be alternated with braces extending from the center ridge or floor

to a location corresponding with the tie anchorage.

Thickness of Splice Plates for Center Sills When Webs or Sills are More than One-half Inch Thick.—Attention was directed to the use of center sills on some tank cars with webs 3/4 in. thick, and that the rules for splicing of steel center sills would require butt plates of the same thickness, which is inconsistent, and would interfere with proper riveting. Recommendation: That paragraph 2, of the rules for splicing steel center sills be modified as follows: "The splice for

center sills, except as otherwise herein stated, to be located not less than 7 in. from either side of the body bolster, consisting of butt joints. The butt joints to be reinforced by plates on both sides to be not less than twice the length of the protruding end, but not exceeding 24 in. and not less than same thickness of web plate, but not more than 1/2 in. thick, with the one on the flange side of channel to include flanges, while the outside plate should only cover the web. The rivets to be spaced as shown on figs. A and B, sheet 28.

Locomotive Terminal Design and Operation.

The committee, of which C. E. Fuller, Superintendent Motive Power, Union Pacific Rd., was chairman, reported as follows:—On Feb. 20, 1920, the committee issued a circular containing 20 questions and a request that all replies be in the chairman's office by Mar. 15. Up to May 1 eighteen roads responded to the questionnaire. However, the information received from the majority responding was of such a nature that the committee feels that no general conclusions or recommendations can be presented and, therefore, begs to offer the following as a progress report:

The length and capacity of ash pits is determined by the maximum number of engines handled in 24 hours.

One road recommends an ash pit of suitable size to take care of 50% more power than is being handled, so that if the pit conveyor is put out of commission temporarily, the ash pit will be of sufficient capacity to hold cinders until repairs are made.

Two roads recommend two large water cinder pits emptied by locomotive cranes, with grab buckets operated from a separate track, with pits so arranged that cinders can be flushed into cinder pit from the dump pit with water.

Three roads favor a depressed track, for holding cinder cars, located along the side of pits, in order that cinders may be easily shoveled into the cars.

The capacity of the coal chute depends upon the maximum number of locomotives to be coaled in 24 hours.

Seven roads specify coal chute, sand house and ash pit to be located between inbound and outbound tracks from turntable, and as close to locomotive house as trackage will permit.

Five roads prefer sanding facilities at the coal chute direct.

One road recommends the coal chute to be equipped with automatic sprinkler system, and with crusher and scales.

One road reports coal chute located about 200 ft. from the ash pits; while it is desirable, according to two other roads, to have ash pit adjacent to, but not immediately under, coal chute, so that men from either one can help out in rush periods, and the fumes from wet ashes and the ashes themselves will not corrode the steel work of coal chute.

One road recommends, for a cold country, locomotive house, turntable, ash pit, etc., all under one roof, with coal chute close by, and incoming locomotive to be left by crew before coming to the coal chute.

The problem of coal chute and ash pit organization depends materially on the amount of power handled, as well as the question of locomotive house organization and the character of repairs to be made; in other words, it is based on the size of the terminal and the business handled.

Five roads report a foreman in charge of coal chute and ash pit, whose duties are to see that all locomotives are properly sanded, coal and water furnished, and fires cleaned.

Four roads recommend locomotive house foreman's supervision of ash pit and coal chute gang leaders, fire cleaners, ash shovelers, helpers, etc.

There is not sufficient data available upon which to base a recommendation for a definite system of organization. Regarding locomotive house operation as a whole, while only four roads replied on this subject, three agree that there has been a great deal of neglect in the proper design of locomotive houses.

Adequate equipment with as many labor-saving devices as possible will repay the expense of installation in a short time.

Locomotive houses should be equipped with proper ventilation to force out smoke and gases.

Eleven roads recommend coal stoves as the best method of drying sand, while six prefer steam coils. It is pointed out that drying by stove burns off organic matters and renders the sand more gritty.

A large majority of roads replying prefer the elevation of sand by compressed air, while a small number prefer the chain and bucket elevator operated by motor. Conveying sand to locomotives by gravity appears to be universal practice.

The recommended distance between pilot and outer wall of locomotive house varies from 8 to 15 ft., while the distance between face of coupler on tender and wall varies from 5 to 10 ft. The distance from locomotive to side wall varies from 5 to 10 ft. The ideal arrangement would permit sufficient space between walls, with tank cut loose, to permit the removal of engine truck and both tender trucks at the same time.

With reference to locomotive house door clearance, the replies cover doors which vary from 12 ft. 8 in. to 14 ft. wide, and from 14 ft. to 18 ft. high. One road strongly recommends steel framed doors on locomotive houses.

Nine roads recommend steam as the best method of heating locomotive houses, while five prefer hot air, and two prefer coal stoves. Others specify steam heat for small locomotive houses and hot air for large ones.

The preference in location for steam heat is to place the coils in the pits, properly protected from damage from heavy parts falling from above. It is essential for the coils to set in from the side and be protected so that water drippings from thawing ice and snow on engine will not run on to the pipes. Eight out of nine roads recommending steam heat favor steam coils on outer wall, while five roads report additional coils on in-

Regarding material for locomotive

As to locomotive house lighting, there seems to be about an evenly divided preference for reflector lights on the walls, and lights placed between pits. All, however, appear in favor of sufficient extension plugs on post for working in pits and fire boxes. In lighting outside grounds, all roads appear to favor flood

The time available has been entirely too short to prepare a comprehensive report on such a large, important subject, and your committee desires to offer the above as a progress report with a continuation of the committee if the association feels that this is desirable.

What is the tonnage rating on type of locomotives in territory where operated? Is there any difference in the tonnage rating on hand-fired and stoker-fired locomotives of the same type in the same territory? Do you load the stoker-fired locomotives heavier than the hand-fired? If not, why? With the increased tonnage, do they make better or poorer time over the division? These questions are practically the same but were asked separately in an effort to bring out such views as would be possible by different

forms of interrogation. The tonnage rating is controlled locally by gradients and type of commodities hauled. The difference in rating between hand-fired and stoker-fired locomotives, in the majority of cases, is hard to determine, few railways having both types of firing, as the stoker came with the inception of heavier power, and prevents comparisons being made. However, some of the larger users of the stoker report increasing loading 150 tons on a 2,400 ton train, and 400 tons on a 4,600 ton train, with the stoker-fired locomotive, over the hand-fired on the same division. Where the stoker and hand fired are used on the same type of locomotive, with one exception, replies indicate as good performance can be procured with the stoker, with increased tonnage, as the hand-fired with reduced rating.

How does the condition of fire of the hand-fired locomotives compare with the stoker-fired locomotives when arriving at terminals? The general answer to this question, "Better condition on stoker-fired, demonstrates that the firemen soon realize the advantages of the stoker and will endeavor to carry a light, even fire, which can easily be accomplished by ordinary attention. It lightens the labors of the locomotive crew and also shortens labor of cleaning or knocking fires at the ash pit.

Do your records indicate any decrease in boiler maintenance with the stoker-fired locomotives as compared with the hand-fired locomotives, in parallel cases? One road notes changes in locomotive boiler construction, largely in welding flues and other parts of the fire box, have made comparisons difficult. The committee wishes to call attention to the advantages of maintaining a fire box temperature while trains are on sidings waiting for orders, or any stop of the locomotive, especially in single track operation, that will minimize the detrimental results of rapid contraction in large fire boxes. This can be very satisfactorily overcome by keeping a light, even fire easily controlled with the stoker.

Do you use two firemen, or a relief fireman, or give the fireman any assistance on your hand-fired locomotives? Majority of roads report "No."

State what prompted you to apply stokers to particular classes of locomotives. With one exception all answers report "Increased tonnage and size of locomotives." One representative reply which appealed to the committee was "A better class of men can be recruited and held as firemen," another, "The fireman can devote more time to improving himself in the necessary knowledge he requires to become a locomotive man." One large road states "The stoker is considered a positive necessity where coal consumption averages more than 5,000 lb. an hour." All replies, with one exception, call attention to the operation of large type locomotives under maximum conditions, stating that the mechanical stoker is essential.

With the experience you have had with stoker-fired locomotives generally, and from actual tests, please express your views on economy as to amount of fuel consumed, and efficiency of the locomotive as to speed and tonnage compared with hand firing, either with run-of-mine or prepared coal. Naturally in the consideration of applying any new device to a locomotive the thought of economy, by the shortest route, appears, and in the case of the mechanical stoker, the coal which it delivers to the fire box, and in fact its chief function, being the largest item of expense connected with the loco-

motive, immediately falls heir to the query, "How much coal will it save over hand firing?" The replies, with one exception, to this question above stated are in line with all reports that have been made by previous reports by the stoker committee, viz., that there is, undoubtedly, some more coal burned by the stoker-fired locomotives than by the hand-fired, but from the replies on this subject, there are no doubts in the minds of your committee that the increased efficiency as to tonnage, speed, and in fact the various thoughts before enumerated, offset any loss that may develop in amount of coal consumed for a given service performed. Your committee, however, desires to make the point that the users of stokers realize that fine coal to the extent it is handled by the stoker increases stack losses; the education of the fireman is just as essential as in hand firing, and not to be lost sight of is the fact that stoker firing is mechanical rather than a human operation, and it is for the manufacturers to improve and so refine the machine that it can be kept in a closer range of operation, and the stoker on the locomotive today, however successful, does not free the manufacturers from improving the mechanical condition to remove human inefficiency.

What percentage of the run-of-mine coal which you receive for locomotive use is slack? If this same coal is prepared at a crusher, how much is the slack increased? Local conditions govern the answer to this question. From 20 to 50% of so-called slack reported. The term slack, as recorded by several roads, is the amount of fine material passing through a 4-mesh per sq. in. screen. One road reports increasing from 35 to 50% crusher, and another from 15 to 75%. All others report "No coal prepared by crusher."

What do you estimate the additional cost of maintenance where stokers are equipped with crushers? All roads report "No data."

Are you in favor of coal crushers with stoker equipment on locomotives? Please state reasons. This question is one of the most discussed, and possibly the most serious subject, in connection with the mechanical stoker, owing to the fact that it resolves itself into a local condition, on account of the great diversity of fuel coal, as to amount of slack, fitness to be handled by a crusher on account of hardness, and the possibilities of procuring the proper supply at all times. It will be recognized that the opinions of the officers will be influenced by the conditions and best methods applicable to their own road. The answers received to this question were practically unanimous that the locomotive equipped with the mechanical stoker should, to make it a complete machine, capable of operating over a wide territorial range, have the crusher on the locomotive. Your committee concurs in this as applied to a limited number of stokers being used on a railway, but as locomotives equipped with the stoker are centralized it becomes possible to prepare the fuel before delivery to the tenders. The manufacturers are confronted with conditions in the application of the crusher to the locomotive that have been met with fairly good success, but will require their best talent to meet the widely varying conditions as the stoker is placed on more roads. The hardness of the coal causes an extremely wide range of conditions the country over. The strengthening of the crusher parts, and the possibility of the crusher mechanism being detachable, in a way that prepared coal can be used, and dis-

continue operation of the crusher parts while using the stoker, are recommended by this committee.

It has been proposed that coal should be prepared at the mines. Where railways own their own mines and when the entire output of some coal mine is controlled, this suggestion has its merits, but with the unsettled conditions that have confronted us the past few years, in the mining industry, the changing of contracts and unreliability at all times of being assured 100% of fuel for their stokers, this suggestion cannot be recommended. The coal, if prepared before being delivered to the tenders, should be crushed at the railway coal tippie or a centralized crushing plant on the railway.

Do you prepare coal for stokers before loading it on the locomotives? If so, by what methods and what does it cost by each of these methods? The resolution of this convention in 1919 asking for the information embodied in this question cannot be answered by your committee, as no figures were made available in the answers. Where coal is prepared before being placed on the locomotive it is bought in that state or screened at the railway coal tippie. One road reports crushing at fuel station, but the cost is practically negligible, as the coal is dropped from the car into the crusher and prepared before it is elevated. The capital expenditure necessary to install this method will, where electric power is available, be from \$6,000 to \$12,000 at each coaling station.

The question of using so-called lignite fuel has been referred to this committee. There is some question as to the proper definition of lignite. We find the term semi-lignite and sub-bituminous used; it being a fuel used by the north-western railways having a b.t.u. value from 11,250 to 12,500. Reports indicate no difficulties are being experienced in firing with this fuel, if handled properly. Stack losses and fires along right of way not developing. One road reports less liability of fire, on account of the fire, and character and regularity of the fire, and doing away with the necessity of opening the fire door, which creates sparks with this class of fuel. The only change in fire box or draft appliance noted, to burn lignite, was one road reports applying one more row of fire brick.

On the question as to what recent changes have been made in coal space of locomotive tenders to permit the coal to flow within easy reach of the fireman, replies state that several roads have resorted to a mechanical device for pushing the coal forward, which was reported successful in various sections. Existing power has been largely cared for by local arrangements of changes in slope sheets, raising and moving coal boards.

Your committee recognizes that the mechanical stoker, coming to the railways as it has in the past three years, under trying times, with inexperienced firemen, shop forces not up to the standard, and the burden of an overloaded organization trying to move every ton of freight possible, has received many a hard knock and will continue to receive them, but the manufacturers will be on the ground; and, as we have tried to bring out plainly in this report, local conditions must be studied and the preparation of fuel, the cost of maintenance and the benefits of having a locomotive that will prove 100% good, up hill and down, will be your problem and result in improvements to the benefit of all.

Enquiry was made of the stoker manu-

of the study. From the study of this data our committee will be able to prepare a perspective of not further tests and investigations that are essential, which will be submitted to the personnel committee for approval, to the end that final recommendations may be made to the association on this subject.

[illegible]

Snow Fighting Equipment.

W. H. LITTLE, Chief Mechanical Engineer, Canadian Pacific Ry., read at the Atlantic City convention an individual paper on snow fighting equipment in which he traced very fully the history of snow ploughs, etc., and described their various types. The paper, as printed for the convention, and which contains 74 illustrations, occupies 87 pages of 9 in., so that it is impossible to reproduce it in this issue, on account of the large amount of space required for other matter relating to the convention, but we hope to utilize it in future issues. It deals with locomotive, pilot, push, wing, spreader and machine ploughs; the C. P. R., the Fuller, and the Russell steel ploughs; the C. P. R. Grand Trunk Pacific and Union Pacific rotary ploughs; also with flangers, ice cutters, sweepers; the operation of equipment, and preventive measures. The whole subject is most exhaustively treated, and the paper will undoubtedly become a standard reference work.

The United States Railroad Administration, under the direction of C. B. Young, Manager of Inspection and Test Section, has been conducting very reliable tests on draft gears and attachments. The members of your committee have witnessed some of these tests and have had a representative working with the administration on these tests. Your committee has been advised that a complete report covering all draft gear investigation work done by the administration will be turned over to them as soon as it is possible to finish tabulation.

Superintendent Electric Equipment, New York Central Rd., chairman. This consists of individual papers written by the various members of the committee, showing the development of several of the important electrification projects of American steam railways, as follows:—Baltimore tunnels electrification, Baltimore & Ohio Rd., New York Central Rd. electrification, New York to Harlem. Brief history of New York, New Haven & Hartford Electric Rolling Stock. Great Northern Rd. electrification Cascade tunnel, Boston & Maine Rd., Hoosac tunnel electrification. Butte, Anaconda & Pacific Ry., electric operation. Norfolk & Western Rd., electrified line historical sketch. Chicago, Milwaukee & St. Paul Ry., synopsis of electrification. Long Island Rd. electrification. Southern Pacific Co.'s electrification of Oakland, Alameda and Berkeley suburban lines.

recommends a number of changes in the rules.

Research Bureau.—C. B. Young, Manager, Inspection and Tests Section, U.S. Railroad Administration. This favors the establishment of a research bureau, the cost to be assessed, in the usual manner, on railways which are members of the association.

Specifications and Tests for Materials. F. M. Waring, Engineer of Tests, Pennsylvania Rd., chairman. This recommends specifications for steel cars; boiler and fire box steel for locomotive equipment; line journal bearings; annealed and unannealed carbon steel axles, shafts and other forgings; solid wrought carbon steel wheels; bronze bearings for locomotives; carbon steel axles for cars, locomotive tenders and locomotive trucks; solid and hollow staybolt iron, and tender tank hose.

Fuel Economy and Smoke Prevention. Wm. Schlafke, Mechanical Manager, Erie Rd., chairman. This consists of revision of the text of "Fuel Economy on Locomotives," comprising complete instructions to bring about the economical use of fuel, to promote good practice in the operation of locomotives and to improve the methods of firing.

Standards and Recommended Practice. W. E. Dunham, Assistant to General Superintendent, Motive Power and Car Department, Chicago & Northwestern Rd., chairman. W. J. Robider, General Master Car Builder, Canadian Pacific Ry., being a member. This deals with the combining of the standards and recommended practice, as recorded for the Master Car Builders Association and the American Railway Master Mechanics Association, and in preparing the manual in the form in which it has been furnished recently.

Interchange Rules for Passenger Cars. H. H. Harvey, General Car Foreman, Chicago, Burlington & Quincy Rd., chairman, I. N. Clark, Master Car Builder, Grand Trunk Ry., being a member. This recommends several changes in the rules.

Labor and Material Prices.—G. E. Carson, District Master Car Builder, New York Central Rd., chairman. This recommends the complete revision of rules existing heretofore.

Loading Rules.—R. L. Kline, Assistant Chief of Motive Power, Pennsylvania Rd., being a member of the committee. This

Tank Cars.—A. W. Gibbs, Chief Mechanical Engineer, Pennsylvania System, chairman. The committee's work has been large devoted to details for construction calling for improvement, and, as the details have not been settled, the report is principally one of progress.

Train Brake and Signal Equipment.—T. L. Burton, Air Brake Engineer, New York Central Rd., chairman. This recommends a number of subjects to be sub-

mitted to letter ballot, for adoption as standard.

Train Lighting and Equipment.—J. R. Sloane, Chief Electrician, Central Re-

gion, Pennsylvania Rd., chairman. This deals principally with specifications for axle generators.

Train Resistance and Tonnage Rating.

Railway Supply Exhibits at the Atlantic City Convention.

The railway supply exhibits at the Atlantic City convention were, as usual, arranged for by the Railway Supply Manufacturers' Association, the officers of which were: President, Geo. R. Carr, Vice President Dearborn Chemical Co., Chicago; Vice President, J. F. Church, Vice President, T. H. Symington Co., Chicago; Secretary Treasurer, J. O. Conway, Pittsburg, Pa. Mr. Carr was also chairman of the joint committee of arrangements, comprised of representatives of both the railway and manufacturers associations. There was a considerable increase in the number of exhibits and the space occupied was 100,000 sq. ft., against 93,000 in 1919. Among the principal exhibitors were the following:—

American Brake Shoe & Foundry Co., New York.—Standard patterns railway brake shoes; steel back driver shoes; steel back engine truck shoes; steel back passenger and tender shoes; steel back freight car shoes; malleable iron locomotive driver brake head and keys.

American Locomotive Co., New York. Also reverse gear; flexible staybolts; intercepting valves.

American Steel Foundries, Chicago.—Economy cast steel draft arm; Davis steel wheel; Ajax and Hercules brake beams; Simplex coupler; cast steel bolster; Simplex clasp brake; Simplex coupler pocket; Vulcan truck.

Association of Manufacturers of Chilled Car Wheels, Chicago.—One 33 in. no. 625 M. C. B. car wheel for 30-ton cars; one 33 in. no. 700 M.C.B. car wheel for 40-ton cars; one 33 in. no. 725 M. C. B. car wheel for 50-ton cars; one 33 in. no. 850 M. C. B. car wheel for 70-ton cars. Also a moving picture showing various processes of manufacturing the chilled iron car wheel, including moulding, pouring, pitting and drop testing of the wheel. In addition thereto, a series of pictures showing measurement of temperature stresses to which the wheels are subjected, indicated by test gauges.

Barrett Co., New York.—Carbosota, coaltar, pitch and felt products; roofing; waterproofing; wood preservatives; metal protective paints.

Boss Nut Co., Chicago.—Boss lock nut; bolts and rivets.

Bowser & Co., S. F., Fort Wayne, Ind. Tanks and self-measuring pumps for receipt, storage, distribution and checking of oils and similar liquids; paint handling and mixing equipment.

Crane Co., Chicago.—Locomotive brass valves, railroad unions and railroad union fittings; locomotive blow-off valves; locomotive pop valves, brass railing fittings.

Davis Boring Tool Co., St. Louis, Mo. Full line of Davis expansion car wheel and shop boring tools; Davis micrometer adjustable reamers.

Davis-Bournonville Co., Jersey City, N.J.—General line of oxy-acetylene cutting and welding apparatus.

Dearborn Chemical Co., Chicago.—Dearborn water treating preparations for prevention of scale formation, corrosion and foaming in locomotive boilers; No-ox-id rust preventive.

Electric Service Supplies Co., Philadelphia.—Golden Glow locomotive headlights, sheet metal and cast iron types; keystone turbo generators; golden glow

and crystal mirror glass reflectors; locomotive headlight switches; marker lights; classification lights; lamp guards; flood lights and searchlights.

Fairbanks, Morse & Co., Chicago.—Oil engine, direct connected to electrical generator in operation; motor-driven centrifugal pump, direct-connected in operation; locomotive water crane; motor cars.

Flannery Bolt Co., Pittsburg, Pa.—F. B. C. welded flexible staybolts, flexible crown staybolts and boiler section under test; Tate flexible staybolts; crown adjustable staybolts and marine flexible staybolts. Tools for proper application of F. B. C. and Tate products.

Franklin Railway Supply Co., New York.—Raggonnet type B reverse gear; automatic adjustable driving box wedge; driving box lubricator; no. 8 fire door, Franklin steam grate shaker; McLaughlin flexible conduit; Franklin ball joint; two-wheel engine truck; radial buffer; unit safety bar; no. 9 fire door; universal valve chest; Booster engine on exhibition track.

Galena-Signal Oil Company, Franklin, Pa.—Reception booth.

Garlock Packing Co., Palmyra, N.Y.—Air pump and throttle, slip and ball joint, and power reverse gear packing; compressor and accumulator, steam hammer and power plant packing; gaskets and pump valves; flexible metal packing.

Gold Car Heating & Lighting Co., New York.—Vapor, combination pressure and vapor, pressure, hot water and electric car heating systems; thermostatic control for all types of car heating systems and buildings; ventilators for railway cars; pressure regulators.

Griffin Wheel Company, Chicago, Ill.—Chilled iron car wheels.

Grip Nut Co., Chicago.—Grip nut products; grip lock nut; holding nut; unit nut; pump piston rod nut.

Hunt-Spiller Manufacturing Corporation, South Boston, Mass.—Locomotive parts made of Hunt-Spiller gun iron; cylinder bushings; cylinder packing; solid pistons; ball rings; piston valve bushings; tee rings; piston valve packing; crosshead shoes; side rod and knuckle pin bushings for freight service; air pump bushings and packing; driving boxes; pedestal shoes; pedestal wedges; eccentrics and eccentric straps.

Independent Pneumatic Tool Co., Chicago.—Thor pneumatic drills, reamers, grinders, hammers, hoists, rammers and electric drills and grinders.

Ingersoll-Rand Co., New York.—Little David pneumatic tools and appliances.

Johns-Manville Co., H. W., New York. The 85% magnesite pipe covering and boiler lagging; J-M sponge felted pipe covering and blocks; miscellaneous J-M pipe coverings and transite and ebony asbestos wood; asbestos shingles; high temperature and insulating cement; Mastic flooring; J-M built-up and ready roofing; Salamander insulation; Keystone hair felt and standard hair felt; spiral locomotive pipe covering; power reverse gear packing; Mallet locomotive packing; J-M expander rings and packing cups; friction tape and splicing compounds; Transite asbestos wood smoke jacks; miscellaneous packing materials; Vulcabeston gaskets and washers; J-M fire extinguishers; Transite ventilators.

O. P. Rees, Superintendent Motive Power, Pennsylvania Lines, chairman. This is a progress report, dealing briefly with equated tonnage rating.

Joliet Railway Supply Co., Chicago.—Brake beams; truck bolsters; side bearings; journal boxes.

KeYoke Railway Equipment Co., Chicago.—Murray cast steel friction draft gear and cast steel coupler yokes.

Locomotive Feed Water Heater Co., New York.—Boiler feed pump; model of feed water heater; samples of various parts from service.

Locomotive Stoker Co., Pittsburg, Pa. Full size type D duplex stoker with locomotive backhead; 1/3 size type D duplex stoker with locomotive backhead; full size type D slope sheet coal pusher.

Locomotive Superheater Co., New York. Steam superheaters for locomotives; fire tube superheater for Scotch marine boilers; Elesco superheater for stationary boilers; pipe coils; steam pyrometers.

McCord & Co., Chicago.—Journal boxes.

Metal & Thermit Corporation, New York.—Thermit and appliances, sample of square single track crossing, constructed by Thermit welding. Sample of carbon-free metals and alloys produced by the Thermit process. Sample weld on 9 in. crank shaft. Materials for demonstrating pipe welding for the purpose of welding locomotive superheater units. Sample of superheater unit so welded.

Miner, W. H., Chicago.—Friction draft gears; side bearings; safety hand brakes; refrigerator car door fasteners; draw-bar yokes.

Mudge & Co., Chicago.—Solvit compound; Mudge motor cars; Mudge-Peerless ventilators.

National Carbon Co., Cleveland, Ohio. Columbia dry cells; Columbia hot shot and multiple batteries; Columbia high voltage caustic soda cells; carbon and metal brushes for motors; generators and headlight equipment; lighting and welding carbons; welding paste; carbon plates; carbon packing rings; special forms in carbon and carbon telephone specialties; American flashlights and batteries.

National Lock Washer Co., Newark, N.J.—Models of car curtains; curtain fixtures, sash locks; sash balances; window packing; national lock washers and Hipower nut locks.

Norton, A. O., Incorporated, Boston, Mass., and Coaticook, Que.—Different types of Norton self-lowering speed-controlled jacks—100 ton; 50 ton; 50 ton inverted type—new this year. 35 ton; 25 ton; 25 ton and 35 ton ball bearing journal jacks.

Pyle-National Co., Chicago.—Model of Young valve gear. A complete line of turbo generators; electric headlight sets; suburban train lighting; headlight cases of all sizes; sheet steel and cast; locomotive cab lamps; back-up lamps; switches; connectors; focusing devices for lamps.

Q & C Packing & Lubricator Co., New York.—Piston rod packing and lubricators.

Safety Car Heating & Lighting Co., New York.—Electric and gas car lighting equipment; car lighting fixtures and reflectors; electric fans; oxy-Pintsch metal cutting equipment.

Standard Car Truck Co., Chicago.—Complete models showing different types and capacity of lateral motion trucks and working parts; roller center plates; roll-

truck.

Union Railway Equipment Co., Chicago.

chanarch; Imperial and Universal car steel trap doors; trap door locks; resisto quilt hairfelt insulation; Tuoork mineral

well friction draft gear, type G, class 11-A; Castwell friction draft gear, type G, class 11-A; duplex.

Union Railway Equipment Co., Chicago.

Universal Draft Gear Attachment Co., Chicago.—Cast steel coupler yokes; cast steel reinforcing draft arms; miscellaneous draft lugs in cast steel and malleable iron.

Vapor Car Heating Co., Chicago. — Vapor system of car heating—short-circuit cut-out method; new type steam hose couplers, with take-up lock; automatic car temperature control and automatic control for reducing yard temperatures; pressure reducing valves; steam traps; train pipe valves.

Westinghouse Air Brake Co., Pittsburgh, Pa.—Universal passenger equipment demonstration rack of three cars and locomotive. Illuminated electric chart showing performance of UC passenger equipment with and without the electro pneumatic feature. Empty and load brake equipment demonstration rack. Westinghouse NA-1 friction draft gear complete.

Westinghouse Electric & Manufacturing Co., East Pittsburgh, Pa.—Type 815 switch; type 809 reversing switch; type C controller, class C-7440; types 815 and 816 switch; type A auto starter; type 816 switch; 500 watt 32 volt turbine generator; type F. B. controller; type S duplex controller; type HK crane motor; 175 ac welding outfit.

Wheel Truing Brake Shoe Co., Detroit, Mich.—Samples of abrasive brake shoes.

Whiting Foundry Equipment Co., Harvey, Ill.—Working model of Whiting screw-jack locomotive hoist for wheeling and unwheeling locomotives; folios of drawings, photographs and literature covering complete line of cranes, foundry equipment and railway specialties, locomotive and coach hoists, turntable tractors and transfer tables.

Officers Section 3, Mechanical, American Railroad Association.

The term of office of the Vice Chairman and seven members of the general committee, Section 3, Mechanical, American Railroad Association, having expired in June, the committee on nominations, nominated the following, to serve until 1921.

For Vice Chairman:—J. Coleman, Assistant to General Superintendent Motive Power and Car Department, Grand Trunk

For members of General Committee:—J. S. Lentz, Master Car Builder, Lehigh Valley Rd.; H. R. Warnock, General Super-

intendent Motive Power, Chicago, Milwaukee & St. Paul Ry.; C. E. Fuller, Superintendent Motive Power and Machinery, Union Pacific Rd.; W. Kells, General Superintendent Motive Power, Atlantic Coast Line Rd.; John Purcell, Assistant to Vice President, Atchison, Topeka & Santa Fe Rd.; H. L. Ingersoll, Assistant to President, New York Central Lines; J. J. Tatum, Superintendent Car Department, Baltimore & Ohio Rd.

The report was unanimously adopted on June 14. It was also resolved that the officers should be elected annually, instead of every two years, so that a greater number of members may enjoy the honor of being officers of the section.

Interchange Rules Modified.

Section 3, Mechanical, American Railroad Association, issued the following circular May 28:—

Effective June 1, 1920, the following

modifications are made in sections (k) and (o) in rule 3 of the 1919 Rules of Interchange. The modifications to be read as follows: "After Mar. 1, 1910, no car will be accepted in interchange unless properly equipped with United States Safety Appliances or U.S. Safety Appliances, Standard, except cars moving home on car service orders for equipping with safety appliances. Cars will not be accepted from owner at any time unless equipped with U.S. Safety Appliances or U.S. Safety Appliances, Standard."

Rule 3, section (o), modified to read as follows: "Cars built after Nov. 1, 1920, will not be accepted in interchange unless equipped with 6 x 8 in. shank A. R. A. Standard Type D Couplers."

This circular should be considered as a supplement to the Rules of Interchange and necessary instructions issued to all concerned. These modifications to the Rules of Interchange will be incorporated in the next supplement to these rules.

Birthdays of Transportation Men in July.

Many happy returns of the day to:

A. A. Allen, Vice President, Holden Co., Ltd., Montreal, formerly Master Mechanic, Timiskaming & Northern Ontario Ry., born at Grafton, Ont., July 7, 1870.

J. H. Black, ex-Superintendent, Timiskaming & Northern Ontario Ry., now at Toronto, born near Smiths Falls, Ont., July 8, 1874.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., July 25, 1877.

D'Alton C. Coleman, Vice President, Western Lines, C.P.R., Winnipeg, born at Carleton Place, Ont., July 9, 1879.

G. C. Conn, ex-Freight Traffic Manager, Pere Marquette Ry., Detroit, Mich., now General Traffic Manager, Buick Motor Co., Flint, Mich., born at Woburn, Mass., July 1, 1867.

A. R. Curran, Paymaster, Eastern Lines, Canadian Northern Ry., Toronto, born there, July 3, 1877.

H. Darling, Locomotive Foreman, Grand Trunk Pacific Ry., Smithers, B.C., born in Northumberland, Eng., July 27, 1873.

A. H. Eager, Mechanical Superintendent, Western Lines, Canadian National Rys., Winnipeg, born at Waterloo, Que., July 15, 1868.

F. E. Hartshorn, Assistant Superintendent, Montreal Division, Quebec District, Canadian National Rys., Montreal, born at West Stewartstown, N.H., July 21, 1877.

S. J. Hungerford, Assistant Vice President, Canadian National Rys., Toronto, born at Bedford, Que., July 16, 1872.

C. W. Johnston, Assistant General Passenger Agent, G.T.R., Montreal, born at Actonville, Que., July 27, 1879.

H. J. Lambich, District Commissary Agent, Sleeping, Dining and Parlor Cars and News Service, Canadian National Rys., Winnipeg, born at Quebec, Que., July 25, 1881.

M. Kelly, Resident Engineer, Farnham Division, Quebec District, C.P.R., Farnham, born at Thamesville, Ont., July 6, 1878.

T. King, Superintendent, Detroit Division, Western Lines, G.T.R., Detroit, Mich., born at Dunbarton, Ont., July 18, 1869.

A. E. Lock, Superintendent Car Service, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Albany, N.Y., July 14, 1879.

G. A. McNicholl, Assistant General

Freight and Passenger Agent, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at Montreal, July 31, 1876.

H. D. Mackenzie, Master Mechanic, Canadian National Rys., Edmundston, N.B., born at Churchville, N.S., July 22, 1864.

M. H. MacLeod, Vice President, Operation, Maintenance and Construction, Canadian National Rys., Toronto, born in Skye, Inverness-shire, Scotland, July 13, 1857.

J. M. Macrae, Assistant General Freight Agent, Canadian National Rys., Winnipeg, born at Stornoway, Scotland, July 31, 1884.

W. G. Manders, Assistant Freight Traffic Manager, Canadian National Rys., Winnipeg, born at Owen Sound, Ont., July 24, 1876.

Neil Marple, General Foreman, Michigan Central Rd., St. Thomas, Ont., born in McKillop Pt., Ont., July 1, 1860.

J. E. Morazain, General Superintendent, Quebec District, Canadian National Rys., Quebec, born at Wheatland, Que., July 31, 1875.

P. C. Perry, Assistant Resident Engineer, Grand Trunk Pacific Ry., Regina, Sask., born at Fort William, Ont., July 27, 1889.

R. E. Perry, Assistant General Freight Agent, Canadian National Rys., Montreal, born at Drayton, Ont., July 5, 1876.

G. G. Ruel, General Counsel, Canadian National Rys., Toronto, born at St. John, N.B., July 5, 1866.

George Stephen, Freight Traffic Manager, Canadian National Rys., Toronto, born at Montreal, July 5, 1876.

H. G. Studd, Auditor for Europe, C.P.R., London, Eng., born at Tottenham, Eng., July 10, 1883.

Sir Thos. Tait, President, Frederickton & Grand Lake Ry. & Coal Co., Montreal, born at Melbourne, Que., July 24, 1864.

M. M. Todd, Vice President and Treasurer, Grand River Ry. and Lake Erie & Northern Ry., Galt, Ont., born there, July 22, 1891.

H. B. Walkem, Assistant Engineer, C.P.R., Vancouver, B.C., born at Montreal, July 31, 1858.

G. A. Walton, General Passenger Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, July 17, 1881.

R. H. Webster, Commercial Agent, G.T.R., Moncton, N.B., born at Pictou, N.S., July 2, 1885.

Canadian Northern Railway Co's Annual Report.

The Canadian Northern Ry. Co.'s directors' report, addressed to the shareholders, has been issued over the signature of D. B. Hanna, President, as follows:—

Attention is particularly directed to the fact that this report covers only the operations of the Canadian Northern Railway lines, forming a part of the Canadian National Ry.

The directors submit herewith the fifth annual report covering the working of the Canadian Northern Ry. System for the year ended Dec. 31, 1919.

Gross earnings	
Passenger traffic	\$10,775,708.46
Freight traffic	39,175,552.09
Express, mail and telegraph	1,688,902.18
Miscellaneous earnings	2,022,014.84
Interest and profits from elevator and other subsidiary companies, investments, etc.	1,791,752.61
	\$55,353,930.18
Working expenses	\$60,034,023.92
Hire of equipment, taxes, rentals and miscellaneous charges	1,020,553.96
	\$61,054,577.88
Deficit	\$ 5,700,647.70
Interest charges	19,969,710.36
Total deficit	\$25,670,358.06

The total mileage operated at the end of the year was 9,685.7 compared with 9,566.5 at the end of 1918, an increase of 119.2 miles. The average mileage in operation throughout the year was 9,636.9.

Operating Revenues for 1919 increased by \$6,252,165.66 over 1918, or 13.22%. The increases were derived from

Passenger traffic	\$2,351,264.02	37.72%
Freight traffic	2,439,682.63	6.64%
Other	861,219.01	31.32%

Traffic Movement.—The increase in passenger earnings in 1919 as compared with 1918 is due in part to the removal of restrictions on travel applicable to war time traffic, augmented by the movement of troops for demobilization. As a result of the cessation of activities dependent on the war, and the consequent cancellation of government orders for munitions, foodstuffs, etc., a decline in business took place in the first half of the year. This was inevitable in a period of transition from war to peace. The loss in freight tonnage from Jan. 1 to July 31 was 1,500,000 tons, after which the tonnage showed an increase over 1918, to the extent that by the end of the year the net loss in tonnage was cut down to 850,327 tons. A gratifying feature of the situation is the additional long haul business, which is indicated by the increase of 23 miles in the average distance each ton of freight was hauled. While movements of live stock, lumber and building material show gains over last year, the declines in grain, coal and miscellaneous traffic more than offset these gains, resulting in loss of tonnage already mentioned as compared with 1918. The decline in coal traffic is due to the loss of shipments from Drumheller, Cardiff and Wayne during June, July and August, caused by the strike of the miners in the Alberta coal fields.

Operating Expenses.—The increase of \$15,971,073.98 in operating expenses is nearly all due to higher wages. The general large increases in rates of pay granted during 1918 under the McAdoo series of advances which were reflected only in part in the operating expenses for the year ended Dec. 31, 1918, show their full effect in this year's figures, and the total is increased by the effect of additional supplements issued during 1919 by the United States Railroad Administration

and which, under arrangement between the Canadian Railway War Board and the Dominion Government, have been applied to the wages of railway employees in Canada. The total increase in expenses due to wages for the year was \$12,350,226.60, or 77.31% of the total increase in operating expenses.

The deficit of \$5,700,647.70 is after crediting miscellaneous earnings and charging deductions from income. The actual operating deficit for the year is \$6,471,846.35, against net earnings of \$3,247,061.97 for 1918, and net earnings of \$7,443,369.41 for 1917. This loss between 1917 and 1919 of nearly \$14,000,000 in net earnings is a direct reflection of the improper relation existing between earnings and operating expenses. During these two years the abnormally large wage increases more than represent the loss in net earnings, as the following comparison of pay-roll totals shows:

1917	1918	Inc.	1919	Inc.
\$20,871,397	\$29,269,906	40.24	\$41,620,133	42.19

For every dollar earned in the last year the railway had to pay out over 75c. in wages.

As all elements of the railway's expenses enter into the production of transportation in the shape of train miles, the increase in the cost of running a train one mile tells better than any other unit the story of the railway's inability to make ends meet, under conditions such as have existed in the past two years. When the large increases in the cost of materials and supplies are also considered, the difficulties of the situation will be more fully appreciated. The cost of running a train one mile increased from \$1.98 in 1917 to \$2.65 in 1918 and to \$3.36 in 1919, the latter figure being an increase of 27% over 1918 and 70% over the cost in 1917. Gross earnings per mile of line increased, from \$4.396 in 1917, to \$5.005 in 1918, and to \$5.558 in 1919, the 1919 gross per mile being only 10% over 1918 and 25% over 1917. Under these conditions, and with less than 1% increase in train service, the net result for the last two years has been to convert net earnings of \$789.08 a mile of line in 1917, and \$343.53 in 1918, to a deficit of \$671.63 a mile for 1919. This change in the net earnings situation is entirely due to the conditions referred to in the preceding paragraphs.

In comparing the train mile expenses for the last three years, the higher percentage of expenses devoted to maintenance, particularly in 1919, is worth noting, as indicating that a large percentage of the expenses is going towards the improvement of the roadway, structures and rolling stock. The cessation of hostilities having appreciably relieved the labor situation, your company was enabled during 1919 to commence undertaking considerable maintenance of roadway, structures and equipment work which (as referred to in previous reports) has been unavoidably deferred by war conditions. The amount of money spent on deferred maintenance through the year is estimated at over \$4,500,000, which is included in operating expenses.

The increase in revenue, which higher rates were expected to bring, has been greatly cut down by the falling off in tonnage of certain commodities, as compared with 1917, which, in common with other railways in Canada, has affected your line and has been most noticeable in respect to grain traffic. This loss of tonnage, and the extra expenditures, due to taking up in part the deferred main-

tenance, with the conditions already referred to in respect to wages, etc., precluded the possibility of making any net earnings without a readjustment of transportation rates.

Freight Rates.—The existing improper relationship between earnings and operating expenses is a condition which fortunately may be regarded as transitory. It is recognized in the United States and Great Britain, as well as in Canada, that the railways cannot continue to provide transportation at practically pre-war rates. Canadian and U.S. freight rates being generally on an equality, the general percentage of increase in the U.S. will, in the opinion of your directors, largely determine what the increase in Canada should be. From the statistics embodied in the report, it is clear that existing rates do not provide an adequate return. With the U.S. railways now handed back to the private owners, with legislation passed providing that they are to receive "a fair return upon the aggregate value of the railway property" and this fair return for two years fixed at 5½% a year and provision for an additional half of 1% for equipment, betterments, etc., there is every reason to believe that freight rates will be fairly adjusted in the near future.

Land Sales for the year were 79,053 acres for \$1,535,608.44, an average of \$19.42 an acre, compared with an average of \$19.45 for 1918. During the same period sales previously entered into, aggregating 32,403 acres, were, by mutual agreement, cancelled, so that the acreage of land available for sale has been decreased by 46,650 acres, leaving a total of 772,309 acres unsold.

Additional car trust obligations were created during last year to the extent of \$22,500,000 for the purchase of equipment of different kinds, and \$4,705,000 was repaid in respect of previous obligations, thus making the net increase \$17,795,000, and leaving the total amount of car trust obligations outstanding at Dec. 31, 1919, \$32,936,000.

New Equipment.—Motive power and other rolling stock ordered in 1919 were as follows:—

25 Pacific type locomotives.
25 Six-wheel switch locomotives.
750 Box cars.
800 Wooden stock cars.
500 Dump cars.
500 Flat cars.
250 Hart ballast cars.
150 Refrigerator cars.
80 Steel baggage cars.
6 Flangers.
130 Colonial cars.
20 Tourist cars.
18 Standard sleepers.
13 Compartment observation cars.
29 First class cars.
20 Mail cars.
9 Dining cars.
6 Snow ploughs.
5 Caboose.

Construction and Betterments.—As referred to in your directors' previous report, the construction programme for 1919 contemplated the completion of certain branch lines in Western Canada which were under construction at the outbreak of the war. Work was done on the following lines:—Acadia Valley extension, Jackfish Lake extension, Onoway extension, Alaska southeasterly, Luck Lake extension, Peebles-Lampman extension, Amaranth northerly, Melfort-Humbolt extension, Gravelbourg extension, Eston southeasterly, Melfort northeasterly, Thunderhill extension, Hanna southeasterly, Oliver northeasterly, Kamloops-Kelowna-Lumby branch. While conditions governing labor and materials

Description of Freight Carried.

	1919	1918
Flour, sacks (100 lbs.)	8,578,810	8,901,498
Grain, bush.	91,774,574	93,398,078
Live stock, head (all kinds)	831,991	654,583
Logs and lumber, ft. (m.f.)	1,928,698	1,614,829
Firewood, cords	329,138	362,118
Coal, tons	2,174,207	2,373,985
Immigrants' effects, cars	4,728	5,279
Building material (lime, stone, brick, sand, etc.)		
Miscellaneous, tons	31,407	29,791
Earnings, Expenses and Net	3,142,961	4,048,065
per mile operated.		

Year	Average miles Operated	Earnings	Expenses	Net Earnings
1917	9,433	\$4,396.27	\$3,607.19	+\$789.08
1918	9,462	\$5,005.29	\$4,661.76	+\$343.53
1919	9,636	\$5,558.55	\$6,230.18	-\$671.63

The amount required per mile of road to pay fixed charges (including leased lines), was as follows:—1919, \$2,072.41; 1918, \$1,093.60; 1917, \$1,695.24.

Passenger, Freight and Miscellaneous Statistics.

	1919	1918
Passenger traffic		
Passengers carried (earning revenue)	1,925,547	4,114,965
Passengers carried one mile	344,773,029	288,067,300
Passengers carried one mile per mile of road.	36,256	30,477
Average distance carried.	70.00	70.01
Total passenger revenue	\$ 9,629,460.01	\$ 7,128,141.55
Average amount received per passenger	\$ 1.95,500	\$ 1.73,223
Average amount received per passenger per mile		
Total passenger train earnings	\$ 2,798	\$ 2,474
Passenger train earnings per train mile	\$ 1.53,575	\$ 1.28,903
Freight traffic		
Revenue tons carried	12,439,314	13,289,641
Revenue tons carried one mile	4,046,023,363	4,921,275,963
Revenue tons carried one mile per mile of road	425,472	425,442
Average distance haul of one ton	325.56	302.59
Total freight revenue	\$38,276,419.96	\$36,674,816.63
Average amount received for each ton of freight	\$ 3.07,705	\$ 2.68,441
Average revenue per ton per mile946	.887
Total freight train earnings	\$39,010,667.80	\$36,719,136.76
Freight train earnings per train mile	\$ 3.34,877	\$ 3.24,220
Mileage of passenger trains	5,861,271	5,044,667
Mileage of freight trains	9,322,881	9,556,238
Mileage of mixed trains	1,826,898	1,769,124
Expenses per traffic train mile—		
Maintenance of way and structures	\$8.45	\$4.67
Maintenance of equipment	\$6.05	\$1.12
Traffic expenses	\$5.82	\$1.70
Transportation expenses, mail	\$1.61,96	\$1.43,69
Transportation expenses, water011	—
Miscellaneous operating expenses	\$5.34	\$3.52
General expenses	\$8.51	\$7.10
Total	\$3.36,24	\$2.64,89

Operations of Electric Lines not included in above Statement.

Electric line statistics		
Passengers carried (earning revenue)	11,281,694	6,036,625
Total passenger revenue	\$99,945,772	\$64,319,814
Revenue tons carried	383,130	409,704
Total freight revenue	\$20,489,077	\$252,756.20

The total mileage operated in 1919 was 9,685.7, viz.: owned by C.N.R. Co., 9,183.1; joint running rights, 155.3; Northern Pacific lines in Manitoba, leased, 347.3.

Cornwall Bridge Assessment.—The Ontario Legislature has confirmed a Cornwall Tp. bylaw validating an agreement between the township and the Ottawa & New York Ry., fixing the amount of the assessment of the portion of the company's bridge across the St. Lawrence River at Cornwall, at \$150,000 for ten years.

Parcel Post Rates on Mail Order Business.

The following motion by Senator W. Proudfoot, was passed by the Senate April 28:—"That an order do issue for a return of the evidence and other proceedings submitted before the Board of Railway Commissioners at the sessions at Ottawa on Oct. 3, 1911, Nov. 7, 1911, and Mar. 18, 1919, relating to freight rates and all matters before said board on said dates. 2. A copy of the report made by said board to the Government as the result of said investigations. 3. A copy of the postal rate agreement or agreements existing between the government and the railway companies for parcel post service, including a statement or copy of the rates charged by the government railways. 4. A copy of the report made by the Board of Railway Commissioners to the government on the contracts between the government and the railway companies as to the rates charged for the postal services. 5. Does the said report show (or is the government aware) that the rates fixed and paid are less than it cost the railway companies to perform the services? 6. What quantity of mail is carried annually by parcel post?"

In moving the resolution, Senator Proudfoot said:—"The object of the investigations above referred to, as I understand, was to ascertain whether or not certain commodities were being carried at certain rates. I understand that a report was made by the Board of Railway Commissioners to the government, but it has not yet been made public, and it is for the purpose of having it brought down that I make this motion. Another object of the motion is to enable me to deal with the question of postal rates, in so far as they affect mail order houses. The mail order business is one of great importance to the people. When in the Ontario legislature, I advocated the imposition of a tax on mail order houses in each municipality; that is to say, if they sold by mail order in certain townships, or in certain towns or villages, they should pay a tax based on the business they did in each municipality. It is not fair that they should do business in a municipality and pay nothing in the way of taxes to the municipality, while the merchants there are obliged to pay taxes and other rates toward the upkeep of the municipality. The mail order business is carried on very extensively throughout the Dominion, and, according to my information, the mail order houses have been securing a great advantage over the merchants in the country districts. The question then arises, how far is the government responsible for enabling the mail order houses to carry on business? We find that on Mar. 15, 1918, freight rates were advanced 15%, and that on Aug. 12, 1918, they were again increased 25%. There was also an increase in the rates on various commodities on all the railways. The salaries of those engaged in the mail service were also increased, and in that way the cost of transportation was increased. My information is to the effect that, although those increases were made, nevertheless the postal rates were not increased, and that therefore the mail order houses were able to carry on business at practically what it cost them to do so prior to the increase in freight rates. If that is so, it is unfair discrimination in favor of the mail order house, and it is a kind of discrimination which should be put an end to. We must consider the

effect it has on business in the rural municipalities and in the towns and villages. We find throughout the length and breadth of the land that the country stores are gradually being driven out of business by unjust competition. I say it is unjust competition when mail order houses are enabled to ship goods into these municipalities at less than it costs the country to provide the carrying of these goods. They are discriminated against, first, in so far as the railways are concerned, and secondly, in so far as the government is concerned. The railways are carrying the mail order business at less than cost, and the government is providing the means for carrying it at less than cost. The result is, as an examination will show, the government of this country is handing over every year millions of dollars to the mail order houses. It would not be so bad if the general public were getting the benefit, but the public as a whole are not getting the benefit of the millions that are handed out in this way.

"The Minister of Labor, at a meeting in, I think, Ottawa last year, made the statement that the government was bonusing the newspapers of Canada to the extent of about \$6,000,000 a year by carrying them at less than the cost of transportation. I am not making any complaint in that respect. There may be some justification for newspapers being carried in that way. Newspapers are supposed to be a means of educating the people and of disseminating the news from one end of the country to the other. That being so, there is an excuse for the government spending money in that way. But there is no excuse in permitting one section of the people to secure an advantage over others. If the country stores had been allowed to go on as they did in years past, many of the young people in the country would have found it to their advantage to remain at home. The money would be kept in circulation in their immediate neighborhood. Besides, those localities would not be entirely rural districts, as they are being made by the change which has been gradually brought about in the mode of business by the mail order houses. No one objects to fair competition, but what people do object to, and I think they have a right to it, is unfair competition; and the competition is unfair when one class secures an advantage over another, at the expense of the whole public.

"The object in desiring to distinguish between the provinces is to ascertain what amount of mail order business is being done by the various houses, say in Ontario. We can in that way ascertain whether the mail order business is being carried on more extensively in Ontario than in any of the other provinces; and if that is the case, and I am correct in my surmise that this service is being carried on at a loss to the country, then Ontario is securing an advantage over the rest of the Dominion. If the service is being performed at a loss, the sooner the government makes a change in that respect the better. Otherwise the same unfair conditions will continue in the future as in the past."

British Railway Rates.—The Minister for Transportation is reported to have stated in the British House of Commons June 14 that a further increase in railway rates cannot be avoided.

Demurrage not Chargeable Where Delays Caused by Customs Officials.

HALIFAX, N.S., July 1.—The Board of Railway Commissioners, after the Board had received on April 5 an application for an informal ruling of the Customs Department, in the matter of the tariff of demurrage on goods in the hands of the railway company, has decided that demurrage is not chargeable where delays are caused by Customs officials in the testing and inspection of the goods in the car.

There are two applications on this case to date. The first, from W. J. Collins, Manager, Canadian Car Demurrage Bureau, in connection with a carload of lima beans, apparently Asiatic, consigned to Montreal from 60th St., New York, ex s.s. Port Albany from London, and which arrived in Montreal Feb. 9, 1920, and was released by the appraiser on Feb. 13. The application is for an informal ruling of this board, in the matter of the right of the railway company to collect demurrage, or storage, under the circumstances where cars are delayed by customs authorities and the testing or inspection of the goods in the car. Ten dollars demurrage was assessed on this car, which the consignee, the Universal Importing Co., refused to pay, on the ground that the Customs Department would not allow it to take delivery of the car until the beans were tested by the Chief Analyst at Ottawa. The Superintendent of the Car Service Bureau, F. Price, wrote Mr. Costigan, Customs Department, Inland Revenue, Montreal, April 5, as follows: "We respectfully refer you to the enclosed papers covering delay to car 43909 at Montreal between Feb. 9 and 16, 1920. This car arrived Montreal Feb. 9, and it is claimed by the consignee that the Customs Department would not allow it to take delivery of the car until the shipment, which consisted of beans, had been tested by the Chief Analyst at Ottawa. Note letter from appraiser, O'Shea, and kindly advise exact date this shipment was released by Customs Department." To which Mr. Costigan replied, April 6: "Car 43909 was released on report of analysis under date of Feb. 19, 1920." This inspection was in compliance with a circular issued by the Customs Department, Jan. 28, 1920, instructing all collectors of customs to withhold delivery of East India, or Oriental beans, or beans of Asiatic or East India origin, pending a receipt of a report from the authorities of the Health Department.

The second application is the complaint of the Canada Seed Co., Toronto, per Agriculture Department, Canada (Seed Commissioner) in connection with a carload of clover seed consigned to the Canada Seed Co., Brantford, Ont., and held for inspection under the seed importation regulations of the Agriculture Department. These regulations were contained in a circular issued to collectors of customs throughout Canada, Oct. 26, 1918. This car, 11840, was held in bond from Sept. 17 to 29, 1919, at Brantford, and \$30 demurrage charges assessed against it. The following letter from the Customs Collector at Brantford to the G.T.R. agent makes the situation clear: "The papers for this car arrived in Brantford from Toronto Sept. 19, 1919, being sworn to at Toronto Sept. 18, 1919. Samples drawn according to then Customs regulations sent to Agriculture Department to test as to purity. Instructions received from Agriculture Department, dated Sept. 27, 1919, received here Sept.

26, to release shipment, and papers sent same date to G.T.R. to release car."

It is quite clear from the written statements of J. T. Costigan, General Inspector, and J. W. Spence, Collector, that in both these cases the delay was due to government regulations. These regulations are general in their application; and the delay to the two cars under consideration was not due to any individual cause in these two particular consignments. I am, therefore, of the opinion that under Canadian Car Demurrage Rule 8, which is as follows: "Customs or inspection delays.—Demurrage shall not be collected from the consignee for any delays for which government . . . officials may be responsible," the railway company is not entitled to collect demurrage.

Assistant Chief Commissioner McLean concurred as follows:—Rule 8 of the Demurrage Rules, which is headed "Customs or Inspection Delays," as it stands, is ambiguous. It is open to two constructions: (1) that the exemption from demurrage "for which government . . . officials may be responsible" is an exemption arising out of neglect on the part of said officials; (2) that the exemption may arise where there is a delay from general governmental regulations, under which the government officials are working. The position taken by the Canadian Car Demurrage Bureau is that the exemption applies only where the delay is attributable to an act or neglect of Customs officials. It may be that the rule is not clear in wording in regard to its intent. It is, however, an established rule of construction in regard to tariffs, classifications, etc., that where the rule or item is ambiguous, the rule or item is to be construed strictly against the railway. Looking at the matter from this standpoint, I agree in Commissioner Goodeve's finding.

Dismissal and Reinstatement of Intercolonial Railway Conductor.

The following questions were asked in the House of Commons recently by J. B. Bourassa, M.P. for Levis, Que., and answered by the Minister of Railways, Hon. J. D. Reid:

"Has Philippe Boucher, of Charny, railway conductor, Intercolonial Ry., who was arrested for theft of merchandise from the G.T.R. in Montreal last autumn, and found guilty, been reinstated in his former position?" Answer: "He was not arrested for stealing from the G.T.R., but he was arrested by a G.T.R. policeman for having in his possession blankets belonging to Canadian Government Railways. He has since been reinstated."

"If so, how long after his offence was he reinstated?" Answer: "Twenty-six days."

"At whose request was he reinstated?" Answer: "At the request of the General Superintendent, after he had thoroughly investigated the matter and found that Boucher was not attempting to steal."

Nepigon Terminals Ltd. has been incorporated under the Ontario Companies Act with authorized capital of \$40,000, and office at Port Arthur, to deal in lands and buildings for various purposes. A. J. McComber is one of the provisional directors.

The West Indies Cable.

When the estimates for the West Indies cable, in the estimates for this fiscal year, was under discussion in the House of Commons recently, W. Duff, M.P. for Lunenburg, N.S., asked if the government pays that amount towards cable service with the West Indies.

Sir GEORGE FOSTER replied: Yes. I think about eight years ago an arrangement was made between the British Government, the United States Government and the West India Islands Government, which had two things in view, an extension of the cable service, and a cheapening of the costs of that service. The subsidy that was given was shared in equal proportions by Great Britain and Canada. I think it was \$8,000 for each, and the West India administration contributed \$10,000 a year. That subsidy has yet three years, I think, to run. A cheapening in the cost was brought about at once, and has continued up to this time. That cheapening runs from Halifax and other Canadian points, all the way through down to Bermuda, and through the other lines down as far as Demerara and connecting all that outer rim of the islands. That service has within the last two years been a good deal troubled and interrupted, and I have had the fullest explanations and information with reference to it. The service has been intermittent, and the condition has been extremely annoying to business men, but on the other hand it has been up against the hardest luck that I have known in connection with the service. Owing to the war, and other circumstances, it was absolutely impossible to get repair ships, and that was where the trouble arose. I got into communication with the British Post Office authorities, who manage the service so far as Great Britain is concerned, and a thorough examination is being made into the matter. That also will be one of the questions which will come up for discussion when our conference meets in Ottawa.

Mr. DUFF said:—I am very glad to hear that the cable service will be resumed, because for the last year or so it has been very unsatisfactory. Sometimes it takes as much as a week for a cable to go from Canada to the West Indies and the reply to come back, and that seriously interferes with business. It is absolutely necessary for business men that their cables shall arrive at their destinations quickly, so that they can get replies as soon as possible. Competition is keen, and it is necessary to catch the steamships that are sailing between Canada and the West Indies, and sometimes the cables are only sent 24 hours before the steamer sails from Halifax or St. John.

Grain Inspected at Western Points.

The following figures, compiled by the Dominion Bureau of Statistics' Internal Trade Division, show the number of cars of grain inspected at Winnipeg and other points on the Western Division during May, and during 9 months ended May 31, 1920 and 1919:—

	9 months to May	9 months to May
	1920	1919
Canadian National Ry.	3,864	48,835
Canadian Pacific Ry.	2,565	66,789
Grand Trunk Pacific Ry.	654	19,021
Great Northern Ry.	29	384
Totals	7,104	134,179
		122,584

Railway Operation and Maintenance Under a Divisional Organization.

By Alfred Price, General Manager, Eastern Lines, Canadian Pacific Railway.

In the very early days of railroading on this continent there was no necessity for an elaborate official organization. One can imagine that the rules and methods of operation first adopted were somewhat similar to those now in effect on rural electric lines. The trains were then few in number; they cannot now be satisfactorily handled on single track lines. The locomotives weighed from 4 to 6 tons; the latest achievement weighs 427 tons. The passenger cars were simply stage coaches coupled together; they are now elegant palaces on wheels. The rails were short wooden beams, covered with strap iron, and after a short use failed mechanically under 6 ton locomotives; they are now from 30 to 41 ft. long, and

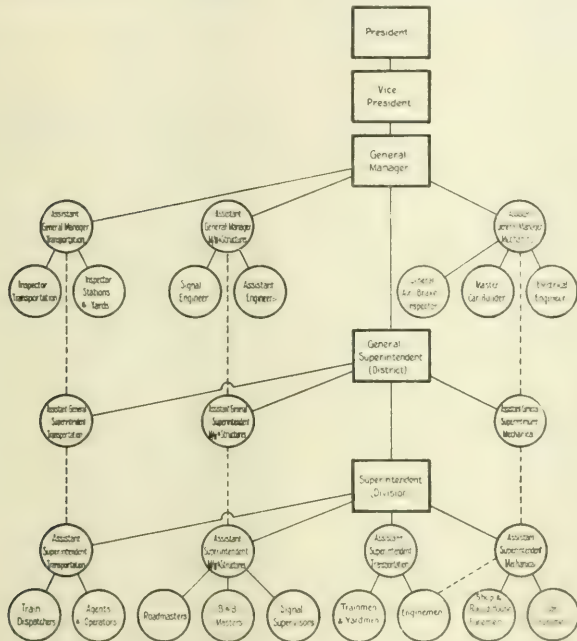

the number of miles of railway under operation, the extent of the territory served, and the prodigious sums of money invested in property, material and equipment, it is almost impossible to realize that the first railroad in the United States was built only about 90 years ago. Since then, not only have the achievements in railway building been stupendous, and the improvement in equipment and facilities marvelous, but the organization which has been developed to handle the immense traffic over an interlaced system of rails, with its complicated movements, has been amazing. In this development each railway company was at first a law unto itself and worked independently. All roads were not built

its object being the discussion and recommendation of methods for the management of American railways. Probably the oldest organization of the kind is the Master Car Builders' Association, formed in 1867. Its objects are the advancement of knowledge concerning the construction, repair and service of railway cars, to bring about uniformity and interchangeability in their parts, and to adjust the mutual interests growing out of their interchange and repair. There are also important associations, representing all branches of railway work, including maintenance of way, car service, railway telegraph, railway signal, passenger traffic, freight traffic, accounting, baggage, stores and claims agents, which discuss and legislate upon the various matters over which they respectively have jurisdiction. Through the recommendations and decisions of these associations, agreements have been reached on almost every known railway subject and almost every article used in connection with railway construction, maintenance and operation.

Upon one subject, however, no agreement has ever been arrived at. Both the divisional and the departmental organizations are in effect upon railways that are known to be efficiently and economically managed and neither system is without its champions. It is believed by some successful railway executives that the maintenance of way department should be under the direct supervision and sole control of men who are technically trained engineers, and that the track and bridge maintenance should be something entirely separate from the operation of the railway. Similarly it is their opinion that the mechanical department should be managed exclusively by men having had a thorough mechanical training and that there should be a well defined line of demarcation between it and the operating department. The theory is that, in this day of specialization, the right principle is to have experts in sole charge of the three important departments, operating, maintenance of way and mechanical, and that they should be handled as separate entities.

Organization has been defined as "The systematic union of individuals in a body whose officers, agents and members work together for a common end." Those who favor the divisional organization believe that better results are obtainable by a fusion, under one head, of the three important departments referred to above, and that by such an organization "the officers, agents and members" are much more likely to "work together for a common end" than if the departments are kept separate.

The departmental idea is carried a great deal higher up on some roads than on others. In some cases the general superintendent, besides being in charge of operation, controls all maintenance and mechanical work on his district, the officers of these departments reporting direct to him. In other cases the departments are kept entirely separate on districts, as well as on divisions, and the departmental officers report direct to the general manager. Again on other roads a great gulf is fixed between the working forces in the different departments, the general manager having no control of maintenance of way and mechanical matters. Instead the departmental officers

Railway Operation and Maintenance under a Divisional Organization.

are made of steel by the Bessemer, open hearth or other processes. In those good old days the trains were known as accommodation trains. The passengers were accommodating, for it is recorded that they habitually alighted from trains on steep ascending grades and climbed to the summits on foot; the modern passengers object to climb even into upper berths. But as traffic increased, trains multiplied, locomotives and cars were enlarged, and all railway facilities, equipment and appurtenances, which at the beginning were exceedingly crude, by a continuous series of improvements reached their present degree of excellence. Coincident with this great physical change there was naturally and necessarily a development in methods of operation, varying from time to time as traffic increased and conditions altered.

As one surveys today, the whole railway field on this continent, and considers

to the same gauge, and the interchange of cars was thereby rendered impossible. The necessity of standardizing the gauge was therefore recognized. Every railway ran its trains according to the local time of the city in which its head offices were located, or on some other arbitrary time. The various railways had their own system of operating rules; and in giving signals by hand or lamp, what was a "stop" signal on some roads was a "proceed" or "back-up" signal on others.

The need for reaching agreements on many matters and the desirability of standardizing methods, brought railway officials together, for an exchange of ideas and railway associations were the outgrowth of these meetings. Of the many railway associations in existence today the most important, although not the oldest, is the American Railroad Association, which was organized in 1872,

the various districts, and their respective departments and report direct to the one predominant in charge of operations and maintenance.

The general principle of having each district superintendent preserve these two essential attributes is fully appreciated, but this is quite possible, under a system that will concentrate under the assistant superintendents all the business of the railroad, maintenance of way and mechanical departments, and to have the superintendent to be applied to the passenger department only. The solid lines indicate direct jurisdiction and control. Symbols in the dotted lines indicate a measure of communication between men engaged in the same department, so that the benefit of the technical knowledge and expert training of those at the top may be transmitted to those who are directly in charge of the work.

Instead of designating the departmental officers as "assistants," some would prefer to use the old familiar titles, such as superintendent of transportation, district master mechanic, division engineer, trainmaster, chief dispatcher, etc., but this is not material. By a reference to the diagram, it will be seen that the general manager, general superintendent, and superintendent each has assisting him men who may be regarded as specialists in maintenance of way, transportation and mechanical work, respectively. The assistant general manager (maintenance of way) prescribes standards in connection with track, bridges and buildings; allocates new rails supplied for replacement; passes upon all plans submitted to the general manager by general superintendents for approval; criticizes maintenance of way expenditures, etc., etc. The assistant general manager (transportation) is responsible for the distribution of cars as between districts; the preparation of timetables, fixing the time for through trains at inter-district points; the issuance of instructions about preference and special passenger train movements; notices of embargoes; criticizes transportation expenses, etc., etc. The assistant general manager (mechanical) is responsible for the distribution of power as between districts; he prescribes locomotive shop, car shop and roundhouse practices; controls the movement of air brake inspection cars; supplies dynamometer car and attendants for the making of tonnage rating tests; criticizes mechanical department expenses, etc., etc. All three officers report to the general manager and all instructions to district officers are addressed to the general superintendents over the signature of the general manager.

The three assistant general superintendents bear pretty much the same relation to their general superintendent as the three assistant general managers bear to the general manager, communications and instructions being sent out over the signature of the general superintendent. They confer with officers of higher rank on work in which they are especially concerned, and guide those of lower rank so as to ensure the work being prosecuted in accordance with the prescribed standards and practices. The assistant superintendents report direct to their superintendent. They bear pretty much the same relation to him as corresponding officers of higher grades bear to the general manager and to the general superintendents. They are held directly responsible to him for the work of the men under them and have the advantage of the assistance and advice of

the district officers in the same department.

The above gives, in brief outline, a general idea of a divisional organization, but does not show in any definite way the advantages to be derived from it. Time will not permit of more than a mention of a few of these. Such a system absolutely removes any departmental friction, and tends to promote harmony throughout all branches of the service. If passenger trains fail to maintain their schedules, the superintendent is not in a position to blame the engineering department for not keeping the track in proper condition for high speed trains, nor the mechanical department for not maintaining locomotives in condition to make time. He is responsible for the condition of both the track and the power.

When there is an abnormal demand for locomotives for work train service, as well as for traffic, the superintendent, being in full control, and responsible alike for the track maintenance and the traffic movement, is in a position to decide in what proportion the available power should be provided for each class of service. Locomotives turned out for traffic can, when necessary, be utilized to do odd jobs of maintenance of way work, such as unloading cinders or ties en route and likewise locomotives supplied for work train service can often be utilized to handle revenue traffic before reaching working limits or beyond them.

When a division of railway is required to take care of some extraordinary rush of traffic, so that the facilities and power are taxed to their utmost, if the superintendent finds that a few extra men in the locomotive house, or at the ash pit, or coaling plant, would result in a quicker return of locomotives he is in a position to authorize their employment, or to transfer them from some other class of work. When there is an accident—and no railway is immune from such unfortunate occurrences—it is very much better to have one man responsible for clearing the line, repairing the track, picking up the wreckage, and resuming the running of trains, than to place the responsibility of clearing the line and picking up the wreckage upon the mechanical department, and for repairing the track upon the maintenance of way department, while the superintendent's forces stand aside waiting for the other departments to repair the damage and make the line passable for the resumption of traffic. In an investigation to determine upon whom to place responsibility for an accident, the superintendent can have no object in attempting to fix the blame, except where it belongs. Under a departmental organization, all departments interested are represented and every representative naturally desires to escape the necessity of admitting responsibility. This is unfortunate, but as human nature is constituted, it is inevitable.

A superintendent has a greater number of officers available for special emergencies. If it is suspected that men engaged in train service are becoming lax in the observance of any of the important general rules, or if it is considered advisable to check up any feature of track work, he is in a position to use all his assistants for checking or efficiency testing. There is an added advantage in that so many assistants obtain a general all around knowledge of and experience in the operation and maintenance of a division fitting them for greater responsibilities. Not the least important benefit to be derived from a divisional organi-

zation is the broader training which officers in the lower positions receive. A man occupying the position of general manager, or general superintendent, should not only know something theoretically, but a great deal practically, about the maintenance of track, buildings, bridges, signals, cars and locomotives, besides being a competent transportation officer, and the best way to acquire this general knowledge is to be placed in a position to gain the practical experience. A superintendent given such an opportunity will naturally make a more capable general officer than one whose training is confined to one department.

It has already been stated that some railways are being efficiently and economically managed under a departmental organization. The question naturally arises "Would still better results be produced under a divisional organization?"

The foregoing paper was read before the Central Railway Club, at Buffalo, N.Y., recently.

Limited Liability for Loss of Baggage.

Commissioner Boyce, of the Board of Railway Commissioners, gave the following judgment recently:—Application is made by a firm of solicitors for advice as to the legal interpretation to be placed upon the Baggage Regulations—rule 3 (b) of General Order 151. They desire to be informed as to whether the limit of \$100 for liability for loss by the carrier is applicable to all manner of loss in respect of baggage. The board's opinion is sought, presumably as a preliminary to the institution of legal proceedings in a provincial court, which would involve the construction and interpretation of the regulation as regards particular circumstances under which the loss occurred. I am of opinion that it is no part of the functions or duty of this board to give such opinions or legal interpretations for the purpose of founding or supporting legal claims. Those functions are of courts, and this board, whose functions are administrative, not advisory, should not appropriate them. This has long been the practice and principle adopted by this board. In a memorandum, dated Nov. 11, 1907, re Dunville Ice Company's switch, the then Chief Commissioner (A. C. Killam) stated that while the board is always willing to give information as to the contents of statutes to which parties may not have the means of convenient access, he considered that it should not undertake to give legal opinions as to parties' rights under circumstances stated to it, except where it became necessary for it to do so in dealing with applications and complaints coming before it in due course for adjudication; that in the particular case submitted, rights and obligations of the parties might be affected by circumstances not known to the board; and that the board could not properly undertake to advise in the matter.

The Commissioner then cited a number of similar rulings by the board, and concluded as follows:—The applicants should be advised that, for the reasons given, the board is unable to comply with their request.

The Union Pacific System has now three offices in Canada, for both freight and passenger purposes, as follows:—Toronto, G. W. Vaux, General Agent; Calgary, Alta., L. J. Canfield, General Agent; Vancouver, B.C., F. S. Elliott, General Agent.

The Locomotive as an Investment.

By G. M. Basford, President, Locomotive Feed Water Heater Company.

The following individual paper was read at the Sec. 3, Mechanical, Convention, American Railroad Association:—

More Ton Miles per Hour.—The locomotive is a big investment, and it must be so considered and so treated. In no other branch of engineering development has so much progress and improvement been made in efficiency as has been made in the steam locomotive during the present official generation, and the improvement has just begun. If all new and all existing locomotives are made as efficient as the best, and it is possible to make them nearly so, private ownership and operation of railways will be put in the way of success. But, no matter how efficient the power unit may be as a unit, its operation must be such as to obtain the benefit of the possible efficiency for the maximum number of ton miles per hour. More ton miles per hour is the only salvation of the railways. Among other things, this calls for the best locomotives and the best use of locomotives, quick and continuous movements, reduction of idle hours, quick terminal movements, improved dispatching, improved maintenance and repair facilities and repair methods, also fuel and labor saving improvements of every possible kind. It calls for resourcefulness in keeping locomotive wheels turning most continuously and most effectively.

Steam Locomotive Here to Stay.—Whatever we may have in the future, to-day the steam locomotive is the most vital influence in the progress of civilization. Its possibilities for assisting in meeting the problems of the present and future by reducing the cost of transportation lie beyond the imagination of all who have not made a careful study of the improvements now available for increasing capacity.

Whenever you wish you may put on the rails locomotives that, from a performance and particularly an efficiency standpoint, will hold their own with the best non-condensing power plants on land or afloat. You may at any time produce a drawbar horsepower per hour for 2.25 lb. of coal at the speed giving the maximum power of the engine. The problem is how to make all the locomotives in this country approach the standard already set, how to make the best use of facilities that are already available, also how to keep abreast of further improvements.

Your speaker innocently suggested as a subject for this convention: Modernization of existing locomotives, a study of locomotive operation from the point of view of a large investment, believing this to be the greatest problem before you. Your general committee honored me with the request, which is as effective as an order, to do it myself. I appreciate the responsibility. The only difficulty is to make the facts clear and to state the case strongly enough.

Importance of Overhead.—I have said that a locomotive must be considered as a big investment and must be used accordingly. It has been stated that the value of locomotives used on our railways is 60% of the total value of all the machinery, implements and tools used in all of the other industries in the country. Is this equipment used as efficiently and as effectively, when it is used, as is that of our manufacturers? A manufacturer is mighty careful about his \$25,000 and \$100,000 machines to keep them busy. If he does not, he goes

"broke." He puts cranes over them. He keeps raw material coming and clears away the finished product. He keeps them in repair. He works them night and day by watching operation and methods. He treats them as a big investment and keeps them going. He thinks of his machinery as being worth so many dollars per hour and he knows just how many dollars in each case. That is why he makes money.

In increased production an important lesson is learned from the electric locomotive. It costs more than the steam locomotive, and its friends have seen to it that it is given every opportunity for greater continuity of service. Expensive machinery ties up lots of capital. That machinery must produce or the carrying charge is overwhelming. The true significance of the word "overhead" needs to be emblazoned in the railway dictionary. Everything possible to do what will keep the wheels moving must be done. Overhead is the nightmare of the business man and the manufacturer, and it ought to be of the railway man. Railway men do not worry about it as much as they ought. Production is the answer to overhead in manufacturing business and in railroading. How to make the locomotive pull more tons per ton of coal, per ton of its own weight, per dollar of wages, per hour of the day, per year, per dollar of shop, terminal and track investment, and per mile run, is the answer on the railway.

Figures prepared to illustrate the increased cost of locomotives built two years ago, compared with the cost of exactly similar ones today were too painful to be included in this discussion. They reveal the fact that those built most recently are up against a serious handicap. They must earn several times more than their predecessors in order to make good. Not only has the cost of new locomotives gone up; the value of old ones from a capital standpoint has gone up and so also has the cost of maintenance and operation. Therefore, every locomotive must produce more.

Motive Power Chiefs Should be Vice Presidents.—In order to secure increased production from locomotives a serious handicap must be overcome. Railways are essentially machines. Transportation success depends very largely upon the character and the use of the power plants that move the tons. Not all the operating officers have come to their high places with sufficient knowledge and intimate contact with the locomotive to understand and thoroughly know what a locomotive should be and what it should be expected to do. It is not their fault, but it has been unfortunate for the railways. Many of the members of this organization know that for many years the speaker has implored the mechanical officers of American railways to compel the locomotive problem to take its proper place in railway organizations and therefore in railway operation. For years the speaker has urged a more commanding position for the mechanical officer and the mechanical department. In the present crisis this means more than it ever did. As a matter of course, traffic, accounting, legal and sometimes purchasing responsibilities are given recognition and high standing by being administered by officers of the rank of vice president. This is as it should be. In my opinion, the pulling power of the railways can

never be what it ought to be, and what it may be, until motive power problems are solved and motive power policies are prescribed over by officials acknowledged and supported by the standing that the officer in charge of locomotive design, construction, operation and maintenance requires, not to mention the other question of cars. This suggests that the mechanical policies of the railways, using 26 2/3% of the fuel of the country, involving technical responsibility for upwards of six billion dollars worth of property, for more than four hundred million dollars spent per year in locomotive repairs, and presenting possibilities to effect savings upon the expenditure of over a billion dollars a year for fuel, might with profit be prescribed over and decided by officers of the standing of vice presidents. This ought to happen, but it should be done in such a way as to accomplish three things: First, safeguard mechanical policies; second, provide for maintenance and operation of mechanical matters through the operating department; and, third, provide prospects and official standing which will constitute adequate reward for lifelong effort in a line of endeavor that requires this incentive.

On the other hand, if our railways do not take care of their mechanical officials, they will continue to lose men whose knowledge, experience and ability are needed in order to prevent public ownership and operation. They must be given the opportunity to increase production of transportation, and, fortunately, they know how to help to do it. In many cases they are obliged to plead and argue for improvements, with higher officials who do not always appreciate the importance of these mechanical questions. Sometimes the decision concerning equipment is in the hands of persons or departments whose responsibility does not extend to the operating results. Too often prices only determine their decisions. Such a selection of equipment is not only detrimental to the operating results, but most discouraging to the motive power officials who must keep the locomotives going and going at the minimum cost of fuel and repairs.

Profit, Not Fuel Cost, Important.—The vital thing is to make a profit on transportation. Profit is not determined so much by the first cost of the piece of machinery as by the economy of its performance. Under certain conditions a costly machine may be far more profitable to its owner than a cheap one, which is wasteful in its workings. Railway executives have realized this point in electric locomotive installations. Such installations have not been hampered by traditions such as exist with the steam locomotive, and the engineers are allowed a free hand to produce the best possible economic results. It would be worth while for any railway to give an order for steam locomotives to do certain work at minimum cost per unit of work done without restriction as to the cost of the machine. The writer knows of no record of this having been done. He predicts surprising economies when it is done.

This constitutes the strongest argument for basing locomotive recommendations upon facts that cannot be questioned and for pushing plans to conclusions. High officials will yield to the insistence of arguments the strength of which is made clear to them. Show the

It is a fact that the locomotive is a machine of great complexity and that its design is a task of no small magnitude. It is a machine which must be able to handle a wide variety of loads and to operate under a wide variety of conditions. It is a machine which must be able to operate for long periods of time without requiring any special attention. It is a machine which must be able to operate at a high speed and to maintain a high speed for long periods of time. It is a machine which must be able to operate at a low speed and to maintain a low speed for long periods of time. It is a machine which must be able to operate at a high speed and to maintain a high speed for long periods of time. It is a machine which must be able to operate at a low speed and to maintain a low speed for long periods of time.

Bigger Boilers Possible.—An example of subjects which open the way to revolutionary improvements in the locomotive is dynamic augment, which opens up great possibilities in increased capacity. At present, the locomotive is a systematic movement to reduce reciprocating weights and decrease dynamic augment was started. It was carried on successfully up to the beginning of the war and then stopped. This work must be resumed. Railway men were beginning to realize that it was not the static or dead weight of the locomotive alone that was important, but the dead weight plus the additional weight put on the rails by the unbalanced weights at speeds. When the dynamic increase from the unbalanced weights is reduced by lighter weights of reciprocating parts more weight may be put into the boiler. This development lies right at hand. It is well worked out and is ready for immediate application.

Let us see what this means. Consider what are known as the 2-10-2 A and B classes of United States Railroad Administration locomotives. They have not enough counterweight in their main wheels to balance the rotating weights at the main pins. With ordinary open hearth steel parts, as these locomotives are built, there is a lack of rotating balance at the main pins of 390 lb. This produces a dynamic augment at 54.2 miles an hour equal to 50% of the static weight at the main wheel. By the use of high quality steel forgings for reciprocating and rotating parts it is possible to reduce this unbalanced weight in the main wheel to very nearly zero. This would also help the overbalance in the other wheels. Of course, it must be made clear that there was insufficient time to consider this in the U.S.R.A. locomotives.

Furthermore, if the U.S.R.A. heavy mikado is given specially designed reciprocating and revolving parts of high quality steel, its destructive action upon the track at a speed between 40 and 45 miles an hour will be less than that of the U.S.R.A. light mikado that is fitted with the present corresponding parts of open hearth steel. The advantage thus gained is cheap, when it costs only a change in material and refinement of design. At all speeds, at which these locomotives are at all likely to damage the track, the heavy mikado, if built with light reciprocating parts, will be actually a safer locomotive than the light mikado is now. The heavy mikado has 10% more tractive power, 14% more heating surface and its total weight is 9 1/2% greater than the light mikado.

The excellent report to this association in 1915 on this subject should be followed by another study of this promising development, which means so much to the track and to bridges, as well as to the locomotive itself. Maintenance of way officers are now studying stresses in track. They take dynamic augment into consideration, but they seem to accept it as being necessarily high, instead of considering it is a series of forces which may be refined by reduction. They may be greatly reduced. Their re-

duction will reduce the track immensely, and relieve boiler restrictions.

Boiler Design Improved.—About eight years ago methods of laying out steam boilers and properties of locomotive boilers changed from the empirical to the exact. New rules were established. These were based upon the power of the cylinders, and the boiler was designed to produce the necessary steam. The result of the change in methods was to put locomotive designing into a higher plane, equal to that of marine and stationary engine design. What this means to our railways and what it means now, with increasing weight, size and power of locomotives, is difficult to estimate, but it is safe to say that we could not build the big engines of today on the basis of the rules of design recommended by this association in 1897. The locomotive builders have introduced these radical improvements in elementary design. Others have insistently and consistently developed improvements of factors making for better use of fuel and of steam. The use of steam in the cylinders, production of superheated steam, the subjects of combustion, stokers, steam conservation and boiler circulation are now studied in locomotive practice as they have been studied for years in the stationary and the marine fields. Locomotive combustion is being studied as it never was before. This has revealed the relative value of firebox, combustion chamber and tube heating surface and has thrown new light on the subject of air supply to the fire, baffling and mixing the gases and the form and volume of fire boxes. In fact, the fire box has been transformed into a proper furnace. If stationary and marine engineers were limited as to size and weight as locomotive designers are limited, the progress that the locomotive has made during the past few years would be appreciated.

Fix Up Old Locomotives.—There is scarcely an item that goes to make up an efficient and safe locomotive that has not been improved to make more power and more mileage. They not only make for better use of fuel, but they keep the locomotive from going to the shop as early and as often, and they protect the crews. These improvements need not be mentioned in detail. They are well known, are past the experimental stage, and are available to transform the fuel, wage, time and tonnage wasters into money makers, because the improvements are applicable to old locomotives as well as to new ones.

Locomotive men and firemen know these things. They know how modernizing transforms a locomotive. They understand what these factors mean to the big new power and they cannot be expected to exert themselves to the utmost and give most efficient service when so many of them must work with locomotives that they know to be capable of so great improvement. Not the least of the advantages of modernizing is its effect upon the men. They naturally do better work when provided with good tools.

New locomotives are usually well equipped for good performance. They are usually provided with most of the factors that make for increased capacity and improved economy. Their application to old locomotives offers a wonderful opportunity for a big money saving improvement. This application to old locomotives is a gold mine ready for immediate operation. These old locomotives may be made, weight for weight, as good and as efficient as new ones. How many men in this meeting realize

the fact before them. If they were asked to explain to a successful manufacturer the reason why this has not been done. How often a 12 or 15 car locomotive is seen on a 4 or 5 car train. This happens on roads having hundreds of locomotives that if modernized would handle light trains economically while the big ones do not. This is somewhat like turning piston rings in a wheel lathe. This is difficult for a manufacturer to understand, especially when it is so easy to bring small, old engines up to date.

What Has Happened to Some Locomotives.—Turn to page 55 of the proceedings of this association for 1917 to see how a single modernizing factor changed the maximum power of a locomotive. By applying this improvement to a consolidation locomotive on the Big Four Railroad, the power of the locomotive at 27 miles an hour was increased one-third. The speed at which the locomotive produced its maximum power was stepped up 42%. This is typical of the possibilities on other locomotives with correspondingly greater improvement when all the modernizing factors are applied.

Not long ago, one of the largest Pacific type passenger locomotives in the country gave up its train because of a loose tire. A 20-year-old 8-wheeler took the train of 8 steel cars 40 miles into the terminal in time to save refunding the excess fares. The little 8-wheeler had been modernized. The locomotive man said: "The bosses don't know what these modernized little locomotives will do. They do not know what we have to work with, and they do not use the old locomotives as they should after they are modernized. The tendency is to overlook their possibilities." Due in part to this experience, thirty more of these small locomotives on this road are now being modernized as they go through the shops.

When one of our big railways was considering the application of a fuel saving and capacity increasing factor for modernizing existing locomotives and improving old ones, the problem of keeping one of its important passenger trains on time was pressing. The regular train had six passenger and one parlor car and was hauled on a very fast schedule by a Pacific type saturated locomotive which usually was unable to make the schedule with nine cars. One of the locomotives was modernized in the hope that it would handle 10 cars. In the first test the train had seven cars. On each of the following test runs one additional car was put on until the locomotive handled 15 cars on schedule time. Let me here make record of the fact that one of our great railways declined to even try this particular improvement until its owner agreed not only to furnish it without obligation on the part of the railway, but to remove it at his own expense if it did not satisfy the representations made for it.

In another case modernizing saved 300 old 8-wheel locomotives which were too ineffective to be maintained as they were. They were good to haul wooden cars, but were outclassed by steel equipment. Approximately 30% in fuel was saved by modernizing and they were made sufficiently powerful for steel car trains.

Modernizing received its first good start by the improvement of a lot of Mallets. Another road has rebuilt prairie type locomotives into mikados with 21% increase in tractive effort. Another road changed over 300 consolidations into mikados. At speeds of 35 miles an hour the last mentioned rebuilt locomotives have a drawbar pull of 22,300 lb., whereas the consolidations gave only 8,500 lb.

at that speed. These were comprehensive changes which have proved successful. Modernizing usually need not be carried as far as to change the type or wheel arrangement. Its greatest field lies in adding improvements without this change. Every railway man knows that he has this opportunity before him. It is unnecessary to cite further notable examples, although this paper could be filled with them. The thing to do is to get into action, survey all existing locomotives, plan the modernizing and rejuvenate a certain number per month on a real time card as they go through the shops.

In 1915 a comparison was made between two locomotives. One was a consolidation, which represented best practice before the time modernizing of design and introducing of fuel saving factors began, the other was a mikado built in 1915. The mikado delivered 82% more work for the same amount of coal, which in each case was as much coal as the fireman could handle. The locomotives were designed for the same road and the same service and represented the advance of 10 years in modernizing on that road, including design and the use of fuel saving, capacity increasing factors.

The locomotive of 10 years ago, and unmodernized, is very little more efficient than one of 70 years ago. Modernizing three of them, however, is usually equivalent to an additional locomotive of the same size. The rest of the problem is to get the utmost service out of the improved locomotive and to obtain on the road the increased capacity known to be available. The available improvements should be capitalized and made to earn money. Not only should the locomotive itself be considered as an investment, but the improvements should also be so considered.

Electric Locomotive Fallacy.—Electric locomotive partisans are propagandists in arguments for electricity versus steam. They argue, however, on the basis of the steam locomotive as they knew it in the past rather than as it is today. They further weaken their case by absurd claims to the effect that electric locomotives can save two-thirds of the coal burned by all the steam locomotives in the country, and they base their claims on the steam locomotive of 10 years ago. The truth is that in five years of this period the economy and the capacity of the steam locomotive has more than doubled. The object is not merely to win against the electric, but to pit the steam locomotive against the high cost of everything. Constructive, systematic policy of locomotive engineering and operation is the way to do this and it will do it.

We are told that electric are replacing steam locomotives. We do not hear enough about the 38 steam mikados that replaced 12 moguls and 38 consolidations on the Missouri, Kansas and Texas several years ago, and of the 41.8% increase of train load, also of the reduction of 23% in the number of trains. The Norfolk and Western replaced 57 locomotives with 40, with a reduction of 26% in the number of trains for the same traffic. The Delaware and Hudson showed a saving of 43.8% in coal by substituting Mallets for consolidations. Each Mallet replaced two consolidations. A year later each of these Mallets showed 7.6% better fuel records and each of them continued to do the work of two consolidations, while burning less coal than one of the consolidations. On the Chesapeake and Ohio 25 Mallets replaced 44 con-

solidations, saving 37% in the cost of handling freight traffic. This has been going on the country over, in cases too numerous to mention, but too little is said about these improvements and too little is said about future possibilities. When every existing locomotive is thoroughly modernized and when all are operated with the study, care and supervision called for, and when coal and fuel oil are used as if they were expensive—then this association and the men who make it will be recognized for saving the railways. In this scheme of things the obsolete locomotive lacking labor saving, capacity increasing, fuel conserving and safety factors has no place.

For further development we have the tractive effort booster, also the fixing of cut-off to give maximum power at every speed of the locomotive to which B. B. Milner referred at this convention last year.

Scrap the Old Shops.—Shops for quick and economical repairs to big locomotives present possibilities for revolutionary modernizing improvement. If the "average" railway shop should be made the subject of investigation and report with a view of equipping it to put locomotives back on the road repaired as quickly and as cheaply as possible, it is the writer's opinion that the honest recommendation of the investigator would be to salvage the old and build a new shop, from foundations up. Shops as well as locomotives need modernizing from the standpoint of being considered as a big investment. Only a short time ago the writer watched the wheeling of a heavy locomotive by air jacks at one of the shops of a big railway where he once had the honor of employment. This would be impossible if the locomotive, or the shops, were considered by that road as a big investment. Let us hope that an able, quick crane has replaced the dangerous, sluggish jacks, and time and man-killing wooden blocking. Fortunately, shops as well as locomotives may be modernized if there is a will to do it, and if the policy of doing it is established on a stable basis. Bear in mind the fact that increasing the number of new big locomotives without increasing shop and locomotive house facilities is fatal as a business policy.

Maintenance of way officers are now engaged upon the establishment of units for comparison of track repair costs, and great improvements in track maintenance costs are expected. If costs of various locomotive repair shop jobs were compared upon a fair and really comparable basis, many shops with high costs could be put on the basis of the best shops. Improved machines, rearrangement of machines and improvement of methods, with reduction of distance traveled by material and parts, would certainly result. Many shop operations are subject to comparisons that would be intelligent and fair, but only items which are subject to fair comparison should be selected. There are many of these, and if the facts that comparisons would reveal are put up to the managements strongly, machinery 50 or more years old would disappear from our shops and locomotive houses because it cannot be modernized.

In the matter of shop production methods this association would do well to discuss the paper upon graphic production control read by E. T. Spidy, Production Engineer, Canadian Pacific Ry., before the Canadian Railway Club (see Canadian Railway and Marine World, Feb., 1920, pg. 55). Officers who desire to make a good record should study it. If

Mr. Spidy's "up-to-the-minute" shop information were also applied to locomotives and their operation, railway stockholders and the public would be happy indeed. Careful attention to the excellent report by the committee on shop scheduling systems, to be presented at this convention is earnestly recommended in connection with the reduction of overhead.

Stitch in Time Terminals.—Locomotive terminals are not all equipped to handle expensive locomotives promptly and economically. Has anyone charted or scheduled locomotive terminal movements with a view of short cuts in delays? Are big locomotives ever held in yards and sent in herds to the locomotive house for fire cleaning, coaling, sanding and locomotive house jobs, when they could as easily be sent singly to keep the locomotive house load curve more uniform? Because the "stitch in time" at the locomotive house may keep a big locomotive going strong, the best of mechanics and the best of tool equipment should be at the locomotive houses. Is this so today? Unquestionably the locomotive house foreman should be a man of greater authority. It would seem to be a money making scheme to give him much better standing, also to give him a yard foreman to handle the firing up of locomotive and all the out-of-door work, to speed up ash pit and other work that delays expensive locomotives from the road. An inspector who has been a locomotive man should meet all incoming locomotives and discuss with the crews the condition of the locomotive and the defects found. These men would save their annual pay every month. It would be very profitable to have travelling engineers spend a day or so every month at the locomotive house.

Adequate locomotive terminals laid out, organized and equipped for quick, thorough work will speed up the entire railway. Inadequate terminals do more than anything else to slow down the entire railway. Furthermore, locomotives themselves may be designed and equipped for quick terminal work, particularly at the ash pit. Who knows how many new locomotives might be saved by quickening terminal operations?

Better Use of Power.—In locomotive operation lies a fruitful field for study and improvement. Mileage of passenger and freight runs is an item of importance. Water and coal stations that were established years ago upon the basis of locomotives which did not have the advantage of modernizing factors may in many cases be relocated with profit. Why should not passenger divisions be extended to 300 miles and freight divisions to 200 miles? There are difficulties, but are we sure they cannot be overcome? It is much better to change crews and much cheaper than to let the locomotive go to a terminal so often. Is it possible to double the mileage between locomotive housings or to cut in halves the time waiting for the ash pit?

As to terminal delays, have conditions improved greatly since N. D. Ballantine recorded, before the Western Railway Club five years ago, the results of an investigation of locomotive service which showed that the mechanical department had the locomotives 58.5% of the time, and of the balance of the time 65% was occupied between terminals and 36% in actual running? Mr. Ballantine revealed an opportunity for remarkable saving by lengthening locomotive divisions that this association can profitably discuss.

Practical Shop Hints; Grinding.

Speed is one of the most important factors in grinding. Don't forget that the cutting speed decreases as the wheel wears down.

Every grinding wheel used at all regularly should have an exhaust hood and should be connected to an exhaust system supplied with a suitable fan.

Some work can be ground from the rough more cheaply than with preliminary turning. Makers of grinding machines should be consulted if there is any doubt in the matter.

"Glazing" of the abrasive wheel, is when the cutting point becomes dull. This sometimes occurs when the wheel is being run at too low speed. Glazing and loading are sometimes confused.

"Loading," is when the material being ground fills into the spaces between the cutting points of the abrasive. The soft materials such as aluminum and babbitts, tend to load an abrasive wheel much more than the harder metal.

The grinding wheel is in reality a milling cutter which presents millions of cutting teeth to the work every minute. Don't forget that these teeth cut chips, although they are naturally much smaller than those produced by the milling cutter.

The great field for grinding is in the economical finishing of work, either from the rough or in connection with other machines. In too many cases it has failed because of lack of co-operation between the turning and grinding departments.

An abrasive wheel is a disc built up from an immense number of small cutting particles held together by a bond of some kind. Excessive pressure of the work against the wheel tears these cutting particles out of the bond and wastes the wheel.

Automobile cylinders are usually ground dry and the wheel connected with an exhaust system to remove the dust. If water is used, it is usually circulated in the water jackets surrounding the cylinder, and in this way keeps the cylinder casting cool.

It is good practice to change wheels from one machine to another as they wear down, having the speed of the machines varied according to the diameter of the wheel. Some shops provide different size pulleys so that the speed of the machine may be increased to compensate for the wear of the wheels.

A hard wheel with a narrow face will grind work with less care and thought on the part of the operator, but it is the most expensive grinding that can be done. A wide-face soft wheel with the proper care does much more work per dollar of expense and is the proper combination for economical manufacturing.

Fine grinding can be done with a coarse-grain wheel under the proper conditions; in the same way a fine wheel may produce rough work. Many of the scratches which appear on ground work are made by small particles of metal between the wheel and the work. Good grinding demands conditions which allow these particles to escape.

When work is to be finished by grinding, the lathe hand must realize that conditions have entirely changed and that his work is not to finish, but to prepare for the grinder. This means about the roughest kind of turning he can do, simply reducing the stock to the point where the grinder can handle it more economically than the lathe.

A heavy grinding machine with a stiff spindle can run a soft wheel much more successfully than a lighter machine. This is because it holds the wheel firmly while cutting, and the mass of the machine absorbs much of the vibration. A light machine requires a harder wheel because it does not have the qualities referred to. Don't forget to consider all these points in trying to find out exactly where the trouble lies.

Grinding machines are run at high speed and the question of lubrication should be carefully considered. Don't overlook the directions or suggestions sent out by the makers of the machines. It is to their interest to have them run properly, and the directions should be followed.

Lubrication of grinding machines requires the proper kind of lubricant; this varies according to the kind of work being done and the speed at which the wheel spindle runs.

When grinding has to be done in addition to the lathe finish, it is an added expense. The proper way is to rough-turn with a coarse speed to within, say 1/32 of finished size, then send the piece to the grinding room. No grinding wheel should be used without a substantial safety guard for protection of the operator and surrounding machinery against damage should the wheel break. The operator's eyes should also be protected from the chips either by a glass shield, a spark brush or goggles.

Manufacturers of grinding machinery and wheels claim that a good grinding wheel run at proper speed wears less during its passage over the work than a milling cutter under similar conditions.

The wheel contact helps to determine the proper grade of wheel to be used on any kind of work. On work of small diameter there is more contact and consequently a harder grade of wheel can be used. In surface or in internal grinding the contact is very much greater so that a softer wheel gives better results.

Where water is used in automobile cylinders in the type of grinders where the wheel travels around the surface of the cylinder, trouble is often experienced by the collection of mud in the bottom of the cylinder through which the wheel must pass during every revolution.

The old fear of emery or other abrasive working into the metal being ground has been proved without foundation. Where oil and emery are used between metal surfaces rubbed together, the abrasives will lodge in the pores of the metal. This, however, does not happen in grinding automobile cylinders and similar work.

It is important that a grinding wheel fit the spindle or arbor closely to avoid play which throws it out of balance. Don't make the mistake, however, of forcing a wheel on its spindle, as even a slight strain may result in breaking the wheel. An allowance of 0.005 in. will usually be found about right.

A grinding wheel should always have flanges from 1/4 to 2/3 the diameter of the wheel itself. These should be relieved in the centre so as to bear perhaps for 1/2 in. at the outer edge. Never tighten the flanges directly against the wheel, but put in washers of blotting paper or some soft or thick substance between the flange and wheel.

Grinding allowances vary entirely with the work being done and the machine in which it is ground. In heavy, powerful

machines which remove stock rapidly, the grinding allowance may be anything from 1/64 to 1/32 in.

For fine finish of grinding where the work is not out of true, 0.003 in. is usually sufficient to true it up nicely if the turned surface is not too rough.

In wet grinding the stream of water should be applied at the right spot, which is the grinding point. It should have sufficient force to keep the face of the wheel clean while in contact with the work. It is especially important on internal work.

Grinding wheels appear softer at slow speed because the metal being ground tears the grinding particles away from the bond which holds them together. Don't condemn a wheel as being too soft until you are sure that its cutting speed is correct.

A soft wheel at the proper speed will give more satisfactory results than a harder wheel at slower speed. Don't forget that the wheel maker has had a wide experience and is always willing to give you the benefit of it. If you are having trouble of any kind submit it to the wheel maker.

Grinding problems cannot always be solved by asking the other man what he is doing. A wheel that is perfectly satisfactory on one machine may not give good results on another. Don't think from this that there is anything mysterious about it, because there is always a good reason for everything that happens.

The old notion about keeping oil away from grinding wheels has been largely exploded. This does not mean that oil spots are good for a grinding wheel as they undoubtedly help it to accumulate dirt and dust. Grinding wheels can be lubricated with oil, water, or almost any compound, as long as it is supplied freely and evenly over the wheel. While soda-water is best for general use, there are places where oil is being used successfully.

Grinding wheels should never be trued with the toothed sharpener if accurate work is to be done. While these cost less money than the diamond, they cannot produce nearly as accurate results. Wheel dressers are good for grinding wheels used on rough work or to true up wheels before applying the diamond. Both wheel dressers and diamonds should be supplied as freely as necessary if economical grinding is to be done.

The most important point in lapping is that the laps shall always fill the hole. If this is not done the hole will not be round as the lap will follow the original surface. The lap should be a little longer than the work, so as to lap the whole length of the hole at once, and so tend to correct any curvature which may exist.

To avoid bell-mouthed holes, which come from being lapped large at the ends, put the emery in a slot near the center of the lap and after the lap is in the hole squirt in oil to float the emery against the surface. Don't sprinkle the emery on the ends of the lap and work the piece over it while it is running as this grinds the ends large.

Ring gauges are lapped with a lead lap. They are first ground straight and smooth to within 0.0005 in. of size. After being lapped they are cooled and cleaned before trying the plug. This is done by placing them in a pail of benzine long enough to bring them down to the temperature of the room.—American Machinist.

Merging the Grand Trunk into the Canadian National Railways System.

Canadian Railways and Marine World
The following are the participants of the arbitration committee, to settle the merger of the G.T.R. with the Canadian National Ry., the two systems to be treated in the public interest as nearly as possible as one. The committee, as stated previously, consists of H. G. Kelley, President, C.N.R., and G. F. P. R. as chairman; C. A. Hayes, Traffic Manager, Canadian National Ry., and S. J. Hunsicker, Assistant Vice President, Canadian National Ry., representing the Dominion Government, and Frank S. P., Vice President and Treasurer G.T.R., and W. D. Robb, Vice President, Transportation and Maintenance G.T.R., representing that company. The committee, which will continue until after the arbitration award has been made and the G.T.R. preference and common stocks are vested in the government, held a series of conferences during June, careful and expert consideration being given to the work of co-ordination. The managing committee has named a number of subcommittees, composed of C.N.R. and G.T.R. officials, to make reports and recommendations regarding their respective departments, with a view to ensuring the maximum of efficiency and economy under the co-ordination plan, and action has already been taken in regard to joint operation of certain lines of both systems, and as to the amalgamation of a number of ticket offices.

Train Changes.—The Canadian National Ry., announced the following as the most important changes, effective June 27:—Train leaving Toronto for Port Arthur, Fort William and Winnipeg, Sunday, Monday, Wednesday and Friday, 9:15 p.m., cancelled. New train 11, leaves Toronto 9:30 p.m. daily for Sudbury and Capreol, connecting at Sudbury with Algoma Eastern Ry. for Little Current. Train 11, leaving Toronto Tuesday, Thursday and Saturday, connects at Capreol Wednesday, Friday and Sunday with new Canadian National-Grand Trunk Train 1, tri-weekly Montreal to Winnipeg via Port Arthur.

Train 2 from Winnipeg, arriving Toronto 4:30 p.m., Tuesday, Wednesday, Friday and Sunday 4:50 p.m., cancelled.

New train 12 leaves Capreol and Sudbury daily, arriving Toronto 8:50 a.m. Train arriving Toronto, Monday, Wednesday and Friday connects at Capreol the preceding day with new train 2, Winnipeg to Montreal.

The National leaves Toronto 11 p.m. daily for Winnipeg via Grand Trunk to North Bay, T. & N.O. to Cochrane, thence Canadian National. The National will arrive Toronto from Winnipeg, 3:00 p.m. daily.

West of Winnipeg the National runs over the Grand Trunk Pacific Ry. to Edmonton, 799 miles, thence over the Canadian National Ry. to Vancouver, 775 miles, making a total run of 1,574 miles, against 1,602 by the Canadian Northern through route, and 1,474 over Canadian Pacific. The train leaves Winnipeg daily at 10:25 a.m., arriving at Saskatoon at 12:10 p.m.; Edmonton 11:15 p.m., and Vancouver 9 a.m. Eastbound it leaves Vancouver at 9 a.m., Edmonton 8 a.m., Saskatoon 7:10 a.m., arriving Winnipeg at 11 a.m.

A new fast train, the Capital City, leaves Toronto 12:00 noon, daily except Sunday, for Ottawa, via Grand Trunk Toronto to Napanee, thence Canadian Na-

tional, arriving Ottawa 7:15 p.m., with close connection for Montreal and Quebec. Westbound, The Queen City leaves Ottawa 1:15 p.m., daily except Sunday, over same route, arriving Toronto 8:30 p.m. Stops on these trains between Toronto and Napanee will be limited to Whitby, Oshawa, Bowmanville, Port Hope, Cobourg, Trenton and Belleville. Connection is made at Harrowsmith for and from Kingston. Trains leaving Toronto 9:30 p.m. and Ottawa 12:30 p.m. cancelled.

Night train leaves Toronto 10:40 p.m. daily, arriving Ottawa 7:30 a.m.; returning, leave Ottawa 10:00 p.m. daily, arriving Toronto 7:00 a.m. These trains operate over the Canadian National throughout.

Train formerly leaving Toronto 4:45 p.m. daily, except Sunday, for Yarker, leaves at the same time and operates over Canadian National to Cobourg (G.T.R. station) only; returning, leaves Cobourg 7 a.m., daily except Sunday, arriving Toronto 10:15 a.m.

Grand Trunk train formerly leaving Toronto 6 p.m. daily except Sunday, for Belleville, leaves at same time and operates to Kingston via Grand Trunk to Brighton, Canadian National to Napanee, thence Grand Trunk to Kingston. Westbound this train leaves Kingston 6 a.m., daily except Sunday, for Toronto, via same route.

Grand Trunk train leave Toronto 7 a.m. daily for Montreal, running via Canadian National between Brighton and Napanee.

Ticket Office Amalgamations.—As part of the unifying process of the traffic agencies and other interests of the C.N.R. and the G.T.R., the following changes will take place about July 1, the amalgamated offices being known as Canadian National-Grand Trunk ticket offices:—

Boston, Mass.—The C.N.R. and G.T.R. offices have both been in the Old South Building, 294 Washington St. The C.N.R. office will be closed, and the business amalgamated in the G.T.R. office, W. R. Eastman, heretofore General Agent, Passenger Department, G.T.R., being appointed General Agent, and C. K. Howard, heretofore General Agent, C.N.R., being promoted to another position.

New York, N.Y.—The C.N.R. office at 1520 Woolworth Building will be closed, and the business amalgamated at the G.T.R. office, 1270 Broadway, A. B. Chown, heretofore General Agent, Passenger Department G.T.R., being appointed General Agent, and F. A. Young, heretofore General Agent, C.N.R., being transferred to another position.

Quebec, Que.—The C.N.R. office at 7 Du Fort St. will be closed, and the business amalgamated at the G.T.R. office at Ste. Anne and Du Fort Streets, S. J. Nestor, heretofore City Ticket Agent, C.N.R., being appointed City Passenger Agent; G. H. Scott, heretofore City Passenger and Ticket Agent, G.T.R., being appointed Special Passenger Agent, and P. H. Proulx, heretofore Ticket Agent, C.N.R., being appointed City Ticket Agent.

Montreal.—The G.T.R. office, at 22 St. James Street, will be closed, and the business amalgamated at the C.N.R. office, 230 St. James Street, M. O. Dufour, heretofore City Passenger and Ticket Agent, G.T.R., being appointed City Passenger Agent, and A. J. Roy, heretofore City Passenger Agent, C.N.R., being appointed City Ticket Agent.

Ottawa.—The G.T.R. office at Sparks and Elgin Sts. will be closed, and the business amalgamated at the C.N.R. office at Sparks and Metcalf Sts., P. M. Butler, heretofore General Agent, Passenger Department, G.T.R., being appointed General Agent; I. G. Reece, heretofore City Passenger Agent C.N.R., being appointed City Ticket Agent, and C. A. Belford, heretofore City Ticket Agent, G.T.R., being appointed City Ticket Agent.

Toronto.—The C.N.R. office, at 52 King St. East, will be closed, and the business amalgamated at the G.T.R. office, King and Yonge Sts., W. J. Moffatt, heretofore City Passenger Agent, G.T.R., being appointed City Passenger Agent; C. E. Tewny, heretofore City Ticket Agent, G.T.R., being appointed City Ticket Agent; and R. E. Richmond, heretofore City Ticket Agent, C.N.R., being appointed Assistant City Ticket Agent.

Hamilton, Ont.—The G.T.R. office at 11 James St. North will be closed, the business being amalgamated at the C.N.R. office at 7 James St., Jas. Anderson, heretofore City Passenger and Ticket Agent, G.T.R., being appointed City Ticket Agent.

Western Amalgamations.—Winnipeg press dispatch, June 20.—Complete amalgamation of stations and staffs on the Canadian National and Grand Trunk Pacific Railways will take place within the next 30 days at all western points. Local committees are working on the matter in connection with the Winnipeg staffs.

Rehabilitation of Belgian Railways.

The following is stated to be the condition of the Belgian railways on Jan. 1, the latest date to which information has been received:—Freight cars available average about 14,000 daily, while in 1914 the daily average furnished Belgian shippers was in the neighborhood of 20,000. The number of freight trains running is about 84% of the number before the war. The average daily tonnage hauled is 171,000 tons, compared with a daily average of 190,000 tons in 1914. The passenger trains in daily operation number 1,536.

On Jan. 1, 1919, there were but 578 locomotives in good running condition; this number is now said to be increased to 2,776. Railway receipts have greatly increased in recent months, although there will probably be some deficit for the year because of the heavy monthly deficits during the period following the armistice. For the 11 months ended Nov. 30, 1919, the total receipts amounted to \$57,128,000, at normal exchange, while the total for 1918 was \$59,444,000.

During Nov., 1919, passenger and passengers' baggage receipts were \$2,516,720, and freight receipts were \$4,130,200. The corresponding figures for November, 1913, were \$1,497,101 and \$3,762,149 respectively. This increase of current receipts is of course, partly occasioned by an increase in rates.

The need for additional rolling stock is acute. Locomotives and cars reclaimed from Germany are usually found to be in need of extensive repairs, and it has been impossible to obtain prompt delivery of new orders. At present it is stated that it would take more than 4,000 additional freight cars daily to meet the demands of commerce and industry.

Industrial, Logging and Mining Railways in British Columbia.

The B. C. Railways Departments report for the calendar year 1919 contains considerable information relative to industrial railways in the province, and says: "During the year a large amount of new work has been added in connection with the above owing to the amendments to the Railway Act having brought railways not subject to the Dominion jurisdiction under this department's jurisdiction. This new work includes, besides the inspection of locomotive boilers, previously under the Boiler Inspector's department, the examination of locomotive engineers." An amendment to the Railway Act passed in 1917, provided that "no company shall operate a railway

within the province except with the Minister of Railways' written consent, subject to such conditions as the Lieutenant-Governor-in-council may impose, and a further amendment passed in 1918, brought under the Minister's control the inspection of rolling stock used on such railways. Under these provisions the department has drawn up a new set of locomotive rules, and from April to Dec. 31, 1919, 53 locomotive boilers were given a hydrostatic test, 150 preliminary examinations have been made, 70 locomotive men have been examined and granted certificates, and there are 50 more applicants for certificates awaiting examination. The inspector is giving

careful inspection of the rolling stock employed, and giving instruction to the employees as to rules, etc.

There are over 70 industrial common carrier railways under the department's jurisdiction operating approximately 1,000 miles of line, equipped with 170 steam locomotives, 32 electric locomotives, 4,000 cars and miscellaneous equipment. The accompanying table shows the railways under the department's jurisdiction, with mileage and particulars of rolling stock. The table includes three railways which report to the Dominion Government, viz.: Eastern British Columbia Ry., Morrissey, Fernie & Michel Ry., and Pacific Great Eastern Ry.

Company.	Head Office.	Operating.	Miles track.	Locomotives.	Cars, etc.	Equipment.	Total.
Abbotsford Timber & Trading Co.	Abbotsford	Abbotsford Mill.	1	1	17 logging-trucks, 1 flat car, 1 oil-car.	19	28
Alberti Pacific Lumber Co.	Port Alberni	Alberti Mill.	1	1	20 logging-cars, 7 logging-trucks, 1 workmen's passenger-car.	28	29
Amick, J. H., Logging Co.	Sooke	Sooke	1	1	40 logging-trucks	10	10
Anderson, P. R.	Vancouver	Knox Bay	1	1	10 logging-cars, 8 logging-trucks, 1 flat car.	19	19
Beaver River Lumber Co.	New Westminster	Beaver River	1	2	11 logging-cars	11	11
Beaver Cove Lumber & Pulp Co.	Vancouver	Beaver Cove	1	1	4 cars	4	4
Blodell, Stewart & Welch Lumber Co.	Vancouver	Myrtle Point	20	3	51 cars	51	51
Britannia Mining & Smelting Co.	Britannia Beach	Britannia Beach	35	25	267 cars	267	267
B.C. Mills Timber & Trading Co.	Vancouver	Rock Bay	27	6	70 logging-trucks	70	70
Brooks, Scanlon & O'Brien (Eagle River)	Vancouver	Stillwater	18	3	42 logging-trucks	42	42
Northern Ry.	White Rock	Hernando Is.	2	4	4 logging	4	4
Campbell River Lumber Co.	White Rock	Otter	1	4	6 cars	6	6
Canadian Panama Timber & Logging Co.	Victoria	Sooke	1	1	1 logging-car, 2 workmen's passenger-cars, 25 rock-dump.	16	16
Canadian Collieries, Ltd.	Victoria	Ladysmith	21	10	8 box, 25 flat, 383 coal-cars, 25 rock-dump, 2 passenger-cars, 3 workmen's passenger-cars, 1 steam-shovel, 1 pile-driver, 1 snow-plough	455	455
Canadian Puget Sound Co.	Victoria	Junco River	1	3	72 logging-trucks	72	72
Canadian Robert Porter & Co.	Nanaimo	Union Bay	1	1	1 boarding-car, 6 logging-cars, 15 sets logging-trucks	23	23
Canadian Western Fuel Co.	Nanaimo	Nanaimo	20	6	42 flat, 664 coal-cars, 21 work-cars, 2 workmen's passenger-cars, 1 crane	680	680
Capilano Timber Co.	North Vancouver	North Vancouver	8	2	1 flat, 12 logging-cars, 27 logging-trucks, 1 steam-shovel, 1 snow-plough	42	42
Clayburn Co.	Clayburn	Clayburn	8	2	3 flat, 11 ore-cars, 4 coal-cars	12	12
Columbia River Lumber Co.	Vancouver	Golden	28	3	2 box, 2 flat, 82 logging-cars, 3 log-ladders	89	89
Comox Logging Co.	Comox	Comox	50	6	200 logging-cars, 30 logging-trucks, 10 boarding-cars, 12-tank-cars, 2 flat, 1 box, 4 gons	259	259
Corbin Coal & Coke Co.	Spokane, Wash.	Corbin	12	2	96 coal-cars, 8 work-cars, 2 steam-shovels, 1 rotary plough	107	107
Craig-Taylor Lumber Co.	Vancouver	Otter	5	2	8 logging-cars	8	8
Crow's Nest Pass Lumber Co.	Wardner	Waso	9	2	3 flat, 7 boarding-cars, 2 log-loaders	12	12
Clayton Lumber Co.	Cloverdale	Cloverdale	4	1	4 trucks	4	4
David Varley Mines Ry.	Vancouver	Alise Arner	18	3	1 box, 5 flat, 2 cabooses	11	11
Eagle Timber Co.	Vancouver	Grassy Bay	3	1	1 box, 1 flat, 7 logging-trucks, 1 pile-driver, 1 log-loader	18	18
East Kootenay Lumber Co.	Jaffray	Jaffray	10	1	24 logging-cars, 2 log-loaders	26	26
Eastern B.C. Ry. (Corbin Coal & Coke Co.)	Spokane, Wash.	Corbin	16	2	8 box, 19 flat, 1 baggage, 1 passenger-car, 1 pile-driver, 1 snow-plough	31	31
Eastern Lumber Co.	Ladysmith	Ladysmith	3	1	5 logging-trucks	5	5
Ellis, H. M.	Vancouver	Lombard	3	1	10 logging-trucks	10	10
Galbraith Logging Co.	New Westminster	Lindsay Mill	4	1	4 logging-trucks, 1 log-loader	5	5
Gordon Development Co.	Vancouver	Half Moon Bay	4	1	1 flat, 10 logging-trucks	11	11
Granby Consolidated Mining & Smelting Co.	Vancouver	Anox	6	8	3 box, 12 flat, 50 ore-cars, 3 coal-cars, 20 ballast, 1 steam-shovel	88	88
Gwilt Lumber Co.	Courtenay	Courtenay	4	1	2 sets logging-trucks	4	4
Griffin, Contractors	Vancouver	C. N. Ry.	3	2	2 sets logging-trucks	4	4
Hedley Gold Mining Co.	Hedley	Hedley	3	1	2 40 ore-cars	40	40
Heaps, E. H.	Ft. Victoria, Vancouver	Ruskin	12	1	4 flat, 15 logging-trucks, 3 oil-cars, 2 tank-cars	24	24
Hoard & Flaherty	Bainbridge	Bainbridge	3	1	4 sets logging-trucks	5	5
International Timber Co.	Vancouver	Campbell River	20	3	2 flat, 50 logging-cars, 10 work-cars, 1 box, 1 workmen's passenger-car, 1 pile-driver	65	65
Keystone Logging Co.	Vancouver	Silverdale	8	2	1 flat, 11 logging-trucks, 1 pile-driver, 1 log-loader	14	14
King, M. B., Lumber Co.	Newton	Kings	3	1	2 box, 1 logging-car	3	3
Khales International Timber Co.	Mission	Mission	2	1	1 logging-car	1	1
Lamb Lumber Co.	Vancouver	Lang Bay	4	1	1 flat, 10 logging-cars, 4 logging-trucks	15	15
Mayo Lumber Co.	Duncan	Duncan	3	1	2 logging-cars, 1 log-loader	3	3
McDonald-Murphy Logging Co.	Campbell	Campbell	3	1	1 logging-car	1	1
Merrill-Ring-Moore Co.	Vancouver	Johnstone Strait	3	2	19 logging-cars	19	19
Morrissey, Fernie & Michel (Crow's Nest Pass Coal Co.)	Fernie	Fernie	12	5	6 box, 49 coal-cars, 1 passenger-car, 5 workmen's passenger-cars, 1 snow-plough, 1 crane	64	64
Magoffin, Contractors	Prince George	G.T.P. Ry.	4	1	21 logging-cars, 12 logging-trucks, 1 pile-driver	34	34
Nimphish Timber Co.	Vancouver	Alert Bay	9	3	11 cars	11	11
New Ladysmith Lumber Co.	Nanaimo	Nanaimo	9	2	11 cars	11	11
Otis-Staples Lumber Co. (St. Mary's & Cherry Ry.)	Wycliffe	Wycliffe	34	8	91 cars	91	91
Pacific Great Eastern Ry.	Vancouver	North Vancouver to Whylcliffe	13	10	49 box, 138 flat, 35 stock, 3 refrigerators, 10 gons, 10 oil-cars, 4 cabooses	352	352
"	Vancouver	Squamish to Tatlah	231	10	45 ballast, 27 outfit-cars, 8 coaches, 1 comb. P. & B., 2 mail and baggage, 3 P. gas-motors, 3 steam-shovels, 1 ditcher, 1 pile-driver, 1 crane	31	31
Pacific Coast Coal Mines	Victoria	Wellington	20	3	3 flat, 45 coal-cars	61	61

Quebec	Quebec	10 long-line trucks	1 passenger	31
Atlantic	Halifax	10 long-line trucks	1 passenger	32

Aerial Transportation Notes.

The Vancouver Island Aerial Service is reported to have been inaugurated with headquarters at Victoria, B.C. A new line for aeroplanes and hydroplane landing stations is said to have been secured at Comox.

An Ottawa press report states that the Dominion Government will shortly undertake survey and forest protection service by aeroplane in the Rocky Mountain areas from stations at Vancouver, B.C. and Winnipeg, Man.

Lieut.-Colonel A. K. Tyler, O.B.E., who has been appointed officer commanding the Canadian Air Force, has gone to Camp Borden, Ont., to take up his duties. Applications for positions on the force have been received, and the work of selection and organization is reported to be in progress.

The Dominion Express Co. has, according to a London, Eng., cable, arranged for the transportation of passengers between London and Paris by aircraft. There will be a daily service in each direction, the time of the trip being scheduled at 2 hours 15 minutes. The single trip fare is approximately \$75.

Airship R-80, built at Barrow-in-Furness, Eng., for the British Admiralty, was expected to be launched by the end of June. Her dimensions, etc., are:—length, 535 ft.; breadth, 70 ft.; lifting power, 38 tons; number of engines, four; power, 240 h.p. each; estimated maximum speed, 65 miles an hour.

The Clifton Aero Club Ltd. has been incorporated under the Ontario Companies Act with authorized capital of \$40,000 and office at Niagara Falls, Ont., to provide aviation fields and aerodrome sites; to deal in aircraft and aeronautical supplies of all kinds; to carry passengers, merchandise and mail and give exhibition flights for hire. The provisional directors are J. B. Robinson, J. P. O'Reilly and H. R. Hillick, Niagara Falls, Ont.

Plans for Grouping British Railway.

London, Eng., cablegram:—Sir Eric Geddes' scheme for the economical administration of the British railways, which is being considered by the cabinet, disposes of the widespread expectation that the systems were to be nationalized. The scheme, however, contains some revolutionary proposals. The 135 railway undertakings in England and Wales are to be distributed into four geographical groups, comprising the northeastern and central system, the northwestern and midland, the south-western and south coasts, and the western and Wales system, each administered by one board of management. The proposal is that the state will buy out the smaller companies, and lease their lines to the larger undertakings in the various groups, thus leaving the entire management to be continued by private enterprise. It is claimed that this scheme of grouping lines will effect considerable economies in directors' fees and administra-

tion charges, while the pooling of locomotives and cars and the prevention of overlapping will make for greater efficiency.

The proposals will not, however, pass into law without a storm of protest from the working railwaymen, who have placed absolute dependence on the statement by Mr. Winston Churchill during the general elections to the effect that the government intended to nationalize the lines. Nationalization makes the same appeal to railwaymen as to the miners, and the tabling of Sir Eric Geddes' scheme is certain to usher in another big struggle on this issue.—Copyright by Toronto Star.

It may be explained that of the 135 railway undertakings in England and Wales apparently independent, only a comparatively few are trunk lines or of more than local importance, although a number of the smaller lines carry a very considerable traffic, and up to 1915, at any rate, paid dividends to their shareholders. The Cambrian Ry. is perhaps the largest of the independent companies but it has never been a prosperous concern owing to the fact that there is little traffic originating in the territory through which it runs. It has close affiliation with the London & North Western Ry., the Great Western Ry. and the Midland Ry. There are a number of other lines having considerable mileage and carrying a lot of traffic operated as separate lines, but owned jointly by two or more of the large trunk lines. The Shrewsbury & Hereford Ry., owned by the L. & N. W. Ry. and the G. W. Ry. and the lines operated by the Cheshire Lines Committee, owned by the Midland Ry. and the Great Central Ry.; and the Somerset & Dorset Ry., owned by the Midland Ry. and the London & South Western Ry. Of the other lines which are of little more than local importance, notwithstanding the amount of traffic carried, are the Taff Vale Ry., the Rhondda Valley Ry., the Barry Docks & Ry. Co., and other coal carrying lines in South Wales, and the Maryport & Carlisle Ry. in Cumberland.

Qu'Appelle, Long Lake & Saskatchewan Railway Land Suit.

An action brought by David Russell, Montreal, broker and promoter, to recover \$8,175,000 from Sir Edmund Osler, Hon. W. Pugsley, the National Trust Co. as executor of the estate of the late H. C. Hammond, and C. S. McInnes, as executor of the estate of the late Hon. D. McInnes, came before the Ontario High Court April 27. The plaintiff alleged that in May, 1916, he bought from the then directors of the Qu'Appelle, Long Lake & Saskatchewan Ry. 435,000 acres of its land grants for \$500,000 and stock in the Canada Saskatchewan Land Co.; that the directors sought to evade carrying out the contract; that he lost \$5,000,000 through the railway and its lands being subsequently sold to Mackenzie, Mann & Co. and the Canadian Northern Ry.; and the claim further included \$200,000 alleged to have been expended in attempting to recover the property from

Mackenzie, Mann & Co. The statement of claim contained allegations of fraud, espionage, bribery and attempts on his liberty and life. The statement of defence claimed that Russell had made default in his agreement to pay for the land, and that in return for shares in the Canada Saskatchewan Land Co. he gave up all claim to the land. Russell was not in court when the case came up, and it was dismissed.

Canadian National Railways Earnings.

	1920	1919
January	\$ 7,726,562	\$ 6,787,517
February	6,516,956	6,265,562
March	7,761,326	7,160,036
April	8,207,478	6,686,686
May	8,206,520	7,884,287
	\$38,418,842	\$34,684,088

Approximate earnings for three weeks ended June 21, 1920, \$10,104,341, against \$10,104,341 for the same period 1919.

Canadian Northern Railway System.

	1920	1919
January	\$4,200,700	\$4,026,000
February	3,862,300	3,863,580
March	4,287,730	3,564,300
April	4,732,623	3,878,149
	\$17,083,353	\$15,332,029

Canadian Pacific Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, from Jan. 1, 1920, compared with those of 1919:

	Gross	Expenses	Net	Increase or decrease
Jan.	\$13,914,569	\$13,393,629	\$520,941	\$967,571
Feb.	12,557,104	12,843,231	713,873	\$267,242
Mar.	15,715,937	13,758,171	1,957,766	418,721
Apr.	16,029,426	15,387,750	2,641,676	400,000
	\$58,217,026	\$53,517,600	\$4,699,426	\$4562,870
Incr.	\$8,311,341	\$10,104,341	\$1,793,000	

Approximate earnings for May \$2,161,000, and for three weeks ended June 21, \$10,104,341, against \$10,104,341 for May, and \$10,104,341 for three weeks ended June 21, 1919.

Grand Trunk Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, from Jan. 1, 1920, compared with those of 1919:

	Gross	Expenses	Deficit	Increase
Jan.	\$ 5,014,034	\$ 5,867,445	\$ 853,411	\$ 87,406
Feb.	4,660,831	5,119,742	458,911	188,887
Mar.	5,754,372	5,191,208	563,164	272,215
Apr.	4,777,816	5,187,240	209,424	466,592
	\$20,216,053	\$21,765,635	\$ 1,549,582	\$1,827,260
Incr.	\$1,827,260	\$2,041,198	\$ 213,938	

Approximate earnings for May, \$7,269,660, and for three weeks ended June 21, \$21,606,660, against \$21,606,660 for May, and \$21,606,660 for three weeks ended June 21, 1919.

Sir William Mackenzie's Private Car. P. F. Casgrain, M.P. for Charlevoix-Montmorency, Que., asked in the House of Commons recently, "How many times has Sir William Mackenzie's private car travelled on the Canadian National Ry. within the last two years." The Minister of Railway replied: "The Government has no information as to the details of operation of each individual car, on the Canadian National Ry."

Mainly About Railway People Throughout Canada.

J. Antonisen, who was appointed City Engineer, Port Arthur, Ont., recently, was born in Christiania, Norway, in 1869, and after spending a year in shipbuilding at Bergen, Norway, went to the United States in 1888, where he acquired some practical experience in civil engineering, and returned to Norway in 1894. After graduating in civil engineering at the Dresden University, he was engaged for about two years as Assistant Engineer on the Saxony Government Railways, and spent another four years in the Saxony Government department for improvement and regulation of rivers. He came to Canada in 1904 and entered C.P.R. service as Terminal Engineer, Winnipeg, and in 1905 was appointed City Engineer, Port Arthur, Ont., and subsequently also Manager, Public Utilities Commission there, resigning in 1911, when he was appointed City Engineer, Moose Jaw, Sasks., in 1912. He resigned the last mentioned position in 1913 and was appointed Superintendent, Brandon Municipal Ry., Brandon, Man., in 1913, which position he resigned in 1914, and returned to Port Arthur, Ont., where he conducted a private practice until his present appointment.

W. B. Bamford, who has been appointed District Freight Agent, C.P.R., Nelson, B.C., was born at Belleville, Ont., Sept. 10, 1863, and has been, prior to June, 1910, District Freight Agent, C.P.R., London, Ont.; June, 1910, to Apr., 1911, General Freight Agent, Atlantic Division, C.P.R., St. John, N.B.; Apr., 1911, to May, 1916, Division Freight Agent, Atlantic Division, C.P.R., St. John, N.B.; May, 1916, to June 1, 1920, District Freight Agent, C.P.R., Toronto.

Kennet William Blackwell, Vice President, Canadian Steel Foundries Ltd., Montreal, died there, June 11, after a short illness. He was born at Devizes, Eng., July 16, 1850, and was the son of T. E. B. Blackwell, Vice President and General Manager of the G.T.R. from 1857 to 1863. He was education at Bishops College, Lennoxville, Que., and in England, and took up the study of mechanical engineering at the age of 17, spending five years in the drawing office of the G.T.R. shops at Montreal, after which he was, from 1872 to 1875, Shop Foreman, G.T.R., Montreal; 1875 to 1879, Assistant Mechanical Superintendent, G.T.R., Montreal; 1879 to Sept., 1881, Mechanical Superintendent, Chicago and Grand Trunk Rd.; 1881 to 1883, Superintendent, Locomotive and Car Department, C.P.R., Montreal. In 1883 he resigned to enter business in connection with the manufacture of railway supplies in Montreal, and eventually became President and Managing Director of the Canada Switch & Spring Co., which later became the Montreal Steel Works Ltd., of which he was President, and when the business was taken over by Canadian Steel Foundries Ltd., he became Vice President of the last mentioned company. He was President of the Canadian Society of Civil Engineers, now the Engineering Institute of Canada, in 1903, and was subsequently an honorary councillor of that institute. He was also a director, at various times, of the Locomotive & Machine Co., Montreal; Vice President, Suburban Tramway & Power Co., Montreal Park & Island Ry., Montreal Steel Ry., Nova Scotia Steel & Coal Co., and several financial and industrial companies. The funeral took place at Mount Royal Cemetery, Montreal, June 14, when

a large number of transportation men attended.

George Bonham, who died suddenly, from apoplexy, at Montreal, June 1, aged 83, was at one time accountant on the Quebec & Lake St. John Ry., and remained for a time with the Canadian Northern Quebec Ry., when the control of the former line passed to the latter.

W. A. Booth, chief draftsman, G.T.R., Montreal, and Secretary Canadian Railway Club, was elected Vice Chairman of the Society of Railway Club Secretaries, at Atlantic City, recently.

J. M. Copeland, who has been appointed Travelling Agent, Great Northern Ry., Toronto, was presented with a silver mounted and engraved umbrella recently, by R. W. Long, Divisional Freight Agent, G.T.R., Toronto, and staff, on leaving the G.T.R. service.

T. M. Hyman.
Master Car Builder, London, Ont. Shops, Grand Trunk Railway.

J. J. Crowley, Assistant Superintendent, Canada Southern Division, Michigan Central Rd., St. Thomas, Ont., died at St. Bernard Hospital, Chicago, Ill., June 14.

J. H. Cunningham, who has resigned as General Agent, Union Pacific Rd., Vancouver, B.C., is now President of Rock-Cunningham Inc., Seattle, Wash., shippers and steamship agents.

Mrs. Dennis, wife of Col. J. S. Dennis, C.M.G., Chief Commissioner of Colonization and Development, C.P.R., died at Calgary, Alta., June 8, after a long illness.

Richard Doyle has been appointed Assistant General Manager, Mississippi River & Bonne Terre Ry., Bonne Terre, Mo., operating 46.2 miles of line from Riverside to Doe Run, and 8.1 miles of branches. He was born at Dudley, Ill., Nov. 12, 1862, and entered transportation service June 16, 1862, since when he has been, to Jan. 1, 1883, telegraph operator, Big Four Rd., at various points;

Jan. 1, 1883, to Aug. 1, 1892, dispatcher; Aug. 1 to Nov. 15, 1892, chief dispatcher; Nov. 15, 1892, to Mar. 1, 1893, Assistant Trainmaster; Mar. 1, 1893, to Dec. 1, 1899, Trainmaster same road, Mattoon, Ill.; Dec. 1, 1899, to Jan. 1, 1904, Trainmaster, Wabash Rd., St. Thomas, Ont.; Jan. 1, 1904, to Nov. 1, 1906, Superintendent, same road, Moberly, Mo.; Nov. 1, 1906, to Dec. 1, 1909, Trainmaster, G.T.R., Battle Creek, Mich.; Dec. 1, 1909, to Dec. 15, 1910, Master of Transportation, same road, Durand, Mich.; Dec. 15, 1910, to Nov., 1912, Trainmaster and Assistant Superintendent, Chicago & Alton Rd., Springfield, Ill.; Nov., 1912, to Mar. 16, 1916, Trainmaster; Mar. 16, 1916, to June 1, 1920, Superintendent, Mississippi River & Bonne Terre Ry., Bonne Terre, Mo.

James Dunsmuir, at one time chief owner of the Esquimalt & Nanaimo Ry., and later a director of the C.P.R., which company acquired the control of the E. & N.R., died at Cowichan Lake, B.C., June 6, as the result of a stroke, after being in poor health for some time. He was born at Fort Vancouver July 8, 1851. He entered business life with his father, who discovered and developed the first coal measures of any importance in British Columbia, and eventually succeeded him as President and chief owner of the Union and Wellington collieries, and the Esquimalt & Nanaimo Ry. These properties have since passed into the hands of Canadian Collieries (Dunsmuir) Ltd., and the C.P.R. respectively. He was a director of the C.P.R. for some years after 1908, was a member of the B.C. Legislature from 1898 to 1902, President of the Council 1900 to 1902, and Lieutenant-Governor of the province from 1906 to 1909. He entertained the present King and Queen when they visited British Columbia in 1901, and was present at the coronation of the late King Edward and Queen Alexandra in 1902.

L. C. Fritch, at one time General Manager, Eastern Lines, Canadian Northern Ry., Toronto, and latterly Vice President and Chief Engineer, Chicago, Rock Island & Pacific Ry., under corporate control, has been elected Vice President of the latter company, in charge of construction, maintenance and capital expenditures, with office at Chicago.

John Macneill Grieve, who has been appointed General Superintendent, Sleeping, Dining and Parlor Cars and News Service, Canadian National Rys., Toronto, was born in Scotland, Aug. 25, 1870, and entered railway service in July, 1900, since when he has been, to Sept., 1900, waiter, Intercolonial Ry., Halifax, N.S.; Sept., 1900, to Apr., 1907, waiter and steward, C.P.R., Montreal; May, 1907, to Apr., 1908, waiter, Apr., 1908, to Mar., 1910, dining car steward, Mar., 1910, to Mar., 1912, Inspector, Mar., 1912, to Apr., 1915, Chief Inspector, Apr., 1915, to Oct., 1917, Assistant Superintendent, Sleeping, Dining and Parlor Cars and News Service, Canadian Northern Ry., Winnipeg; Oct., 1917, to May 1, 1920, Superintendent, same department, Canadian Northern Ry., latterly Canadian National Rys., Winnipeg.

John Halstead, whose appointment as Division Freight Agent, C.P.R., Winnipeg, was announced in our last issue, entered C.P.R. service Jan. 7, 1892, since when he has been, to May, 1894, messenger and clerk, Freight Department,

June, 1901, May, 1904 to July, 1907, 1910, 1911, 1912, 1913, 1914, 1915, 1916, 1917, 1918, 1919, 1920, to May, 1921, General Freight Department, Toronto; May to Nov., 1907, Executive Freight Agent, Winnipeg; Jan. 1908 to Feb., 1909, chief clerk, General Freight Department, Vancouver; Oct. 1910 to Oct., 1901, Freight and Passenger Agent, Toronto; West, Ont., 1901 to Jan. 1, 1902, Assistant General Freight Agent, Calgary, Alta.; Jan. 1, 1902 to May 16, 1902, Division Freight Agent, Calgary, Alta.

R. A. C. Henry, B.A., B.Sc., Assistant Engineer, Railway and Canal Department, Ottawa, has been appointed Engineer in Charge for the Dominion Government, in connection with the arbitration as to the acquisition of the G.T.R. System, and is located in the International Building, Montreal. F. P. Moffatt of Winnipeg, formerly Senior Division Engineer, Hudson Bay Ry., has been appointed Assistant Engineer in connection with the work.

C. R. Hosmer, one of the C.P.R. directors, and Mrs. Hosmer, are spending the summer at Dorval, Que.

I. M. Hyman, whose appointment as Master Car Builder, G.T.R., London, Ont., was announced in our last issue, was born near Bristol, Eng., June 12, 1885, and after serving an apprenticeship in car construction in England, came to Canada and entered G.T.R. service at Point St. Charles shops, Montreal, and in 1914 was Car Inspector. On the outbreak of war in 1914, he enlisted for active service and went overseas with the Second Brigade of the first contingent, and served throughout the war, receiving the Distinguished Conduct Medal. On his return to civil life in 1919, he was appointed Assistant General Foreman, Car Department, Point St. Charles shops, G.T.R., Montreal, and was appointed to his present position May 1.

Walter E. Joyce, who has been engineer in charge of the Montreal tunnel, Canadian National Ry., since the late S. P. Brown resigned the position of Chief Engineer, has resigned, and is reported to have been appointed in charge of the Ridout suspension bridge at Kingston, N.Y.

H. G. Kelley, President G.T.R. and G.T. Pacific Ry., is a member of the committee on freight stations, organization, simplification of switching, and mechanical appliances, of the International Railway Congress, which will meet in Rome, Italy, in April and May, 1922.

Jas. A. C. Kelman, whose appointment as Telegraph Traffic Supervisor, Central & Western Divisions, Grand Trunk Pacific Ry., Winnipeg, was announced in our last issue, was born at Bowmanville, Ont., Nov. 1, 1886, and entered telegraph service Feb. 1, 1902, since when he has been, to Mar. 30, 1903, messenger, Great North Western Telegraph Co., Bowmanville, Ont.; Feb. 1, to Sept. 10, 1903, telegraph operator, same company, Brighton, Ont.; Oct. 1, 1903, to Nov. 1, 1905, telegraph operator, G.N.W.T. Co. and C.P.R. Telegraph, Toronto; Nov., 1905, to July, 1908, telegraph operator, C.P.R. and Canadian Northern Ry., Winnipeg; July 13, 1908, to Nov. 1, 1910, telegraph operator, G.T.P. Ry., Winnipeg; Nov. 1, 1910, to June 1, 1917, chief telegraph operator, same company, Winnipeg; June 1, 1917, to May 17, 1920, telegraph circuit manager, same company, Winnipeg.

Ernest Roy Logic, whose appointment as Division Engineer, Superior Division,

Canadian National Ry., Hornepayne, Ont., was announced in a recent issue, was born at Chatham, N.B., Aug. 16, 1886, and entered railway service in Mar. 1907, since when he has been, to Sept., 1908, draftsman and rodman, Grand Trunk Pacific Ry., Winnipeg, and Edmonton, Alta.; June, 1909, to Dec., 1910, draftsman, leveller and Resident Engineer, successively, Bangor & Arroostook Rd., Bangor, Me.; Jan., 1911, to Jan., 1912, topographer on location, and instrument man on construction, Franz to Hearst, Ont., Alkoma Central & Hudson Bay Ry.; Jan., 1912, to Sept., 1917, Resident Engineer on construction, Sudbury-Port Arthur line, Canadian Northern Ry., and Lambton-Guelph line, Toronto Suburban Ry.; Sept., 1917, to Dec., 1918, Resident Engineer, Toronto, Hamilton & Buffalo Ry., Bridgeburg and Hamilton, Ont.; Jan., 1919, to Feb., 1920, Resident Engineer on Maintenance, Canadian National Ry., Rosedale, Ont.

J. K. Macdonald, who has been appointed Chief Engineer, Northern Light Railways Co., Elk Lake, Ont., in charge

J. M. Grieve.
General Superintendent, Sleeping, Dining and Parlor Cars and News Service, Canadian National Railways.

of surveys and construction of the projected light railways in Northern Ontario, was born in 1869, and graduated in civil engineering from Ottawa University in 1892, and held various minor engineering positions in Canada and the U.S. from 1892 to 1900. In 1900 he was contractors' engineer on the harbor works at Port Colborne, Ont.; 1901, Chief Engineer and General Superintendent, Marietta, Columbus & Cleveland Ry., and rebuilt and operated 67 miles of coal railway, which was subsequently sold to the Wabash Rd.; 1902, Division Engineer, Missouri Pacific Ry. on construction work in Arkansas; 1903, Division Engineer on location; 1904, Locating Engineer on the southern end of the Toronto-Sudbury line, C.P.R.; 1905, Division Engineer, New Liskeard to McDougalls Chutes, Timiskaming & Northern Ontario Ry.; 1906 to 1907, prospecting mining claims, and contractors' engineer,

Canadian Northern Ry.; 1908, on location work, Ontario Northern & Temagami Ry. from Sturgeon Falls north, and also engaged in the construction of the Northern Ontario Smelter at Sturgeon Falls, Ont.; 1909, Inspection Engineer, Atlantic, Quebec & Western Ry., Gape, Que.; 1910, Engineer for the Foundation Co. engaged on the reconstruction of the C.P.R. Windsor St. station, Montreal; 1911, Engineer in charge of the Mond Nickel Co.'s connecting railway; 1912, Contractors' Engineer, C.P.R., double tracking on the Lake Superior Division; 1913, engaged in mine surveying, prospecting and municipal work, Sudbury, Ont.; 1914, Contractors' Engineer, Trent Canal, Washago, Ont. From 1915 to 1919, he was in military service overseas, two years being spent in France on light railway location and construction, and subsequent to his discharge in Apr., 1919, he has acted as a vocational officer for the Disabled Soldiers Civil Re-establishment Commission at Toronto.

W. McIlroy, whose appointment as General Agent, Passenger Department, C.P.R., Detroit, Mich., was announced in our last issue, entered C.P.R. service in May, 1891, in the telegraph department, and has been, from June, 1892, to July, 1893, clerk, Galt, Ont.; July 1893, to Feb., 1899, telegraph operator, Toronto; Feb., 1899, to June 1900, agent, Brantford, Ont.; June, 1900, to Mar., 1905, agent, Galt, Ont.; Mar., 1905, to Oct., 1912, agent, Peterborough, Ont.; Oct., 1912, to May, 1915, City Passenger and Ticket Agent, Hamilton, Ont.; May, 1915, to June, 1916, City Passenger Agent Toronto; June, 1916, to June 1, 1920, chief clerk to District Passenger Agent, Toronto.

Miss Evelyn MacInnes, second daughter of W. R. MacInnes, Vice President Traffic, C.P.R., was married at Montreal June 15, to Capt. R. B. S. Reford, M.C., of the Irish Guards, formerly A.D.C. to the Lord Lieutenant of Ireland, and elder son of R. Wilson Reford, of the Robert Reford Co., Montreal.

Arthur Tilley McKean, whose appointment as Division Freight Agent, C.P.R., Calgary, Alta., was announced in our last issue, was born at St. John, N.B., Dec. 18, 1886, and entered C.P.R. service Apr. 1, 1903, since when he has been, to Mar., 1906, clerk and stenographer, General Freight Department, St. John, N.B.; Mar., 1906, to Jan., 1908, clerk, assistant chief clerk and chief clerk to Assistant Freight Traffic Manager, Winnipeg; Jan., 1908, to June, 1911, Soliciting Freight Agent, Winnipeg; June, 1911, to Jan., 1916, City Freight Agent, Winnipeg; Jan., 1916, to May 15, 1920, Division Freight Agent, Winnipeg.

R. M. MacMillan, whose appointment as Division Superintendent of Telegraphs, and Superintendent of Time Service, Central Division, Grand Trunk Pacific Ry., Winnipeg, was announced in our last issue, entered telegraph service in 1904 as messenger with the Western Union Telegraph Co., Sydney, N.S., and worked through the various positions of clerk, operator and local manager there, and was later transferred to Halifax, N.S. In 1911 he went west and entered C.P.R. Telegraphs service, transferred to the Grand Trunk Pacific Telegraph service at Winnipeg in the same year, and was subsequently city manager in that service at Regina, Sask., and Calgary and Edmonton, Alta., successively, and, during the absence on active military service of F. T. Caldwell, was appointed acting Division Superintendent of Telegraphs.

Mrs. A. D. MacTier, wife of the Vice President, Eastern Lines, C.P.R., and Miss Adeline MacTier, are spending the summer in England.

Richard Marpole, General Executive Assistant, C.P.R., Vancouver, B.C., died there June 8. He was born in Wales in 1850, and served for nearly eight years in the construction and traffic departments of British railways before coming to Canada. He entered C.P.R. service in 1881, serving successively as contractor, Assistant Manager of Construction, Nipissing Division; Superintendent, Lake Superior Division; Superintendent, Pacific Division, and General Superintendent, Pacific Division to 1907, when he was appointed Executive Agent for the Pacific Coast, and later, General Executive Assistant for British Columbia.

Charles Sedgewick Morse, who has been appointed District Freight Agent, C.P.R., Toronto, was born at Ottawa, Ont., Aug. 31, 1889, and entered C.P.R. service Mar. 1, 1906, since when he has been, to Jan. 1, 1909, stenographer, tracing clerk and export clerk, Winnipeg; Jan. 1, 1909, to Apr. 1, 1912, Travelling Freight Agent, Calgary, Alta.; Apr. 1, 1912, to July 15, 1914, District Freight Agent Fort William, Ont.; July 15, 1914, to June 1, 1920, District Freight Agent, London, Ont.

Lord Mount Stephen, first President of the C.P.R., celebrated his 91st birthday in England, June 5.

Jas. Murdoch, of Toronto, who has resigned his position as a member of the Dominion Board of Commerce, has announced that he will return to his office in Cleveland, Ohio, as Vice President of the Brotherhood of Railway Trainmen of America.

John Murphy, Chief Electrical Engineer, Railway and Canals Department, and Board of Railway Commissioners, addressed the Engineering Institute of Canada, Ottawa Branch, recently, on ice problems and their solution, illustrated with moving pictures and lantern slides.

Charles F. Needham, whose appointment as Assistant to General Superintendent, Motive Power and Car Departments, G.T.R., Montreal, was announced in our last issue, was born at London, Ont., Dec. 9, 1877, and entered G.T.R. service July 2, 1898, since when he has been, with the exception of short periods in the road and transportation department and the motive power department, successively as follows,—clerk, head time keeper, accountant, chief clerk, and special assistant, to 1905, at Toronto, and to May 17, 1920, at Montreal.

David Pottinger, I.S.O., at one time General Manager, Intercolonial & Prince Edward Island Railways, at Moncton, N. B., and Mrs. Pottinger, who spent most of the winter in Montreal, are at Schenectady, N.Y., for the summer.

C. Price-Green, Industrial Commissioner Canadian National Rys., Toronto, spoke on forests and forest preservation in Canada, before the National Editorial Association at Boston, Mass., June 4.

John Gunion Rutherford, C.M.G., one of the members of the Board of Railway Commissioners, Ottawa, has been given the degree of doctor of veterinary science, honoris causa, by Toronto University.

S. Osborne Scott, General Passenger Agent Canadian National Rys., Winnipeg, was married there, June 2, to Miss Audrey Heath.

Lady Shaughnessy and Hon. Marguerite Shaughnessy have returned to Mont-

real from England.

Mrs. **Spencer**, widow of C. W. Spencer, at one time in the C.P.R. service, and afterwards with the Canadian Northern Ry., and Miss Beatrice Spencer, who spent the winter in California, have returned to Montreal.

Frederick William Sterling, who has been appointed District Freight Agent, C.P.R., Edmonton, Alta., was born at Thornbury, Ont., Sept. 13, 1879, and entered C.P.R. service in 1894, since when he has been, to 1903, messenger, local freight office, Vancouver, B.C.; 1903 to 1904, claims clerk, General Freight Department, Vancouver, B.C.; 1904 to 1906, chief clerk, General Freight Department, Vancouver, B.C.; 1906 to 1910, Contracting Freight Agent, Seattle, Wash.; 1910 to 1913, Travelling Freight Agent, Vancouver, B.C.; 1913 to May, 1920, District Freight Agent, Nelson, B.C.

William Tansley, who has been appointed Car Service Agent, C.P.R., Toronto, was born at Shelburne, Ont., Dec. 27, 1872, and entered C.P.R. service in Sept., 1889, since when he has been, to 1900, operator and agent at various points on the Ontario Division; 1901 to 1907, dispatcher, Toronto; 1907 to 1912, Chief Dispatcher, Toronto; 1907 to 1912, Assistant Superintendent, Havelock, Ont.; 1914 to 1915, Assistant Superintendent, Toronto; May 18 to July, 1915, Assistant Superintendent, Smiths Falls, Ont.; July to Dec., 1915, acting Superintendent of Car Service, Eastern Lines, Montreal; Dec., 1915, to Feb., 1916, Assistant Superintendent, Montreal Terminals; Feb., 1916, to Jan., 1917, Assistant Superintendent, London, Ont.; Jan. to Apr., 1917, acting Superintendent, London, Ont.; Apr., 1917, to Apr., 1918, Superintendent, Laurentian Division, Quebec District, Montreal; Apr., 1918, to May 31, 1920, Car Service Agent, C.P.R., St. John, N.B.

Lady Van Horne, and Miss Van Horne, are spending the summer at Covenhoven, St. Andrews, N.B.

Mrs. **Vaughan**, wife of H. H. Vaughan, formerly Assistant to Vice President, C.P.R., and their family, are spending the summer at Lake Placid, N.Y.

W. G. Vernon, Yardmaster, G.T.R., Windsor, Ont., dropped dead in the yards there, June 24, aged 54.

F. L. Wanklyn, General Executive Agent, C.P.R., Montreal, and Mrs. Wanklyn, are spending the summer at their country house, at Senneville, Que.

Howard Williams, C.B.E., heretofore Assistant General Manager, London & North Western Ry. of England, has been appointed General Manager, Central Agency Ry.

John H. Wilson, whose appointment as Locomotive Foreman, C.P.R., John St., Toronto, was announced in our last issue, was born at Aberdeen, Scotland, Aug. 31, 1878, and entered C.P.R. service May 1, 1899, since when he has been, to May, 1900, machinist, Winnipeg; May to Dec., 1900, charge hand, Calgary, Alta.; Jan., 1901, to Nov., 1906 assistant foreman, Brandon, Man.; Nov., 1906, to Aug. 1909, Locomotive Foreman, Brandon, Man.; Aug. to Dec. 1909, Locomotive Foreman, Moose Jaw, Sask.; Jan., 1910, to Nov., 1914, Locomotive Foreman, Kenora, Ont.; Nov., 1914, to Apr., 1916, Locomotive Foreman, Canadian Northern Ry., Hornepayne, Ont.; Apr. 1916, to Apr. 1919, General Foreman, Canadian Northern Ry., Trenton, Ont.; Apr. to Nov., 1919, Locomotive Foreman, C.P.R., Smiths Falls, Ont.; Nov., 1919, to Apr., 1920, Locomotive Foreman, C.P.R., Brownville Jct., Me.

Delaware & Hudson Co.'s Canadian Properties.

The Delaware & Hudson Co.'s annual report, for the year ended Dec. 31, 1919, contains the following:—Your railroad properties in Canada, operated by their owners, obtained the following results, which are compared with the previous year:

The Quebec, Montreal & Southern operating revenues decreased \$208,238.47, or 26.49%, and operating expenses increased \$49,874.32, or 6.34%. Income from hire of freight cars increased \$49,480.83, or 22.04%, and net operating income, not deducting interest due your company, was \$7,712.47, a decrease of \$199,264.27. Freight movement decreased 23,355.427 ton miles, or 51.97%, mainly on account of the reaction following the war. Freight revenue decreased \$211,476.70, or 33.97%. Passenger movement decreased by 491,408 passenger miles, or 10.69%. Operating expenses were increased by charges in anticipation of wages adjustments which may be necessary and will probably be retroactive to Jan. 1, 1919. Decreases occurred in maintenance of way and structures and transportation expenses, but were more than offset by an increase in the outlay for maintenance of equipment resulting from heavy repairs to locomotives during the year.

The Napierville Junction operating revenues increased \$73,474.20, or 17.27%; operating expenses increased \$83,831.25, or 27.71%, and net operating income decreased \$10,118.92, or 13.64%. Operating expenses were increased by necessary wages adjustments and this company's proportion of the increased cost of operating through passenger train service due to increased wages paid by the U.S. Railroad Administration. Passenger revenue increased \$124,443.64, or 97.01%, on account of the increase in passenger traffic which followed the termination of the war and the operation of through passenger train service to the station at Windsor St., Montreal. However, this increase was more than offset by a decrease in freight revenue of 23.76%, and the increase in expenses.

Toronto Union Station Progress.

W. F. Maclean, M.P. for South York, Ont., asked the following questions in the House of Commons June 8:—"Is the Minister of Railways aware that the new Union Station at Toronto, which is being built largely at the expense, either directly or indirectly, of the people of this country, has been completed, and is practically ready for occupation, but that for some reason or another the use of it is delayed? Is he also aware that the people of Toronto and of Ontario generally would like to see the splendid accommodation provided in that station for postal, express and passenger business, put at their disposal at the earliest possible date? If some legal difficulty stands in the way, I should like to know whether the government is prepared to remove that and to give the public the use of the building?"

The Minister of Railways, Hon. J. D. Reid, replied:—"The work in connection with the new station at Toronto is not and will not be completed for some little time. It has been delayed on account of strikes and shortage of material. The Toronto Terminals Railway Co., which is constructing this station, tells me that every effort is being made to complete it at the earliest possible moment.

Railway Association of Canada's Officers, Committees, Etc.

The following is a partial list of the officers and committees of the Railway Association of Canada, with headquarters at Montreal.

Honorary Chairman, Life Statutes:
J. M. E. Stewart, C.P.R., Montreal.
President, H. G. Kelley, President, G. F. B. Montreal.

General Secretary, C. P. R. Montreal.

Executive Committee—Life Statutes:
J. M. E. Stewart, C.P.R., Montreal; H. G. Kelley, President, G.F.R., Montreal; E. W. Beatty, President, C.P.R., Montreal; D. B. Hutton, President, Canadian National Ry., Toronto; J. N. Beckley, President, T. H. & B. R., Hamilton; N.Y.; A. H. Smith, President, New York Central Ry., New York.

Operating Committee—Grant Hall, Vice President, C.P.R., Montreal; W. D. Robb, Vice President, G.T.R., Montreal; M. H. MacLeod, Vice President, C.N.R., Toronto; F. F. Backus, General Manager, T. H. & B. R., Hamilton; J. H. Walsh, General Manager, Quebec Central Ry., Sherbrooke.

Traffic Committee—C. A. Hayes, Vice President, C.N.R., Toronto; J. E. Dalrymple, Vice President, G.T.R., Montreal; W. R. MacInnes, Vice President, C.P.R., Montreal; G. C. Martin, General Traffic Manager, T. H. & B. R., Hamilton; Carl Howe, Traffic Manager, Michigan Central Rd., Chicago.

Financial Committee—I. G. Ogden, Vice President, C.P.R., Montreal; Frank Scott, Vice President, G.T.R., Montreal; A. J. Mitchell, Vice President, C.N.R., Toronto; W. H. Maund, Sec.-Treas., T. & N. O. R., Toronto; E. B. Barber, Comptroller, Algoma Central & Hudson Bay Ry., Sault Ste. Marie.

Legal Committee—W. C. Chisholm, General Solicitor, G.T.R., Montreal; W. H. Curle, General Solicitor, C.P.R., Montreal; Gerard Ruel, General Counsel, C.N.R., Toronto; F. E. Robson, General Solicitor, Michigan Central Rd., Detroit; E. D. Cahill, General Solicitor, T. H. & B. Ry., Hamilton.

Sub-Committee on Transportation—H. T. Malcolmson, Superintendent, T. H. & B. R., Hamilton; H. Shearer, General Superintendent, M.C.R., Detroit; C. G. Bowker, General Superintendent, G.T.R., Toronto; F. P. Brady, General Manager, C.N.R., Montreal; A. Price, General Manager, C.P.R., Montreal; W. H. Farrell, General Manager, Algoma Eastern Ry., Sudbury; W. A. Griffin, Sup't of Traffic, T. & N. O. Ry., North Bay.

Sub-Committee on Car Service—F. Price, Sup't Car Service, G.T.R., Montreal; A. Hutton, Gen'l Sup't Car Service, C.P.R., Montreal; A. E. Lock, Sup't Car Service, T. H. & B. R., Hamilton; J. P. Driscoll, Gen'l Sup't Car Service, C.N.R., Toronto; W. S. Moy, Car Accountant, Quebec Cent. Ry., Sherbrooke; W. M. Huggill, Sup't Car Service, A. C. & H. B. R., Sault Ste. Marie; J. S. Gordon, General Manager, Quebec Oriental Ry., New Carlisle; C. A. Stewart, Manager, Temiscouata Ry., Rivière du Loup.

Sub-Committee on Rolling Stock—W. H. Sample, Gen'l Sup't Motive Power, G.T.R., Montreal; W. H. Winterrowd, Chief Mech. Engineer, C.P.R., Montreal; W. U. Appleton, Mechanical Engineer, C.N.R., Montreal; H. L. Rodgers, Mech. Engineer, T. & N. O. R., North Bay; W. T. Kuhn, Sup't Motive Power, T. H. & B. R., Hamilton; G. M. Robins, Master Mechanic, Quebec Central Ry., Sherbrooke; G. E. Parks, Mechanical Engineer, Mich. Cent. Rd., Detroit; T. C. Hudson, Gen'l

Master Mechanic, C.N.R., Montreal.

Sub-Committee on Engineering—F. L. C. Bond, Chief Engineer, G.F.R., Montreal; A. F. Stewart, Chief Engineer, C.N.R., Toronto; J. M. R. Fairbairn, Chief Engineer, C.P.R., Montreal; R. S. McCormick, Gen. Supt. and Chief Engineer, A. C. & H. B. R., Sault Ste. Marie; R. L. Latham, Chief Engineer, T. H. & B. R., Hamilton.

Sub-Committee on Wages and Working Conditions—E. R. Battley, Sup't Motive Power, G.T.R., Montreal; Geo. Hodge, Asst. to Vice President, C.P.R., Montreal; A. J. Hills, Asst. to President, C.N.R., Toronto.

Sub-Committee on Claims—J. M. Eddison, Freight Claim Agent, T. H. & B. R., Hamilton; E. Arnold, Freight Claim Agent, G.T.R., Montreal; G. C. Jackson, Auditor of Claims, C.P.R., Montreal; H. McDonald, Freight Claim Agent, C.N.R., Toronto.

The Railway Association of Canada Western Lines.

Secretary—E. J. Stone, Winnipeg.

Western Operating Committee—W. P. Hinton, Vice President, G. T. Pacific Ry.; A. E. Warren, General Manager, C.N.R.; C. Murphy, General Manager, C.P.R.; D. C. Coleman, Vice President, C.P.R.; C. E. Dafeo, Gen'l Superintendent, Midland Ry. of Manitoba.

Sub-Committee on Traffic and Transportation—H. H. Brewer, General Superintendent, G.T.R.; C. E. Dafeo, General Superintendent, Midland Ry. of Manitoba; A. E. Stevens, General Superintendent, C.P.R.; A. Wilcox, General Superintendent, C.N.R.; W. J. Manders, Asst. Frt. Trf. Manager, C.N.R.; W. M. Kirkpatrick, Asst. Frt. Trf. Manager, C.P.R.; W. C. Bowles, General Freight Agent, C.P.R.; A. E. Rosevear, General Freight Agent, G. T. Pacific Ry.; E. D. Cotterell, Sup't of Car Service, C.P.R.; T. P. White, Sup't of Car Service, G. T. Pacific Ry.; E. Crawford, Sup't of Car Service, C.N.R.; A. G. Sutherland, Sup't of Car Service, E. D. & B. C. Ry.

Grant Hall Honored in Winnipeg.

Grant Hall, Vice President C.P.R., was entertained at dinner at the Royal Alexandra Hotel, Winnipeg, on June 4, the event being somewhat belated, owing to the fact that when he was appointed to his present position he had to leave Winnipeg suddenly for Montreal to assume it. Nearly 300 leading citizens from throughout the west were present, Sir Jas. Aikins, Lieutenant Governor of Manitoba, presiding. Mr. Hall, in replying to the toast of his health, is reported as saying that it was a really great encouragement to a man to find that after years spent among them they would go to extremes of trouble to show him such marks of approval and appreciation. It was not all of his own volition that he went to Montreal, for both on account of his own many warm friendships and associations in Winnipeg and the west, and the fact that his family has grown up here and formed close ties in Winnipeg, it was a great loss to him and them to leave. He had watched with constant faith the development of Winnipeg and of the west for 20 years, from the time when at the invitation of Sir William Whyte he had first gone west. He continued:—"I have seen the C.P.R. extend its main line passenger service from one train a day to three, including the Trans-Canada Limited. I have seen 100 miles of the track doubled; the Winnipeg yards grow to 150 miles of track, including Transcona; the shops from 500 men to

over 2,000, and the Order shops established with 1,200 men. Thirty years ago I was only an apprentice at the Grand Trunk shops. I cannot speak to my western friends on an occasion like this without referring to the problems that face us as a result of the war. The western men gave a good account of themselves in France and Flanders and may be relied upon to do the same now at home. I am not a pessimist, but I would suggest that we all get together and consider our problems, present and future, with a minimum of provocative argument. We want to serve you; we cannot get along without you. I claim that we should be allowed, and should get, the remuneration necessary to make that service adequate to your needs. Though I live in the east, my heart is with you, for I appreciate the west. I hope you will always believe I am trying to give you the service to which you are entitled. Sometimes I hear western men say that the eastern men do not know enough about the west. I know that western men do not know enough about the east. We are one country, and the west is an important part of it, but I would suggest that you learn the east, and learn to appreciate it."

Premier Norris of Manitoba, who spoke for all the other western premiers as well as himself, voiced the sentiments of the west in regretting the departure of such a sterling public spirited person as Mr. Hall. The Mayor of Winnipeg, in the name of its citizens at large, paid a tribute of appreciation to the services rendered the city by Mr. Hall, during his executive residence there. Among the other speakers were the Mayor of Toronto, and Peter Heenan, M.L.A., for Kenora, Ont., a C.P.R. employee, who is often called upon to represent the men in conference with the management, and who testified to the confidence they have in Mr. Hall.

Alaskan Railway Work for 1920.

Construction and preparatory work for 1920 on the southern and northern sections of the Alaska Government Ry., as outlined by Col. Frederic Mears, Chairman and Chief Engineer, Alaskan Engineering Commission, includes heavy bridges and rock-cut work, as well as new grading and repair of old grades. The contract has been let for the 504 ft. truss span over the Susitna River, 265 miles north of Seward. Examinations are being made for the foundations of the Hurricane Gulch steel arch bridge, 284 miles north of Seward, which will be the northern limit of operation for the southern division this year. It was necessary to start excavation at this point early in the season, owing to the heavy yardage in the approach cut. Several miles of sidehill grading work will be carried out by steam shovel along the Susitna River. North of this work, in the same locality, about 24 miles of re-grading are required, to repair the old grade, which has deteriorated badly at several points owing to its abandonment in 1917-18. Distribution of supplies and materials, from the present end of track, 237 miles north of Seward, for 38 miles northward was carried out during the winter by sledding over frozen roads. On the northern division construction will be confined to Nenana Canyon, over a distance of about 10 miles, 120 miles south of Fairbanks, from the present end of track. Here engineers have been assigned to construction sections and six station gangs have made contracts for heavy rock cut work.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Shipbuilding and Railway, Harbor and
Canal Contractors' Interests.
Official Organ of various Canadian Transpor-
tation Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS,
Proprietor and Editor.

AUBREY ACTON BURROWS,
Business Manager.

Assistant Editors,
JOHN KEIR and DONALD F. KEIR

United States Business Representative,
A. FENTON WALKER, 143 Liberty St., New York.

Member of
Associated Business Papers,
Audit Bureau of Circulations
Canadian National Newspapers
and Periodicals Association,
Canadian Press Association.

Authorized by the Postmaster General for Can-
ada, for transmission as second class matter.

SUBSCRIPTION PRICE, including postage any-
where, \$2 a year in advance.

SINGLE COPIES, 25 cents each, including
postage.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection unless cheque is payable at par in
Toronto or Montreal.

Electrification of Railways in Great Britain.

Reports of recent annual meetings of British railway companies give information as to proposals for electrifying sections of the lines as follows:—The London & North Western Ry. appropriated £150,000 for widening its line between Chalk Farm and Willesden for electric service, and work on completing the electrification of suburban lines, postponed during the war, is in progress. The London & South Western Ry. has decided to supersede the present electrical equipment of the Waterloo and city underground line with modern equipment and to extend the length of the trains, at a cost, including additional cars, of £750,000. The Great Eastern Ry. has authorized its General Manager to prepare a scheme for the electrification of its lines. The London, Brighton & South Coast Ry., which has been operating its minor suburban trains electrically for some years, is encouraged to hope that at an early date the company may be able to electrify its lines throughout the whole of its suburban area. The Lancashire & Yorkshire Ry. directors have recommended that the line between Manchester and Oldham, and on to Shaw and Royton, be electrified. The Great Western Ry. is electrifying the Ealing & Shepherds Bush Ry. The North Eastern Ry. has under consideration proposals for the electrification of the main line between York and Newcastle, 80 miles.

A North and South American Railway.

The often discussed proposal for a north and south American railway extending from Hudson Bay, to Patagonia is again being revived. This line would be approximately 10,000 miles long, and it is estimated the trip could be made in 10 or 12 days. The projected railway, while it has been advocated to some extent for the past 50 years, obtained the official endorsement of the International American Conference in 1902, and has again been considered by the Pan-American financial conference held in Washington most of the South American republics have been linked up by railways, and the Peruvian Government is building additional lines so that a north and south railway on the southern half of the continent is within measurable realization. The same may be said of the railway situation in Canada, the United States and Mexico, where something like a through route will be available on the completion of the Hudson Bay Ry. by the Dominion Government. The greatest difficulty to be overcome is in Central America, where the population apparently is not deeply interested and the geological conditions to be met with are discouraging.

Quebec & Saguenay Ry. Ownership and Operation.—The Minister of Railways stated in the House of Commons, recently, that the government took possession of this line Mar. 4, 1919, that it is still in the contractors' hands and is being operated by them under an arrangement made Sept. 24, 1919.

Sir William Van Horne's Estate.

The Supreme Court at Ottawa recently heard the case of the British Columbia Finance Minister vs. Royal Trust Co., an appeal from the judgment of the British Columbia Court of Appeals affirming the judgment of the trial judge, which declared that the Finance Minister's statement determining the amount of succession duty in respect to the estate of the late Sir Wm. Van Horne payable to the Province of British Columbia proceeded upon an erroneous basis, and that the succession duty payable in respect of such estate to British Columbia is \$8,523.16 and no more. The appellant's grounds of appeal were that the property of the deceased, wherever situated, should be taken into account in determining the rate of succession duty to which the property of deceased situate within British Columbia is liable and that the part of deceased's property within the province is liable to the proportionate duty that would have been payable by that portion if all the property of deceased, wherever situate, had been within the province. Judgment was reserved.

Air Required to Operate Thermo Welding Preheaters.

The following data is the result of tests made recently by Metal & Thermo Corporation, New York, N.Y., to determine the proper amount of air required for special thermo welding gasoline and compressed air preheaters: 25 lb. per sq. in. seems to be a practical minimum for operating preheaters. At this pressure, a single burner preheater will require approximately 25 cu. ft. of free air a minute and a double burner preheater approximately 50 cu. ft. of free air a minute. For very large welds, where the walls of the molds are thick, and the preheater gates longer than usual, a pressure of 40 lb. a sq. in. would be advisable, which would require approximately 35 cu. ft. of free air a minute for a single burner preheater and 70 cu. ft. of free air a minute for a double burner preheater. In the case of a large plant, with a central air compressor plant, upon which demands are being made by many departments, the pressure mentioned above should be maintained at the outlet to which the preheaters are attached.

Railway Employees' Voting Act, Ontario.—The Act passed in 1918 providing for the taking of the votes of railway men, who expected to be absent from their homes on the regular election day was amended at the Ontario Legislature's recent session. The provisions of the act are made to apply to voting on bylaws, elections for boards of education, or for public school trustees where the election is held by ballot, and the act is to apply in any place where at least 25 railway employees petition the council to pass a bylaw to that effect.

The Federated Order of Railroad Employees has been incorporated under the Dominion Companies Act part 1, without share capital, and with office in Toronto, to promote the moral and social welfare of its members, and to further their interests in every legitimate manner; also to provide for the maintenance of permanently disabled members or their dependents by furnishing shelter or other relief. The incorporators are:—F. Morrison, Brockville, Ont.; M. Morrison, H. A. Nightingale, A. J. Stark, Toronto, and H. S. Rand, Chicago, Ill.

*Quantity for each individual interior terminal elevator not received.
*Week ending May 27th, 1920.

29.743. June 10.—Ordering C.P.R. to stop on line at 22 and 24, and at 25, in view of the fact that the line is not yet completed at Newmarket, Ont.

29.744. June 10.—Approving agreement, May 21, between Bell Telephone Co. and Grand Trunk Ry. to build siding across Macdougall St., Windsor, Ont.

29.745. June 11.—Approving C.P.R. plans, Mar. 1, 1919, for the construction of a new line and three sidings at the mouth of the Ottawa River, North Bay Subdivision, Algoma District, Ont.

29.746. June 11.—Relieving C.P.R. from providing further protection at highway crossing near Yamachiche station, Que.

29.747. June 11.—Authorizing C.P.R. to divert road allowance on north boundary of Sec. 10, Tp. 2, Range 18, west of 100th meridian, across the tracks at mile 19, Moose Jaw Southwestern Branch, Sask., to be used to cross the tracks at the crossing at the mouth of the river.

29.748. June 12.—Authorizing Essex Terminal Ry. Co. to build siding for Piggett Lumber Co., Windsor, Ont.

29.749. June 9.—Authorizing C.P.R. to build siding and sidings at sidings for Quaker Oats Co., Peterborough, Ont.

29.750. June 11.—Approving agreement, May 21, between Bell Telephone Co. and Uptergrove Telephone Co., Ontario County, Ont.

29.751. June 11.—Ordering G.T.R. to install warning signal at crossing of Parkdale Ave., Ottawa, Ont.

29.752. June 11.—Approving Canadian National Ry. Co. to build siding at 100th meridian at overhead unloading apparatus for tank cars, such as to be used around the rear of the train when not in use, and employees to be kept off tops and sides of cars when passing under structure.

29.753. June 15.—Approving G.T.R. bylaw, May 21, authorizing Vice President, Passenger Traffic Manager or General Passenger Agent to prepare orders 13,449 and 21,718, Apr. 18, 1911, and Apr. 19, 1911.

29.754. June 15.—Approving agreement, June 2, between Bell Telephone Co. and Dingwall Telephone Co., Oxford County, Ont.

29.755. June 15.—Approving C.P.R. route map, June 1, 1919, for the Westford Lake Subdivision, mile 24, to Sec. 11, Tp. 56, Range 15, west of 100th meridian.

29.756. June 15.—Authorizing Michigan Central Ry. to connect with the Essex County track on lot 23, Con. 4, Gosfield Tp., Ont.

29.757. June 15.—Amending order 29,952, Nov. 2, 1919, re Pere Marquette R.R., crossing bridge at Middlemarch, Ont., by inserting paragraph 2.

29.758. June 11.—Authorizing Ottawa Electric Ry. to build power distribution line over C.P.R. on Clifton Road, Westboro, Ont.

29.759. June 15.—Approving proposed extension to Grand Trunk Pacific Ry. station at Stony Plain, Alta.

29.760. June 15.—Authorizing Canadian Northern Railway Ry. to build spur for Jos. Dufresne at mile 153.40, Montreal, Que.

29.761. June 15.—Approving Esquimaux & Nanaimo Ry. to build bridge 3.75 over Stamp River, at its Great Central Lake Branch, B.C.

29.762. June 15.—Approving C.P.R. to build spur for Ford Motor Co. of Canada, Ltd., Calumet, Alta.

29.763. June 16.—Approving C.P.R. plan of revised location of portion of the Langdon Northcarriage Branch from Sec. 23, Tp. 33, Range 22, at mile 0 to Sec. 11, Tp. 40, Range 18, west 2nd meridian, at mile 50.55, and rescinding order 29,168, Dec. 12, 1919.

29.764. June 16.—Ordering Canadian & New York Ry. (N.Y.C.R.) to build station at Northfield, Ont., including waiting room and freight shed combined; and to appoint caretaker to see that station is kept clean, heated, ventilated and lighted.

29.765. June 16.—Ordering Toronto, Hamilton & Erie Ry. to provide protection at crossing of

Wellington St. South, Hamilton, Ont., between 3.45 and 1.15 p.m. daily.

29.766. June 16.—Ordering Dominion Atlantic Ry. to have posted on 40 sidings in accordance with British road law specifications no. 20, 20, 20, from service and replaced by suitable car; D.A.R. to be kept in perfect order, one for every day it is in default in complying with this order, and rescinding order 29,490, June 1.

29.767. June 16.—Authorizing Canadian National Ry. to build spur for Sanitary Buildings, Inc., Regina, Sask.

29.768. June 16.—Rescinding to July 31, 1921, time within which Canadian Northern Railway Ry. may install interlocking plant at junction

with C.P.R. at mile 18.4, Kingston Subdivision, near Hazelton station, Ont.

29.769. June 16.—Relieving C.P.R. from providing further protection at highway crossing at Putnam, Ont.

29.770. June 16.—Authorizing Canadian Northern Ry. to build across highway at mile 10, Kamloops Subdivision, near Kamloops Branch, B.C.

29.771. June 16.—Approving Canadian National Ry. to connect Canadian Northern Ry. with National Transcontinental Ry. near St. Prosper, Que.

29.772. June 16.—Ordering Canadian National Ry. to appoint station agent at Valparaiso, Sask., by July 15, and to build suitable station there.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Canadian Niagara Bridge Co.—A meeting of shareholders to effect organization, elect directors, etc., was held at Hamilton, Ont., on June 7, and the following officers were elected subsequently:—President, E. W. Beatty, K.C., President C.P.R., Montreal; Vice President, A. H. Smith, President New York Central Rd., New York; Secretary, E. F. Stephenson, Secretary New York Central Rd., New York; Assistant Secretary and General Solicitor, E. D. Cahill, General Solicitor, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont.; General Treasurer, M. S. Barker, New York; Assistant General Treasurers, H. G. Snelling and Edgar Freeman, New York; Treasurer, Ernest Alexander, Secretary, C.P.R., Montreal; Auditor, John Leslie, Comptroller C.P.R., Montreal; Chief Engineer, R. L. Latham, Chief Engineer, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont.

The company was incorporated by the Dominion Parliament in 1918, with Lord Shaughnessy, J. N. Beckley, E. D. Cahill and W. P. Torrance as provisional directors, to build a bridge across the Niagara River, the Canadian end to be located between Chippawa and Fort Erie, Ont., and six miles of lines to connect the bridge with existing railways. In 1919 the act was amended to enable the company to build 12 miles of line, instead of six, to connect with existing lines from Welland to Bridgeburg.

Great Northern Ry.—We are officially advised that there is no truth in a recent press report that the company has filed plans for dock and wharfage improvements on Semiahmoo Bay, White Rock, B.C., in connection with its B.C. lines. (June, pg. 297.)

Hudson Bay Railway.—A special committee of the Senate, appointed to take evidence, and report, upon the navigability and fishery resources of Hudson Bay and Strait, and of the character of the ports on the bay, with regard to their fitness as a railway terminus, has reported that sufficient care was not taken in the selection of Nelson as the railway terminus and that the government should not make further important expenditures upon that port without first making a new and thorough examination into the relative merits of Churchill and Nelson as a terminus. To utilize Churchill would necessitate the building of 80 miles of railway, across a country about the character of which there is considerable divergence of opinion. The committee's report is given very fully in the Marine Department of this issue, under "Senate Committee report on the Hudson Bay route and ports."

Kettle Valley Ry.—A press report states that it is expected to have about 13 miles of the branch from Princeton to the Copper Mountain district opened for traffic at an early date.

Mount McKay & Kakabeka Falls Ry.—The Ontario Legislature has passed an act providing that this railway may be operated by steam for a further period of two years, except on Neening Ave., north of Montreal St., Fort William, Ont., and extending the time for the completion of the unconstructed sections of the line to Squaw Bay until 1922. (April, pg. 176.)

Northern Light Ry.—A press report states that the first car load of steel rails for the construction of the 36 in. gauge light railway from Elk Lake to Gowganda, Ont., has been delivered at Elk Lake. The report also states that surveys on the projected line are being proceeded with.

A meeting of shareholders of this newly incorporated company has been called to be held in Toronto, July 5, to receive and adopt the provisional directors' report and accounts; to elect directors; to let contracts for the construction of a light railway, and to authorize the directors to issue bonds for \$10,000 a mile on the whole undertaking, or on any branch or part contracted to be built. A press report of June 12 stated that \$300,000 of 7% first mortgage bonds were being offered by the company as part of the financing necessary for the construction of the projected light railway from Elk Lake to the Gowganda mining camp, about 30 miles.

Pacific Great Eastern Ry.—The Premier of British Columbia on his return from a trip of inspection over the line recently is reported to have said that the foundation work for the viaduct at Deep Creek was completed, that the steel work was expected to be completed in July, that track laying would then be resumed, and that it was expected to have rails laid into Quesnel some time in September. The site for the station building and terminal yards in Quesnel was selected during the Premier's visit. (June, pg. 297.)

Springfield Ry. Co.—The Nova Scotia Legislature has passed an act amending the company's charter. The Davison Tramway Co. was incorporated by the Nova Scotia Legislature at its 1903-4 session to build a railway to be operated by electricity, steam or any other motive power, near Alpena, and from near Cherrifield, on the Halifax & Southwestern Ry., and from any point on the Caledonia branch of that railway to points on the Davison Lumber Co.'s lands. The name of the company was changed in the following year to the Springfield Ry. Co. Construction of a line from Hastings Jct., one mile from Springfield, on the Halifax & Southwestern Ry., was begun in 1905, and about 9 miles of line were reported in operation in Nov., 1906. Subsequent additions were made, and it is reported that the company is operating 30

miles of standard gauge track, carrying mail to Crossburn, N.S., 10 miles, and lumber and general freight traffic over all its lines. The company's head office is at Crossburn.

Timiskaming & Northern Ontario Ry.

The Ontario Legislature has authorized the construction of an extension of this railway from its present terminus at Cochrane, Ont., to James Bay, with 20 mile branches and spurs as may be necessary. The location of the extension

and branches is to be subject to the government's approval, and the cost of construction is to be paid out of such sums as may be appropriated therefor by the legislature from time to time. (June, pg. 298.)

Canadian National Railways Construction, Betterments, Etc.

Halifax Ocean Terminals.—A recent Halifax, N.S., press report states that the only permanent work in progress at the new ocean terminals there is the train shed, which is nearing completion.

Fairview Locomotive Terminal.—Tenders are under consideration for grading at the locomotive terminal at Fairview, near Halifax, N.S.

Sydney Mines Freight Shed.—Tenders are under consideration for the erection of a freight shed at Sydney Mines, N.S. We are officially advised that it will be 180 x 40 ft. and be of wooden construction. It will replace a similar structure destroyed by fire recently.

New Glasgow Station.—We are officially advised that the work in hand at New Glasgow, N.S., consists of the erection of an extension 79 ft. 8 in. long and the remodelling of the existing building to give modern facilities for handling passenger and baggage business.

St. John Train Shed Damaged.—A large section of the roof of the train shed at St. John, N.B., collapsed on June 15, and it is said that 15,000 square ft. of the roof fell on the platforms and tracks. The roof was condemned some time ago, and work has been in progress taking down the entire station. A start had been made June 14, on taking down the trusses supporting the roof, and it is believed that the jar from the operation of trains out of the station, brought about the collapse. The St. John City Council was reported to have been advised in May that appropriations had been made for \$1,000,000 towards the erection of a new station, and additions to the yards.

McGivney Jct.-Fredericton Division.—We are officially advised that R. B. Stewart's tender for improvements on the line between McGivney Jct. and Fredericton, N.B., for about \$186,000 is to be accepted.

Moncton Yards.—Tenders are under consideration for grading for a yard for Moncton, N.B.

St. Lawrence Subdivision Revisions.—Tenders were invited recently for clearing, fencing, grading, and building trestles, culverts, and bridge substructures on the following deviations of main line on the St. Lawrence Subdivision, Canadian Northern Quebec Ry.: Burrel deviation, between mile 87 and 92, between Glenada and St. Boniface; East Yamachiche deviation, between mile 94.5 and 96.5, between St. Boniface and Charette; St. Paulin deviation, between mile 100 and 106, between Charette and St. Paulin; St. Ursule deviation, between mile 109 and 116, between Fremont and St. Justin.

The St. Lawrence Subdivision extends from Joliette to Quebec, and is made up in part of the Great Northern Ry. of Canada, a line acquired by Canadian Northern Ry. interests, and in part by the Quebec, New Brunswick & Nova Scotia Ry., which was built by the same interests, and leaves the former line at Garneau Jct., just east of the St. Maurice River and 80 miles from Quebec. The Great Northern was built under rather stringent financial conditions, and in days when 1% grades were considered quite

good enough, especially as its connections at either end were built to that standard and worse, but for some 30 miles out of Joliette it runs over the Montreal plain, and it was difficult to get 1% grades even if one tried. The Quebec, New Brunswick & Nova Scotia, on the other hand, was built to the same standard as the National Transcontinental Ry., which it parallels for some distance, so that on the whole subdivision of some 140 miles there are only about 30 miles on which the 6/10% standard was seriously exceeded, where the old line brushed up against the foothills of the Laurentides, and about one half of this was compatible with modern standards.

The location staff had made more or less of a study of this section for many years back, but capital was scarce and traffic none too heavy, and until recently it did not seem worth while to call attention to it, but the recent boom in paper and pulp products, and the growth of Northern Quebec generally has caused quite a change of conditions. Heavier locomotives and cars became the rule, and it happened, as it very often does, that the worst sections in point of grades and curvature were also those which required considerable bridges and viaducts. The bridges were built about 1900, and were not equal to the heavier loading of the present day, rebuilding became necessary, and it turned out that the bridges could be built on the revised locations just as cheaply, and in one instance much more cheaply than on the existing location. The intervening grading was a comparatively unimportant matter. The result is a reduction of the grades over the subdivision from 1% to 6/10%, and a corresponding increase in train load of 80%, at a cost (excluding bridges) of some \$250,000, while the capitalized value of the increased trainload is estimated at from \$4,000,000 to \$6,000,000 with present traffic, and the traffic shows every sign of increasing even faster in the future than in the past.

From the west the diversions are: 1, the St. Ursule, 4.75 miles, which entails a viaduct 700 ft. long and 150 ft. high; 2, the St. Paulin, or Riviere-du-Loup, 3 miles, and including a viaduct over the Riviere-du-Loup 1,000 ft. long and 140 ft. high; 3, the East Yamachiche, only 1½ miles long, but involving a viaduct 550 ft. long and 100 ft. high; 4, the Burrill, some 4 miles long. This extends over two ravines, one of which is to be filled in solid, and the other is crossed by a steel trestle 450 ft. long and 80 ft. high. The intervening grading is comparatively unimportant, although there is some rock on both the first and last sections. Aside from the reduction of grades, the distance has been shortened somewhat, and the curvature flattened from 8° to 5°, and much reduced in total amount. These revisions when completed will furnish the C.N.R. with a first class line from Montreal to the St. Maurice, and from Garneau to Quebec, the only break in the standard being across the valley of the St. Maurice River, some 7 or 8 miles.

Levis Station.—The repairs and improvements at Levis, Que., station, upon which the Minister of Railways advised the House of Commons in Oct., 1919, the government proposed to expend \$125,000, have been completed and the renovated building was expected to be opened for public use June 27. A party of C.N.R. officials made an inspection of the building June 5. The renovated station is provided with three entrances, viz., from Laurier Ave., from Commercial St., and the third facing the platform. The ground floor contains a general waiting room, 75 x 40 ft.; a ladies' waiting room, 28 ft. square; smoking room, 30 x 40 ft.; Canadian Express Co.'s office; ticket office, lavatories, etc., for passengers, and conductors' rest room. The upper floors will contain division officials' offices.

Charney to Quebec Bridge.—Tenders were received to June 25 for grading and track laying for direct connection between Charney, 8 miles west of Levis, Que., and the Quebec bridge.

Western Lines Betterments.—Tenders are under consideration for the following betterments, etc., on Western lines:—For excavation and laying of cast iron pipe lines at Maymont, Humboldt, Dana, Alsask, and Margo, Sask.; for fencing (labor only) on 24 track miles on the Swan River subdivision; for construction of stream diversions at miles 333.1 and 335.6, Calgary Subdivision, Alta., and for grading and culverts, on line diversion between miles 333.2 and 335.1 Calgary Subdivision, Alta.

Western Line Extensions.—The House of Commons on June 10 passed an act authorizing the Canadian Northern Ry. Co. to build and operate the following lines of railway:—From Prince Albert, Sask., to Tp. 57, Range 25, west 2nd meridian; from the company's main line between the crossing of the North Saskatchewan River and Radisson, generally northerly and westerly to Meeting Lake; and from the Maryfield branch in Ranges 23 to 26, west of the 2nd Meridian, generally southerly and westerly to Tps. 2 or 3, on the 3rd Meridian.

We are officially advised that the invitation for tenders for the construction of a 16 mile extension of the Maryfield branch, in the direction of Bengough, Sask., was withdrawn, on account of a deputation requesting another route to be investigated. The management acceded to the request and the route suggested is being investigated.

Lampman Mines Branch.—We are officially advised that the work to be done on the Peebles-Lampman, Sask., Branch for this current year will include the completion of the 20 miles south from Peebles which was started in 1919.

Turtleford Extension.—We are officially advised that it is proposed to complete the grading on the Turtleford extension, Sask., to mile 83 this year, but it is not expected that any rails will be laid on the extension this year. We are also advised that a contract for grading on this extension has been let to the Western Construction Co., North Battleford, Sask.

Freight and Passenger Traffic Notes.

The Canadian National Rys. and the C.P.R. put into effect summer tourist rates to Pacific coast points on June 1.

The number of cars which passed over the Quebec Bridge for the seven days ended June 8 was as follows:—

	1920.	1919.
Bridge Station to Chaudiere Jet.....	311	326
Chaudiere Jet. to Bridge Station.....	358	172
Total	799	498

The U.S. Interstate Commerce Commission was reported on June 8 to have approved of the C.P.R.'s application for permission to file a schedule containing reduced rates on shipments of paper and paper articles from points in Canada to New York City.

The Grand Trunk Pacific Ry. has announced a second summer tour over its lines. The party is limited to 200 persons, and will start from Grand Forks, North Dakota, July 6, and will travel from Winnipeg in a special excursion train to Prince Rupert, B.C., which will be reached in nine days, stopovers being made at several points. From Prince Rupert the party will travel by G.T.P.R. steamship via the inner channel to Seattle, Wash., with stopovers at Vancouver and Victoria, B.C. Members of the party have the option of returning to the starting point by a number of routes, and may complete the trip any time up to Oct. 31.

The Canadian National Rys. is reported to have put in operation on June 1 a gasoline motor car on the line between Winnipeg and Transcona, Man. The car accommodates 75 passengers, and makes the 6-mile trip in 10 minutes. It makes seven trips from Winnipeg to Transcona, and eight trips from Transcona to Winnipeg every week day, and two trips each way on Sundays. On week days additional trips are run to accommodate the employees of the Canadian National Rys. Transcona shops. More than 1,000 persons are reported to have used the car on the first day it was operated. It has sufficient power to haul a trailer, which will be provided as soon as traffic warrants.

The Quebec and Saguenay Ry. continues to be operated by the contractors, Hugh Doheny & Co., for the Canadian National Rys. On June 1 the contractors put in operation the following train service:—A train daily except Sundays, leaving Quebec (Quebec Ry., Light & Power station) at 2.45 p.m., reaching Murray Bay at 6.45 p.m., and a train leaving Murray Bay at 7.45 a.m., reaching Quebec at 11.45 a.m. On June 26 and on each succeeding Saturday to Sept. 11, a train will leave Quebec at 7.30 a.m., reaching Murray Bay at 11.30 a.m. The return train will leave Murray Bay at 5.15 p.m. on Sunday, June 27, and each succeeding Sunday to Sept. 12, reaching Quebec at 9.15 p.m.

Justice Lafontaine gave judgment in the Superior Court at Montreal June 8 in an action brought by Hodgson, Sumner & Co. against the C.P.R. for \$931.55 for loss of merchandise. The goods were delivered to a carter driving a wagon bearing the C.P.R. sign, and were signed for on one of the company's bills of lading, but never reached their destination. The judge held that according to the custom established by the C.P.R. Co. for receiving goods and signing a bill of lading for their transportation to places indicated, the person accredited to receive them was not any particular individual,

but whatever person might be in charge of the vehicle on which appeared the printed initials "C.P.R." In view of article 1730 of the Civil Code to the effect that the mandator is liable to third parties who, in good faith, contract with a person not his mandatory, under the belief that he is so, when the mandator has given reasonable cause for such belief, the court ordered the C.P.R. to pay the full amount claimed by plaintiffs, with interest from the date the action was taken, and costs.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John, N.B., Bridge.—A press report states that excavation for the main piers for the new bridge at the reversible falls of the St. John River has been started, that the caissons to be used for the foundation work are being built in Montreal, that different sections will be put together at St. John and that it is expected the work for the supports of the western approach to the bridge will be started during the summer.

St. John-Montreal Gradients.—A press report states that the company has an engineer in the field studying the gradients on the line between St. John, N.B., and Montreal, to determine the possibility of reducing them.

Timiskaming to Lac La Quinze.—Hon. L. A. Taschereau, Attorney General for Quebec, is reported to have said recently that arrangements had been completed regarding the construction by the C.P.R. of the projected line from Timiskaming to the Quinze River Falls, Que., and that he had been given to understand by the C.P.R. officials, whom he had seen at Montreal, that construction work would be carried out promptly.

Ottawa Suburban Station.—A press report states that the company proposes to build a station near Parkdale Ave., Ottawa.

Saskatchewan Beach Station.—A station building is reported to have been built at Saskatchewan Beach, Sask. Hitherto passengers for this summer resort have had to use Sifton station.

Western Branch Lines.—The Senate railway committee on June 2 approved without amendment the company's bill authorizing construction of certain branch lines in the prairie provinces, details of which were given in Canadian Railway and Marine World for June, pg. 292. The bill was read a third time, and was assented to on June 16. (June, pg. 291.)

A St. Malo Shops Mare's Nest.—As a sample of how time is wasted in the House of Commons, the ridiculous questions asked, and the difficulties of carrying on the management of a government railway under such circumstances, the following may be quoted: C. A. Gauvreau, M.P. for Temiscouata, Que., asked recently, "Is it true that two first class machines, which were in good working order at the Riviere-du-Loup shops, were scrapped after their transfer to the St. Malo shops?" The Minister of Railways answered "No." The answering of this question probably involved, first a letter from a House of Commons officer to the Railways Department transmitting it, then a letter from the Railways Department to the Canadian National Rys. management, enquiry by the management of the St. Malo shops Superintendent, a reply from him, and its transmission from the management to the Railways Department.

Traffic Orders by Board of Railway Commissioners.

Contracts for Live Stock Transportation.

General order 298, June 2.—Re consideration of special form of contract for transportation of live stock, to be used by railway companies: Upon hearing the matter at Ottawa, Feb. 10, 1920, the Canadian Manufacturers' Association, Western Live Stock Shippers' Association, Winnipeg Live Stock Exchange, Calgary Live Stock Exchange, Cattle-men's Protective Association of Western Canada, Express Traffic Association, Toronto Humane Society, Western Canada Live Stock Union, Canadian Council of Agriculture, United Farmers of Ontario, United Farmers' Co-operative Company, Eastern Canada Live Stock Union, Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen, Swift Canadian Co., Grand Trunk and Canadian Pacific and Canadian National Railways, and Michigan Central Rd. being represented, it is ordered as follows:—

1. That the forms of Live Stock Contract and the Special Contract with Attendants in Charge of Stock, attached hereto marked Schedule A and Schedule B respectively, be approved.

2. That the form of Special Contract with Attendants in Charge of Stock (Schedule B) be printed on the back of the Live Stock Contract form (Schedule A).

3. That on and after July 1, 1920, the forms herein approved shall be the only contracts for the carriage of live stock to be used by all the railway companies subject to the legislative authority of the Parliament of Canada.

We are unable to give sufficient space to publish the schedules A and B.

Railway Finance, Meetings, Etc.

The Canada & Gulf Terminal Ry.—The company received tenders recently for the purchase of \$1,400,000 of 5% twenty-year first mortgage gold debentures secured by a trust deed in favor of the Royal Trust Co., and dated Mar. 31, 1920.

New Brunswick Ry.—At a special meeting of shareholders at St. John, N.B., June 1, a resolution is reported to have been passed authorizing the directors to sell or dispose of all or any part of the company's extensive landed properties in the Upper St. John River district. The company's railway forms part of the C.P.R. system, and the company for years past has been dealing with its land grants only.

Thousand Islands Ry.—There has been deposited with the Secretary of State at Ottawa two instruments dated Aug. 2, 1905, and April 21, 1920, appointing J. P. Ashworth, and F. Scott, respectively, as trustees under a mortgage dated Feb. 28, 1894, from the Thousand Islands Ry. Co. to John Bell, to secure payment of \$50,000 of 6% first mortgage bonds.

Toronto, Hamilton & Buffalo Ry.—At the annual meeting at Hamilton, Ont., June 2, the following were elected directors:—Lord Shaughnessy, E. W. Beatty, K.C., Grant Hall, A. H. Smith, A. H. Harris, W. E. Scott, H. B. Ledyard, W. P. Torrance, W. K. Vanderbilt, Jr., D. W. Saunders and J. N. Beckley.

Fighting Grasshoppers.—The C.P.R. has had poison spread along its right of way in the prairie provinces to kill grasshoppers in the infected areas.

Telegraph, Telephone and Cable Matters.

W. TANSLEY, heretofore Car Service Agent, St. John, N.B., has been appointed Car Service Agent, Toronto, vice H. C. Taylor, promoted.

Railway Lands Patented.—Letters patent were issued during May respecting Dominion railway lands in Manitoba, Saskatchewan, Alberta, and British Columbia as follows:—

The British Postmaster General has sent notices to the various chambers of commerce and boards of trade in Great Britain calling attention to the fact that a state owned cable is in operation between Great Britain and Canada, and to the government's desire that this cable, which is known as the Imperial cable, should be used mainly, if not exclusively, for traffic between Great Britain and the British Dominions. It is operated direct from the Central Telegraph Office in London, to Halifax, N.S., where connection is made with the Canadian land lines, as well as with the British cable to the West Indies. Traffic for Australasian points is sent by a special line direct from Halifax to Bamfield, B.C., and thence by the state owned Pacific cable to Australia and New Zealand, there being only one retransmission, viz., at Halifax.

J. I. M. Grant, heretofore cashier, Canadian Ex. Co., St. Catharines, Ont., has been appointed agent at Brantford, Ont. vice G. A. Oliver, resigned.

Electric Railway Department

Oshawa Railway Fifty-ton Electric Locomotive.

The Oshawa Ry., Oshawa, Ont., has added a 50-ton 400 horse power, steel, electric locomotive, which it has had built by Ottawa Car Manufacturing Co. The following are the principal dimensions:—

Length over end sills	32 ft.
Length of cab	16 ft.
Distance between bolter centers	18 ft.
Width over cab	10 ft.
Height, top of rail to top of roof	12 ft.
Height top of rail to center of draw bar	34½ ft.

The underframe is of steel construction, built as one unit. There are 6 longitudinal sills consisting of four 12 in. I beams and two 12 in. channels, with cross sill of 9 in. I beams and corner angle 6 x 6 x ½ in. Bumpers, or end sills, are built up with a 12 in. channel, fastened to ends of longitudinal sills by 6 x 6 x ½ in. angles, with another 12 in. channel shaped to meet the requirements of the M.C.B. coupler height, after which a ¼

is placed on the end window opposite the locomotive man. An 18 in. globe ventilator is placed at the center of roof, to take away any heat generated by the resistors. All sash and doors are of white ash, with ¾ in. white ash t. and g. sheeting on the interior. A frame is built of angle iron, surrounded with movable expanded metal screens, for the purpose of mounting the control equipment, which is located in the center of the cab. The resistors, which are installed in the top half, near the roof, are surrounded by 4 sheet metal doors, with ends of permanent steel panels rivetted to frame. The floors are of wood, with air space of 1½ in. between the 1½ steel plate and bottom side of floor boards, which are 1½ in. thick, t. and g., covered over with steel checker plate. The hoods or sloping ends are of 3/16 in.

ing is 3 ft. high with center rail, one end secured to hoods, and the opposite end forms a grab handle on the side, where angle iron steps are provided, with another grab handle fastened to cab corner post, providing access to inside of cab. A hand brake is provided with a 15 in. drop handle. Marker lamps and sockets of standard railway type are provided with flags. Sand boxes are located in each hood and designed to carry a quarter ton of sand, with 2 O.B. type air sanders in each box. The corner wheels have an independent discharge pipe of 1½ in., which is attached to the truck connected with rubber hose to each air sander. A standard air operated locomotive bell is provided at one end, mounted on hoods. This bell is also hand operated by a cable running through a ½ in. pipe and pulleys, which makes a very easy hand-ringing apparatus. The headlights, which are located on each hood, are of the Golden Glow type 12 in., 94 watts, 115 volts, plain resistance, with mirror reflector. Trolley retrievers are of the O. B. type on each end, mounted on hoods. The couplers have been designed specially to meet the requirements of the underframe and trucks. A very heavy bumper pocket casting, rivetted to center I beams, contains the Westinghouse friction draft gear. This arrangement eliminates any buffing shocks, which the locomotive would get if provided with the solid coupler head, therefore, is an important factor when one takes into consideration the Westinghouse h.l. control, which is installed inside the cab, giving longer life and better service, also eliminating unnecessary adjustments, which would occur without the use of the Westinghouse friction draft gear. Coupler heads are the M.C.B. standard. Poling sockets are provided at each corner, complying with the M.C.B. standard design. Air signal is installed, to meet future requirements for passenger service.

The trucks are the Baldwin-Westinghouse standard electric locomotive truck, with rigid bolster, equalized type, designed especially for locomotive service, and built with rolled steel side frames located outside of wheels. The cast steel transom and rolled steel end frames are fitted together with reamed taper bolts. This construction is especially adapted to heavy traction and buffing strains met in locomotive service. Wheels are rolled steel, 36 in. diameter with 4 in. tread, 1½ in. flange. Axles are forged steel, to meet requirements of A.E.R.A. standard in diameter and bearing area; 6½ in. diameter at bearing and 7 in. at gear. Journal boxes are of semi-steel of the Symington type journals, 5 x 9 in. The brake rigging is actuated through a radial brake beam, and through a brake beam located adjacent to truck transom. This permits the locomotive to negotiate short radius curves.

The electrical equipment comprises the Westinghouse type h.l. unit switch control, double end, arranged for field control of motors, including forced ventilation to motors and train line receptacles. The type of motor is 562-D-5 of 100 h.p., 600 volts, making a total of 400 h.p. per locomotive. The gears are Nuttall helical. A smooth drive, which is free from

Oshawa Railway, Fifty-Ton, All Steel Electric Locomotive.

in. steel plate is sheared to meet the required shape, and securely rivetted together. Bolsters are of box girder type constructed with two 12 in. channels and 1½ x 15 in. steel plate on the bottom side, rivetted to flanges of the 12 in. channels. A ¼ in. rolled steel floor plate extends the full length of the locomotive and the full width of cab. This construction forms a strong girder of the box type.

The cab, or body, is of steel construction, consisting of angle irons for ends and Z bars intermediates, 6 in. all, bent to form the sides and roof in one continuous piece, to which 3/16 in. sheet steel plates are rivetted, forming window and door openings. The roof is of steeple type, having 3 windows in each side and 2 on ends, with door at each diagonal corner. Two windows on each side are drop, and the third, which is at the control corner of the cab, is of a sliding type, with hinged arm rest, to enable the locomotive men to look out with ease when shunting. A storm sash

steel plates rivetted to angle irons. Doors are placed on end to permit installing new carbons and oiling air compressors. Also on side of hoods there is a double door, to permit installation of equipment, and the same are constructed to prevent undue heating of the electrical apparatus, which they contain, including the fan motor. There is also a door into the cab, so as to give the locomotive man easy access from inside of cab without going outside. These side doors are arranged to keep out water and give abundance of ventilation. An upholstered seat, with arm rest, is provided at each operator's position.

Pilot and switchman's steps are provided at each end. The pilot is constructed of angle iron base, with 1½ in. iron pipe for uprights, conforming to shape to meet the requirements of the locomotive end and coupler. A 1½ in. pipe rail is located on each end, to ensure safety, with an 18 in. opening at center, to give access to switchmen and train men, also train line jumpers. This rail-

Downloaded At: 11:53 11 September 2009

As mentioned in the Westerbork Internment Museum's website, 14,614 arrested and deported people are buried in the crematoriums of the D-III. After liberation, Westerbork became a school for returning internees, which existed until the summer of 1946. Without taking into account a considerable contribution to postwar reconstruction and the economy and agriculture, especially in the reconstruction of the Netherlands. Through the assistance of this program, the two crematoriums were destroyed after the war.

... (3) the operator should be permitted to operate to the best advantage with the machine; (4) all operations should be suitable for the operator's maintenance and overhauling; (5) there should be no danger of the operator being thrown in contact with the live parts. Centralization of control equipment is very important in the design of the machine.

Electric Railway Projects, Construction, Betterments, Etc.

Calgary Municipal Ry.—R. A. Bryson, Superintendent, has reported that extensive reconstruction of double track line will have to be done at the rate of from 110 to 120,000 a block, or 100,000 a block if heavier rail is used; and reconstruction of the single track street at the rate of six blocks a year at a cost of \$6,000 a block. The estimated total cost of this reconstruction is about \$6,000 a year for the next five years. He proposes that \$60,000 a year be taken from depreciation fund and that the balance be made up from revenue. June, 1910.

Hydro Electric Ry. (Essex Division). We are officially advised that a second track is being built on London St., Windsor, Ont., from Ouellette St. to Wellington St.; and that the car shop on London St. is being rebuilt. The new work will provide a new repair pit, an armature room, a blacksmith shop and a machine shop. (See *Sunday, Windsor & Amherstburg Ry.*, June, p. 316.)

New Brunswick Power Co.—We are officially advised that the project for the extension of the company's line from Fairville to Manchester, N.B., has been cancelled for this year.

We are further advised that the company is installing loops on all its lines in St. John, with a view to operating single end cars. Proposals to be made this are before the city council for the following:—Branch off at corner of Charlotte St. and north King Square; a line up Union St. from Mill St. to Charlotte St., 1,500 ft. At West St. John it is proposed to connect through tracks at the head of Rodney wharf. An extension of 3,000 ft. of track is also being arranged for in East St. John to accommodate the Symons Parish, the new harbor dry dock, etc., and the county hospital. The materials for these extensions are on hand. T. H. McCauley is General Manager.

Porcupine Rand Belt Electric Ry. Co.—The Ontario Legislature has revived the charter of incorporation granted this company in 1912, together with an extension of time until 1922 to begin construction and until 1923 for the completion of the projected line. The railway authorized to be built is from Larder City townsite westerly through McVittie, Hearst, Gauthier, McElroy, Label and Boston Tps., to Dane townsite. (Nov., 1916, 192, 460.)

Quebec Ry. Light & Power Co.—The extension of the electric railway tracks in Belvedere Ward is under consideration by Quebec City Council. A delegation waited on the council requesting that the company be asked to extend its service on St. Cyrille St., by St. Marguerite Bourgeois to Bells Road, so as to reach the St. Malo section of the line, and suggested the consideration of another extension along the cliff, by Boulevard de l'Entente and the city limits. Another extension asked for is a line to Belmont cemetery. (June, pg. 346.)

Winnipeg Electric Ry. is, according to report, planning an extension of its Academy Road line to Lindsay St., at an estimated cost of \$20,000.

We are officially advised that the company is building a substation to house two motor generator sets.

The Guelph Radial Ry., owned by the city, will be taken over for operation by the Hydro Electric Power Commission of Ontario July 1.

Unknown Railway Electric Locomotive Cab Interior, showing installation of equipment, with screens removed.

clarion type of whistle is installed over end corner window, operated by air.

Marker lamp brackets are installed on each corner of the locomotive's lateral glass. The locomotive is equipped with 2 marker lamps, and 2 classification lamps, including 2 green and 2 red lamps.

The heater equipment consists of 2 units of 1 heater unit each. Consolidated Heater Co. make, including 2-knife switch and fuse.

The painting is a dead black, varnished, with lettering in gold leaf, which is a very suitable color for this type of

Reliability was the most important factor considered in designing this locomotive, also five essential features were considered: (1) The weight, type, capa-

this is shown. This has a number of advantages: (1) All control apparatus is assembled compactly in one part of the locomotive and the switch groups are located in such a manner that they are readily accessible from all sides; (2) location of grid resistors above switch groups, which are placed under the roof, reducing the length of connection between these two pieces of apparatus to a minimum. All the heat from resistors passes directly through the roof ventilators. The distributing valve is located inside the cab, as a protection against freezing. Fan motor and blower are located inside hoods, also one compressor installed in each hood, which eliminates considerable objectionable noises, which are caused when these two pieces are in motion.

Increases in Electric Railway Passenger Fares.

Brandon Municipal Ry.—A Brandon, Man., press report of June 11 stated that the Manitoba Public Utilities Commission had approved an increased schedule of fares for Brandon Municipal Ry., effective June 21, as follows:—Cash, 7c.; ordinary tickets, 6 for 35c.; workmen's tickets, 5 for 25c.; children's tickets, 8 for 25c.

Brantford Municipal Ry.—A new schedule of fares is reported to have been put in operation June 10 in order to meet the increase of wages granted to the employees. The sale of tickets at 6 for 25c. has been abandoned and the fare is now a straight 5c. one.

Calgary Municipal Ry.—R. A. Brown, Superintendent, is reported to have recommended that an increased schedule of fares be put in operation. Following is a comparison of the present and suggested rates:—

	Present.	Suggested.
Cash.....	5c.	10c.
Tickets for \$1.....	22	18
Tickets for 25c.....	5	4

The reason for suggesting the 10c. fare is to encourage the purchase of tickets. The city commissioners are reported to have approved of the suggested schedule on June 11, and to have recommended the city council to authorize it.

Levis County Ry.—The Quebec Public Service Commission met May 25 to consider an application to authorize charging increased fares on this railway. Representatives of St. Joseph and Romuald municipalities refused to agree to the application or to abide by any decision made, and asked that the company be ordered to operate a service according to its franchise terms. The service through the two municipalities named, to Lauzon, had been suspended from May 20, the company's employees having refused to operate the cars over the boundary line, on account of the action of the St. Joseph and Romuald municipalities in refusing to join in the application for increased fares. The Commission, after investigating the company's finances and operations, together with the cause of the strike, reserved judgment, so far as the City of Levis and Bienville municipality were concerned; but ordered the company to operate its cars in the Town of Lauzon. The company was unable to obey this order, as the employees refused to operate cars in Lauzon, and they further intimated that if attempts were made to operate the cars in that town by other men, there would be a general strike, thus tying up the remainder of the system. The Town of Lauzon applied to the Commission, June 1, asking it to force the company to find money to operate the cars in Lauzon, or that the Commission take over the line and operate it. Judgment was given June 9, the Commission refusing to entertain the motion, or to force the company to operate its cars by borrowing money, as the company had proved in the investigation that it was unable to do so, and decided that no further motions of the Town of Lauzon to force the company to operate its cars under the existing conditions would be entertained, and also that no further motions or applications in regard to the matter would be accepted until the four municipalities interested got together and agreed to revise the franchise, or to submit the whole question to the Commission for its decision. On June 10, all the company's employees, including the car barn men, etc., went on strike. The Mayor of Levis, on behalf

of Levis and Bienville, guaranteed to re-adjust the fare schedule, so as to permit wages to be increased, and the service was resumed in those two municipalities June 11, the council subsequently agreeing to the granting of the following tari:—Cash fare, 10c.; tickets, 4 for 30c., 50 for \$3.50; children's tickets, 10 for 25c.; scholars tickets, 50 for \$2. The situation in St. Joseph and Romuald is reported as unchanged.

A press report of June 21 stated that the company's cars were again running in St. Romuald, the municipal council having on June 19 accepted the new fare schedule asked for by the company. St. Joseph municipality and the Town of Lauzon were still without a car service.

Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.; Geo. Kidd, General Manager, British Columbia Electric Railway Co.; M. W. Kirkwood, General Manager, Grand River Railway Co. and Lake Erie & Northern Railway Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Railway Co.; R. M. Reade, Superintendent, Quebec Railway Light & Power Co.; Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Railway Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Railway Co.

Official Organ—Canadian Railway and Marine World, Toronto.

London & Port Stanley Ry.—In order to meet increased wages, the week end rates between London and Port Stanley were cancelled June 17, and the regular tariff rates were put in force, viz., London to St. Thomas and return 80c, and London to Port Stanley and return \$1.25. The previous week end rate from London to Port Stanley and return was 95c.

Nova Scotia Tramways & Power Co.—The Nova Scotia Legislature has passed an act amending Chap. 180, of the act of 1914, subsections c and f of sec. 22, which fixed the fares to be charged by the company and sec. 1 of the new act declares that notwithstanding anything contained in those subsections and any amendments thereof increased fares may be charged. Following is a comparison of the old rate of fares and those now authorized:—

	Old.	New.
Cash.....	5c.	7c.
6 tickets for.....	25c.	4 tickets for..... 25c.
25 tickets for.....	\$1	17 tickets for..... \$1
10 workmen's tickets for.....	25c.	20 workmen's tickets for..... \$1
10 school children's tickets for.....	25c.	8 school children's tickets for..... 25c.

The workmen's tickets are good only up to 8 a.m., and the school children's tickets are for pupils under 16 years of age actually attending any public school, available for use between 8 and 9.30 a.m.

and between 1 and 4.30 p.m. of every regular school day.

Section 3 of the act provides that the new fares shall only be in effect for two years from the coming into operation of the act, viz., from May 23, and that on or before Dec. 31, the government shall appoint a commission under the Public Inquiries Act consisting of three members—one appointed by the Chief Justice of the Supreme Court of Nova Scotia, one by Halifax City Council, and one by the company—who shall make investigations and report to the government and to the Halifax City Council by Feb. 1, 1922, as to whether the increased fares granted by the act shall be continued further.

We are advised that very little difficulty was experienced in the legislature over the granting of the right to charge increased fares, but that there was considerable discussion over the matter of regulating the rates for the future. Under the company's charter the matter of the regulation of fares, etc., in the tramway department does not come under the Nova Scotia Public Utilities Commission, but is subject to legislative enactment. The company desires that the Public Utilities Commission should have jurisdiction over its electric railway, but the Halifax City Council objected to this being done and the legislature finally approved of the appointment of a special commission.

Sarnia St. Ry.—The Point Edward, Ont., Town Council is reported to have refused to permit the Sarnia St. Ry. to charge increased fares within its limits, unless provision is made for selling tickets for working women as well as for working men. The rates of fare are before the Sarnia City Council, and it is reported that the putting in operation of a straight 5c. fare may be the only solution to the difficulty.

Winnipeg Electric Ry.—The hearing of evidence by the Manitoba Public Utilities Commission on the Winnipeg Electric Ry.'s application to permanently increase the fares charged on its lines, is reported to have been concluded June 16, when the sittings were adjourned to June 24, to hear arguments. A press report states that the Commissioners' decision is expected to be given about the end of July.

One-Man Cars for St. John, N.B.—The New Brunswick Power Co. is arranging to operate on its electric railway in St. John, N.B., one-man cars of the McCauley type, similar to those on the Calgary, Alta., Municipal Ry., and the Moose Jaw, Sask., Electric Ry., on the street railway in St. John, N.B. The proposal is being opposed by the employees on the ground that they do not consider the cars to be safe. The company is arranging to fit up some cars and to submit the question of their safety and that of their operation to the civic authorities and the citizens. The company claims that it is impossible to give a service with two men on a car at the present 6c. It is proposed to put on a third more cars of the one-man type, than are now in service, and to give a night service.

Montreal Tramways Co. has declared a dividend of \$2.50 a share for the quarter ended Dec., 1918. A press report states that with this payment the company will have paid up half of the amount of dividends in arrear.

Bill to Amend the Ontario Railway Act.

C. McCrea, M.L.A., introduced a bill in the Ontario Legislature May 13 to change the Ontario Railway and Municipal Board's powers as follows:—

1. The Ontario Railway Act is amended by inserting as part of section 210 the following as sub-section 4 thereof:

(4) In the event of the board being of opinion that the fares taken by any company are insufficient to meet the ordinary and necessary expenditures of the company and to provide for the maintenance and upkeep of the tracks, equipment and rolling stock in a manner consistent with the safety and comfort of the public, the board may authorize and permit an increase in the fares to be taken by any such company to such an extent as will ensure the provisions of this subsection being carried into effect notwithstanding the provisions of subsection 3 or the provisions of any agreement between the company and a municipality in regard to the amount of the fares to be charged by such company, to the contrary.

2. Section 260 of the said act is amended by adding thereto the following as subsection 9:

(9) The provisions of this section shall not apply nor shall the board be authorized to exercise the powers given it under the terms of the preceding subsections if it appears that the alleged violation is the result of a difference or dispute arising between any company and its employees until after such time as a board of conciliation has been appointed under The Industrial Disputes Act and has considered and delivered their award upon the matters in dispute nor shall the board exercise such powers provided any company shall within four days after the receipt of the said award express its intention of accepting and complying with the same.

When the bill came before the Legislature's Legal Committee on May 25 it was decided to replace it by one said to have been prepared by the Ontario Railway & Municipal Board as follows:—

"Where the council of any municipality has by resolution expressed the opinion that the wages paid to the workmen upon an electric railway or street railway operating in the municipality, under a bylaw or agreement of the municipal corporation are insufficient or unfair, and that such wages should be increased, the council may apply to the Ontario Railway and Municipal Board to hold an inquiry and report as to the practicability of increasing the wages paid to such workmen, having regard to revenue derived by the company in the operation of the railway, and the board shall not, where a question of wages is involved, take possession of the railway or any part of the same as authorized by subsec. 2 of sec. 260 of The Ontario Railway Act until the council has passed such resolution.

"Where upon such inquiry by the Ontario Railway and Municipal Board it is found that the revenue derived by the company in the operation of the railway, after providing for other working expenditures, and without making any allowance for dividends payable on preferred or common stock, is not sufficient to admit of an increase in the wages paid to such workmen without operating the railway at a loss, the council may by bylaw, and with or without submitting the same to the electors, authorize the company to charge such different or increas-

ed rates of fares as the council may deem necessary, and may enter into an agreement or contract with the company for that purpose."

"The powers conferred by sections 2 and 3 may be exercised notwithstanding the terms and limitations of any general or special act of this legislature or of any municipal bylaw, agreement, license, contract or other instrument heretofore passed or entered into."

When the house went into committee of the whole on the new bill, Lt. Col. Price, M.P. for Parkdale, Toronto, took exception to it, on the ground that it was, as reported from the legal committee, an entirely different bill to that referred by the house to the committee, and requested that the committee rise and that the Speaker give a ruling upon the point raised. The Speaker decided that, while it was apparently a new bill, recommended to the house by the legal committee, he did not feel that he could rule it out of order, but he advised adherence to the British practice and that the bill be withdrawn and be reintroduced as a new bill. Mr. McCrea accepted the Speaker's ruling, and introduced the bill as a new one. It was read a second time, but the motion for its second reading was defeated.

Lt. Col. Price then introduced a bill to amend the Municipal Franchises Act, which was in part as follows:—

2. (1) Subsection 3 of section 3 of The Municipal Franchises Act is repealed and the following substituted therefor:

(3) No renewal or extension of any franchise heretofore or hereafter granted, and no alteration or modification of the terms or conditions of any such franchise nor in any agreement between any individual, firm or company constructing or operating upon, or using any highway for the purpose of a railway, street railway or public utility, shall be lawful until the same has been sanctioned by a by-law of the council of the municipality which has been submitted to and has received the assent of the municipal electors in the manner provided by The Municipal Act with respect to bylaws requiring the assent of the electors.

(2) The amendment made by subsection 1 shall take effect as if the same had been enacted at the time of the passing of The Municipal Franchises Act, chap. 42, of the casts passed in the second year of His Majesty's reign.

This bill was ruled out of order and the whole matter then dropped.

Proposed Sale of Moncton Tramways, Electricity & Gas Co.'s Property.

The New Brunswick Legislature has passed an act on the application of Moncton City Council authorizing it to buy all the Moncton Tramways & Gas Co.'s rights, title and interest in the electric lighting plant in the city, and all its rights and property belonging to or forming part of its tramway system upon such terms as may be agreed upon between the city council and the company. No agreement for the purchase of the lighting plant or tramways, or either of them, shall take effect until it has been approved by the ratepayers.

The Moncton Tramways, Electricity &

Gas Co. acquired from the City of Moncton by lease dated May 11, 1910, the gas lighting and electric lighting plants belonging to the city and subsequently built the tramway lines. It has 2.5 miles of line, 4 motor passenger cars and 1 other car. The company is controlled by people in Pittsburg, Pa.

The ratepayers will vote on July 3, on a by-law to improve an agreement made between the city council and the company for the purchase of the latter's electric light plant and electric railway in the city, also certain lands, from May 31, 1920, for \$165,000, to be paid before May 31, 1921, with interest, and subject to certain adjustments to be settled by the city auditor.

Additional Cars for Toronto Railway.

The Ontario Railway and Municipal Board, on the application of the City of Toronto, has issued an order directing the Toronto Ry. to provide 200 additional double truck cars for operation by June 1, 1921, and in case of default, to pay the city a penalty not to exceed \$1,000 for each day it continues in default from that date.

The history of this matter dates back for several years, the board having ordered the company to provide and have in operation 100 additional cars by Jan. 1, 1918, and a further additional 100 by Jan. 1, 1919. Prior to this order, the City of Toronto promoted a bill in the Ontario Legislature, which provided among other things, that the company place in operation 100 new cars during 1917 and a further 100 during 1918, and in default to pay to the city \$100 a day for each car less than the numbers called for. While in committee this section of the bill was struck out, on the ground that it was a matter entirely within the Ontario Railway and Municipal Board's jurisdiction. At the same time as this matter was before the legislature, the city had an application before the Ontario Railway and Municipal Board to enforce the company's compliance with the board's previous order. Early in 1918 further legislation was sought by the city to compel the company to comply with the board's order and to penalize it for default, and an amendment to the Ontario Railway Act was passed Mar. 26, 1918, providing that the board, for the purpose of enforcing compliance with any order theretofore or thereafter made upon a railway company under its jurisdiction, to furnish additional cars for its service, might order such company to pay to the municipality in which it operates, a penalty not exceeding \$1,000 a day for noncompliance. On Apr. 19, on the city's application, the company was fined \$24,000 by the board, being at the rate of \$1,000 a day from Mar. 26, for noncompliance with the board's order. This judgment was appealed by the company through various courts and eventually to the Imperial Privy Council, which decided that the board could not inflict a penalty for noncompliance with a previous order, unless it was mentioned and made a part of the order. Since this judgment was delivered early this year, the city again applied to the board for an order to enforce its original judgment, with the penalty attached, and the board, as stated above, ordered the company to provide an additional 200 double truck cars by June 1, 1921, with \$1,000 penalty for each day in default.

London Street Railway Fares and Wages.

At a meeting of the London Railway and Municipal Board, held on the 10th of May, 1920, the City Council's agreement to the London Street Railway was discussed. The board stated that a consideration of the report of the Finance Committee, which was presented at the meeting on May 18, 1919, had been made. The board stated that it was of the opinion that the London Street Railway should be operated on a basis of a 5c. cash fare, with unlimited tickets at 6 for 25c., and limited tickets at 8 for 25c., and to pay over to the city any surplus remaining after paying the men an advance of 8c. an hour. After several

work June 16, having, it is reported, arrived at a proposed agreement of 48 hours, with a rearranged service which will have the effect of reducing the number of cars on certain routes. The fare schedule remains unchanged, the railway still being under the Ontario Railway and Municipal Board's charge.

The London Free Press of June 17 said: "The Ontario Railway and Municipal Board has effected an agreement with the street railway employees that may be said to represent a victory for all concerned. The employees are to receive an increase of 4c. an hour, and more if the earnings will warrant it. The company is to have its bonds retired at the rate of \$36,000 yearly, which is equivalent to about 6% upon the money invested in the railway. The patrons of the railway are to retain the dates of fare named in the agreement made between the city and the company 25 years ago."

The London Trades and Labor Council on June 16 asked that the council arrange for taking a vote as early as possible on the question whether the existing fares are to be continued, or whether the price of tickets is to be amended by selling 6 for 25c., unlimited, and 8 for 25c., limited.

Calgary Municipal Ry.—R. A. Brown, Superintendent, is reported to have submitted a statement to the city commissioners showing that there will be a total deficit of \$82,221.72 in street railway funds this year, of which \$38,688 is required to be placed in depreciation account. The total deficit to May 31 was \$10,629.29 without counting two carloads of wheels the city has bought, making the actual deficit \$18,139.04. The gross earnings of the railway this year are estimated at \$900,000.

Sudbury-Copper Cliff Suburban Electric Ry.—We are officially advised that the Sudbury-Copper Cliff Suburban Electric Ry. Co. has offered to sell its system to the town of Sudbury, Ont., for \$222,921. This amount is said to represent \$208,680, the actual cost of the system and \$14,251 representing three years' dividend on preferred stock. The company offered to accept payment in 10, 15 and 20 year municipal debentures.

The company's railway was opened for traffic in the Town of Sudbury, and from Sudbury to Copper Cliff, a distance of 6.27 miles, Nov. 11, 1915, and subsequent extensions brought the total mileage up to 9 miles. It owned at June 30, 1918, 3 closed passenger cars, and has its own power plant, a description of which was given in Canadian Railway and Marine World, Sept., 1916, pg. 377. Its capital consists of \$173,100 of stock,

and \$24,000 of bonds, a total of \$207,100.

Electric Railway Notes.

The Hydro Electric Power Commission of Ontario has ordered 6 motor cars and 6 trailer cars for the Hydro Electric Ry. (Essex Division), formerly Sandwich, Windsor & Amherstburg Ry.

R. A. Brown, Superintendent, Calgary, Alta., Municipal Ry., is reported to have advised the city council against adopting the pay-as-you-leave system on the city cars, and in favor of continuing the present system of pay-as-you-enter cars.

The Montreal Tramways Commission, the Montreal Administrative Commission and the Montreal Tramways Co. are reported to have agreed to have snow removed from the streets next winter by flat cars operated by the Montreal Tramways Co.

The St. Thomas, Ont., Municipal Ry. is reported to be operating two of its one-man cars, but pending the installation of the protective devices ordered by the Board of Railway Commissioners at the steam railway crossings the cars are in charge of a motorman and conductor.

A Hamilton Accident Suit.—Judgment was given by Mr. Justice Kelly recently, in an action brought by Mrs. Jeannie Ellis, against the Hamilton St. Ry. and H. K. Stiles; which was heard at the Hamilton, Ont., assize court in January. The plaintiff alighted from a Hamilton St. Ry. car on its stopping at a place other than a regular stopping place. Stiles was driving an automobile behind the car, and not expecting it to stop ran alongside it, knocking down and injuring Mrs. Ellis. In his judgment Justice Kelly said: "While I do not lay it down that the stopping of a street car between the regular stopping places is in itself an act of negligence, there is a duty on those operating a street car to take reasonable means to safeguard one who, by their act, may be exposed to such danger. It is likewise incumbent on persons in the position in which plaintiff placed herself, or was placed, to take reasonable means to avoid such danger. But the jury have exonerated her from negligence in that respect." Judgment was given against the company for the damages assessed and costs and the action as against Stiles was dismissed with costs. A 15 days stay was granted.

Following the receipt of this report several propositions were made to the council in order to permit the charging of an increased fare so that an increase of wages might be given to the men. The first proposition was for the fixing of the fare at 5c. and abolishing all tickets, with the exception of the limited hour tickets, which it was proposed to sell at 6 for 25c.; this being defeated, an attempt was made to increase the number of limited tickets to be sold to 7 for 25c., but this also was defeated on June 9, and the men again went on strike. The Ontario Railway and Municipal Board presented another report to the Council on June 10, in which it expressed its willingness to operate the line on a basis of a 5c. cash fare, with unlimited tickets at 6 for 25c. and limited tickets at 8 for 25c. and to pay over to the city any surplus remaining after paying the men an advance of 8c. an hour. After several

Nova Scotia Tramways and Power Co's Annual Report.

Following are extracts from the annual report for the year ended Dec. 31, 1919. Early in the year your newly elected directors deemed it advisable to secure the services of Stone & Webster, Boston, Mass., to manage and operate the company. This was accomplished in June. In accepting the management Stone & Webster stated that in view of the conditions which have arisen during the past two or three years it was impossible for the company to fulfil its obligations either to the community or to the stockholders, if it were compelled to continue to attempt to meet its increased charges with its present rate of income. The results of the past year show that this statement was accurate. Many adverse causes had tended to bring about certain undesirable operating conditions, but certainly the prime causes were the war conditions in Halifax, its sudden increase in population, but lack of available labor, the disastrous explosion and the impossibility of financing in competition with Victory Loans and other war activities. As a result of these conditions, the tramway service was not satisfactory to anyone and the need of large sums for construction and reconstruction was perfectly evident. Additional cars were needed, as the equipment was entirely unable to handle the traffic properly. A portion of the distribution lines of the light and power department were in very bad shape. Due to the quality of coal available, the quality of the gas was entirely unsatisfactory.

Financing.—While the outlook was not encouraging for the immediate future, it was, nevertheless, determined to use every effort to better the service, in the confident belief that the imperative need of additional revenue would be recognized by all and granted by the authorities. Negotiations were entered into with well-known bankers in order to finance the necessary reconstruction and essential improvements and finally \$1,000,000 of 3 year 7% notes were sold. About three-quarters of the proceeds was immediately appropriated to definite items of construction, and reconstruction as follows: Tramway department, \$480,000; light and power department, \$188,000; gas department, \$58,000; and to miscellaneous items about \$12,000. Owing to unavoidable delays much of the work remains to be completed in 1920. Present plans call for the expenditure of the remaining quarter in about the following proportions: Tramway department, \$133,000; light and power department, \$60,000; gas department, \$30,000. While the business in sight will call for the expenditure of large sums in addition to the above, such expenditures cannot be made until the company is in a position to finance them.

Tramway Construction and Reconstruction: twenty-four steel safety cars were ordered, at a cost, including duty, of 42½%, of approximately \$10,000 each, or \$240,000 for the lot, and delivery was promised Nov. 1, 1919. In spite of the utmost efforts by your company, the manufacturers have from time to time postponed this date because of shortage of labor and materials. There now seems good reason to believe that actual delivery will begin in Feb., 1920, and that the cars, or at least a substantial number of them, will be in operation in March. For city work the safety car is rapidly displacing all others. The general public satisfaction with its performance is graphically demonstrated by the fact that

during 1919 three of every four cars ordered for city lines in the United States were safety cars. As traffic conditions in Halifax are not as difficult as in many cities on the continent, the fact that the safety car meets adequately the requirements of the more exacting conditions in many other cities assures its success in Halifax. During the year 21 of the more modern old cars were rebuilt and painted in the company's shops. One new snow sweeper was purchased and a new snow plow constructed.

Much of the tramway overhead construction was rebuilt during the last half of the year, and reasonable progress made in carrying out the programme of double tracking all of the belt line.

The track reconstruction was very expensive, one of the heaviest portions of this expense being the paving of the street itself, which under the law falls upon the company. This is particularly heavy, as the best grade of paving obtainable is required, even though the balance of the street, paved by the city, is covered with a less permanent surface. The work in connection with the rehabilitation of the track system was accomplished under very adverse conditions. Labor was scarce, and wages high, and the weather was particularly bad, hampering the progress of all outside work in the city. In addition to the completion of the paving programme already started and financed out of the proceeds of the notes authorized, the city's street paving programme for 1920 will call for an expenditure by the company of about \$400,000, along tracks which need not be reconstructed at present.

Tramway Earnings and Expenses.—The gross earnings of the tramway department have increased substantially over those of the previous year, but the increase has been more than offset by the growth in operating expenses and taxes. During the year, the labor cost of this department, already high, has increased over 15%; materials even to a greater degree. Shareholders familiar with the financial difficulties which have recently overtaken tramway lines in the U.S. will understand the greater difficulties which have confronted this company, when it is realized that materials in Halifax cost from 30% to 60% more than they do in the U.S. This is mostly because of high customs tariffs, which affect Canadian prices as well as goods purchased in the U.S. The average tramway fare in Halifax is 4.3c a passenger. In the United States such a fare has been found inadequate and ruinous and has been increased very generally. The street car fare in Boston is 10c, in St. Louis, 8c., in Cincinnati 7c., in Montreal and in Quebec 7c. There are 460 cities in the U.S. serving a population of over 31,000,000 in which fares have been increased.

Following the determination to better the service, the car mileage in 1919 was increased 432,227 miles, or 40% above that of 1918. The earnings per car mile in 1918 were 39.3c and fell to 33.2c. in 1919, because of the increased number of car miles operated. As there is still overcrowding in rush hours, further increases in car mileage will be made during 1920 and from 40 to 50 cars will be operated against the usual 31 during 1919.

Fares.—The Nova Scotia Legislature will be asked to authorize an increased tramway fare. The thinking public real-

ize fully that no street car company can carry passengers at 4.3c. each, and, if they can be assured of good service, should not oppose the legislation necessary to compensate the company for the cost of that service. It certainly is absolutely essential that the requested legislation be prompt and adequate, if the company is to be put into a position to borrow the additional funds which it is imperative that it should have if it is to give the service that the city needs.

Other sections of the report deal with the company's gas, electric light and power departments. The gas department has been self sustaining for a number of years and should be on a paying basis before the end of this year. The light and power department's growth of gross earnings has been satisfactory, and it should show even better earnings than it did last year.

Tramway Difficulties.—The difficulties which the company is endeavoring to meet are in the tramway department, which is not receiving income sufficient to cover the cost of service. It is in the interest of both shareholders and public that this situation be corrected. The City of Halifax is forging ahead rapidly. Its public utilities must keep pace with it or both they and it will suffer. Your company will need to make arrangements for additional funds during the coming year if it is to fill its place in the community. Unfortunately, with the present and prospective price of wages and materials, the net earnings from all departments are not sufficient to warrant a further increase in the company's liabilities. It seems hopeless to expect that operating expenses as a whole will be reduced; in fact, the tendency will be rather upward. The only way to increase the net earnings is to increase the operating revenue. This will be accomplished to some extent by the better service which the company will be able to give, as better service always brings increased use of that service. The increase from this source, however, will be but a fraction of what is necessary. The balance must be obtained by increased charges to the public. Experience in other cities has shown that the public is willing to make use of good facilities at an increased price. They do wish, however, to feel assured that they are not paying too much and giving the owners of a public utility an undue profit. In this connection the cry of "watered stock" is often raised. By "watered stock" is meant capitalization in excess of the value of the property. Most people now realize that under the law such excess capitalization has no effect on rates. The company is not entitled to earn a fair return on the par value of its securities, but upon the value of its property.

In authorizing the issue of securities the Board of Commissioners of Public Utilities valued the plant at about \$3,700,000, which was a much smaller amount than that determined by the company's appraisal. Since that time large additions have been made, so that the present book value is about \$4,700,000. Owing to the increased cost of construction, the real value of this property today is materially in excess of this latter amount. To encourage new capital it is evident that a fair return must be earned on the present capital. The constant need of new capital is emphasized when it is realized that in a growing city it is necessary to nearly double the facilities every seven to ten years. There-

Electric Railway Employees' Wages, Working Conditions, Etc.

Brantford Municipal Ry.—A press report states that a new wage scale has been agreed upon between the commissioners and the employees, the increase granted being equal to about 15% and the new rates per hour being worked out as follows:—First year, 46c.; second year 48c.; third year, 50c.

Hamilton St. Ry.—The board of conciliation appointed to deal with questions of wages, etc., as between the company and its motormen and conductors being members of Division 107, Amalgamated Association of Street and Electric Railway Employees of America, was composed of Judge C. D. Snider, chairman; G. S. Kerr, K.C., representing the company, and F. Bancroft, representing the men. The board met April 29, when the parties not being ready, the sittings were adjourned to May 10, from which date they were continued to May 18, when a majority report was signed by Judge Snider and G. S. Kerr. During the sittings the various sections of the proposed agreement were discussed and finally adopted by both parties with the exception of those relating to wages and overtime. Following are the rates of wages per hour in force under the old agreement, in comparison with the rates recommended in the majority and minority reports respectively:—

	Old rate.	Majority report.	Minority report.
First six months	38c.	40c.	42c.
Second six months	38c.	40c.	42c.
First year	38c.	45c.	50c.
Second year	41c.	45c.	50c.
Third year	41c.	52c.	55c.

The majority report recommending time and a half for all overtime, also for legal holidays, and 7c. an hour extra for work on Sundays, which is not overtime. The minority report recommended that time and a half be paid for all overtime, legal holidays and Sunday work. The board was unanimous in fixing the date of the coming into operation of the new wage schedule as April 1.

After some negotiation between the parties, the men agreed to accept the wages recommended in the majority report, and an agreement was signed accordingly.

Hull Electric Co.—We were officially advised recently that the wages agreement between the company and its employees would expire July 1. The rate per hour under that agreement for motormen and conductors has been:—First six months, 34c.; second six months, 36c.; second year, 39c.; third year, 41c. The men asked for a new agreement with a uniform rate of 65c. Several conferences were held between G. Gordon Gale, Vice President and General Manager, and the men's representatives between June 3, when the demand was made, and June 9, but without result. At a meeting held June 12, the men decided to apply for a board of conciliation.

Hydro Electric Ry., Essex Division. formerly Sandwich, Windsor & Amherstburg Ry. W. R. Robertson, General Superintendent Hydro Electric Power Commission of Ontario's Electric Railways, is reported to have had a conference with the employees in Windsor June 19, and to have stated that wages will be increased on July 1.

Levis County Ry.—We were officially advised June 17 that the wages for employees operating safety cars are 32c. an hour for first year men, increasing 2c. an hour yearly until in the fifth year the rate is 40c.

London & Port Stanley Ry.—In our last issue it was stated that the employees had returned to work, at the rates of wages fixed by the conciliation board, but that if the management found it possible to pay higher wages in the future it would do so. The increased wages recommended by the conciliation board were made effective from Feb. 1, and some slight further advances have now been made to freight conductors and motormen, and to brakemen, also effective from Feb. 1. Following is a comparison of the rates per hour, prior to the conciliation proceedings, the conciliation board's award and the new rates.

Passenger conductors and motormen			
	Old	Conciliation	New
1st year	41c.	46c.	46c.
2nd "	46c.	48c.	48c.
3rd "	47c.	50c.	50c.
4th "	48c.	52c.	52c.
Freight conductors and motormen—			
1st year	44c.	46c.	48c.
2nd "	46c.	48c.	50c.
3rd "	47c.	50c.	52c.
4th "	48c.	52c.	54c.
Brakemen			
1st year	4c.	41c.	43c.
2nd "	42c.	43c.	44c.
3rd "	43c.	44c.	45c.
4th "	44c.	45c.	46c.
Baggage men	37½c.	40c.	42c.
Men	35c.	40c.	42c.

Conductors, motormen and brakemen are paid time and a half after 10 hours. Line men are paid time and a half after 9 hours work, previous to 10.30 p.m., and after that double time. Some advances have also been given to other classes of employees.

Montreal Tramways Co.—Following the failure of efforts to secure a new agreement with the company at greatly advanced wages, as detailed in Canadian Railway and Marine World for June, pg. 318, the employees applied to the Minister of Labor for a board of conciliation, which was appointed June 10 as follows: Justice Archambault, Chairman; E. W. Villeneuve, representing the company, and J. A. Woodward, representing the men.

The Montreal Tramways Commission, which, under Quebec provincial legislation, has control of the company's expenditures, fares, etc., has been carrying large advertisements in Montreal papers to show that the wages asked are unreasonable and could not be paid without another increase in fares.

Nova Scotia Tramways & Power Co.—Under the provisions of an act passed by the Nova Scotia Legislature at its recent session granting the company power to increase fares, the company was directed forthwith to extend to the employees of its various departments the increased wages schedules agreed upon.

The maximum rate agreed upon for conductors and motormen is 52c. an hour, with 5c. an hour extra for operators of one-man cars. The rate of pay is to be graduated up to the maximum according to length of service. It is estimated that the increase of pay granted will add about \$100,000 a year to the company's pay roll.

Ottawa Electric Ry.—Justice F. S. Macleannan, chairman; G. D. Kelley, representing the company, and A. E. Frapp, K.C., M.P., representing the employees, members of Division 279 Amalgamated Association of Street and Electric Railway Employees of America, met as a board of conciliation in Ottawa, May 25, and presented a unanimous report May 28. The report deals with three matters, viz., a closed shop, an 8-hour day, and

wages. After hearing all that was urged by both parties the board concluded that it was not desirable that the request for a closed shop should be granted. The company has no objection to its men joining the union, but desires to leave them free to join or to remain out; it has not in the past and will not in the future discriminate against any employee who does not desire to join the union. The men have been working a nine hour day, and are being paid overtime rates for all work done in excess of that time. The service rendered to the public is between 6 a.m. and midnight, covering a period of 18 hours, and the board did not think it practicable to introduce the 8-hour day under these circumstances. Following are the rates of pay per hour for motormen and conductors, as agreed upon, compared with those in force formerly:—

	Old.	New.
First year	39c.	40c.
Second year	41c.	51c.
Third year	43c.	53c.
Fourth year and over	45c.	55c.

The men asked for a minimum rate of 65c. an hour. In regard to the other employees the board granted an increase of 20%. Time and a quarter is to be paid for work on Sundays and legal holidays and time and a half for all overtime.

The agreement is dated from May 1, and is to be operative until May 1, 1921, and from year to year thereafter, unless either party shall give 30 days notice to the other of a desire for a change.

Quebec Ry., Light & Power Co.—We are officially advised that an agreement has been made between the company and the Fraternite National des Employes de Tramways de Quebec (Union of conductors and motormen of the city street railways division, Q. R. L. & P. Co.). It is dated May 15, and is to be continued unless cancelled by either party giving the other two months notice. It provides for the recognition of the union; that the company is to engage only conductors and motormen who are members of the same; the appointment of a committee to deal with engagements, suspensions or dismissals and working conditions, consisting of two employees and two representatives of the company with a president elected by the four, who, however, has no vote; for respecting the present agreement, which does not expire until Mar. 1, 1921, and fixes a new scale of wages effective May 16. Following is the new scale of wages per hour as compared with that in operation formerly:—

	Old.	New.
--	------	------

On appointment	31c.	34c.
----------------------	------	------

After one year service	35c.	38c.
------------------------------	------	------

After two years service	36c.	42c.
-------------------------------	------	------

After five years service	38c.	45c.
--------------------------------	------	------

The company has also entered into an agreement with the shopmen on its city division, effective June 1, and to continue in force from year to year thereafter unless 30 days written notice is given by one or other of the parties prior to each recurring May 31.

Sarnia St. Ry.—A press report states that there is little likelihood of a strike taking place in Sarnia, Ont., in connection with the employees' application for an increase of wages. It is stated that many of the older employees are shareholders in the company, and that they are likely to discourage a strike.

The St. Thomas, Ont., City Council's street railway committee has recommended the submission to the ratepayers of a bylaw providing for the operation of cars on the municipal railway on Sundays.

Another Toronto Railway Strike.

The board held its first sitting June 9, and made its report June 11. The report was signed by the three members of the board. The working conditions in force were recommended by the board of conciliation of 1919, and the modifications thereof asked had reference to a number of matters, the most important being the demand for a closed shop, and the payment of overtime after 8 hours work instead of 8½. The board, after taking into consideration everything that was said by the parties, came unanimously to the conclusion that no change should be made in the working conditions.

After reviewing the conditions as to wages, particularly in cases where rates have been fixed by boards of conciliation, and conditions as to cost of living, the report said:—"Briefly stated, the result of the evidence on wages and the cost of living shows: The wages now paid are equal to or exceed those paid by any other street railway in eastern Canada. The wage increases during the past few years, going back to the commencement of the war, are fully equal to all increases in the cost of living. The amounts actually paid to motormen and conductors are wages during the last six months of 1919, and during May, 1920, show that, on an average, motormen and conductors were paid amounts equal to or averaging more than the skilled trades of the city, without taking into account uniforms and free tickets, or other advantages which the employees enjoy in the company's service. The company's franchise expires on Aug. 31, 1921, and the board was informed by the mayor that the city will take possession of the road on that date. The board, having considered all evidence and representations made to it, recommend unanimously as follows: That the working conditions and rates of pay in force since July 4, 1919, should be continued until Aug. 31, 1921, and trust that this recommendation will be accepted by all parties concerned."

On June 12, J. T. Vick, the men's representative, who had signed the award along with the other two members of the board, forwarded to the Minister of Labor a letter in which he said:—"I have been reading the award carefully and I find that I signed it under a misapprehension. I am agreeable to recommend most of the conditions as they prevailed and which have been recommended. I certainly had no idea that my signature placed me in the position of agreeing with the other two of the board on the rates of wages. I contended for an increase and am going to recommend the

same. While the figures and evidence presented show that at the present time wages paid equal and exceed in some cases that paid on other roads in Eastern Canada per hour, but not per day, yet it was shown by the evidence that the wages in border cities of a like size exceed that paid in Toronto both in hourly and daily rates, Cleveland paying 75c. an hour, Detroit 75c, Chicago 65c, and the corporation of the city of Toronto paying their street railway employees from 60 to 65c, with holidays added. The amounts actually paid some motormen and conductors show that these men work a great deal of overtime in order to make the amounts submitted by the company, and without working overtime the men would not earn the rates paid skilled trades. That for the sake of harmony and everybody concerned I recommend that the present working conditions be continued until Aug. 31, 1921, which is the expiration of the franchise, and also recommend that in my opinion the men working for the Toronto Ry. should receive at least the same wages as paid by the City of Toronto, where there was an exhaustive investigation by the heads of the departments and the Board of Control before striking the rates named, namely: 60c. an hour for the first three months; 63c. for the next nine months; 66c. thereafter."

The employees at a meeting held after receipt of the conciliation board's report refused to accept it, and passed the following resolution, which set out:—"That we agree to accept a scale of wages 20% in advance of existing scale for all men included in the draft agreement presented to the company, which equals the rate paid by the City of Toronto, for like service; all other conditions to remain as provided in existing arrangements between the Toronto Ry. employees represented by the union and the Toronto Ry. Co." The men gave the company until June 18, at 3 a.m., to accept the terms, threatening an immediate strike if they were not conceded. As it was found impossible to hold a meeting of the company's directors within that time, the men extended the time for the acceptance of their terms to June 23 at 3 a.m. The directors met on June 22 and decided not to grant the demands and the men struck on June 23 at 3 a.m., the operation of the whole of the company's cars ceasing.

It is important to note that while the men demanded the same rate of wages as paid by the Toronto Civic Ry., they also demanded the Toronto Ry.'s working conditions, not those of the Toronto Civic Ry., and as the company pointed out in an advertisement the wages paid on the civic line, viz., 60c., 62½c. and 66c. an hour, combined with the Toronto Ry.'s extra allowance of time and a quarter for Sunday work, would be equivalent to 82½c. an hour, and combined with time and a half for overtime and holiday work would be equivalent to 99c. an hour, neither of which is paid by the city.

On June 24 the Mayor notified the Toronto Ry. that it had failed to operate its service and demanded that it resume operation. The company's General Manager replied that it was prepared to operate a service immediately, upon receiving the Mayor's assurance that efficient protection would be given, so that the lives of its employees, and its property, would not be endangered. On June 25 the Ontario Railway and Municipal

Board met for the first time.

The Board met representatives of the company and of the men at noon, under an appointment issued at the instance of the Toronto Ry. Co. A lengthy discussion took place, and was continued until about 1.30, and a number of proposals and counter proposals were made, none of which, however, was accepted by both parties to the conference. The Board then intimated to the conference that it was prepared to make a proposal, and would do so after the adjournment for lunch. At 3 o'clock the conference resumed, and the Board submitted this proposal: "That the wages payable to the motormen and conductors and other employees on strike should be raised to 55c., 57½c., and 60c. an hour, according to classification. This increase is approximately an increase of 10% upon the wages heretofore paid to them. These terms are to be incorporated in the form of an agreement binding on the men and on the company until the expiry of the company's franchise. The representatives of the men agreed to lay the proposal before a mass meeting of the striking employees tomorrow (June 26). If the proposal is accepted the representatives of the men are of the opinion that the cars could be started on Sunday morning (June 27). The Board assured the representatives of the men that if the proposal is accepted by the striking employees, the Board would enforce performance on the part of the company."

On June 26 the men decided, by a vote of 841 to 333, to return to work on the terms offered by the Board, and the cars resumed running on Sunday morning, June 27, after having been stopped for four days. It is said that the 5c. raise will add about \$375,000 a year to the company's pay roll.

Mainly About Electric Railway People.

Verschoyle Cronyn, who died in London, Ont., June 1, aged 88, was the promoter and principal owner of the original London St. Ry., prior to its electrification.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., has been appointed chairman of the Canadian Standards Association's sub-committee on wire strand.

Charles Johns, of Cleveland, Ohio, has been appointed Manager, St. Thomas Street Ry., by the city council of St. Thomas, Ont., at \$175 a month.

A. Lacasse, heretofore private secretary to Hon. H. Seguin, of the Quebec Government, is reported to have been appointed Secretary, Montreal Tramways Commission, vice W. R. Beaudry, resigned, to resume the Dorval Jockey Club's Secretaryship.

E. L. Milliken, formerly Manager, Cape Breton Electric Co., Sydney, N.S., and subsequently, successively, Manager, Houghton County Traction Co., Houghton, Mich., and Houston Electric Co., Houston, Texas, has been transferred to Stone & Webster's home office at Boston, Mass.

C. U. Peeling, who resigned his position as Manager Cornwall Street Ry., Light & Power Co., Cornwall, Ont., a few months ago, to enter the Illinois Traction Co.'s service at Peoria, Ill., has transferred to the Palmetto Power & Light Co. at Florence, South Carolina.

Marine Department

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Steel Supplied for Shipbuilding.—J. H. Sinclair, M.P. for Antigonish and Guysborough, N.S., asked the following questions in the House of Commons recently, the answers being given by the Minister of Marine.

"Referring to an item of expenditure described as steel for shipbuilding to be refunded by contractors, \$3,283,965.05, found on page ZZ42 of the 4th volume of the Auditor General's report, has all this money been refunded?" Answer:—"Not all, because the department has not finally settled with the builders for the ships for which the steel was purchased. The balance outstanding is \$289,252.10."

"If so, when?" Answer:—"By deductions from progress payments during 1918-19, \$861,430.80; 1919-20, \$2,133,282.15."

Keels Laid.—Since Canadian Railway and Marine World for June was issued, we have been advised of the laying of the following keels for steel cargo steamships, for Canadian Government Merchant Marine Ltd.:—

June 5, s.s. Canadian Rover; Marine Department contract 57; builder's yard no. 67; approximately 3,890 d.w. tons; Collingwood Shipbuilding Co., Collingwood, Ont.

June 9, s.s. Canadian Racer; Marine Department contract 54; builder's yard no. 10; approximately 3,890 d.w. tons; Midland Shipbuilding Co., Midland, Ont.

Names of Steamships.—The Marine Department has decided on the name Canadian Harvester for the steel cargo steamship being built by the Port Arthur Shipbuilding Co., Marine Department contract 61; builder's yard no. 45; approximately 3,890 d.w. tons.

Launchings of Steamships.—Since Canadian Railway and Marine World for June was issued, we have been advised of the following launchings of steel cargo steamships, for Canadian Government Merchant Marine Ltd.:—

June 22, s.s. Canadian Victor; Marine Department contract 50; builder's yard no. 77; approximately 3,890 d.w. tons; Canadian Vickers Ltd., Montreal.

Deliveries of Steamships.—In addition to the steamships mentioned in Canadian Railway and Marine World previously, the following deliveries have been made:

June 15, s.s. Canadian Prospector; Marine Department contract 37; builder's yard no. 14; approximately 3,890 d.w. tons; J. Coughlan & Sons, Vancouver, B.C. This ship took a cargo, at Vancouver, for New Zealand and Australia.

June 15, s.s. Canadian Observer; Marine Department contract 47; builder's yard no. 66; approximately 3,990 d.w. tons; Collingwood Shipbuilding Co., Collingwood, Ont. She went to Huron, Pa., for a cargo of coal for Montreal, and will take a general cargo from Montreal to Barbados, Trinidad and Demerara.

Officers of Steamships.—The following officers have been appointed by Canadian Government Merchant Marine Ltd. The first column contains the names of the ships, the second those of the captains, and the third those of the chief engineers.

Canadian Aviator	P. J. Murphy
Canadian Gunner	B. Fraser	B. Rogers
Canadian Miner	M. Fraser
Canadian Navigator	W. H. Miller	J. Borland

Canadian Observer	W. M. D.
Canadian Prospector	H. S. Hilton
Canadian Raider	E. C. Sears
Canadian Racer	John Stail
Canadian Sealer	E. Randall
Canadian Signaller	R. D. Masson
Canadian Steamer	C. E. Thompson
Canadian Trapper	W. G. McConchy
Canadian Warrior	R. C. Cook

Regarding the appointments mentioned above, C. J. Murphy succeeds H. S. Hilton as master of the Canadian Aviator, the latter having been appointed master of the Canadian Prospector; W. H. Miller succeeds E. C. Sears as master of the Canadian Navigator, the latter having been appointed master of the Canadian Raider, succeeding Capt. Watkins; R. D. Maxwell has been appointed master of the Canadian Signaller, succeeding J. E. Faulkner, and W. G. McConchy has been appointed master of Canadian Warrior, relieving C. R. Bissett, who is on leave of absence.

Dominion Marine Association.

President. A. E. Matthews, Managing Director, Mathews Steamship Co., Toronto.

First Vice President. H. W. Cowan, Director of Operation, Canada Steamship Lines, Montreal.

Second Vice President. A. A. Larocque, President, Sincennes-McNaughton Line, Montreal.

Executive Committee. E. H. Beazley, Union Steamship Co. of British Columbia, Vancouver; W. E. Burke, Canada Steamship Lines, Montreal; T. R. Enderby, Montreal Transportation Co., Montreal; L. Henderson, Montreal Transportation Co., Montreal; W. J. McCormack, Algoma Central Steamship Line, Sault Ste. Marie, Ont.; G. J. Madden, George Hall Coal Co. of Canada, Montreal; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Sowards Coal Co., Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; Jno. Waller, Keystone Transportation Co., Montreal; Lorne C. Webster, Webster Steamship Co., Montreal; J. Wilkie, Imperial Oil Ltd., Toronto; A. A. Wright, honorary member, Toronto.

General Counsel. Francis King, M.A., Kingston, Ont.

Official Organ. Canadian Railway and Marine World, Toronto.

Freight Steamships on Inland Waters. J. E. Armstrong, M.P. for East Lambton, Ont., asked in the House of Commons recently:—"Does the government intend to place freight ships built and owned by them on our inland waters during the present season? If so, how many of said vessels will be so placed? If the Canadian Government Merchant Marine organization has the handling of the government owned ships, what reason, if any, do they give for not using some of the vessels under their control in the carrying trade on our Great Lakes?" The Minister of Railways replied:—"Ships owned by the Government through its Government Merchant Marine are being operated by that organization in connection with the Canadian National Rys., as will appear in the public interest. Cannot say at present time what ships may operate on the inland waters during present season."

Extension of Service.—A London, Eng., press dispatch of June 8 states that the Times financial editor indicates the in-

stitution this year by Canadian Government Merchant Marine Ltd. of further cargo service between Canadian Atlantic ports and India, Ceylon and the Far East, via the Mediterranean, and also to South Africa, and from Pacific ports to the Far East and Calcutta. This "information," which originated in Canada in April, and which was published in Canadian Railway and Marine World for May, eventually found its way into English papers, and has apparently been cabled to Canada in June as "news," with special credit to the Times financial editor for perspicacity. We have been further officially advised that the plan which is now being worked on by the C. G. M. M. management covers a service from Atlantic ports the year round to India, Ceylon, Straits Settlements and Java, the ports of call not having yet been settled, but they will be arranged in accordance with the desires of shippers whose traffic will be carried. It is also contemplated to establish a service to China, India and Singapore, but no details have been worked out. The first sailing in the first named service will be towards the end of August by the s.s. Canadian Conqueror, approximately 3,890 d.w. tons, now under construction by Canadian Vickers Ltd., Montreal.

Australian Trade.—C. Harlett, Assistant Canadian Trade Commissioner at Melbourne, Australia, wrote April 28:—"Already two steamships of the Canadian Government Merchant Marine, Ltd., the Canadian Raider and Canadian Importer, have arrived at Sydney and Melbourne. These ships are to be followed by the Canadian Exporter and two other ships of similar size at regular monthly intervals. The Canadian Raider departed from Newcastle for Auckland (with a cargo of coal) to load at the latter port for Eastern Canadian ports. In a few days the Canadian Importer, which has discharged her cargo of lumber, paper, etc., and is now loading cargo for New Zealand and Vancouver to her full capacity at Melbourne, will depart for Wellington and Auckland, where she will complete loading for Vancouver. Apart from filling a long felt want in the shipping facilities between Canada and Australia, these ships, in carrying cargo from the Commonwealth to New Zealand, are relieving considerable congestion existing for some time in Australian ports, and the available space is eagerly sought by shippers of Australian products to both New Zealand and Canada. Upon her arrival in Melbourne the Canadian Importer was visited by a number of prominent Australian shipping men, and most favorable comment was made upon her design, her exceptional clear holds, large hatches and powerful winches for the rapid loading and discharge of cargo."

s.s. Canadian Inventor.—Hon. W. L. Mackenzie King said in the House of Commons June 8: "I have a message sent on behalf of some British Columbia shippers complaining about the delay in sailing of one of the Government Merchant Marine vessels. I will ask the Minister of Marine if he can give any information in regard to the questions asked. The telegram reads: 'Information that steamship Canadian Inventor booked

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of dead cargo shipments which the Dominican Marine Department has been authorized, by order in council, to place orders for and which others are to be carried on the figures given in the column headed "Long tons (t.w.)" and which are preceded by an asterisk (*) show the total deadweight capacities as determined after the ships have been completed. The figures in that column, not preceded by an asterisk, show the approximate total deadweights, subject to modification as they may vary above or below the figures given and as may be ascertained after the ships are completed, and of course, the total prices will vary accordingly.

Where the total price does not agree with the finally ascertained deadweight tons multiplied by the price per ton, the extra amount is for changes from specifications, additional equipment, accessories, etc., as follows:

Senate Committee Report on the Hudson Bay Route and Ports.

The special committee appointed by the Senate to take evidence and report upon the proposed Hudson Bay and strait route, and the character of the ports of the bay, through which the proposed railway would pass, has the honor to report the following: That the committee examined 21 witnesses, drawn from all parts of the country. It had in view acquiring information on the following subjects: 1. The length of the season during which the bay and strait are reasonably navigable having in view the presence of ice, the occurrence and persistence of snow storms, the advantages to be gained by the proposed route as a wireless telegraphy, light houses, fog signals, and the like. 2. The size and size of ships to be used for the carrying trade. 3. The relative merits of the two ports, Nelson and Churchill, and the relative cost of the development of each. 4. The fishing resources of the bay and strait and of the rivers emptying into the bay. 5. The mineral resources of the country tributary to the bay. 6. The utilization of the country for the production of meat and furs to be obtained from reindeer and musk ox, which would subsist upon the extremely nutritious grasses grown throughout that part of the country.

A large number of witnesses were called with respect to the length of the season during which the bay and strait can be safely navigated. There was some variation among them regarding the length of the season of navigation, but all agreed that the minimum would under ordinary circumstances be at least four months, while the maximum would not likely exceed five months. Voyages have been made through the strait as early as June 5, and as late as the first part of November, with the ordinary type of ship, without meeting any difficulty, but these were admittedly rather exceptional cases. All were agreed, however, that modern navigating appliances, such as lighthouses, wireless stations, hydroplanes and fog signals, would greatly facilitate navigation in these waters and in a large measure overcome the natural difficulties from ice and snow. In order that the route would be able to compete with the more southerly channels of communication between this country and Europe, it would be necessary to have a type of freighter capable of carrying from 5,000 to 10,000 tons of dead weight, and in the committee's opinion, from the evidence adduced, there would be no difficulty in handling so large a ship on the route, provided it was properly strengthened and protected in the forward part. Of course, heretofore only ships of smaller size have been used, because ships of larger capacity have not been required.

The consensus of opinion is that Hudson Bay remains open all the year through and that the ice does not extend beyond 30 or 40 miles from the shore. The strait is also open for the greater part of the year, and would probably be open all the time, except for the ice which comes down late in the autumn from Fox Channel, and obstructs navigation in the strait. It was generally conceded by the eight witnesses who gave evidence on this point that the aids to navigation which might be installed along the strait would greatly facilitate the passage and communication between the coast of northwest

Canada.

Canada.

The committee took a large amount of evidence regarding the relative merits of the two western ports, Churchill and Nelson, and there was a considerable divergence of opinion among the different witnesses as to which of the two should have been selected, having in view the shorter railway haul in the one case and the cheaper construction of the port itself in the other. Churchill was shown to be an absolutely land locked harbor, entirely protected from every wind, no matter from which quarter it should blow, where a few ships could at all times ride at anchor in perfect security. Nelson, on the other hand, has no natural protection from the sea, except such as it receives by reason of its remoteness from the body of the sea, there being a 20 mile stretch of shallows between it and deep water. A narrow channel bordered by wide shallows connects the proposed harbor of Nelson with the open bay. A very large amount has already been expended upon the harbor improvements of Nelson, but a much larger sum is still required before the present plans can be carried out. There seems to be considerable doubt, whether or not, even when the proposed plans are completed, the harbor at Nelson will be an entirely safe one against an easterly gale. To utilize Churchill it would be necessary to build about 80 miles of road across a country which has been described by one witness as very difficult, it having a stretch of 30 miles of morass almost impossible to cross, owing to the difficulty of getting a firm foundation for a roadbed. This was, however, denied by two witnesses, by each of whom the committee was greatly impressed. Both J. B. and J. W. Tyrell testified that there is a perfectly good and comparatively short route from the present route, defecting at a point some 56 miles from Nelson and going north and east to Churchill. The present harbor of Churchill is rather small, but, accordingly to the evidence of the Messrs. Tyrell, uncontradicted, could easily be enlarged enough to accommodate all the trade likely to offer for many years to come. Beyond the present deep water harbor there is a large basin of shallow water, the bottom of which is composed of hard clay mixed with boulders, which could be easily dredged and the resultant harbor would be of its size one of the finest in the continent. The Tyrell brothers are very familiar with the country around Hudson Bay, having spent several years each in research and in examination of these regions. J. W. Tyrell spent one winter at a station in Hudson Strait taking observations for the Canadian Government, and also looked over the country from Pas to Churchill, on behalf of a company who had some intention of building a railway in that part of the country, a scheme which was afterwards abandoned. He had no hesitation in saying that no difficulty whatever would be found in extending the railway to Churchill. It is the committee's opinion that the government would be well advised if, before expending any more money on the harbor works at Nelson, they were to appoint a committee of expert engineers and railway builders to examine the route to Churchill and ascertain whether or not it is really possible, as the Messrs. Tyrell say, and what would be the cost and advantage of making Churchill the port and terminus of

the Hudson Bay Route rather than Nelson. In the meantime, the laying of the rails would be completed to Nelson, and that port could be used for the present in its present state.

While no one was asked to speak with certainty as to whether cod fish are plentiful in the bay or not, there is no doubt as to the strait. All the rivers flowing into the bay teem with fish, and walrus and seal are also found in large numbers in the strait. No doubt as soon as the Hudson Bay route is established, a very large and lucrative fishing industry will be established there. Recent discoveries have shown that the country surrounding Hudson Bay is strongly and richly mineralized, particularly so in regard to gold and copper.

Mr. Stefansson, the distinguished Polar explorer, gave evidence before the committee. He is a devout believer in the possibility of utilizing what have always been known as the Barren Lands of the north, and the islands within the Arctic Circle, in the cultivation of reindeer, cariboo and musk ox for the production of meat. He gave evidence as to the splendid quality of the flesh of these animals as food for the people, and as to the cheapness with which it might be produced. He said that the wild lands of the north, which have always been looked upon as worthless, could carry at least 50,000,000 reindeer and 10,000,000 musk ox, and that the cost of handling these huge numbers would be trifling in comparison with the profit to be made. The effect of this upon the world's food supply would be tremendous, and the committee strongly recommend that the matter be energetically taken up by the government.

The committee makes the following findings upon the evidence adduced before it:—

That the Hudson Bay route is feasible and will, probably, in time, be profitable.

That the season of navigation under present conditions is at least four months in length, and may, by improvements in aids to navigation, be considerably increased.

That sufficient care was not taken in the selection of Nelson as the terminus of the railway, and that the government should not make further important expenditures upon this port without first making a new and thorough examination into the relative merits of Churchill and Nelson as a terminus for the railway.

That the waters of the strait and rivers tributary to the bay teem with fish and valuable marine animals, and we believe that the bay is equally well stocked, but there has not yet been sufficient data collected as to the extent of the fisheries of the bay to enable an authoritative statement to be made as to their prospective value.

That the mines already discovered in the Hudson Bay district are of sufficient number and richness to indicate the existence of great potential mineral wealth.

The committee feel that they cannot too strongly endorse the valuable suggestion of Mr. Stefansson as to the cultivation of reindeer and musk ox, and urge upon the government that the Interior Department be empowered to take hold of this matter, earnestly taking advantage of what has been done in this regard by the United States Government.

After considerable debate the report was adopted by the Senate June 18, on a division.

General Shipbuilding Matters Throughout Canada.

B.C. Marine Ltd., Vancouver, B.C.—As mentioned in our last issue, this company is building an auxiliary powered schooner for the Hudson's Bay Co. She will be rigged as a three masted bald headed schooner, with jib headed mizzen and top sail for running purposes, and will carry a large square sail forward, and will also be fitted with a triangular shaped top sail. The total area of fore and aft sails will be about 10,960 sq. ft., and the approximate total of all sails will be 15,610 sq. ft. She will also be equipped with a 350 b.h.p. semi-Diesel engine, for a speed of about 7 knots an hour. Her dimensions will be,—length over all 200 ft., length l.w.l. 188½ ft., beam 36 ft., moulded depth 15 ft., draft loaded 12 ft., deadweight for freight 700 long tons.

B.C. Yacht & Boatbuilders Co., Victoria, B.C.—The Dominion Marine Department has accepted this company's tender for building 2 motor patrol boats for British Columbia coast patrol service, at a total price of \$62,750. The approximate dimensions are,—length over all 75 ft., breadth 17 ft. 8 in. Each boat will be equipped with heavy oil engine of the semi-Diesel type of 100 h.p.

British Empire Shipbuilding Corporation Ltd. has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital, and office at Montreal, to build, own and operate steam and other ships, steamship and railway terminals, dry docks, shipyards, etc., and to conduct business in Canada and elsewhere.

Canadian Concrete Shipbuilding Co., North Sydney, N.S.—The concrete motor ship *Permanencia* was launched by this company in May. She was built under Lloyd's special survey for the highest rating. The hull was practically complete and ready for launching in Dec., 1919, but a fire on board caused damage which necessitated a prolonged delay. She will have a deadweight capacity of from 450 to 500 tons, and sleeping accommodation for 10 passengers in addition to the crew. She is being equipped with a Bolinder crude oil engine of 240 b.h.p., for a speed of from 9 to 10 knots an hour, supplied by the Swedish Steel & Importing Co., Montreal. When completed, she will be operated between Cape Breton, Prince Edward Island and New foundland ports.

Canadian Vickers Ltd., Montreal, launched the s.s. *Loch Tay*, at the end of May, for Norwegian owners. She is a sister ship of the *Tatjana*, the launching of which was announced in our last issue. Her dimensions are,—length over all 413 ft., breadth 52 ft., depth 31 ft. 0½ in., draft when loaded with 8,300 tons of cargo, 25 1/3 ft. She is classed in Norwegian *Veritas*, and is equipped with triple expansion engines and 3 Scotch boilers fitted with forced draft. The cargo handling equipment, etc., which is of the latest type, is all made by the company.

K. Cochrane, Port Greville, N.S., launched the schooner *Frederic H.*, 425 tons, June 5, for the lumber trade.

Collingwood Shipbuilding Co., Collingwood, Ont., advised us June 9 that the 650 d.w. tons ship, which it is building for Standard Oil Co., was then completely plated, and would be launched in July.

Collingwood Shipbuilding Corporation, Ltd., has been incorporated under the Dominion Companies Act, with \$100,000 au-

thorized capital, and office at Montreal, to build, operate and charter steamships of all kinds, dry docks, shipbuilding yards, etc., to take over any existing business, which it is authorized to do and to carry on its business in Canada and elsewhere.

J. Coughlan & Sons, Ltd., Vancouver, B.C., launched the s.s. *Margaret Coughlan* May 18 for Western Canada Steamships, Ltd., a subsidiary of the building company. She is of the standard 8,800 ton type, steel cargo steamship, of the following dimensions,—length over all 427 ft., breadth moulded 54 ft., depth moulded 29¾ ft., and she is equipped with triple expansion engines, with cylinders 27, 44 and 73 in. diam. by 48 in. stroke, supplied with steam by boilers equipped for burning oil fuel. She has been chartered to carry railway ties from British Columbia to Great Britain. This is stated to be the first steel cargo steamship built

2 vertical inverted direct acting compound surface condensing engines, with cylinders 12 and 24 in. diam. by about 16 in. stroke, turning outboard when going ahead, developing about 275 i.h.p. at 175 r.p.m.

Dominion Shipbuilding Co., Toronto, launched the s.s. *Gonzaba*, June 19, for the Gulf Navigation Co., New Orleans, La. The christening was performed by Miss Abaunza, daughter of the owning company's President and General Manager. The ship was designed for ocean service to carry approximately 2,550 d. w. tons, and has the following dimensions,—length over all 261 ft., length between perpendiculars 251 ft., breadth moulded 39½ ft., depth moulded 19 ft. 4 in. She is classed to Lloyd's 100 A1, and equipped with triple expansion engines 950 h.p., and 2 Scotch boilers supplying steam at 180 lbs. A sister ship is under construction for the same com-

Steamship *Capilano*, built recently for Union Steamship Co. of British Columbia, to run between Vancouver, and way ports, to Powell River, B.C.

in Vancouver, for Vancouver interests, and to sail from that port.

Hull 16, which was under construction for Vancouver Steamships Ltd., one of the company's subsidiaries, has been sold to J. A. Sturrock, for Swedish interests. She is of a similar type to the s.s. *Margaret Coughlan*, and it is expected that she will be delivered about the end of July.

Davie Shipbuilding & Repairing Co., Lauzon, Que.—A wooden steamship, one of 12, of 1,500 tons d.w. each, ordered last year by the Anderson Co., New York, for the French Government, was launched at this yard June 3, and christened *Aubernalle*. Her dimensions are,—length over all 204½ ft., length between perpendiculars 195 ft. 8 in., beam moulded 39 ft. 8 in., beam extreme 40½ ft., depth moulded 17 ft., depth of hold 15 ft., draft loaded 16 ft. The hull is of Douglas fir, and the propelling machinery consists of

pany, to be named *Floraba*, and it is expected she will be launched early in July.

Foundation Co., Victoria, B.C.—This company's shipbuilding interests in B.C. are being closed up, and the shipbuilding plant and machinery at the Point Hope and Point Ellice yards are reported to have been sold to private interests. The leases on the yards expired at the end of June. During the war, the company built several wooden steamships for the British Government, under orders from the Imperial Munitions Board, and also built a number of wooden steamships for the French Government, which latter order was completed recently. The Point Ellice yard was operated formerly by Cameron-Genoa Mills Shipbuilders, Ltd., and the land, in both cases, forms part of the old Songhees Indian Reserve, and was leased from the B.C. Government.

Harbour Marine Co., Victoria, B.C.—The steel car ferry tow barge, which this

completed in the month of May. The ship will displace 2,400 tons. Her length is 120 ft., breadth 25 ft., depth 11 ft., and approximately 280 d.w. tons. She will be fitted with triple expansion engines with cylinders 12, 19 and 30 in. diam. by 20 in. stroke, 450 i.h.p., supplied with steam by a Scotch boiler at 150 lb., to be supplied by the New Burrell Johnson Iron Co. The ship is being built for general freighting work, but can easily be adapted for coal service. The deck machinery will include powerful steam winches, windlasses, etc., and she will be equipped with all the necessary derricks, etc., for handling cargo.

R. M. Melanson, Gilberts Cove, N.S., is building a steamship of the following approximate dimensions: length over all 110 ft., breadth over all 12 ft., breadth 28 ft., depth 11 ft., and approximately 280 d.w. tons. She will be fitted with triple expansion engines with cylinders 12, 19 and 30 in. diam. by 20 in. stroke, 450 i.h.p., supplied with steam by a Scotch boiler at 150 lb., to be supplied by the New Burrell Johnson Iron Co. The ship is being built for general freighting work, but can easily be adapted for coal service. The deck machinery will include powerful steam winches, windlasses, etc., and she will be equipped with all the necessary derricks, etc., for handling cargo.

Nova Scotia Shipbuilding & Transportation Co., Liverpool, N.S., launched the tern schooner Olive Moore, June 5. Her dimensions are,—length 136 ft.; breadth 25 ft.; depth of hold 11 ft. She is owned by J. & S. Moore, St. John's, Nfld.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—After a strike lasting about three weeks, the employees returned to work at the old scale and conditions, June 10. It is stated that the number of employees is at present somewhat less than before the strike, one report stating that only 50% of the men returned at the old rate. When the strike occurred, the management stated definitely that it was absolutely impossible, under existing conditions, to make any increases in pay, or changes in the working conditions, and that if the men ceased work, the plant would have to be closed down.

Port Arthur Shipbuilding Corporation Ltd. has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital, and office at Montreal, to own and operate steamships, dry docks, shipbuilding plants, etc., and to carry on its business in Canada and elsewhere.

St. John Dry Dock & Shipbuilding Co.'s annual meeting was held at St. John, N.B., June 8. The directors are: James Playfair, Midland, Ont., President; D. S. Pratt, Midland, Ont., Vice President and Managing Director; Thomas A. Duff, Toronto, Secretary-Treasurer; D. L. White, Jr., Midland, Ont.; W. E. Phin, Hamilton, Ont.; W. J. Sheppard, Waubashene, Ont.; J. B. Craven, New York. It was announced at the meeting that the company had bought the 24 in. hydraulic dredge Tornado of Canadian register, for work in the St. John harbor.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C.—Considerable progress is reported on the construction of the first of the four wooden barkentines of 2,400 tons each, which are being built at the Cholberg shipyard, under Dominion Government aid. The keel of the first was laid May 1. Thos. McConkey, of the Dominion Marine Department, Ottawa, has been appointed to act as the naval architect in connection with these ships, on the government's behalf.

About the middle of June it was reported that there was some delay in construction work, owing to delayed delivery of certain special lumber, but it was expected that this would be overcome within a few days. Keels for three of the ships have been laid and the first frames are in on hull 4 with the stern posts set.

Act to Amend the Canada Shipping Act (Steamboat Inspection).

A bill introduced in the House of Commons by the Minister of Marine was passed by the House April 28, its provisions being as follows:

The Canada Shipping Act, Revised Statutes of Canada, 1906, chap. 113, sec. 475, is repealed, and the following is substituted therefor:—

"578. The Governor in Council may make rules and regulations,—

"(a) for the testing of boilers and all matters connected with the construction and working thereof;

"(b) for the inspection of safety valves and boiler cocks and all matters connected with the construction and working thereof;

"(c) for the inspection of hulls and equipment of steamboats;

"(d) respecting boats and life-preservers, fire-buckets, axes and lanterns and other life-saving appliances to be carried by steamboats or by other vessels mentioned in this part;

"(e) respecting the qualifications necessary to entitle a person to an engineer's certificate;

"(f) requiring steamboats to carry chemical or other fire extinguishers, and prescribing the number of such fire extinguishers to be carried by steamboats of different sizes and classes, respectively;

"(g) for the inspection of the machinery and equipment of steamboats propelled by gas, fluid, naphtha, electricity, or any other chemical, or any mechanical power, and, in the case of such vessels, for making such changes in forms S and T as he deems advisable;

"(h) for the establishment of a scale of fees and the collection thereof, for examining plans of the hulls, boilers and machinery and equipment of steamboats; for the inspection of steamboats, their machinery and equipment, during construction, and for such like examinations or inspection in connection with the Steamboat Inspection Service."

The Canada Shipping Act, sections 643 and 644, are repealed, and the following are substituted therefor:—

"643. (1) The Governor in council may from time to time fix a duty to be paid yearly and every year by the owner or master of every steamboat registered in Canada.

"(2) The amount of such duty shall in each case be paid at such times and in such manner and to such officers as

the Governor in Council may direct, and such duty shall be paid into the Consolidated Revenue Fund of Canada.

"644. (1) No inspector shall make or deliver a certificate respecting any steamboat under this part, unless,—

"(a) it is established to his satisfaction that the fees and duty payable in respect to such steamboat for the current year have been paid; and,

"(b) he is satisfied by careful examination that all the conditions and requirements of this part and of any regulation made thereunder have been fulfilled and complied with in respect to such steamboat.

"(2) Every inspector shall report to a chief officer of Customs any case of omission to pay such fees or duty, or of any omission to apply for such inspection as aforesaid, for more than one year from the date of the last inspection, or of any refusal to submit to inspection at any time which in any way or at any time comes to his knowledge."

Proposed Government Aid to Shipbuilding.

—A deputation consisting of about 40 representatives of shipbuilding companies in the Maritime Provinces, Quebec, Ontario and British Columbia, waited on the Dominion Government at Ottawa, June 10, to urge government aid to shipbuilding in Canada. Two proposals are reported to have been made, one that the government grant a subsidy of \$10 a displacement ton, and \$10 per i.h.p., and another that the government assist the trade by financing foreign shipbuilding contracts. It was stated that a very large shipbuilding contract from a foreign country had actually been offered, provided that the government assist in the financing during the present adverse conditions of exchange. The foreign country concerned, it was said, was willing to put up a large proportion of the amount involved. The Premier promised that the proposals would be given the government's best consideration.

Transportation of Stock and Feed.—The further supplementary estimates, passed by the House of Commons recently, contained two items for transportation of stock and feed under Governor General's warrants as follows:—Aug. 23, 1919, \$375,000; Nov. 24, \$25,000.

Alberta Motor Boat Co., Edmonton, Alta., is building a 40 ft. schooner, equipped with 12 h.p. auxiliary engine, for use on northern waters. It is also building 2 gasoline boats for northern oil exploitation by Imperial Oil Ltd.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during May, 1920:

Articles	Eastbound	M. & R.M.	Canadian Canal	U.S. Canal	Total

Dominion Government Aid for Shipbuilding.

On motion of the Finance Minister, Sir Henry Drayton, the House of Commons went into committee of the whole on June 21, to consider the following proposed resolution:—

"1. That it is expedient to bring in a measure to provide that in any case where a person (hereinafter called the 'purchaser') has entered into a contract with a shipbuilder for the building in Canada of a vessel of not less than 3,000 tons, and such contract is approved by the Minister of Finance and Marine, and a sum not less than 10% of the price of such vessel is paid by the purchaser to the shipbuilder in cash at the time the contract is entered into, and, if such cash payment is less than 20% of such price, the payment to the shipbuilder of a further sum which with the said cash payment will amount to not less than 20% of such price, not later than six months after such time, and the payment of a further sum not later than nine months after such time, if the previous payments are less than 25% of such price, which will be sufficient with the other said payments to amount to at least 25% of the total of such price are contracted for and secured to the satisfaction of the Minister of Finance, and the payment of an additional 25% of the price is arranged between the purchaser and the shipbuilder, the Governor in council may authorize the Minister of Finance to endorse on behalf of His Majesty promissory notes drawn by the purchaser in favor of the shipbuilder for the remaining 50% of the price of the said vessel. The Governor in council shall prescribe the place where such notes shall be paid, the method of discounting them, and the time when such notes are to be paid. Provided that the first of such notes shall be made payable at a date not less than 21 months after the time the contract was entered into, and the last of such notes shall be made payable at a date not later than 57 months after such time.

"2. That a mortgage on the vessel for the full amount of the notes so endorsed by the Minister of Finance, in such form as the Minister of Justice may approve, shall be given to His Majesty, and the said vessel shall be registered in Canada, and the register shall not be transfer-

red, until the amount secured by the mortgage has been fully satisfied and paid.

"3. That until the amount secured by the mortgage is fully satisfied and paid, the vessel shall be insured and kept insured in favor of His Majesty for such amount and against such risks and in such insurance companies as the Minister of Finance may determine.

"Provided that if the vessel is being built for an alien, and the provisions above mentioned with respect to mortgaging the vessel cannot conveniently be complied with, such security for the amount of the said promissory notes endorsed by the Minister of Finance shall be furnished by the purchaser as may be approved by the Governor in council."

The resolution was discussed at length, a number of Liberal members, and Hon. T. A. Crerar, leader of the farmer's group, opposing it. A notable exception was Jacques Bureau, M.P. for Three Rivers, Que., who strongly supported it. Finally it was carried on a division, reported and concurred in, and Sir Henry Drayton then introduced bill 199, based on it, which was read a first time. The bill was read a second time on June 24, and referred to committee of the whole, when a number of Liberal members again opposed it, but two Liberals, P. R. Du Tremblay, of Laurier-Outremont, Que., and T. Vien, of Lotbiniere, Que., joined Jacques Bureau in supporting it. W. Duff of Lunenburg, N.S., moved two amendment, one to give aid to the building of wooden as well as steel ships, and to strike out the tonnage minimum; the other to keep the ship on which the loan is made, on the Canadian register until the debt is discharged. The first amendment was defeated by 42 to 18, and the second amendment was defeated on a division. Sir Henry Drayton moved an amendment, which was carried, as follows: "The whole amount that notes may be endorsed on behalf of His Majesty, as herein provided, shall not exceed \$20,000,000." The bill was then passed by the committee without further amendment, and on June 25 was read a third time and passed.

It is said that the Government's action will result in sufficient foreign business

coming to Canada to keep the shipyards busy for from two or three years. France has been in the market for a large number of steel cargo steamships for some time, but it has been impossible to arrange for credits, and in addition to this the conditions of exchange have prevented orders being placed. It is now said that a credit association, in connection with which Sir Henry Pellatt's name is mentioned, has been formed, and has arranged to secure money in the United States to help to finance the business.

Steamship Northumberland Transferred from Atlantic Coast to Lake Ontario.

The s.s. Northumberland, owned formerly by the Charlottetown Steam Navigation Co., Charlottetown, P.E.I., and for several years operated between Prince Edward Island and the New Brunswick mainland, and which was sold to the Dominion Government when the company ceased business in 1916, since which she has been operated at intervals in the same service by the Railways and Canals Department, has been transferred to service on Lake Ontario, between Toronto and Port Dalhousie, and is being operated by Canadian National Ry. in conjunction with the Niagara, St. Catharines & Toronto Ry. The Northumberland was built at Newcastle-upon-Tyne, Eng., in 1891, has a steel hull, and is screw driven by engine of 350 h.p. Her dimensions are,—length 220 ft., breadth 33.1 ft., depth 20.4 ft., tonnage 1,255 gross, 542 net. After being brought from Cape Tormentine, N.B., where she had been berthed, to Toronto, she went to the Dominion Shipbuilding Co.'s yard, where a passenger stairway was put in and some other minor alterations made. It is said that further alterations will be made after this year's navigation closes.

The service by the steamships Northumberland and Dalhousie City was put into effect June 18, and is run on daylight saving time, leaving Toronto on weekdays at 8 a.m., 2 p.m. and 5 p.m., and Port Dalhousie at 8.30 a.m., 11 a.m. and 7 p.m., and on Sundays, leaving Toronto at 8 a.m., 2 p.m. and 7 p.m., and Port Dalhousie at 9.30 a.m., 11 a.m. and 7 p.m.

Vessels Registered in Canada During March, 1920.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 h.p., are eliminated, as also are sailing vessels of less than 100 tons register.

Atlantic and Pacific Ocean.

The International Shipping Conference at Genoa, Italy, is reported to have decided in favor of the principle of a 48 hour week for seamen.

The *Maritime Lines' s.s. Marquis de Launay*, bound for the west coast at the mouth of the St. Charles River, June 7, being caught by the strong wind, which blew from the Lachine Falls, Quebec. She was forced without serious damage.

Thomas White & Co. state that they anticipate making sailings from Halifax, N.S., to London, Eng., about every three weeks, during the summer, and to Liverpool, via Newfoundland, also about every three weeks, with occasional sailings to Glasgow and Manchester.

The British Government has appointed an imperial shipping committee to enquire into complaints regarding ocean freights and similar matters and also to survey facilities for inter-empire trade. Sir George Perley, Canadian High Commissioner, will represent Canada.

Early in June, the following four steamships cleared from Montreal simultaneously, carrying well over 4,000 passengers among them: Minnedosa and Tunisian, Canadian Pacific Ocean Services; Cassandra, Anchor-Donaldson Line, and Megantic, White Star-Dominion Line. This is an unusual thing for Canada.

A Halifax press dispatch of June 15 stated that it was reported there that a fast transportation service between Halifax and an English port is contemplated, with especially built modern steamships, equipped with oil fuel burners and having a speed about a knot faster than the *s.s. Lusitania*, which will necessitate only three nights being spent on board on the trans-Atlantic trip.

The Canadian Robert Dollar Co., which acquired the *s.s. War Melody* recently, has changed her name to *Grace Dollar*, and has placed her in its trans-Pacific service. She was delivered to her owners at New York a few weeks ago, and went to the Pacific coast via the Panama Canal, arriving at Bellingham, Wash., June 5, after which she proceeded to Vancouver, B.C., to take on cargo for Japan and China. She was built at Belfast, Ireland, in 1918, and has 4,040 d.w. tons capacity.

The Isthmian Line, controlled by the United States Steel Products Co., is reported to have completed arrangements for the operation of a steamship line between New York and Puget Sound, and British Columbia points, and the steamships *Steel Maker* and *Bantu* have already been placed in the service. The ships which are being utilized were operated formerly as the *Maple Leaf Line*, and calls were made at Victoria, but, on the reorganization, Vancouver is said to have been substituted for Victoria.

It was announced recently that a steamship service was about to be inaugurated between Vancouver and Havre and Calais, France, and that the *s.s. Pacific* would be ready to load at Vancouver early in July. We have been officially advised that the Johnson Line, of Stockholm, Sweden, will operate the service, which will be opened during the early half of July with the motor ship *Pacific*, which will load at Seattle, Wash., and Vancouver, and that she will be followed during the latter half of August by the motor ship *Kronprinsessan Margareta*, and that thereafter there will be regular sailings at intervals of about six weeks.

It has not been decided whether the ships will call at both Havre and Calais, as it is considered that the call at Calais will be sufficient, this port being only 186 miles from Paris, and having the best railway connections with northern French ports, and also being connected by canals with points in France, Belgium and Alsace-Lorraine. C. Gardner Johnson Co., represent the line in Canada, and W. R. Grace & Co., at Seattle and Tacoma, Wash.

Maritime Provinces and Newfoundland.

The harbor revenue at St. John, N.B., for May was \$14,600, an increase of over \$4,000 compared with May, 1919, due, it is stated, to the larger number of steamships handled.

Canada Steamship Lines Ltd. announced the inauguration of a steamship service between Montreal and Prince Edward Island, Sydney, N.S., and St. John's, about June 30, with the *s.s. Mapledene*.

The St. John Dry Dock & Shipbuilding Co., contractors for the harbor improvement work in Courtenay Bay, St. John, N.B., is reported to have submitted plans to the Dominion Government for a change in the original plans covering the projected improvements, and calling for the erection of four piers at the head of the bay with accommodation for six steamships, and the reclamation of ground for railway yards to some of the piers.

The Newfoundland Government subsidy for the carriage of mails and passengers between Newfoundland and North Sydney, N.S., is stated to have been reduced from \$75,000 to \$35,000 a year, until such time as the Reid Newfoundland Co., which operated the service, shall restore it to its full capacity. The company lost two of its steamships recently and of necessity of the service has been interfered with. It is reported that negotiations are proceeding in England for the purchase of additional ships and it is expected that they will be in operation during this year.

An order in council has been passed authorizing the following pilotage rates for the pilotage district of Miramichi, N.B.:—For steamships a flat rate of \$25 inward and outward and an additional 5c. a registered ton. For sailing ships, up to 300 tons register, a flat rate of \$25 inward and outward, with an additional 6c. a registered ton outward. For sailing ships over 300 tons register and not exceeding 700 tons register, a flat rate of \$25 inward and outward, with an additional 5c. a registered ton inward and outward. For sailing ships over 700 tons

register a flat rate of \$25 inward and outward, with an additional 4 1/2c. a registered ton outward.

Province of Quebec.

The Gulf of St. Lawrence Shipping & Trading Co.'s *s.s. Lady Evelyn* was considerably damaged by fire at Carey Point June 9.

Canada Steamship Lines' *s.s. Quebec*, which went aground at Three Rivers, June 3, during foggy weather, was released June 8, apparently undamaged.

The *s.s. Columbia* has been bought from U.S. owners by A. A. Larocque, President, Sincennes-McNaughton Lines Ltd., Montreal, and has been transferred to the Canadian register under the name of *Douglmac*.

Canada Steamship Lines Ltd. has had a pontoon landing for the use of passengers and freight at its Quebec docks, built by the Davie Shipbuilding & Repairing Co., Lauzon, Que. It is built of Douglas fir, and is 235 ft. long, by 43 ft. wide, by 7 ft. deep.

The Canada Steamship Lines' *s.s. Rapids King* has, according to a press report, been stationed near Victoria pier, Montreal, to provide for night accommodation for travellers unable to find rooms in hotels or boarding houses in the city.

The barge *Cuba*, from Quebec to Ogdensburg, N.Y., with pulpwood, foundered in deep water, in the St. Lawrence River, June 8, and became a total loss. She was originally built as a steamship at Kingston, Ont., in 1875, and was owned by the George Hall Coal Co. of Canada. Her dimensions were,—length 168.7 ft., breadth 25.6 ft., depth 11 ft., tonnage 386 register.

Ontario and the Great Lakes.

A Kingston press dispatch says that, in view of the low water in the harbor there, the Dominion Public Works Department has decided to remove 41,000 yards of material, and that tenders will be called for the work at once.

The Ogdensburg Coal & Towing Co.'s *s.s. Nicaragua*, westbound June 8, collided with the gates at lock 18 of the Cornwall canal, and dislodged one of the gates. Traffic was delayed for about seven hours. The cause of the accident is given as an engineer's mistake in the signal.

The *s.s. H. P. Bigelow*, operated as a ferry between Brockville, Ont., and Morristown, N.Y., was destroyed by fire at her slip at Morristown, June 5. She was

Vessels Added to and Deducted From the Canadian Register During March, 1920.

of oak, built at Baldwinville, N.Y., in 1893, and had the following dimensions,—length 60 ft., breadth 14 ft., depth 8½ ft.; tonnage, 46 gross, 36 net.

The George Hall Coal Co. of Canada's claim against the owners of the s.s. Samuel Marshall, for damage caused by the Samuel Marshall colliding with the s.s. Liberty, at Kingston, recently, has been settled out of court, by the payment of approximately \$10,000. The s.s. Liberty is at Kingston drydock undergoing repairs.

The United States Lake Survey reports the stages of the Great Lakes in feet above mean sea level for May, as follows: Superior, 602.40; Michigan and Huron, 580.75; St. Clair, 575.24; Erie, 572.31; Ontario, 245.60. Compared with the average May stages for the past ten years, Superior was 0.44 ft. above; Michigan and Huron 0.17 ft. above; Erie 0.42 ft. below, and Ontario 1.10 ft. below.

The contract for the building of a sea wall at Toronto, which has been awarded by the Dominion Public Works Department to Randolph Macdonald Co., Toronto, as mentioned in our last issue, calls for the construction of a breakwater along the southern shore of the center portion of Toronto Island 1,700 ft. long, on brushwood fascine mattress 60 ft. wide, the base of the breakwater being 47½ ft. wide, and the top 10 ft. wide, there being a slope of 1½:1 on one side, and 1:1 on the other. The height of the breakwater above low water level will be 7 ft.

British Columbia and Pacific Coast.

The Union Steamship Co. of British Columbia has appointed G. Whaley, captain, and P. J. V. Farina, chief engineer of the s.s. Capilano; and J. Findlay, captain, and J. Hogan, chief engineer of the s.s. Chilkoet, for this season.

The contract for dredging and filling on the site of the Ballantyne pier, in Burrard Inlet, is reported to have been awarded by the Vancouver Harbor Commissioners, to Grant & MacDonald, Vancouver, for \$513,121.50.

The C.P.R. s.s. Princess Alice has been withdrawn from the Gulf service and was placed on the Alaska route June 11, in conjunction with the s.s. Princess Mary. The s.s. Princess Royal, which has had additional deck accommodation installed, takes the place of the s.s. Princess Alice on the Gulf route.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince John was returned to service on the Queen Charlotte Islands run, June 4, after having been repaired and overhauled, subsequent to a collision with the same company's s.s. Prince Albert, at Dead Tree Point about the end of March. The repairs were made by Wallace Shipyards Ltd., North Vancouver.

The auxiliary powered schooner Janet Carruthers, which was built by Wallace Shipyards, Ltd., North Vancouver, B.C., in 1917, for Canada West Coast Navigation Co., and which was wrecked on the Copalios Beach over a year ago, was dynamited about the middle of June, after her fittings were salvaged. Her dimensions were,—length 240 ft., breadth 44.1 ft., depth 19.3 ft.; tonnage 1,466 gross, 1,253 net. She was equipped with Diesel engine of 36 h.p., driving a screw.

The British Yukon Navigation Co., White Horse, Yukon, has appointed the following officers for its steamships for this year:—Canadian, C. M. Coghlan,

captain, J. Scotland, chief engineer; Casca, J. O. Williams, captain, J. P. Borne, chief engineer; Selkirk, M. Campbell, captain, W. C. Vey, chief engineer; Tarahne, D. McKay, captain, F. Vey, chief engineer; Tutshi, J. McDonald, captain, J. Lauderdale, chief engineer; White Horse, F. D. Turner, captain, P. Larssen, chief engineer.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

British Columbia, Strait of Georgia, Fraser River.—Range lights established on Woodward's Islands, Deas Island, Tilbury Island and Annacis Island.

New Brunswick-Bathurst Harbor.—During the past season the Dominion Public Works Department cleaned the dredged channel through the outer bar level Bay, to a least depth of 15½ ft.; at the entrance to Bathurst Harbor, Chaiside the harbor, on the Ripple, Ballast bar and Seal bar, the channel was cleared to a least depth of 13½ ft., and in the Tetagouche channel, leading to West Bathurst, a section 900 ft. long and 40 ft. wide, was dredged to a least depth of 13 ft., but inside this section the controlling depth is still 10 ft.

New Brunswick-Miscow Island.—Without further notice the steam fog whistle on Birch Point, Miscow Island, Chaleur Bay, will be replaced by a diaphone, operated by air compressed by an oil engine, giving one blast of 3 seconds duration a minute.

Nova Scotia and Newfoundland Radiotelegraph Direction Finding Stations.—The British Admiralty published a circular letter recently relating to these stations at Chebucto Head and Canso, N.S., and at Cape Race, Nfld., calling attention to the immense value of these stations, but indicating that while mariners are beginning to use them more extensively, the advantage does not seem to have become general. The attention of mariners is called to a previous notice early in 1919, which gave the regulations to be used when communicating with the Canadian stations, and it is extremely necessary that both masters and radiotelegraph operators should make themselves fully acquainted with the procedure.

Nova Scotia, Barrington Bay.—Gas and bell buoy to be established without further notice, in position formerly occupied by lightship, in 6 fathoms, ¾ mile eastward of Wessex ledge; steel cylindrical buoy, surmounted by a steel frame supporting the bell and lantern, painted black with white vertical stripes, showing a white acetylene light, automatically occulted at short intervals.

Ontario, Lake Superior, Port Arthur harbor.—Work will be started in the near future on the extension of the Bare Point breakwater. This extension will leave the south end of the present breakwater, and proceed southwesterly for 1,600 ft. Mariners are warned that they must use caution when in the vicinity.

Ontario, Ottawa River, Chats Lake, Arnprior Island.—On an islet, opposite the town of Arnprior, the 6th order dioptric light will be replaced, without further notice, by an unwatched occulting white acetylene light, automatically occulted at short intervals.

Quebec, Gulf of St. Lawrence.—About June 15, the front range light in Thunder River will be changed in position to 228 ft. southward of its previous position

in the line of range, and 112 ft. back from the water's edge. The light is at an elevation of 30 ft. on a structure, consisting of a mast 25 ft. high, with wide diamond shaped day mark attached.

Quebec, River St. Lawrence, channel north of Island of Orleans.—Four steel can buoys, painted black and white, have been placed, two on the north side and two on the south side of the channel, between red gas buoy 110B and black can buoy 121B, at the eastern end of the channel, north of the Island of Orleans. These buoys are not to be used as aids to navigation.

Wreck Commissioner's Enquiries and Judgments.

An enquiry has been held and judgment delivered in connection with the following casualty:—

Prince Albert-Prince John Collision.

Enquiry held during May by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Capt. G. E. Budge and J. R. Stewart as nautical assessors, and judgment delivered towards the end of that month, into the collision between the Grand Trunk Pacific Coast Steamship Co.'s steamships Prince Albert and Prince John, off Skidegate, at the end of April. The court found that the collision took place in such a manner and in such unusual circumstances that it could not have been prevented by ordinary skill on the part of those in charge of their vessels, and no blame is therefore imputed to any of the officers concerned. The court expressed the opinion that both masters exercised considerable care and nerve, when they found themselves placed in an unpleasant and difficult situation, and that after the collision had occurred, the conduct of all concerned was worthy of highest commendation, it being the court's opinion that the s.s. Prince John would undoubtedly have foundered, in comparatively deep water, with probable loss of life, had it not been for the presence of mind, resource, energy and coolness displayed by the masters, officers and crews of both steamships.

Steamships Lady Evelyn and Champlain.—Rt. Hon. A. L. Sifton stated, in the House of Commons, recently, that the s.s. Lady Evelyn was sold April 24, 1919, and the s.s. Champlain in March, 1920, to the Gulf of St. Lawrence Shipping & Trading Co. The Lady Evelyn was included with other ships advertised for sale by the Naval Service Department in Feb., 1919. The only tender received was for \$20,000. The s.s. Champlain was also advertised for sale. The Lady Evelyn was sold for \$40,000, and the Champlain for \$61,050. For the Lady Evelyn \$34,000 had been paid to June 16, the balance of \$6,000 being held pending settlement of a claim that the complete equipment was not handed over with the ship. For the Champlain, \$13,102.50 was paid in cash, the balance being secured by endorsed notes, maturing in 3, 6, 9 and 12 months, with interest at 6%.

Marine Public Works Contracts.—The Dominion Public Works Department has let the following contracts: Rubble mound stone breakwater off southern shore of Toronto Island, May 26, Randolph MacDonald Co., Toronto, at schedule of prices; dredging northwest Miramichi River, Que., June 2, Miramichi Dredging Co., Newcastle, N.B., at 54¢ a cu. yd. scow measure.

Steamship Service Between Canada and West Africa.

Under the terms of the new contract between the Canadian Pacific and the British and French Governments, the first sailing will be the s.s. *Melville* from Montreal on or about July 10. This will be followed by the s.s. *Bassam* on or about July 15. Future sailings will be announced later. The route will call at the following ports: Dakar, Bathurst, Sierra Leone, Secondi, Cape Coast, Accra, Lome, Cotonou, Lagos, Burutu, and Port Harcourt.

There are a great number of ports on the West Coast of Africa, extending over 2,000 miles, and following the practice adopted by our lines from Liverpool and from New York, the ports of call may vary with each sailing. One month's ship will call at certain ports, and the following ship may omit some of these served by the previous one, and include others instead, but in practically every case each ship will include the principal ports, like Sierra Leone, Secondi, Accra and Lagos. The other ports will depend upon the cargo that may be offering from time to time. We have advertised the s.s. *Bassam* for the above ports and are now ascertaining from shippers what other ports they have shipped for, and would like the ship to call at.

This service is intended to be a regular one to and from Canada and the West Coast, and we are just as much interested in bringing back to Canada imports from West Africa, which we are in hope will develop into substantial proportions as the service and opportunities become better known, and we desire to bring to the notice of Canadian importers and manufacturers the opportunities afforded by bringing out by direct steamship, cocoa, palm oil, ground nuts, hides and skins, ginger, piassava, mahogany, ivory, manganese ore, etc.

Our service from West Africa to New York, consisting of steamships about every 10 days, is bringing out full cargoes every voyage, a very large proportion of which consists of cocoa from the Gold Coast, which is producing this article in enormous and ever-increasing quantities, and it seems to us that Canada should be able to import and use quite a large quantity of this West African cocoa, now that it be brought out by direct vessel.

Halifax Dry Dock Expropriation.—The question of the price to be paid by the Dominion Government for the Halifax Graving Dock Co.'s property at Halifax, N.S., came before the Exchequer Court of Canada June 14. The company claims \$5,000,000 for its property, which has been expropriated by the Dominion Government and the government has named \$1,100,000 as the outside price it will pay. The property is now operated under lease by Halifax Shipyards Ltd.

Victoria Drydock.—The Minister of Railways stated in the House of Commons recently that the government had reached a conclusion on the proposal to build a drydock at or near Victoria, B.C., as a government work, that it would be commenced as soon as conditions will justify, and that the cost would be between \$1,000,000 and \$2,000,000.

Trent Canal Construction.

J. A. Campbell, M.P. for Niagara, Manitoba, asked the following questions in the House of Commons recently, the answers being given by the Minister of Railways and Canals:

"What is the total amount which has been spent by the Government on the Trent canal during the last 25 years?" Answer:—"\$2,042,100.28."

"What amount was spent on this canal last year?" Answer:—"\$1,434,713.49."

"How many persons were permanently employed thereon?" Answer:—"Ninety-three employees permanently employed throughout the year, and 91 employed during the season of navigation only."

"What was the total maintenance cost last year?" Answer:—"428,851.22."

"What was the total revenue derived therefrom during the last fiscal year?" Answer:—"23,554.37, from rentals under hydraulic leases. There are no tolls charged on any canals."

"What amount of freight was transported on said canal during the last fiscal year?" Answer:—"Season of 1919—69,118 tons of freight."

"What is the draft of the canal?" Answer:—"Trenton to Peterborough, 8 ft. 4 in.; Peterborough to Lake Couchiching, 6 ft."

Icebreaking Steamship for the St. Lawrence River.

The Marine Department will, we are officially advised, call for tenders early in July, to be in by Aug. 9, for the construction of an icebreaking steamship for service in the St. Lawrence River and Gulf. The estimates for 1920-1921, details of which have been given in previous issues, contain an appropriation of \$2,000,000 for this purpose. The plans and specifications are being prepared in the Marine Department. The general dimensions will be,—length between perpendiculars 275 ft., breadth moulded 57½ ft., depth moulded 32 ft.; tonnage, 3,520 gross; indicated horse power, 8,000; speed 16 knots. The dimensions are practically the same as those of the icebreaking steamship J. D. Hazen, which was built for St. Lawrence River service, by Canadian Vickers Ltd., in 1914, but which was not finished when the war broke out. At the request of the British Government, the ship was then completed and sold to the Russian Government, for use in the White Sea.

Canadian Pacific Ocean Services to the Far East.

The direct steamship service from Vancouver, B.C., to Singapore, Straits Settlements, which was inaugurated by the Canadian Pacific Ocean Services in Oct., 1919, with the s.s. *Methven*, is to be augmented by the addition of the s.s. *Mattawa*, formerly in the Atlantic trade. The *Mattawa* sailed from Liverpool on April 23 via the Suez canal with a general cargo for Karachi, India, and will load for Vancouver at Karachi, Bombay, Colombo, Singapore, Hong Kong, Shanghai, Kobe, and Yokohama, arriving Vancouver early in July.

The direct Singapore service will be in addition to the regular service to China and Japan ports and Manila, maintained by the C.P.R. for many years with the *Empress* fleet. Shipments of rubber, tea, tin, etc., originating in the Straits Settlements and Indian ports, can

be carried by either of the ships direct from Singapore to Vancouver, having transhipment at Hong Kong.

From Vancouver it is expected a fairly heavy volume of traffic will move in connection with these ships to Singapore, as shipments for such ports as Calcutta, Colombo, Bombay, Rangoon, Madras, Batavia, Samarang, etc., can be transhipped at Singapore at considerably less than via Hong Kong. To these ports a regular weekly service is maintained by local steamship lines.

With the addition of these two ships the Canadian Pacific Ocean Services now has 6 steamships in its Oriental service aggregating 60,000 tons gross, with approximately three sailings a month.

Another feature of this service is the issuance of through bills of lading from shipping points to ultimate destination, thereby eliminating the usual trouble of arranging clearance at the seaboard.

Superintendent of Pilots for Montreal and Quebec District.

The Civil Service Commission has invited applications for the position of Superintendent of Pilots for the Montreal-Quebec pilotage district at an initial salary of \$3,060 a year, which will be increased on recommendation for efficient service, at the rate of \$180 a year, until a maximum of \$3,600 is reached. His duties will be, under direction, to supervise the pilotage service in the Montreal-Quebec district, to call and assign pilots to ships, receive pilotage dues, and make the required reports and returns to the Marine Department, to conduct investigations, when required, into wrecks, collisions and strandings, to make recommendations and handle correspondence in connection with such work and to perform other related work as required. He must hold a master's certificate of competency, must have been actually master of a sea going ship, or a passenger ship in coasting trade, for at least a year, must be thoroughly familiar with all shipping matters, especially those of the Gulf and River St. Lawrence, and have a knowledge of both English and French. While no definite age limit is fixed, age may be a determining factor when the selection is made.

Government Steamships to be Sold.

The Naval Service Department is offering for sale by tender, to Aug. 2, the ships, *Niobe*, *Rainbow*, *Grilse* and *Canada*, as they lie, the *Rainbow* at Esquimalt, B.C., and the others at Halifax, N.S. The *Niobe* is a steel armored cruiser of the *Spartiate* type, built in 1892, and having a displacement of 11,000 tons. Her dimensions are,—length over all 462½ ft., beam 43½ ft., draft 27½ ft. The *Rainbow* is a steel cruiser of the *Apollo* type, built in 1891, and having a displacement of 3,400 tons. Her dimensions are,—length over all 300 ft., beam 43½ ft., draft 18 ft., and it is stated that with slight alterations she could be utilized as a cargo ship. The *Grilse* was built at Glasgow, Scotland, in 1912, of steel, as a pleasure yacht, and is screw driven by turbine engines of 6,000 h.p., using oil fuel, and has a speed of 32 knots an hour. Her dimensions are,—length 202.3 ft., breadth 18.3 ft., depth 9.2 ft., tonnage, 287 gross, 157 net. The *Canada* was built at Barrow-in-Furness, Eng., in 1904, of steel, and is screw driven by engine of 209 h.p. Her dimensions are,—length 206 ft., breadth 25.1 ft., depth 13.3 ft., tonnage, 411 gross, 185 net.

Welland Ship Canal Construction.

J. A. Campbell, M.P. for Nelson, Man., asked the following questions in the House of Commons recently, the answers being given by the Minister of Railways and Canals.

"When was the work in connection with the new Welland canal scheme started?" Answer:—"Preliminary surveys date back to 1908 and were continued until 1913. Actual construction commenced Sept., 1913."

"When was the work discontinued?" Answer:—"The work of construction actually ceased in April, 1917, but the work of closing up the contractors' estimates, maintaining government property and plant was carried on until Dec. 31, 1918."

"What was the total cost of the work done during the above period of construction?" Answer:—

"Preliminary surveys (approx.)	\$ 187,232.45
"Construction work and plant taken over from contractors, as per final estimates for sections 1, 2, 3, 4A, and 5 and materials purchased by department, etc.	16,550,883.17

"Total to Mar. 31, 1919	\$16,738,115.32
"Expenditure incurred between Jan. 1 and Mar. 31, 1919	683,315.81

"Total expenditure incurred up to Dec. 31, 1918	\$16,054,799.48"
---	------------------

"When was the work recommenced in 1919, and when did it stop?" Answer:—

"Contracts were dated Jan. 17, 1919; work actually commenced in February. Contracts expired Dec. 31, 1919."

"What was the nature of the work done during 1919, and what was the total cost thereof?" Answer:—"Purchase of plant, equipment, plant materials and repairs, and general construction work. The cost for 1919 was as follows:

"Jan. 1 to Mar. 31, 1919	\$ 683,315.81
"Apr. 1, 1919, to Mar. 31, 1920	3,768,760.22
.....	\$4,452,076.06
"Jan. 1 to Mar. 31, 1920	61,449.23

"Actual expenditure incurred during calendar year 1919	\$1,390,626.83"
--	-----------------

"How many men were employed thereon during 1919?" Answer:—"The largest number employed at one time was during the last week of July, when the force, including engineering staff, was 2,786. Average monthly force was 1,458."

Merger of Canadian Steel, Coal, Shipping and Shipbuilding Companies.

At the Dominion Steel Corporation's annual meeting, at Montreal, June 18, the President, R. M. Wolvin, who is also officially connected with Canada Steamship Lines Ltd., Montreal Transportation Co., Halifax Shipyards Ltd., etc., stated that a short time ago a proposal had been submitted to the directors to join with various other enterprises in the recently organized British Empire Steel Corporation Ltd., the object of which is to put under single control the largest known deposits of ore and coal, to operate ore and coal mines, steel works, steamships, shipbuilding and repair yards, and other complementary enterprises. This would be the greatest industrial enterprise in Canada and would promise greater economy and efficiency in the production of coal and steel, with much needed shipbuilding and organization for the transportation of raw material and finished products, together with an outlet for ship plates.

Among the enterprises which it is said will be absorbed by the newly organized company are: Dominion Iron & Steel Co.,

Dominion Coal Co., Nova Scotia Steel & Coal Co., Canada Steamship Lines Ltd., Black Diamond Steamship Co., Halifax Shipyards Ltd., Tidewater Shipbuilders Ltd., Three Rivers, Que., Collingwood Shipbuilding Co., Davie Shipbuilding & Repairing Co., Lauzon, Que., Maritime Nail Co., and possibly Canada Foundries & Forgings Ltd., Welland, Ont., and Dominion Shipbuilding Co., Toronto. In addition to the Canadian companies concerned, various British interests will probably join, including those controlled by Viscount Furness and Sir William Beardmore, who are associated with large steel, iron, coal, shipbuilding and shipping companies in Great Britain.

Considerable discussion relative to the projected merger centered round the Dominion Steel Corporation's annual meeting, and at this meeting the election of a new board of directors was taken to be an indication as to the company's policy regarding its future movements in this connection. The directors elected are:—Senator C. P. Beaubien, E. Bristol, K.C., M.P., director of Canada Steamship Lines Ltd.; S. Elkin, M.P., President, Maritime Nail Co., St. John N.B.; Viscount Furness, head of Furness Withy & Co., and associated with Canada Steamship Lines as member of the London, Eng., Advisory Board; Sir William Mackenzie, ex-President, Canadian Northern Ry.; Sir Newton Moore, London, Eng.; Senator F. Nicholls, President, Canadian General Electric Co.; J. W. Norcross, President and Managing Director, Canada Steamship Lines Ltd., and President, Halifax Shipyards Ltd., etc.; Sir Henry M. Pellatt, Toronto; Sir Wm. D. Reid, ex-President Reid Newfoundland Co.; Sir Clifford Sifton, Toronto; J. F. M. Stewart, director, Canada Steamship Lines Ltd., and Point Anne Quarries Ltd., Toronto; H. B. Smith, President, Collingwood Shipbuilding Co., and Northern Navigation Co., Toronto; B. Talbot, London, Eng., and R. M. Wolvin, Vice President and Managing Director, Halifax Shipyards, Ltd., and President Montreal Transportation Co.

Lighthouse Keepers' and Caretakers' Pay.—In answer to a question in the House of Commons recently, the Minister of Marine gave the following information as to the names and salaries of lightkeepers and lighthouse caretakers on St. Lawrence river from Lake St. Louis to Lancaster, and on the Ottawa river from Lake St. Louis to Point Fort: Lachine Range, J. B. Malo, \$390; Melochville, E. Julien, \$420; Windmill Point, M. O. Phaneuf, \$100; Caron Point, F. Robert, \$100; Ile Perrot, D. Leduc, \$180; Ste. Anne de Bellevue, E. Pilon, \$220; Ste. Anne de Bellevue locks, S. Brisbois, \$170; Pte. a Cadieux, S. Poirier, \$260; Oka, A. Lacroix, \$140; Oka Wharf, T. Hamelin, \$100; Pte. aux Anglais, A. Labrosse, \$420; Graham Wharf (b), E. Lavigne, \$100; Graham Wharf (f.), A. Bertrand, \$100; Ste. Placide, H. Dubreuil, \$260; Jones Island, J. Charlebois, \$140; Rigaud, O. Mallette, \$220; Argenteuil Bay, J. Giroux, \$140; Knight's Point, W. Sharmon, \$820; McKie's Point, D. Daoust, \$260; St. Anicet Bar, D. McKellop, \$505; Lancaster, J. J. Munroe, \$765.

Canada River Steamship Co. Ltd. has been incorporated as a private company under the Dominion Companies Act with \$1,700,000 authorized capital and office at Kingston, Ont., to build, own and operate steam and other ships, marine railways, drydocks, wharves, elevators, etc., and to carry on a general transportation and forwarding business.

Probable Effect of U.S. Merchant Marine Act.

London, Eng., June 23, copyright cable to Montreal Gazette:—An official of the Ministry of Shipping stated today that Canada will benefit from the forthcoming rate war between British and United States ship owners. A number of U.S. shipping firms carrying on business at San Francisco and Seattle, have applied to be allowed to transfer their headquarters to Vancouver, B.C., and so come under the British regulations, he said. The reason is that the U.S. Merchant Marine Act aims to keep foreign ships out of U.S. ports and thus give a monopoly to the new and vast U.S. mercantile marine, which, by the end of the year, will amount to 7,000,000 tons, against the British 17,000,000 tons. The act imposes a tax on all foreign vessels proportionate to tonnage, and gives preferential railway rates for goods going abroad in U.S. ships.

In connection with the latter, the British Government has instructed Sir Auckland Geddes to make enquiry of the U.S. State Department. The probable outcome will be a big rate war, according to the Ministry of Shipping official. He added: "If the U.S. people, by adopting means laid down in the new law, undercut rates, without doubt the British companies will follow suit immediately, and it must be remembered the U.S. people are novices at ship management compared to the men at the head of our shipping industries. One curious effect is that already U.S. shipping firms in San Francisco have applied to transfer their headquarters to Vancouver. It does not look as though the U.S. people have lost faith in British supremacy."

Fisheries Protection-Tugs on Lake Erie.

The Naval Service Department has selected the steam tugs Becancour, Lavaltrie and Laviolette for the Fisheries Protection Service on Lake Erie. They were all built of steel by the Marine Department, at Sorel, Que., and have the following chief details respectively:—

Becancour, built in 1914, length 93 ft., breadth 22.5 ft., depth 9.9 ft., tonnage 213.74 gross, 84 net, equipped with two fore and aft compound engines 48 n.h.p., 450 i.h.p., driving twin screws, speed 11.5 knots an hour. Station, Port Dover.

Lavaltrie, built in 1912, length 84.5 ft., breadth 21.7 ft., depth 10.8 ft.; tonnage 194.99 gross, 84.12 net; equipped with two fore and aft compound engines 40 n.h.p. and 200 i.h.p., driving twin screws, speed 10 knots an hour. Station, Port Stanley.

Laviolette, built in 1912, length 84.2 ft., breadth 21.7 ft., depth 10.8 ft.; tonnage, 213.49 gross, 82.34 net; equipped with two fore and aft compound engines 40 n.h.p., 200 i.h.p., driving twin screws, speed 10 knots an hour. Station, Kingsville.

Miramichi River Services Ltd. has been incorporated under the New Brunswick Companies Act, with \$24,900 authorized capital and office at Chatham, N.B., to own and operate steam and other ships and to carry on a general navigation business between places on the Miramichi River, and ports within the province, on the Gulf of St. Lawrence. The provisional directors are:—Hon. J. P. Burchill, Nelson, N.B., W. B. Snowball, J. K. Logie, G. J. Sproul, and C. Reinsborough, Chatham, N.B.

Mainly About Marine People.

John Barnsley, formerly Assistant Manager, Union Steamship Co. of British Columbia, has been appointed Acting Manager, in succession to the death of E. H. Bennett, Managing Director, who was killed May 24 in an airplane accident. The chief officer of this company, who is an Englishman, has been a result of his long and varied experience and contacts in the industry. Mr. Barnsley has been connected with shipping in British Columbia for several years, and was Managing Director of the Roscowitz Steamship Co., Vancouver, when it was absorbed by the Union Steamship Co. of B.C., since when he has been Assistant Manager of the latter company.

E. H. Beazley, Managing Director, Union Steamship Co. of British Columbia, Vancouver, whose death in an airplane accident, was mentioned in our last issue, was born at Birkenhead, Eng., in 1876, and entered the shipowning business of Gracie, Beazley & Co., conducted by his father in Liverpool, after completing his education in England and Germany. He later became connected with J. H. Welsford & Co., shipowners, also of Liverpool, and was their outside manager for 10 years, and when that firm obtained control of the Union Steamship Co., he came to Canada as Managing Director in Aug., 1911, which position he retained to the time of his death. He was intimately associated with the business and social life of Vancouver, and was a prominent member of the local board of trade, and President of the Employers Association of British Columbia.

Jos. R. Bennett, wharfinger, and Dock Superintendent, Pickford & Black, Ltd., Halifax, N.S., died there June 8, aged 74. In his younger days he served in the Royal Navy. He was in Pickford & Black service for over 30 years.

George E. Bunting, who has been appointed Representative for Australia and New Zealand, Canadian Government Merchant Marine Ltd., Auckland, New Zealand, entered transportation service with the G.T.R. when 19 years old, and later transferred to the Lehigh Valley Rd. at Buffalo, N.Y., and again to Canada Atlantic Ry. service at Ottawa. He was, subsequent to the absorption of the C. A.R. by G.T.R., Travelling Freight Agent, Allan Line Steamship Co., and in 1913 was appointed General Agent, Chicago, Ill., remaining there until the control of that company passed to the C.P.R. On the absorption of the C.G.M.M. Ltd. by the C.P.R., he was appointed Ontario Freight Agent, with office at Toronto, and in Dec., 1919, was sent to Australia and New Zealand to look over the shipping situation generally on behalf of C.G.M.M.

E. L. Cousins, General Manager and Chief Engineer, Toronto Harbor Commissioners, who returned from England recently, after an extended business trip, was entertained to dinner at the Engineers Club, Toronto, May 31, by the commissioners and staff.

Lt. Commander C. P. Edwards, R.N.C. V.R., Director of Radiotelegraph Service, Naval Service Department, Ottawa, has been appointed an officer of the Order of the British Empire, Military Division, for services rendered during the war.

Sir Thomas Fisher, K.B.E., R.N., General Manager, Atlantic Lines, Canadian Pacific Ocean Services, London, Eng., visited Canada during June, for a conference with the executive relative to extensions to the steamship service. This

is his first visit to Canada since his appointment to his present position. He was recently made a Knight of the Order of the British Empire for general services during the war.

Commander Hugh E. Holme, R.C.N., heretofore in command of H.M.C.S. Rainbow, has been appointed Commander in Charge, H.M.C. Dockyard, Esquimalt, B.C., vice Capt. Edward H. Martin, C.M. G., R.N., retired.

A. B. Mackay, who carried on business as steamship manager and agent, at Hamilton, Ont., has leased Kent House, East Cowes, Isle of Wight, which at one time was the Duchess of Kent's home, and was occupied latterly by Prince Louis of Battenburg, who is now known as the Marquis of Milford Haven.

J. T. Mathews, of the Mathews Steamship Co., Toronto, who died May 19, 1919, left an estate valued at \$454,165, the bulk of it being in the company's shares.

J. W. Norcross, President, Canada Steamship Lines, and **H. B. Smith**, President, Northern Navigation Co., accompanied by Sir James McKechnie, Managing Director, Vickers Limited, James Whalen, President, Port Arthur Shipbuilding Co.; T. P. Phelan, President Canada Railway News Co.; H. W. Brown, President Union Transportation Co., New York; and a number of other prominent men in the Atlantic shipping trade, and several Canada Steamship Lines officials, visited Sarnia, Sault Ste. Marie, Port Arthur, Fort William and Duluth at the end of May, on the Northern Navigation Co.'s s.s. Hamonic. Mr. Norcross entertained at lunch at Sarnia and Port Arthur, about 200 of the prominent business men of each city being present.

George William Roome, C.B.E., whose appointment as Chief Superintendent Engineer, Canadian Pacific Ocean Services Ltd., Liverpool, Eng., was announced in a recent issue, was born in Kent, Eng., Sept. 13, 1865. He entered the Royal Navy as an engineer student in July, 1881, at Keyham College, Devonport, Eng., and subsequently served on the following ships—1887, Mohawk; 1888, Mersey; 1890, Barham; 1911-92, Euphrates; 1893-95, Hood; 1905-06, Prince George; 1911-12, Indomitable; 1918-19, Tiger. He has also served as assistant in the Royal Dockyards at Devonport and Malta, and as Chief Engineer in the Royal Dockyards at Hong Kong and Pembroke. From 1915 to 1918 he was Engineer Manager at the Rosyth naval base, when the whole of the plant and machine shops were erected and the yard put to the work of repair and refit of the greater part of the Grand Fleet. During 1892 and 1893, he served at the Admiralty, and from 1895 to 1898 and 1906 to 1911, was Instructor at the Royal Naval College, Greenwich, Eng. While on service on the staff of the Admiral commanding a battle cruiser squadron, during the latter part of the war, he was promoted to the rank of Engineer Rear Admiral, and made a Commander of the Order of the British Empire.

J. W. Troup, Manager, British Columbia Coast Service, C.P.R., Victoria, B.C., has applied for naturalization as a Canadian. He was born at Portland, Ore., Feb. 5, 1865, and came to Canada in 1887.

W. F. Wasley, Manager Muskoka Lakes Navigation & Hotel Co., Gravenhurst, Ont., has been re-elected President of the Highland Motor League.

Sorel Government Shipyard Superintendency.

In Dec., 1919, the Civil Service Commission advertised for applications for appointment as Superintendent of the Dominion Government shipyard at Sorel, Que. On May 11, the Commission advised us that the Marine Department had requested that no appointment be made, and that the matter would be held in abeyance for some time. On May 20 the Marine Department advised us of Louis Lacouture being acting officer in charge. On June 15 the Commission again invited applications for the position, as follows:

A shipyard superintendent for the Government shipyard at Sorel, Que., at an initial salary of \$3,000 a year, which will be increased upon recommendation for efficient service at the rate of \$180 a year until a maximum of \$3,540 has been reached. This initial salary will be supplemented for the present fiscal year by the bonus provided by law. Duties.—Under executive direction, to have charge of the Sorel shipyard; to be responsible for the design, estimates for costs construction, and repair of ships; to supervise safekeeping of stores and stock and the work of all employees, and to perform other related work as required. Qualifications.—Education equivalent to graduation in engineering from a school of applied science of recognized standing; at least five years of experience in ship design and construction; two years of which shall have been in responsible charge of such work; thorough knowledge of various types of ships and ship machinery and the construction and repair thereof; firmness, tact, good judgment, and ability to manage men. Examination.—Subjects and weights as follows: Education, training and experience, 7; oral interview, if necessary in the opinion of the Commission, 3.

St. John, N.B., Harbor Development.

A St. John, N.B., press dispatch says that important changes are suggested in connection with the harbor development at Courtenay Bay, which is under contract from the Dominion Government to the St. John Dry Dock & Shipbuilding Co., and a very full illustrated description of which appeared in Canadian Railway and Marine World for May. The contract calls for the building of three deep water wharves on the northwest side of the bay, which would narrow the channel considerably, and make it difficult for ships to berth, as the assistance of tugs would be required.

The change proposed is to build four wharves, instead of three, each to be 1,000 ft. long, and to project from Egbert St., straight towards the entrance of the bay. It is claimed that this change would afford a wider channel, and enable ships to dock and leave port without the difficulties which would be encountered under the present plan, as they would go straight to their docks, back out again and turn in the turning basin, thereby avoid the effect of the high tides.

It is also claimed that the change would provide, for the Canadian National Ry., a large acreage of land immediately adjoining their present yards, on which a large number of tracks could be built, which would obviate the present congestion, and avoid the grades, which, under the present plan, would be serious.

Shipbuilding Profits in Great Britain.

According to a statement published in England recently shipbuilding in the United Kingdom has made a very good financial record. Ships built there, it is stated, were turned out at a lower cost than those of other countries, and sold at higher prices. Of the 821 ships ordered by the Ministry, 129 were cancelled after the armistice was signed, 155 were transferred to private owners under the agreement with Lord Inchcape, 120 were transferred on similar terms to their builders, 104 were sold to foreign owners, 156 were sold to British owners direct; while of ships built abroad, 101 were sold to foreign owners and 18 to British owners, while of the total 20 were sunk and 18 are yet unsold. The 260 ships built in the United Kingdom were sold for £47,900,000—a profit of £11,600,000, as compared with their cost of £36,300,000; but the 119 vessels built abroad cost £26,400,000 and realized only £17,200,000—a loss of £9,200,000—leaving a net profit on the whole programme of £2,400,000. Put another way, it may be said that the United Kingdom ships cost an average of £139,615 each and sold for an average of £184,231—a profit of £44,616 a ship; while the ships built abroad cost £221,848 each and sold for £144,538—a loss of £87,310 a ship. This seems to prove pretty conclusively that the shipyards of the United Kingdom are as capable as ever they were of competing economically with those of Canada and the United States.

Shipbuilding in Australia.

The Assistant Canadian Trade Commissioner at Melbourne, Australia, writes:—Some interesting particulars of the cost of shipbuilding in Australia were made public recently by the minister in charge of shipbuilding, who stated that an attempt had been made by the Commonwealth Government to have six steel ships built in Australia of the same type as the five being built in the United Kingdom, but that the Government of New South Wales, after submitting an offer to build three at Walsh Island at £33 (£160.60) a ton, declined to sign the contract.

These ships are 12,800 tons each, with 350,000 cu. ft. of refrigerator space, and are part of the government's proposals for a fleet of eleven 12,800 ton ships of the latest type which would maintain a two-weekly service between Australia and the United Kingdom. The New South Wales Government afterwards offered to build the six ships at the actual cost of labor and material, plus a percentage for overhead charges and profits, but this was not agreed to by the Commonwealth, which estimated the actual cost at £28 10s. (£138.70) a ton, at which price the first ship constructed at the Government yards at Williamstown, Victoria, was recently turned out.

It was further stated by the minister, that under an agreement with two private firms in Australia, which are building two 6,000-ton vessels for the Commonwealth, the profit was to be on a graduated basis. If the ships cost £33 (£160.60) a ton, the firms received no profit, but that the rate of profit increased with each £1 (\$4.87) a ton below £33 that the ships were built for.

It is said that the Commonwealth is prepared to negotiate further with the New South Wales Government in regard to the ships which it desires to have built

in Australia, as the government yards at Walsh Island, at Newcastle, and Cockatoo Island, at Sydney, are the only yards in Australia with ships wide enough for the construction of ships of the size required, but any agreement arrived at would have to be on the basis of £33 a ton previously offered.

United States Shipping and Shipbuilding Notes.

Major General G. W. Goethals has resigned the presidency of the American Ship and Commerce Corporation.

The U.S. Shipping Board will, it is stated, obtain, from the charter of 15 ex-German steamships, to the U.S. Mail Steamship Co. for five years, a minimum hire of \$22,054,917.

The U.S. Shipping Board has issued the following statement of ships which it owned and controlled on June 5. Contract steel ships, 956; requisition steel ships, 205; wooden composite ships, 271; concrete ships, 4; bought ships, 24; seized German and Austrian ships, 31; ships chartered from Peru, 2.

The Atlantic Coast Shipbuilders' Association states that U.S. shipyards had orders on hand May 1 for 296 ships of 1,404,698 gross tons, on private account, an increase of 67,253 gross tons, compared with average gain of 198,000 for preceding six months. This is the smallest net increase in steel steam tonnage orders since U.S. shipyards began to take contracts for private account in any quantity.

Lighthouse and Buoy Service Estimates for 1920-1921.

The estimates for the year ending Mar. 31, 1921, submitted to the House of Commons recently contain the following items:—

Agencies, rents and contingencies	\$198,000
Salaries and allowances to lightkeepers	650,000
Maintenance and repairs to lighthouses	750,000
Construction of lights and aids to navigation, including regulation of traffic in Detroit river and such other places as may be found necessary	100,000
Signal Service	65,000
Administration of pilotage	400,000
Maintenance and repairs to wharves	10,000
Breaking ice in Thunder Bay, Lake Superior and other points deemed advisable for good of navigation	40,000
Pensions to retired pilots	9,900
Telephones at different points in connection with aids to navigation	500
Allowance to Harbor Master, Amherstburg, for supervision of lights and buoys on St. Clair river and Lake Erie; and other services in connection with lighthouse service for season of 1920	600
Job Bros. for use of wharf at Greenly Island	375
	\$2,524,375

Sale of Montreal Transportation Co.

A special meeting of shareholders of Canada Steamship Lines Ltd. was held at Montreal, June 26, to ratify the purchase of the Montreal Transportation Co.'s property. The price to be paid is stated to be \$3,000,000, \$1,000,000 being paid in cash and the balance by July 1, 1921, at short intervals.

The Montreal Transportation Co. Ltd. is an old established business and until 1903 had an authorized capital of \$300,000. In that year the company reorganized, with an authorized capital of \$1,000,000, the paid up capital early in 1916 being \$913,300, with no bonds outstanding.

In addition to other property the company owns the entire capital stock of the Prescott Terminal Co., \$500,000. At the end of 1916 the company's property and assets were acquired by L. L. Henderson, Vice President and Managing Director, and his associates, Mr. Henderson becoming President and Managing Director. In 1918 a number of changes took place, R. M. Wolvin being elected President, L. L. Henderson, Vice President, and T. R. Enderby, Managing Director, and subsequently the authorized capital stock was increased to \$4,000,000, of which \$3,000,000 was issued and paid up. Holders of Montreal Transportation Co.'s stock are asked to deposit it with the Prudential Trust Co. as trustee, and they will receive in return negotiable certificates to the extent of their holdings until the property is fully paid for on July 1, 1921.

The company owns the following steamships: Advance, Alert, Arabian, Atikokan, Cataract, D. G. Thomson, Escort, Glenmount, H. F. Bronson, India, Joyland, Manola, Mary P. Hall, McNaughton, Nicaragua, Otland, R. G. A. Weaver, Simla, Stormount, Valcartier, Vinmount, Westmount, and Windsor, in addition to a number of tugs, barges, etc.

Change in Wavelength at Canadian Direction Finding Stations.

The Director of the Radiotelegraph Branch, Naval Service Department, Ottawa, Lt. Commander C. P. Edwards, has issued the following notice:—The attention of masters of merchant ships fitted with radiotelegraph apparatus is called to the following notice of change in wavelength, at Canadian direction finding stations:—

On and after Aug. 1, 1920, the Canadian radiotelegraph direction finding stations at Chebucto Head, N.S.; Canso, N.S.; and Cape Race, Nfld., will use the wavelength of 800 meters exclusively for transmission and reception.

It will be necessary for all ships to have their transmitters adjusted to transmit on 800 meters if they desire to obtain bearings from the stations named.

All use of the wavelength of 600 meters by Canadian direction finding stations will be discontinued after Aug. 1, 1920.

Vancouver Dry Dock.—J. H. Sinclair, M.P. for Antigonish and Guysborough, N.S., asked in the House of Commons on June 16: "Has an agreement been made by the Government and J. Coughlan & Sons to build a dry dock in Vancouver, under the provisions of the statute relating to the construction of dry docks; what is the date of the agreement; has it been accepted by both parties thereto and if not what is the cause of delay?" The Minister of Railways replied that the form of agreement was submitted to J. Coughlan & Sons legal representatives on May 10, but has not as yet been signed, and returned to the department for completion. There is no information in the department as to the cause of the delay."

The Transportation & Shipping Co. Ltd. has been incorporated under the Quebec Companies Act, with \$48,000 authorized capital and office at Quebec, Que., to own and operate steam and sailing ships, wharves, docks, etc., and to carry on a general freighting business. The provisional directors are:—J. L., J. E., and B. C. Lachance, H. T. Beriau, Quebec, Que., and J. A. Cardinal, Limoilou, Que.

Navigation on Northern Alberta Waters.

The Hudson's Hope, formerly the Northland Call, is of the stern wheel type of 80 tons, with accommodation for 50 passengers, and operates a weekly service from Peace River to Hudson's Hope, a round trip of 500 miles; master, C. Smith, chief engineer, A. Aitkins.

The s.s. Slave River, stern wheel type of 100 tons, with accommodation for 75 passengers, operates a weekly service from Slave River from Vermilion Chutes to Fort Fitzgerald, a round trip of 600 miles; master, —, Alexander, chief engineer, —.

The Distributor, stern wheel type of 200 tons, with accommodation for 250 passengers, operates from Fort Smith to all points on the Mackenzie River, making two round trips during the season, between June 1 and September. The first sailing will take place from Fort Smith July 1; master, —, McLelan, chief engineer, —.

The company also operates two large tug boats, one on the Athabasca and one on the Peace River, and a tug boat on the Peace River.

Trade and Supply Notes.

The Canadian Fairbanks-Morse Co., Ltd. J. Brittain, heretofore Managing Director, Toronto, Winnipeg, Saskatoon and Calgary branches, has been appointed Vice President and General Sales Manager, with office at Montreal, succeeding C. Graham Drinkwater, who has been Vice President in charge of sales, for many years, and has joined the banking firm of Aldred & Co., Ltd. Mr. Brittain was one of the first salesmen employed by Canadian Fairbanks-Morse Co. in its early days. Kenneth Forbes, heretofore Manager, St. John, N.B. branch, has been appointed Manager of Winnipeg branch, also of Regina branch, which is under construction; W. J. Hill has been appointed Manager, St. John, N.B. branch; Malcolm Cordell has been appointed Manager Montreal branch; Geo. L. Nies has been appointed Manager Calgary branch; and Archibald Turnbull has been appointed Manager Saskatoon branch.

Davis-Bournonville Co., Jersey City.

Not long since a catalogue of very good telephone apparatus, including a complete welding and cutting outfit, was available from the Electric Service Supplies Co., Philadelphia, Pa., has issued to superintendents of motive power, and electrical engineers in the steam railway road in connection with the "Maintenance of Motion glow glass reflectors, and their application to the locomotive headlight apparatus."

Northern Electric Co., Montreal.—A. Dwight Smith has been transferred from the position of Sales Manager, to the General Head Office Sales Department, where he has jurisdiction over sales to railways, marine concerns and fire alarm departments throughout Canada. He was one of the first to study and introduce telephone train dispatching in Canada, as it is today, and was a pioneer in telegraph construction on the later built railways in the west. He is a son of A. B. Smith, who was Manager of Telegraphs, G.T.R. and G.T.P.R., until his retirement, a few years ago, on account of ill health.

Trawler and Drifter Sales.—The Anderson Co. of Canada has sold T.R. 59 to T. M. Kirkwood, Montreal, who has arranged options on a further nine through the Naval Service Department. This ship left Halifax for Montreal early in June. The British Admiralty has arranged for the sale to the Rose Street Foundry & Engineering Co., London, Eng., of 40 drifters and 8 trawlers, and 20 men, under Capt. Munro, have been sent from England to Halifax to take the ships over. Drifters 3, 4 and 81, lying recently at New York, and drifter 5, lying recently at Norfolk, Va., have also been sold by the Anderson Co., New York.

Locomotive Fuel Economy and Smoke Prevention.

The committee on fuel economy and smoke prevention, appointed by the American Railroad Association, Section 3, Mechanical, and of which Wm. Schlafke Mechanical Manager, Erie Rd., was chairman; W. H. Flynn, Superintendent, Motive Power, Michigan Central Rd., being also a member, presented the following report at the Association's convention at Atlantic City recently:—In its 1919 report your committee endeavored to emphasize the growing importance of fuel economy to the railways, arising from increasing consumption and increasing cost of production. Both of these factors are likely to result in the largest fuel bills in railway history during this year. It is certain that there will be substantial increases in the cost of production and only the application of prompt and effective means will prevent an increased consumption out of proportion to any probable expansion in traffic. It is therefore urged that every railway check its current consumption with previous records with a view to the adoption of such measures as the situation may require.

With the return of the U.S. railways to corporate control and operation, the Fuel Conservation Section ceased to exist. The work of this important branch of the Railroad Administration was of unquestioned value in promoting economy in the purchase, distribution and use of fuel for railway purposes. The methods employed were substantially those advocated by your committee in previous reports, and they must have continued intensive application, if the cost of fuel is not to exceed even its present ratio to total operating expense. The publications of the Fuel Conservation Section no longer bear an official status and may, therefore, fail to serve their most useful purpose unless incorporated in the official publications of the American Railroad Association. This is particularly true of the pamphlet on "The Economical Use of Railroad Fuel" most recently issued. While this incorporates many features contained in the present official publication of this association issued under the title of "Fuel Economy on Locomotives," there is some additional material gathered as a result of greater experience in the application of the principles of fuel economy to locomotive operation as well as some subject matter not treated in the association pamphlet, that it is believed should be incorporated and accordingly a revision of the text of Fuel Economy on Locomotives is submitted with the recommendation that suitable action be taken to place it before the general committee for adoption as standard practice. In the original preparation of this pamphlet, your committee considered that brevity was not only desirable, but essential, and, therefore, much descriptive and explanatory matter was omitted. The same policy has been pursued in the revision, which accounts for the omission of much interesting material incorporated in the publication of the Fuel Conservation Section, which, while of value in emphasizing the importance of certain rules or recommendations, may be

sacrificed to practical requirements under well trained supervision.

Locomotive Fuel Economy.—Introduction.—The object of these instructions is to bring about the economical use of fuel, to promote good practice in the operation of locomotives, and to improve the methods of firing. As the locomotive man is in charge of the locomotive, his instructions must be followed, and both he and the fireman should work together to bring about the desired results. The best fireman cannot make a good showing with a locomotive man who does not co-operate with him in the proper handling of the injector, throttle and reverse lever. The fireman is not alone responsible for the saving in coal, as a great deal depends on the locomotive man in his proper operation of the locomotive, and the latter should give instructions and suggestions to the fireman, based on his experience, to bring about the best results. An efficient fireman is one having the skill and knowledge which enables him to make the fuel supplied to the fire box, evaporate into steam as much water as possible, or, in other words, he makes the fuel perform its full duty. There are other qualities which increase the value of a fireman, but the ability to keep up steam is the first consideration. Good judgment is an aid to success in every calling, but it seems especially essential in a fireman. Economy in the use of fuel is required, because the fuel used on locomotives is one of the largest items of expense to all railways. As the greatest portion of the fuel passes through the fireman's hands, he can use it economically (depending on his ability, skill and good judgment, coupled with the co-operation of the locomotive man in handling the locomotive), or he can waste it through lack of knowledge or inattention to his duties. Furthermore, by burning no more coal than is absolutely necessary, the labor of firing is lightened, and by taking an intelligent interest in the condition and operation of the locomotive, the fireman is a very important factor in the saving of coal and water. By explaining to the new fireman the reasons why certain methods should be pursued in handling his work to bring about the best results, and by directing attention, if necessary, to improper methods on the part of the experienced fireman who may not use good judgment, the operation of the locomotive can be handled to the best advantage and the greatest saving of fuel effected.

Bituminous and Anthracite Coal.—1. Bituminous coals are usually composed of about 60% carbon, 30% gaseous or volatile matter, which burns as flame, and 10% earthy matter, which remains on the grates as ash or clinker. Good anthracite coal contains about 85% carbon, 5% gaseous or volatile, and 10% earthy matter.

2. The burning of coal in a locomotive requires air, which must be admitted through the ash pan, grates and fire door. Smoke means imperfect combustion and waste of coal, and must be avoided as far as possible.

3. When bituminous coal is applied to the fire, the volatile or gaseous matter is expelled, and, if properly mixed with air and heated to a sufficient temperature in the fire box, the mixture will ignite, be consumed and passed from the fire box through the tubes and stack as colorless vapor, leaving the solid matter on the grates in the form of coke, which burns more slowly. If, however, the gases are unconsumed, they will produce smoke.

4. Anthracite coal burns more slowly than bituminous, and, consequently, a larger grate area has to be provided in order that sufficient coal may be burned to give the required amount of steam. In other words, means must be provided to make a hard-coal-burning locomotive of given proportions consume as much coal per hour as a bituminous burner of the same proportions, and no better way has been found than by designing this kind of locomotive with a large fire box and a liberal grate area. Anthracite coal has to be fired to suit the size of the lumps used. If the coal is in large lumps, a heavy fire must be carried, because the lumps lie so open that the air would pass too freely through the fire if it were light. The smaller the size of the coal the thinner the fire can be. The fire should be started considerably in advance of leaving time from locomotive house, in order that a good fire will be on the grates when the start is made with the train.

5. The method of light and level firing, outlined in the instructions which follow, applies to firing both bituminous and anthracite coal.

Inspection of the Locomotive.—6. The locomotive man and fireman should be on hand in ample time before departure from the locomotive house to thoroughly inspect and lubricate the locomotive, in order to make sure that it is in proper condition and fully equipped for making the run. Any matters which, in the judgment of the locomotive man, should receive attention before departure, must be promptly reported. The fire, grates and ash pan, as well as flue sheet, must be examined, to see that they are in suitable condition for making the run. The condition of the fire should be such that it will make steam freely from the start. The shaker rigging should be operated to see that it is in good working order. The damper rigging (where provided) should also be operated, to make sure of its condition. The ash pan and rigging should be examined, to see that the doors or slides are properly secured and in a condition to prevent hot coals dropping along the road, which are liable to start fires.

7. When locomotives are equipped with mechanically operated fire doors, grate shakers, or coal pushers, the same should be known to be in good working order before starting.

Preparing the Fire for the Start.—8. In preparing the fire for the start (but not before it is known the foundation or kindling fire is in good shape from corner to corner) it must be built up gradually to the proper depth for the service

10. No fuel ever get to grate as fast as the upper part of the coal will, however, as well as the surface. The lower part requires a larger grate surface than the larger sized coal, but the larger size will require a larger grate opening. With two coal approaches the locomotive case, a bed of from 4 to 6 in. thickness should be maintained, which must also be a depth of from 12 to 18 in. thickness will be necessary at times because of the openings that will occur between the large lumps as they go on the grates. A bed of the last

Fig. 1.

mentioned thickness will quickly burn down to a lower level after the locomotive is put into service, and this lower level should then be maintained until the train approaches the terminal.

9. When applying fuel in building up the fire, preparatory to starting, the blower should be used, to create the necessary draft, and the fire door should not be entirely closed between the shovelfuls of coal, but in all cases should be placed on or against the latch until the gases have been consumed, and the closing of the door will not result in the emission of heavy black smoke.

10. It is important that the grates should be clean and free from dead ashes and clinker. They should be left in a level position and secured there after each shaking, to prevent the fingers or edges of the bars being burned off. See that the foundation for a good fire is on the grates, that the fire is evenly distributed over the entire grate surface, and that the ash pan is clean. If these precautions are taken, the fire will be in

condition to scatter, requiring good judgment, as it would not do to run short of coal or water before reaching the next coal chute or water tank. Where possible, take water only from tanks containing good water, and as little as possible from those containing bad water.

Making the Start.—11. The boiler must not be filled too full of water as soon as the locomotive leaves the locomotive house. Leave a space so that the injector can be worked to prevent popping.

14. The lubricator should be started about 15 minutes before leaving the terminal and should be set to feed regularly in order to ensure lubrication of valves and cylinders at the start of the trip. Proper lubrication of the valves, cylinders and machinery helps to save fuel by reducing friction.

15. The sprinkler hose must be used frequently, to keep down dust on the foot plate and in the cab, and to wet the coal in the tender. The use of too much water on the coal should be avoided, as it has to be evaporated by the fire, and may result in the flues stopping up.

16. Care should be taken in starting train to prevent damage to draft gear and couplers. Preventing delays saves coal, and preventing damages saves repair costs.

17. To avoid holes being torn in the fire, the fireman should have the fire in such condition that the pressure can be held up with the fire door held partly open. Slipping of the drivers should be guarded against, as the heavy exhaust tears and upsets the fire, and fuel is wasted in rebuilding it. Furthermore, slipping wears out tires and rails, and may damage the running gear.

18. When using anthracite coal no fuel should be placed on the fire at starting. After the effort of starting is over and the fire has reached a bright, glowing condition, begin firing as lightly as possible, to properly maintain the fire.

Method of Firing.—19. A hard and fast rule covering the depth of fire at the start cannot be made. Good judgment must be used, as the conditions under which the start is made, such as grade, weight of train, speed, etc., will influence to a great extent the kind of fire that is on the grates.

20. Large lumps of coal do not make a

good steam pressure, resulting in a reduction in the work of firing.

21. Very heavy firing is apt to cause leaks, and may cause firebox sheets to crack, as the air cannot pass readily through a heavy fire and large quantities of cold air will be drawn through the fire door and the thinnest places in the fire, resulting in chilling the flues and sheets, the formation of smoke and reduction in steam pressure.

23. The fire door should be placed on the latch, as far as possible, between each shovelful of coal, to keep down the

Fig. 2.

smoke by increasing the admission of air through the door.

24. Do not put four or five shovelfuls of coal into the fire box at one time. One, or perhaps two, will give better results, and if more than one shovelful is used at one firing, they should not be put into the same spot. Fig. 1 shows how coal should be introduced into a single, and fig. 2 a double door fire box, each successive shovelful being thrown to the points indicated by the numbers. This method of firing will tend to make the bed of fire uniform, but, of course, the judgment of the fireman must be depended upon to see that thin spots are kept covered. Fig. 2 shows the method of cross firing a Wooten firebox, as indicated by successive numbers on the arrows, first firing on the one side and then the other, along the walls and center of the firebox.

25. Fig. 3 illustrates the effect of

Fig. 3.

condition to maintain the steam pressure during the trip.

Taking Coal and Water.—11. After taking coal at coaling stations, the coal pile should be trimmed, to ensure the coal from falling off tender while in transit, which saves coal and eliminates a danger to passing trains, trackmen, etc.

12. Coal or water must not be taken more frequently than is necessary, as it requires extra coal to again bring the train up to speed, especially if on a grade.

satisfactory fire, and they should be broken into pieces not larger than 3 in.

21. Always fire as light and level as possible, consistent with the steam requirements, scattering the coal over parts where the bed is thinnest and the fire brightest, in order to prevent it from becoming dead in spots. Large quantities of coal placed in the fire box at one time cool down the fire, cause smoke and waste of coal, small quantities at regular intervals will keep the fire bright, reduce smoke and take less coal to keep

Fig. 4.

heavy firing under the door, which lowers the temperature at that part of the fire box, since the heavy bed of coal does not allow sufficient air to pass through it to supply oxygen for proper combustion, and smoke is liable to result on account of part of the fuel gases passing away unconsumed.

26. Figs. 4 and 5 show the condition of the fire when the practice of light and level cross-firing illustrated by fig. 1 is followed. The bed of fuel is slightly heavier next to the sheets than on other

parts of the grate. This is good practice, because there is a tendency for more air to pass up beside the sheets, which would cause thin spots to form around the edges, allowing cold air to pass up into the fire box. Maintaining a slightly thicker fire along the edges prevents this trouble.

27. Fig. 6 shows the thinning action of the draft around the edges.

28. Fig. 7 shows the effect of a temporary reduction in fire box temperature

brick arch and the path of the products of combustion from the fire to the flues.

Operation of the Locomotive. — 32. When the throttle is closed, before making a stop or for drifting, the blower must be used and the fire door placed on latch, and dampers (where provided) should be closed in order to check the fire and prevent steam from blowing off. This practice, with the exception of the use of the blower, should be followed after using the scraper or slash bar, and

er with the use of large quantities of steam, will cause a reduction of steam pressure. If firing is necessary at this time, it is better to do it while standing.

34. The grates should be shaken only when necessary to clear the fire of ash and clinker, in order to admit sufficient air for proper combustion, and in such manner as to avoid the loss of good fires, which means waste of fuel. Care should be taken after each operation to place the grates in a level position to avoid burning the fingers, which is liable to occur if the grates are allowed to remain at an angle with the fingers projecting into the fire.

35. The waste of steam through safety valves must be avoided. Frequent blowing off of safety valves shows poor judgment, and implies that economy is not being practiced. Tests have demonstrated that about 15 lb. of coal, or one shovelful, is required to supply the steam blown off in one minute, or, in other words, if the safety valves are open for 133 min. about one ton of coal is wasted.

36. Careful attention must be given to the use of the injector and to the height of the water level in the boiler. The proper handling of the injector is a very important matter in fuel economy. The best fireman cannot make a showing if the locomotive man floods the boiler. If the injector is to be used to prevent popping, a space must be left so

Fig. 5.

Fig. 6.

Fig. 7.

Fig. 8.

Fig. 9.

Fig. 10.

when a shovelful of coal is introduced.

29. Fig. 8 shows the restoration of temperature before the second shovelful is introduced at another part of the fire box, as is the case in the system of light and level cross-firing.

30. Fig. 9 shows the effect of a spot or hole in the firing. The admission of a large volume of cold air through such spots causes a serious chilling effect.

31. Fig. 10 shows the application of a

when on sidings, in yards or at terminals.

33. Firing should be stopped long enough before steam is shut off to prevent smoke and waste of coal; and when making station stops the fire should be in such a condition that more coal need not be added until after start is made. It is bad practice to begin firing as soon as the throttle is opened, because the deadening effect of the fresh coal, togeth-

that the injector can be worked. The injector should be put on before, and not after, the safety valve opens. The blower should also be reduced or shut off before the steam pressure rises to the blowing off point.

37. Coal can be saved by the proper use of the injector in feeding the locomotive regularly at a rate governed by the demands, and by taking advantage of every opportunity to increase the

supply of hot water level when not working, the locomotive to full capacity, for example, when drifting, standing in steam, or at a station, and permitting the water to drop slightly below the station level.

It is the practice to start out after making a stop with the throttle closed. The cold water introduced into the boiler while the throttle was closed, thus stratifies and reduces the steam pressure. If a start is made while the throttle is closed, the steam pressure will be still further lowered and an excessive amount of firing necessitated. It is, therefore, preferable to start the engine after a train is well under way.

Of the water and fuel saved by keeping the boiler at a low water or very close to it, the latter end of the valve chambers and cylinders, because it will decrease the lubrication of these parts and may result in serious damage, due to knocking out cylinder heads, breaking pistons or bending of main rods.

40. The locomotive man can save coal and greatly assist the fireman in his work by handling the throttle and reverse lever in such a manner that the minimum amount of steam will be used. The locomotive should be operated with a full throttle opening (except when starting or drifting) when the cut off is 25% of the stroke or greater; but if 25% cut off with full throttle gives more power or speed than is needed, the reverse should be left at 25% cut off and the throttle partly closed as necessary. With locomotives using superheated steam it is well to use 15% cut off instead of 25%, as mentioned above.

Descending Grades.—41. Be sure that the crown sheet is thoroughly covered with water. When approaching a descending grade, the water supply should be increased and the fire allowed to burn down after the throttle is shut off, in addition, allowing the steam pressure to fall back below the popping point. Prepare the fire, if required, by cleaning same, or otherwise, cover it over to preserve the fire and avoid popping.

Mixed Anthracite and Bituminous Coal. 42. On certain locomotives, as well as in power plants, a mixture of anthracite and bituminous coal used in different proportions is consumed. While anthracite coal should be burned without being disturbed by a hook or fire tool, bituminous coal, however, often requires the use of the hook; this applies particularly where a large grate surface is available and a part of the grate surface is covered with a partially coked fire. This crust should be broken up so that every part of the grate surface will give up an equal amount of heat, thereby reducing the fuel consumption by effecting the highest state of combustion over the entire fire box instead of only a portion of the grate surface.

43. The successful use of mixed coals depends in part on the relative quantities of the two fuels employed; as a general rule, the practices that govern the successful use of bituminous coal are equally applicable in the use of mixed coals.

Firing With Anthracite Coal.—44. The most successful and economical method of firing anthracite depends almost entirely on the preparation of the fire. In cleaning an anthracite fire, all ashes and clinkers must be removed and a new bed of fire replaced over the entire grate surface if one is to ensure a prompt and positive burning, or to ignite the fresh coal that is placed on the cleaned fire. This will give a uniform thickness to the fire which can then be maintained by

careful attention, but if the fire is cleaned of all such a constant as to allow ashes or clinkers to remain in the fire after same has been cleaned, such will soon result in the formation of more ashes or clinkers. Anthracite coal, after being placed on the fire, should not be disturbed in any manner by a fire tool, even to remove clinkers or ashes, as it will not again burn level or develop the same rate of combustion over the grates. The imperfect combustion of anthracite coal can be clearly determined by the eye, a clean burning mass with a short flame; if the flame become diminished too much, however, the temperature and steam pressure will drop.

Condition of Fire Reaching Terminal. 45. Locomotives should not be brought into terminals with a dead fire, which is liable to cause fires to leak, nor with too heavy a fire, which will cause a waste of coal when the fire is cleaned.

Cleaning Fires.—46. When banking or cleaning fires, the blower should be used as little as possible, to avoid the rapid cooling down of the fire box and flues, which may cause leaks.

47. When cleaning fires, or with a banked fire, the excessive use of the injectors must be avoided, as this will result in injury to the flues by the rapid reduction of the temperature of the water in the boiler producing contraction, without sufficient fire in the fire box to counteract this effect.

48. After the fire has been cleaned of ash and clinker, the clean fire must be placed at the front end of the grates (where brick arches are not used) and maintained in good condition by applying small quantities of fuel, as may be required, in order to prevent cold air from passing through the front end of grate and injuring the flues. Where brick arches are used, the fire can be banked farther back, as the hot arch brick protects the flues.

49. The same general principles, in so far as upkeep, handling, inspection, etc., that apply to the coal burner, apply to the oil burner, with this difference, however, that while it is hard to get enough air into the ash pan of the coal burner it is quite easy to get too much air into the oil burner, and this applies especially to air leaks around the fire box, brickwork and mud ring. Frequent inspection should be made, by turning on the blower and holding a lighted torch to these points. If leaks are found they should be corrected each trip, as air thus admitted takes a short circuit, goes directly into the lower flues, causes them to leak and to coat over with soot, arresting combustion at this point. Next to the proper alignment of the burner, the avoidance of air leaks is the greatest factor to be considered from a fuel saving standpoint.

50. The burner should not be set so high as to cause the jet to strike the fire door, nor so low as to allow the flame to drag on the bottom. Any obstructions in the shape of fallen brick, etc., in front of the burner should be removed at once.

Handling Oil.—51. Different grades of oil require different methods of handling. However, all oil should be heated sufficiently to cause it to flow freely to the burner. While with many grades of oil the proper temperatures can be maintained with the closed heater, yet when using the heavy Mexican oils the open heater should be turned on strong at first so as to stir up the oil, thereafter shut it off and maintain the proper temperature with the closed heater. No oil of whatever grade should, however, be heated to above a point where the back of

the hand cannot be pressed firmly against the tank without discomfort, for when oil is heated too hot many valuable heat units are lost in the form of gas.

Final Inspection and Work Reports.—52. Great care should be exercised on the part of the locomotive man, on reaching the terminal, to make a thorough examination of the locomotive and prepare an intelligent written report for the information of the locomotive house foreman and those who make repairs.

53. Leaky piston and valve stem packing, cylinder packing or valves which cause blowing, all tend to draw on the coal pile unnecessarily, as it takes coal to generate wasted steam. This also applies to locomotives' steam heat appliances, cylinder cocks, safety valves which blow down too much steam pressure before closing, or in, other words, to all steam wasted.

54. The fireman should be consulted in regard to any defects that have come to his notice, especially with the grates, grate rigging, brick arches, ash pan, firing tools, scoop rigging and dampers (where provided). Particular attention should be given to the condition of the brick arch, because this device, properly maintained, is a considerable factor in the saving of fuel and the reduction of smoke.

55. It is important that the locomotive man, as well as the locomotive inspectors, report all defects in a locomotive on arrival at a terminal which require attention before the locomotive is again placed in service, especially as some defects can be detected to the best advantage while the locomotive is in service.

Oil Firing.—56. In firing with oil, the locomotive man and fireman must work together. Every time the locomotive man changes the throttle or reverse lever the fireman must regulate his firing valve to suit the changed requirement. From this it follows that the locomotive man should never start the locomotive until the fireman is at the firing valve, and should be careful not to slip the locomotive, as such is liable to put out the fire, and the fireman should be equally careful not to use too much steam at the atomizer. Steam will not burn, and a bright fire with just a tinge of blue smoke at the stack indicates good combustion. Black smoke and a red fire indicate waste. Locomotive men should bear this one fact in mind, regardless of whether they are handling oil or coal burners. Any excess fuel used, either on account of a defective locomotive, or from poor handling on the part of the crew, is a charge against them and not against the locomotive house. Therefore, exercise care while out on the road and report all fuel wasting defects on arrival, and so keep your record clear.

Operation of Superheater Locomotives. 57. The general operation of superheater locomotives is the same as the ordinary saturated steam locomotive. Attention is directed to a few items in connection with superheater locomotives which need careful consideration.

58. Cylinder cocks should be kept open when standing, and, as far as possible, when starting, until dry steam appears.

59. A hydrostatic lubricator should be started at least 15 minutes before leaving time, in order that the valves and cylinders may be thoroughly lubricated when starting on the trip. The oil supply to the cylinders should be constant, as there is no water in the steam to assist in the lubrication and, on this account, the superheater locomotive requires more careful lubrication for valves

and cylinders than the saturated steam locomotive.

60. In starting, the reverse lever should be in full gear to ensure oil distribution to the full length of the valve bushings. Care must be taken that the water level in the boiler is not sufficiently high to cause water to carry over into the superheater.

61. The locomotive man should see that the water level is not carried so high that it will be drawn through the units with the steam, as this will result in making an auxiliary boiler of the superheater, thereby destroying the object aimed at in its application, but, in addition to this, the water carried over will deposit any scale forming matter it may hold in suspension or solution on the inside of the superheater units, thereby coating them with an insulating material that will prevent the free passage of the heat contained in the gases into the steam moving through the units. It is this lining up of superheater units through carrying the water too high or through foaming that causes the superheated locomotive to gradually lose its snap.

62. While there is a difference between carrying the water level too high and a foaming boiler, the results are quite the same; the only difference being that when the boiler begins to foam one can see the effect at once in dry valves, reduced speed, etc., while by carrying the water too high the evil effect is spread out over a greater distance and through a longer period of time. The bad effect is there, however, and always means more fuel and slower speed.

63. A superheater locomotive should not be moved without the required air pressure and the brakes in operative condition. When water is carried over into the superheater, part or all of it will flash into steam, even after the throttle is closed. Under the above condition the locomotive is not under control, because the valve chamber is filled with steam.

64. Superheater locomotives should be operated with a full throttle opening and reverse lever control, as far as service conditions will permit, the exceptions being: when starting a train, when using a very small quantity of steam, and when drifting. (See paragraph 40.) The accompanying chart illustrates the point in question and shows the variation in coal consumption with various degrees of superheat for each of the following cut offs: Fifteen per cent, 25%, 35%, 45% and 50%. The figures were taken from tests of a large Pacific type locomotive, but they apply with equal force to all superheater locomotives. For example, take the curve for 25% cut off at 200 deg. of superheat. The coal consumption is about 2 lb. per indicated h.p. hour. Then take the curve for 45% cut off at 200 deg. of superheat. The coal consumption is about 3.3 lb. per indicated h.p. hour. This clearly shows why it is better to operate with a full throttle and reverse lever control rather than with a partial throttle and long cut offs. The difference for the example taken is 1.3 lb., or 39% over the incorrect method. The chart also shows the advantages of a high degree of superheat at any cut off in reducing the coal consumption per indicated h.p. hour.

65. It is advisable, in order to avoid the suction of hot gases from the smoke box into the steam chest and cylinders, to keep the throttle slightly open when drifting or making stops, as by passing a very slight amount of steam through the cylinders the front end gases cannot

be drawn into the exhaust column. The throttle must be completely closed just before coming to a full stop.

66. The firing should be light and regular, to produce as high flame temperature and as perfect combustion as possible in the fire box. A high fire box temperature results in high superheat, which will be obtained by a small coal consumption. A heavy, black fire means low temperature, low superheat and coal consumption. Firemen who carefully follow the above outlined practice will save coal for the company and make their own work easier.

67. The locomotive man should be sure that the superheater damper is open while using steam, and closed when steam is shut off. This can be ascertained by observing the counterweight on the right-hand side of the smoke box attached to the damper. When the counter weight is up the damper is open, and when down the damper is closed. When the locomotive is shut off and the blower is used, the locomotive man should observe that the damper is in a closed position. If the damper is open with the blower on, the superheater tubes are apt to be burned out, due to no steam circulating through the superheater tubes. When

Variation in coal consumption, with varying superheat at different cutoffs.

using steam, the piston in damper cylinder should always move its entire stroke and stop against its seat, in order to prevent loss of cylinder lubrication past the piston. A leak at this point will permit steam to escape at end of drip pipe attached to damper cylinder, and should be reported promptly.

68. Leaks in front end of superheater units, steam pipes and exhaust column, fire tubes stopped up, and derangement of draft appliances not only interfere with the proper steaming of the locomotive, but reduce the degree of superheat. Blows in cylinder and valve packing will cause scoring, due to removal of oil from the wearing surfaces. All leaks such as those mentioned above should be reported promptly by the locomotive man, because if neglected, they seriously affect the economical operation of the locomotive.

The Locomotive Stoker.—69. On arrival at the locomotive the fireman should see that the stoker is in operative condition, by trying it; next, see that it is properly lubricated, so it will stay in working order over the road; next, build up the fire by hand and see that it is ignited all over the grate surface. Don't try to build up the fire with the stoker, as the stoker may start a bank, and a bank with some certain grades of coal causes clinkers and clinkers mean trouble. Don't start the stoker feeding until you have

pulled out of the yard, and then feed just as little coal as possible to maintain the desired pressure. Look into the fire box occasionally to see how the stoker is distributing the coal, it may save hot work with the hook later on. Shut off the stoker when standing in sidings or drifting down hill. Keep up the fire with the scoop. Close the slides in the deck before reaching the terminal, but keep the stoker running, so as to empty the conveyor trough. This will give the locomotive house men a chance to try the stoker and get it in shape for the next trip. Inspect it on arrival and report any defects found. The locomotive man should know as much about a stoker and its care and operation as the fireman. It is as much a part of the locomotive as the injector or air pump, and a locomotive man that cannot run it is not fully qualified.

70. Although the stoker may make it possible to keep ample steam pressure at all times, any failure on the part of the locomotive man to handle the locomotive skillfully will result in the same increase in the cost of fuel and maintenance as when a hand fired locomotive is abused. When you see foreign material in the coal throw it out before it enters the conveyor.

71. Should the stoker stop operating on the road, don't keep on using steam until the pressure runs down, but stop, if possible, locate the trouble, and fix it. If you cannot locate or repair the defect, give the fireman an opportunity to get the fire in shape so he can fire the locomotive to the terminal by hand. Do not give up the train because the stoker failed.

General.

72. The Diaphragm and Draft Plate are put in to control the flow of gases through the flues and to distribute the draft over the grate surface as desired.

73. The draft plate has, however, another function, namely, to give direction to the gases in their passage from the flues to the stack, and in doing this, to aid in keeping the front end clear of cinders.

74. The draft plate simply serves to distribute the draft and to assist in keeping the front end clean. However, while the draft plate does not create draft, it is frequently so adjusted as to obstruct it, and in this way becomes a hindrance to the free steaming of a locomotive instead of a help.

75. The draft plate should always be set so that the opening between the plate and smoke arch is equal to 100% of the total flue area. If the front end should show a tendency to fill up with cinders when the plate is raised, change the angle of the plate by drawing the bottom farther back so it will stand nearly vertical. Furthermore, if the draft plate is too close to the front flue sheet the flow of the gases is so restricted as to cause the locomotive to be what is termed "hot at the door," consequently it follows that carrying the draft plate as high as possible not only decreases the work of the fireman, but also makes his work more comfortable. As it has been shown that the draft plate has but two functions, why change it after it has once been properly adjusted?

76. All front end appliances should be maintained according to the blue print standards as furnished by the mechanical department, keeping them in first class repair and adjustment. Records should be kept of front-end adjustments, so that when the locomotive is reported not steaming, the foreman or man in charge

when they occur, such as coal rolling off the tender on account of the tender being overloaded; coal rolling out of the gangway, due to defective or poor design of coal gates; lack of coal guards, etc.; coal falling through holes in deck of locomotive; coal jarred off when drifting or running fast, due to excessive slack between locomotive and tender, etc. The remedy for such defects is obvious.

Suggestions to Locomotive Men.—100. Your rating as a locomotive man depends on your ability to operate the locomotive in your charge in the most efficient and economical manner. The suggestions in this book, if followed, will assist you to do this. The man who fails to follow same places himself in a position which may bring censure upon himself and others and seriously injure his reputation as a successful locomotive man.

101. When you are called to go out, endeavor to report at the locomotive house in plenty of time to check the register and bulletin boards and to thoroughly inspect the locomotive on which you are to make the trip. This applies to all locomotive men, whether regularly assigned or otherwise. A close inspection before leaving terminal, particularly if work has been reported, and frequent inspections during the trip, when conditions will permit, will prevent possible delays and locomotive failures that might otherwise occur.

102. Try the water glass cocks and gauge cocks and know that they are registering correctly. Know that all bearings are properly lubricated before leaving terminal, and thereby avoid having to stop later on account of some bearing running hot to which you had not given proper attention. Try both injectors and know that the are in good condition. Start the lubricator about 10 to 15 minutes before leaving the terminal, in order that oil will reach valves and cylinders before any work is to be done.

103. In testing air brakes, notice the fall of train line pressure while valve is on lap, and if this exceeds 5 to 7½ lb. per minute, notify car inspectors and be governed by the rules of the road by which you are employed.

104. It is well to note the condition of the fire unless you have an experienced fireman. Keep your fireman informed as to train movements in order that he may fire successfully.

105. In leaving the terminal, endeavor to work your locomotive as lightly as possible until the fireman has his fire in good condition. Work the locomotive at shortest cut off consistent with the work required in order to get the benefit of the expansive use of the steam. Carry water at the proper height in order to get as dry steam as possible to cylinders. Water that is carried over into superheater or the cylinders of a saturated locomotive is reducing the effectiveness of the locomotive regardless of the steam pressure shown on the gauge. Overfeeding a boiler to a point where priming occurs on a superheated locomotive will reduce the temperature 80 deg. or 100 deg. F.

106. Avoid rough handling in starting trains, as this may cause drawbar trouble later on. If you are unfortunate and pull out a drawbar, study the conditions and try to avoid a recurrence.

107. Avoid unnecessary stops for coal and water. Stop at points that will require the least effort to get the train away. It costs from 600 to 1500 lb. of coal to restore a train to speed, depending on the grade. Where conditions will

permit, run coal dock in the direction in which coal is handled to coal dock.

108. Supervise the work of your fireman, giving him your help and the benefit of your experience. Team work is what counts. A locomotive is the equivalent of a large power plant; one, however, that is in motion when employed. Without a fixed foundation and compelled to carry its fuel and water supply with it, its management and operation under a continuous variety of conditions present problems that must be met instantly by the two men in charge. Robust, conscientious, industrious effort will always bring to men of character a high measure of personal satisfaction and material reward. There is much met with that is irritating in every vocation. Keep good-natured and your work will be correspondingly light.

Fig. 11. Stack Cover.

109. If your fireman does not employ the best practice, instruct him yourself, and ask the road foreman or locomotive supervisor to have a friendly talk with him, setting him right.

110. Advise the fireman as to grades, shut off points, the length of time it is probable the train will be held on side track, etc., and explain to him your manner of handling the injector, so that he can anticipate your needs and fire accordingly.

111. Endeavor to work your locomotive at the shortest practicable cut off at all times, so as to obtain full benefit of the expansive force of the steam.

112. Endeavor to feed the boiler uniformly, and do not allow the water level to rise so high that the effectiveness of the locomotive or the superheater will be destroyed.

113. By careful handling, good lubrication of the valves and cylinders can be maintained with a very small quantity of oil. Oil that is fed with steam sticks to the metal surfaces and will lubricate for a long time unless it is washed off by water or burned off by drifting. If a proper water level is maintained and attention is paid to the position of the throttle and the reverse lever when drifting, a few drops of oil will protect a large rubbing surface. If, however, in order to cover up errors in judgment too high a water level is carried when running or if the boiler is overfilled when standing, water from the boiler with its scum and impurities will pass over with the steam and will scour the oil film from the cylinder and valve surfaces.

114. Whenever a high water level does occur, it will prove cheaper to use oil freely than to suffer the friction loss and fuel waste which result from dry valve seats and cylinder walls. Forethought will save both coal and oil, and locomotive men who make a good fuel performance generally make a good oil performance.

115. Avoid wasting steam at the pops. When conditions, such as emergency stops, make popping unavoidable, close your injector heater cocks and lightly blow steam back into the tank, thus heating the feed water. Injectors will lift water as warm as your hand (100 deg.) and feed water heated to this temperature saves about 4% of the fuel and increases the locomotive's steam capacity on hard pulls.

116. Careful judgment in handling the train brakes will save fuel. A moving train contains energy. Make the best use of this energy, consistent with safety. If you lose it by unwise braking, it must be restored through the use of fuel, both for the train and the air pump.

117. Avoid slipping your locomotive. It tears the fire and wastes coal.

118. Do not use your cab lights on your headlight in the daytime.

Suggestions to Locomotive Fireman.—

119. A man in accepting a position as a locomotive fireman should make a study of his work, mastering it in the same manner that he would any other trade or profession.

120. A skillful locomotive fireman becomes a skillful locomotive man, and thereby places himself in a position for further advancement.

121. A few minutes each day, reading some authority on matters pertaining to your present duties, and those to which you aspire, will very materially assist you.

122. In firing a locomotive you are serving your apprenticeship as a prospective locomotive man and should consider the locomotive man for whom you are firing in the same position as the man of the shop in which you might be learning a trade, or the lawyer or doctor in whose office you might be studying the profession of law or medicine.

123. Harmony between the locomotive man and the fireman must exist in order to secure the best results. As the locomotive man is responsible for the performance of the locomotive while in his charge, so is the fireman responsible to the locomotive man for the manner in which he performs his duties. No one is better fitted to properly instruct the fireman than the locomotive man, as by his years of service he has learned by experience the manner in which these duties should be performed.

124. The duties of a locomotive fireman are varied, and merely keeping the

120. Carry up to the popping point, but not an indication that the fire is successful. While proper steam pressure is coming, there are many other things to be done at once.

121. A small start from the forward fluebox for a successful trip that would easily enough fix the grate. However, fire down, stoker, etc. See that you have all necessary supplies, then arrange your fire, so you will not have to work with it when you should be looking for signals.

122. Before leaving, have your fire built so that the heavy exhaust due to starting the train will not tear holes in it, thereafter fire as lightly as possible. Avoid "slugging" the fire regardless of whether the locomotive is hand or stoker fired—this will save work later on. Do not try to carry the steam pressure at the popping point, but within about 5 lb. of same, in order to avoid opening the door to prevent popping in case of an unexpected stop. Every time the pops open, time is wasted.

127. Worry wears more than work. The fireman will worry if he cannot keep steam. Try cracking the coal, firing light and often, closing the door between scoops. Keep the deck clean. This looks better, saves coal, and may save a sprained ankle. Wet the coal just enough to keep down the dust. Too much water on the coal retards combustion. Water will not burn.

128. Avoid the excessive shaking of grates, but keep the fire down in order that sufficient air can pass through the fire. By firing light and keeping the fire shaken down so that the fire box will not fill up with ashes, you will ensure the absence of black smoke, which is one indication of perfect combustion. An excessive amount of black smoke escaping from the stack is an indication of improper firing and should be avoided. Keep the fire free from banks, as the brighter the fire, the more heat is produced.

129. Do not use the rake unless it is absolutely necessary, and then only to remove clinkers or to remove a bank. Learn the profile of the road so that you can have your fire in condition to do the work required. When locomotive is not using steam, and water is being supplied to the boiler, have your fire in such condition that the water entering the boiler will not reduce the temperature of the fire box and sheets to a degree that would cause them to leak.

130. The overloading of tanks with coal is a serious proposition. You not only waste the coal that falls off, but employes and passengers may be seriously injured. A few minutes of your time taken in leveling the coal down will avoid this. Think about it. Is it worth your time to save someone from possible injury? At the end of your run, when the locomotive is placed on the receiving track, have your fire in such a condition that it can be either dumped or maintained as conditions demand, and see that there is sufficient water in the boiler to keep it safe until the hostler takes charge. Notify the locomotive man of all defects that should be corrected, that he may report them.

131. Close the fire door after each scoopful of coal is fired.

132. Do not shake the grates except when absolutely necessary — and then shake them gently. They should never be shaken while the locomotive is working hard; the high draft will then carry ash up into the tubes and superheater flues and clog them.

134. When your locomotive is travelling with a drifting throttle, fire only enough coal to keep the fire in good condition.

135. If large dumps of coal reach your tender, break them down before firing them.

136. Use the blower as lightly as possible, and no longer than is necessary.

137. When entering a terminal let your fire burn down to the proper level; but do not starve it to the point where, in order to get a boilerful of water, it will become necessary to rebuild it just before the locomotive goes on the cinder pit.

138. Do not use the injector when there is little or no fire in the locomotive. To do so starts the flues and side sheets leaking.

139. Keep your deck clean. A well swept deck with the coal in the tender sprinkled, but not flooded, helps save coal and increases your comfort.

140. Do not permit coal to fall off the gangway. This is not only wasteful, but dangerous.

141. Study the methods of good firing. Talk about them with other firemen. Try to improve your own practice.

142. On oil burning locomotives, sand the flues frequently; save oil by avoiding black smoke.

143. Whether using coal or oil, persistent black smoke indicates poor firing. Try at all times to avoid it, but especially in cities, where it causes not only fuel waste, but discomfort and damage.

Suggestions to Locomotive House Officials.—144. Have coal shoveled ahead on tenders at terminals remote from the mines, and put on no more coal at such points than is necessary to take the train back to the terminal nearest the mines.

145. Insist that tenders be not so overloaded as to spill coal. Have them trimmed before leaving the chute, so that surplus coal may be picked up.

146. Do not permit locomotives to be held under steam unnecessarily. If they must be held, bank the fires—if they are to be held for 24 hours, remove the fires.

147. Do not allow a locomotive to leave the terminal unless its fire is in proper condition.

148. Unless absolutely necessary, do not allow fresh coal to be placed in the fire box while the locomotive is held for its fire to be knocked.

149. To avoid delay at leaving time, have tools and supplies placed on the locomotive before the crew reports.

150. Maintain fire door openers so that they will operate properly.

151. Arrange fire doors not equipped with automatic openers so that they can be easily swung open and will remain latched open in rounding curves, and so they can be easily swung shut after firing each scoop of coal.

152. Brick arches must be maintained.

153. Injectors which are too large should be replaced with those of proper capacity.

154. When locomotive fires are cleaned, have a competent inspector enter the fire box. He should assure himself that the grates are thoroughly clean, that there are no broken grate fingers or excessive openings, that the grate is level when the grate lever keepers are in place and locked, and that the arches are clean and in repair. He should also see that the flues are clean and free from leaks, particularly the superheater flues. Superheater flues when clogged with soot and cinders are useless.

155. See that all coal burning locomotives have a total ash pan air opening

equal to at least 14% of the grate area.

156. Maintain boilers up to their highest efficiency. Wash them when necessary, and have the flues bored and blown out every trip. Give special attention to the superheater tubes.

157. Eliminate front end air leaks.

158. Do not allow locomotives to run with mud ring leaks. This leakage represents a considerable waste of fuel.

159. Make a special inspection of all locomotives to see that the exhaust nozzles are opened up to the largest area consistent with proper steaming. Keep a nozzle record of all locomotives, showing the class, size, date of cleaning, and date of nozzle changes.

160. Holes in the cab decking, defective aprons, and lost motion in the tender connections all lead to direct coal losses.

161. Make certain that steam pipes and superheaters are tested at frequent intervals. Cold water tests should not, however, be made when the parts are hot.

162. See that cylinder and valve rings are maintained so that they do not blow; and keep the valves squared up on all locomotives.

163. On oil burning locomotives, maintain all piping, valves and operating fittings in good condition. Keep the burner clean and in proper alignment, making periodical inspections of burners to determine if defective. Pans must be maintained in good condition and rigidly secured to avoid air leaks at sides and front behind brickwork. Inspection should be made each trip to ensure brickwork being in good condition and all carbon and sand removed. Keep air openings free from slag and carbon accumulations.

164. The flues in an oil burning boiler require the same attention as a coal burner. Dampers should be maintained over all air openings, and must be easy to operate.

Exhaust Nozzles.

In addition to the subjects heretofore treated, your committee was instructed to investigate the shape of exhaust nozzles to determine that which would produce the highest vacuum and least back pressure. It is believed that this a problem requiring for its solution the preservation of practically uniform conditions throughout the investigation and, therefore, one demanding a series of test plant observations. While it may be possible to obtain rough approximations in tests under road conditions, the variables are so numerous and so great as to impair the value of conclusions demanding a reasonable degree of accuracy. Variations affecting the results by as much as 5% would be fatal to an investigation in which such a variation is of as much importance as it is where both hauling capacity and fuel economy are involved. The facilities for the required investigation are not now at the service of the association and it is, therefore, impossible to submit any final conclusions at this time, but through the courtesy of the Pennsylvania Rd. a partial report may be made from tests conducted in the Altoona test plant. The investigations made by the Pennsylvania were for the purpose of ascertaining the maximum equivalent evaporation and the least average back pressure under uniform operating conditions with different shape nozzles.

1. The circular nozzle is circular in diameter at the entrance and gradually tapers to the exit diameter at a distance of one inch from the exit, the sides be-

ing parallel beyond this point.

2. The rectangular nozzle has a circular entrance area, this area gradually tapering into a rectangular at 2% in. from the inlet. From this point the sides of the opening are parallel for a distance of one inch to the tip of the nozzle.

3. The four internal projection consists of a circular nozzle having triangular shaped bars projecting 1 in. toward the center from four equal distant points to the edge of the nozzle. The bars have an edge turned toward the discharge jet.

4. The alligator nozzle, 12 in. high, consists of a circular nozzle having two jaws or points projecting 12 in. above the tip of the nozzle. The jaws are 6 1/4 in. apart at the tip, and this diameter remains constant to a point 3/4 in. below the tip of the nozzle, from which point the diameter is gradually increased to the nominal dimension.

5. The alligator nozzle, 6 in. high, is similar to the 12 in. alligator nozzle already described, except that the jaws are 6 in. high.

6. The four vertical projection differs from the alligator nozzle, in that it has four points instead of two. The diameter is uniform to a point 1 in. below the tip of the nozzle, from which point it gradually increases to the nominal diameter at the bottom.

7. The vertical projection and splitter is circular, a splitter being fitted at the top, and a conical piece attached to the splitter at the center, projecting downward 6 1/4 in. below the tip of the nozzle.

8. The special shaped nozzle consists of a circular nozzle, having four projections from the tip 4 in. high, which are bored conical, the diameter at the top being 3/4 in. smaller than at the bottom of the projections. These projections are 2 in. wide at the bottom and flare out to about 4 in. in width at the top.

9. The splitter consists of a circular nozzle tapering on the interior for 2% in. from the inlet, from which point the sides are parallel to the nozzle tip. Across the center is fitted a triangular piece, having one edge directed downward toward the discharge jet and having a width of 3/4 in. at the top.

10. The four notched circular nozzle is somewhat similar to no. 1, except that it has four notches set into it at the top. These notches are so shaped that they would form a rectangle were it not for the sides of the rectangle being cut in the form of a circle.

Tests were made on a Pacific type locomotive equipped with a Schmidt superheater and a brick arch. The same arrangement of front end details was maintained throughout the tests. With each design of nozzle, the evaporative rate was increased until the boiler limit was reached, the usual observations being taken of boiler and locomotive performance.

The results of the tests corresponding to the various shapes of nozzles are shown in the accompanying table. They indicate that under the conditions peculiar to this test with a nozzle having four internal projections it was possible to obtain a higher equivalent evaporation per hour with less back pressure than with a circular or rectangular nozzle having approximately the same net area.

Summary of Results of Nozzle Tests.

Description.	Dry coal per hour.	Equivalent evaporation per hour.	Average back pressure, lb.	Rank.
Four internal projections	9 421	65 129	14.9	1
Rectangular	9 810	61 316	14.3	2
Circular, area 33.29	4 218	49 219	9.2	3

Circular, area 30.68	5 741	52 223	10.5	5
Alligator, 12 in. high	5 292	47 852	9.6	11
Alligator, 6 in. high	6 186	49 129	11.2	9
Four vertical projections	5 833	50 778	8	6
Vertical projection and splitter	7 048	59 624	10.8	5
Four notched circular	5 063	50 883	8.1	7
Splitter	7 301	58 586	10.9	4
Special shape	5 854	47 890	5.8	10

Conclusions.—Your committee does not consider the information now available sufficiently complete to justify positive conclusions as to the most efficient shape of nozzle, and is only in position to report that the circular form of nozzle does not result in the highest vacuum and the least back pressure. As to what form will produce those conditions it is impossible to say without an extended investigation involving a long series of test plant observations. It seems evident, however, that all preconceived ideas of exhaust jet action must be revised, to agree with the apparent fact that the best results will be obtained when the jet contour is interrupted as is the case both with the internal projection nozzle and with the one having one axis longer than the other.

Front End Design.

Your committee has given some consideration to the matter of front end appliances, as affecting fuel economy and locomotive repair costs, but is unable to present a design applicable to all types of locomotives in different classes of service. In fact, from the information at hand, it is believed that a suitable general standard would not meet practical requirements, because of the variables introduced through differences in dimensions vitally affecting the problem. It, therefore appears to be necessary that the best arrangement be determined for each class of locomotive and normal service conditions using the regular fuel supply. It is probable that better results can be produced by these means than could possibly be obtained from any pre-determined standard that did not duplicate all the variables, including those arising under service conditions.

Your committee does believe, however, that there is opportunity for increased facility in maintenance, and reduced cost of repairs through the use of the so-called "unit" front end netting arrangement. It is obvious that a design permitting the complete removal of the assembled netting will be more easily maintained, will reduce locomotive shop hours, and effect a reduction in the cost both of labor and material. For these reasons, it is the opinion of the committee that the use of some form of unit front end should be extended.

A suitable standard having been determined, the front end details should be permanently fastened to prevent further adjustments. Diaphragm plates and stack extensions or so called "petticoat pipes" should be riveted or welded in position and never changed except on the recommendation of the authority establishing the correct relations. The only variable in the front end should be the exhaust nozzle and this should never be altered to cure a steam complaint until the cause of the complaint has been determined.

Running Stoker Fired Locomotives Over More Than One Division.—Your committee recognizes that there may be some fuel economy in running stoker fired locomotives over more than one division, but does not find that the practice prevails on any of the larger systems operating these locomotives. While it may be practicable to increase the mileage of such locomotives, the net economy of operation is doubtful, especially

as topographical conditions are frequently such that it is impossible to handle the most economical rating on the second division, the loss in fuel per thousand ton miles therefore exceeding the saving otherwise effected. This is a question that must be determined by local operating conditions, including terminal facilities.

In conclusion, your committee desires to emphasize the continued importance of the fuel problem, especially at this period of rising costs, of inadequate labor supply, and of car shortage. It must be admitted that the outlook for more favorable conditions is not promising, and it, therefore, becomes a paramount duty to employ all reasonable means of economy in order that the available fuel supply may be conserved and diverted to useful productive purposes.

Canadian National Railways Earnings.

	1920	1919
January	\$ 7,727,762	\$ 6,787,517

*Deficit.				

Government's Railway Policy.—The National Liberal and Conservative Party's platform, announced at Ottawa July 1, contains the following:—"Recognition of the necessity, under existing conditions, of amalgamating and unifying the various railway lines owned by the Dominion, with a view to eliminating duplication and effecting economies in construction and administration. Expert management and operation of the entire railway systems, unfettered by partisan political interference. The fixing of a proper capitalization for the National Railway System."

Merging the Grand Trunk Railway into the Canadian National Railways.

Arbitration of Stock Values.

The Dominion Government has appointed a third arbitrator to settle the dispute between the G.T.R. and the C.N.R. over the valuation of the G.T.R. stock. The arbitrator, who shall be either the then Judge of the Exchequer Court of Canada, or one of the judges of the Supreme Court of Canada, and who shall likewise be Chairman of the Arbitration Board, shall agree upon another third arbitrator who shall be either the then Judge of the Exchequer Court of Canada, or one of the judges of the Supreme Court of Canada, and who shall likewise be Chairman of the Arbitration Board. The arbitrator shall be appointed in the same way as the arbitrator whose seat has become vacant was appointed.

On July 9 the Dominion Government passed an order in council appointing Rt. Hon. Sir Thomas White as its arbitrator on the board. The G.T.R. Co. has appointed W. H. Taft, ex-President of the United States, as its arbitrator. The government will be represented by the following counsel: N. W. Tilley, K.C., Toronto; Hector McInnes, K.C., Halifax; H. A. Lovett, K.C., Montreal, and Pierce Butler, St. Paul, Minn. The G.T.R. will be represented by W. H. Biggar, K.C., Vice President and General Counsel; Eugene Lafleur, K.C.; A. W. Atwater, K.C., Montreal, and F. H. Phippen, K.C., Toronto.

Coordination of Services.

Canadian Railway and Marine World has given in previous issues full particulars of the appointment of the managing committee, representing the Dominion Government and the G.T.R., to ensure the operation of the latter in harmony with the C.N.R., pending the arbitration as to G.T.R. stock values, and the transfer of the company's property to the government. Sub-committees, appointed by the managing committee, have done a large amount of work in this connection, some of the results of which were given in Canadian Railway and Marine World for July, and particulars of others are given below.

Traffic Department Changes.

Boston, Mass.—C. J. Pierce, heretofore General Agent, Freight Department, G.T.R., will also act in same capacity for Canadian National Rys. in New England District, vice C. K. Howard, heretofore General Agent, C.N.R., appointed General Tourist Agent, C.N.R., Toronto.

Buffalo, N.Y.—Ira W. Gantt, heretofore Assistant General Freight Agent, G.T.R., will also act in the same capacity for Canadian National Rys., with supervision of traffic through the Niagara frontier, also of traffic under jurisdiction of Toronto Traffic Bureau at New York, Philadelphia, Buffalo, Pittsburgh, Toledo, Cleveland and Cincinnati.

G. A. McGuire, heretofore Commercial Agent, Freight Department, G.T.R., will also act for the C.N.R. Both these Buffalo officials continue their offices in the G.T.R. Freight Department Building.

Cincinnati, Ohio.—W. K. Evans, heretofore Commercial Agent, Freight Department, G.T.R., will also act for C.N.R., continuing his office in Traction Building.

Cleveland, Ohio.—D. M. Crawford, heretofore Commercial Agent, G.T.R., at Pittsburgh, Pa., has been appointed General Agent, C.N.R. and G.T.R., at Cleveland, Ohio, with office in Kirby Building.

Hamilton, Ont.—R. J. S. Weatherston, heretofore Division Freight Agent, G.T.R., will also act in the same capacity for C.N.R., vice G. M. Thomas, heretofore District Freight Agent, C.N.R., appointed Commercial Agent, C.N.R.-G.T.R., at Windsor, Ont.

F. T. Nelson has been appointed City Freight Agent for the C.N.R. and G.T.R. at Hamilton.

Montreal.—H. A. Carson, heretofore City Freight Agent, G.T.R., will also act in the same capacity for Canadian National Rys., vice S. E. Leger, of the C.N.R., who has been assigned to special duties in Montreal.

New York, N.Y.—J. O. Adams, heretofore General Eastern Freight Agent, G.T.R., will also act in same capacity for C.N.R., vice F. A. Young, General Agent, C.N.R., transferred. Mr. Adams' office continues at 1405 Woolworth Building.

Ottawa.—E. J. Hilliard, heretofore Division Freight Agent, G.T.R., will also act in same capacity for C.N.R. Territory, east of North Bay, Ont., to Hawkesbury, also Kingston-Harrowsmith and east. The position of acting Division Agent, C.N.R., held heretofore by Geo. Collins, has been abolished, Mr. Collins reverting to Special Agent, C.N.R., at Trenton, Ont.

A. H. Gow has been appointed City Freight Agent for C.N.R. and G.T.R. at Ottawa.

Philadelphia, Pa.—C. G. Haigh, heretofore Commercial Agent, Freight Department, G.T.R., will act in same capacity for C.N.R., continuing his office at 114 Customs House Place.

Pittsburg, Pa.—F. G. Wood, heretofore General Agent, C.N.R., has been appointed General Agent, Freight Department, for both the C.N.R. and G.T.R.

W. J. Burr, heretofore General Agent, Passenger Department, G.T.R., will also act in the same capacity for Canadian National Rys., vice F. G. Wood, heretofore General Agent, G.T.R., Pittsburg, who has been appointed General Agent, Freight Department, C.N.R. and G.T.R., at Pittsburg.

Quebec, Que.—E. Labreque, heretofore City Freight Agent, Canadian National Rys., will also act in the same capacity for the G.T.R.

Toledo, Ohio.—S. G. Wagstaff, heretofore Commercial Agent, Freight Department, G.T.R., will also act in same capacity for C.N.R., continuing his office in Bank of Commerce Building.

Sherbrooke, Que.—L. J. Rouleau, heretofore Commercial Agent, G.T.R., Quebec, Que., has been appointed Commercial Agent, C.N.R. and G.T.R., at Sherbrooke, Que.

Windsor, Ont.—G. M. Thomas, heretofore District Freight Agent, Canadian National Rys., Hamilton, Ont., has been appointed Commercial Agent, Canadian National-Grand Trunk Rys., at Windsor.

Changes in Station Services, Etc.

Belleville, Ont.—As the G.T.R. Toronto-Montreal day local trains 9 and 10, and Kingston-Toronto trains 29 and 30, now operate over the C.N.R. from Napanee to Colbright Jet., Belleville station,

C.N.R. E. M. Kiske, agent, is now joint with the G.T.R., for handling passenger traffic. It is also joint with the C.P.R.

As Canadian National Toronto-Ottawa trains 1 and 2, and Toronto-Ottawa, now operate via G.T.R. double track between Toronto and Napanee and via C.N.R. east thereof, the G.T.R. station at Belleville, T. H. Coppin, agent, is now joint with the C.N.R. for passenger traffic.

Brighton, Ont.—Until the permanent track connection is installed both the C.N.R. and G.T.R. stations are being continued.

Cobourg, Ont.—All traffic is now handled at the G.T.R. station, E. J. Warrington, agent, and the C.N.R. station, A. D. Leonard, agent, has been closed, except that for handling C.N.R. Toronto-Ottawa night trains, 7 and 8, and the C.N.R. Cobourg-Toronto morning local, 31, a night ticket seller and operator is maintained at the C.N.R. station, reporting to the joint agent.

Colborne, Ont.—The C.N.R. has discontinued all passenger train service at Colborne, and its station (G. Merkle, agent) has been closed. All traffic is being handled at the G.T.R. station, J. Thorne, agent.

Deseronto, Ont.—As the G.T.R. Toronto-Montreal day locals 9 and 10, and Kingston-Toronto trains 29 and 30, now operate over C.N.R. from Napanee to Colbright Jet., Deseronto station, W. R. Thomas, agent, is now joint with the G.T.R. for handling passenger traffic.

Grafton, Ont.—The C.N.R. has discontinued all passenger train service at Grafton, and its station (H. L. Gummer, agent) has been closed. All traffic is being handled at the G.T.R. station, H. Ford, agent.

Kingston, Ont.—All C.N.R. passenger trains now operate to and from G.T.R. Kingston joint station, J. W. Hanley, agent. The C.N.R. formerly used the C.P.R. Kingston passenger terminals.

Montreal, Que.—The C.N.R. operates the sleeping and dining car service on new trains placed in service from Montreal to Sudbury and Montreal to Winnipeg, and the Pullman ticket office at Bonaventure station is now a joint office handling sleeping and parlor car tickets for both the Canadian Northern and Canadian Government Rys. Division of the Canadian National Rys. and also for G.T.R. trains.

The C.N.R. motor truck now handles all railway business mail and company's supplies between all C.N.R. and G.T.R. offices and stations in Montreal.

Napanee, Ont.—The C.N.R. station has been closed and C.N.R. traffic is now handled at the G.T.R. station, F. B. Allison, agent. All C.N.R. passenger trains now operate to and from the G.T.R. station, except the Toronto-Ottawa night trains 7 and 8, which stop at Selby Road crossing.

Parry Sound, Ont.—The C.N.R. passenger station, W. G. Fowler, agent, is now joint with the G.T.R., on account of G.T.R. Ottawa-Parry Sound trains 47 and 52 operating to and from C.N.R. station, Parry Sound, via James Bay Jet.

Pembroke, Ont.—The C.N.R. has built a connection with its Pembroke station to the G.T.R. track, a mile and a half from the G.T.R. Pembroke station, the length of the connection being one mile. The C.N.R. has changed the name of its Pembroke station to Pembroke Jet. C. N.R. local passenger trains between Pembroke and Ottawa run to and from the

G.T.R. Pembroke station, using the C.N.R. line between Pembroke Jct. and Ottawa. C.N.R. through trains between Montreal and Sudbury do not run to and from the G.T.R. Pembroke station, but pick up and discharge passengers at the C.N.R. Pembroke Jct. station. The G.T.R. station agent at Pembroke, J. G. Valier, is joint agent for both railways, the C.N.R. Pembroke Jct. station being merely a junction point from which the agent has been removed, and at which only operators are stationed, who also sell tickets for the through trains. Freight for Pembroke, collected on the C.N.R., is taken to the G.T.R. freight shed there, where delivery is made, and conversely shipments from Pembroke are received at the G.T.R. station and handed by the C.N.R. from Pembroke Jct.

Smithfield, Ont.—Owing to the operation of G.T.R. trains 9, 10, 29 and 30 via C.N.R. between Colbright Jct. and Napanee, the C.N.R. has established a flag stop at Smithfield, 2.8 miles east of Brighton, for accommodation of traffic which was handled previously on these trains at the G.T.R. Smithfield station.

Toronto union station.—The C.N.R. and G.T.R. ticket offices have been consolidated. W. Grundy, station ticket agent, G.T.R., being appointed station ticket agent for both G.T.R. and C.N.R.; G. A. Gould, heretofore station ticket agent, C.N.R., being appointed assistant station ticket agent for both lines.

The Pullman ticket office at Toronto union station, G. W. Deyell, agent, has taken over the sale of all sleeping and parlor car space for C.N.R. trains, in addition to the sale of space for G.T.R. trains previously in effect.

Trenton, Ont.—The C.N.R. Toronto-Ottawa trains, 6, Capital City, and 5, Queen City, now operate via G.T.R. double track between Toronto and Napanee and via C.N.R. east thereof. The G.T.R. Trenton station, M. A. Harris, agent, is now joint with the C.N.R. for passenger traffic.

As the G.T.R. Toronto-Montreal day local trains 9 and 10, and Kingston-Toronto trains 29 and 30, now operate over the C.N.R. from Napanee to Colbright Jct., Trenton station, C.N.R., C. A. Reid, agent, is now joint with the G.T.R. for passenger traffic.

Wicklow, Ont.—As local passenger service on the C.N.R. between Cobourg and Brighton has been withdrawn, a new stop, named Wicklow, has been established on the G.T.R., 2.2 miles east of Grafton, for handling milk traffic, which formerly moved via Wicklow station on the C.N.R.

Winnipeg, Man.—The C.N.R. and G.T.R. freight terminals and cartage matters have been amalgamated under E. W. Warner, local freight agent, C.N.R., there.

Co-ordination of Express Services.

The Canadian Express and the Canadian National Express Company's services are being co-ordinated in accordance with the general plan adopted in connection with the Canadian Northern and Grand Trunk Railways lines. The changes will avoid duplication of service and secure increased efficiency. The officers of the two express companies are working in close harmony, under direction of the managing committee, and arrangements have been made whereby, at common points where both express companies have maintained separate offices, staffs, and wagon service, they will be consolidated and managed under a joint agent for both companies. Under this arrangement the agency of the express

company doing the preponderance of business at any particular point will take charge of the business of the other company as well. In the east this, in a general way, works out that the Canadian Ex. agency becomes the joint agency of both the Canadian Ex. and the Canadian National Ex. Cos., but in the west the reverse is the case, the Canadian National Ex. Co.'s agency becoming the joint agency of the two companies. Consolidations have been effected at the following points:—Guelph, Hawkesbury, Brockville, Trenton, Port Hope, Cobourg, Oshawa, North Bay and Pembroke, Ont.; Winnipeg, Man.; Regina, Moose Jaw and Saskatoon, Sask.; and Calgary and Edmonton, Alta. Similar steps will be taken at the larger cities, as soon as details can be worked out. Following are details of some of the changes made:—

Cobourg, Ont.—The Canadian National Ex. office has been consolidated with the Canadian Ex. office, F. W. Baker, of the Canadian Express Co., being joint agent. The Canadian National Ex. Co.'s former agent, A. G. Leonard, has been assigned to other duties.

Guelph, Ont.—The Canadian National Ex. office has been consolidated with the Canadian Express, J. E. Phelan, Canadian Express, being joint agent. The Canadian National Ex. Co.'s former agent, T. H. Belt, remains at Guelph as agent for Toronto Suburban Ry.

Kingston, Ont.—The Canadian National Ex. office has been consolidated with the Canadian Express. The Canadian National Ex. Co.'s former agent, N. C. Dunn, has been assigned to other duties with the Traffic Department.

Napanee, Ont.—The Canadian National Ex. office has been consolidated with the Canadian Express, G. A. Taylor, of the Canadian Express, being joint agent. The Canadian National Ex. Co.'s agent, E. J. McLaughlin, has been assigned to other duties.

North Bay, Ont.—The Canadian National Ex. Co.'s office has been consolidated with the Canadian Express, B. W. Baily of the Canadian Express being joint agent. The Canadian National Ex. Co.'s former agent, E. J. Tilt, remains at North Bay as Freight Agent, C.N.R.

Pembroke, Ont.—The Canadian National Ex. Co.'s office has been consolidated with the Canadian Express, G. J. Valin, of the Canadian Express, being joint agent. The Canadian National Ex. Co.'s former agent, J. B. Scanlan, being assigned to other duties.

Port Hope, Ont.—The Canadian National Ex. Co.'s office has been consolidated with the Canadian Express, C. G. Dohney, of the Canadian Express, being joint agent. The Canadian National Ex. Co.'s former agent, H. W. Mitchell, remains in Port Hope in commercial business.

Trenton, Ont.—The Canadian Express Co.'s office has been consolidated with the Canadian National Ex. Co.'s office, D. Harrison, of the Canadian National Ex. Co., being joint agent. The Canadian Ex. Co.'s former agent, N. R. Duelt, has been transferred to Oshawa, Ont.

The Canadian Ex. Co. has arranged for the operation over the G.T.R. between Toronto and Montreal, also serving intermediate points, of a train carrying express shipments exclusively. This train leaves Toronto eastbound at 9.25 p.m., and leaves Montreal at 8.30 p.m., arriving at destinations in time to secure deliveries of express in the cities concerned early on the following morning. This train is made up of express cars that were hauled hitherto between these

points on night passenger trains. It will ensure the prompt handling of express matter and prevent the possibility of delays to passenger trains.

A daily express service, instead of tri-weekly as heretofore, has been established from Montreal and from Toronto, to Winnipeg and Vancouver, in connection with the new passenger train service which has been inaugurated from Toronto via Grand Trunk, Timiskaming & Northern Ontario and National Transcontinental Railways to Winnipeg, Grand Trunk Pacific to Edmonton, and Canadian National to Vancouver. From Montreal the route is by Grand Trunk to Ottawa, Canadian National to Winnipeg, Grand Trunk Pacific to Edmonton and Canadian National to Vancouver.

The Canadian Ex. Co., which operates over the Intercolonial Ry., has extended its service over the Halifax & South Western Ry. from Halifax to Yarmouth, N.S., which was handled heretofore as a local service by the H. & S. W. R. express department.

Important Changes in Train Service.

Daily night train service has been inaugurated between Montreal, Bonaventure station and Quebec, Palais station, leaving Montreal 11.15 p.m., arriving Quebec 6.30 a.m.; leaving Quebec 10.55 p.m., arriving Montreal 6.30 a.m. Connections are made at Bonaventure station with G.T.R. trains and transfer between stations in Montreal is thereby eliminated. A through sleeping car is also operated between Ottawa and Quebec, leaving Ottawa 7.20 p.m. daily except Sunday, arriving Quebec 6.30 a.m.; leaving Quebec 10.55 p.m. daily except Saturday, and arrive Ottawa 11.45 a.m.

Toronto-Montreal-Quebec train services make connections at Quebec with Quebec & Saguenay Ry. trains between Quebec and Murray Bay. This line is being operated by the contractors for the government. A parlor car is now operated on the Saturday morning train Quebec to Murray Bay, and the Sunday evening train Murray Bay to Quebec, while a buffet parlor car is in service on the daily except Sunday trains, leaving Quebec in the afternoon for Murray Bay, returning from Murray Bay in the morning.

The Quebec-Cochrane, Ont., service is now daily, leaving Quebec 5.30 p.m., arriving Cochrane 5.20 p.m. the following day; leaving Cochrane 8.45 p.m., arriving Quebec 8 p.m. the following day. Standard sleepers and dining cars are operated and close connections are made at Cochrane in both directions with Toronto-Winnipeg trains, thereby providing a daily service between Quebec and Winnipeg.

Daily service has been established between Montreal and Sudbury via G.T.R., between Montreal and Ottawa and C.N.R. west thereof, leaving Montreal 6.10 p.m., arriving Sudbury 11.30 a.m.; leaving Sudbury 8.15 p.m., arriving Montreal 1.15 p.m. Standard sleepers and cafe parlor cars are operated.

G.T.R. Toronto-Montreal trains 9 and 10 (old nos. 6 and 7) run via C.N.R. line between Napanee and Colbright Jct.

Canadian National Toronto-Ottawa day trains 5 and 6, now operate over the G.T.R. double track between Toronto and Napanee, and the Canadian National east thereof, providing a fast day service, the run being made in 7 hr. 15 min.—a reduction of 1 hr. 45 min. from schedule previously in effect. The service is daily except Sunday. No. 5, the Queen City, leaves Ottawa 1.15 p.m., arrives Toronto 8.30 p.m. No. 6, the Capital City, leaves Toronto 12 noon, arrives Ottawa 7.15

These trains operate at 15-minute intervals between the above stations on these trains.

C.N.R. trains between Ottawa and Kingston, Ont. and between N.Y.R. between Kingston and Ottawa, leave for Kingston on Saturdays, N. 29 leave Ottawa 6.30 a.m., arrive Kingston 11.15 a.m. No. 30 leaves Toronto 6 p.m., arrive Kingston 11.15 p.m. Daily passenger service is provided on these trains.

Local Canadian National passenger trains now operate between Ottawa Union station and Pembroke, Ont., G.T.R. station, daily except Sunday.

Canada National Trenton - Picton trains connect at Trenton and Trenton Jet. with Canadian National and G.T.R. trains, providing an improved service to and from all points east and west of Trenton.

G.T.R. trains 47 and 52 use C.N.R. Parry Sound station. These trains operate daily except Sunday between Parry Sound as follows: leave Ottawa 8.35 a.m., arrive Parry Sound 9.25 p.m.; leave Parry Sound 6.45 a.m., arrive Ottawa 6.40 p.m.

Daily night trains have been placed in operation between Toronto, Sudbury and Capreol, leaving Toronto 9.30 p.m., arriving Sudbury 8 a.m., and Capreol 9 a.m.; leaving Capreol 9.35 p.m., leaving Sudbury 10.30 p.m., arriving Toronto 8.50 a.m. Standard sleeping cars are operated daily between Toronto, Sudbury and Little Current, via Algoma Eastern Ry. between Sudbury and Little Current. Buffet sleeping car operates between Toronto, Sudbury and Capreol.

Through service has been established between Montreal and Winnipeg via G.T.R. between Montreal and Ottawa, C.N.R. west thereof, leaving Montreal 6.10 p.m. Tuesdays, Thursdays and Saturdays, arriving Winnipeg 9.45 p.m., the second day; leaving Winnipeg 8.30 a.m., Mondays, Wednesdays and Saturdays, and arriving Montreal 1.15 p.m. the second day. The equipment consists of dining cars, standard tourist and compartment observation library cars.

The National trains 3 and 4 (old nos. 9 and 10) operate daily between Toronto and Winnipeg via G.T.P.R. North Bay and T. & N. O. R. to Cochrane, thence over the National Transcontinental Ry., leaving Toronto 11 p.m., arriving Winnipeg 6 p.m. the second day; leaving Winnipeg 5 p.m., arriving Toronto 3 p.m. the second day. Standard and tourist sleeping cars and dining cars are operated on these trains and compartment observation library cars will be added shortly.

The connections at Port Arthur for steamship passengers Winnipeg and beyond are as follows: Montreal-Winnipeg trains arriving Port Arthur, Mondays, Thursdays and Saturdays connect with Northern Navigation Co. steamships from Detroit and Sarnia, arriving Port Arthur 6.30 a.m. (eastern time) on these days, and service is thus provided for boat passengers for Western Canada who will arrive Winnipeg the same evening at 9.45 (central time).

The Canadian National now provides a daily Winnipeg-Edmonton service, trains 5 and 6 via Regina, Saskatoon and North Battleford, leaving Winnipeg 10.20 p.m., arriving Edmonton 9 a.m. the second day. Leaving Edmonton 8 p.m., arriving Winnipeg 7.45 a.m. the second day. Standard sleepers are operated between Winnipeg and Regina, Winnipeg and Edmonton, and dining cars between Winnipeg and Edmonton.

Through service between Winnipeg and Calgary has been arranged by Canadian National Ry., via Dauphin, Saskatoon and Hanna, trains 9 and 10 operating as follows: Leave Winnipeg 10.40 p.m., arrive Calgary 12.50 noon the second day; leave Calgary 4.30 p.m., arrive Winnipeg 8.05 a.m. the second day. Standard sleeping cars between Winnipeg and Dauphin, Winnipeg and Calgary; dining car between Winnipeg and Calgary.

Between Regina and Prince Albert, daily night trains 7 and 8 are in operation as follows: Leave Regina 11.50 p.m., arrive Prince Albert 9.45 a.m.; leave Prince Albert 8 p.m., arrive Regina 6.35 a.m. Standard sleeper, Regina and Saskatoon; buffet sleeping car Regina and Prince Albert.

Improved service has been provided between Winnipeg and Vancouver, daily trains operating via G.T.P.R. between Winnipeg and Edmonton, and Canadian National between Edmonton and Vancouver, leaving Winnipeg 10.25 p.m., arriving Vancouver at 9 the third morning; leaving Vancouver 8 p.m., arriving Winnipeg 11 the third morning. Standard and tourist sleeping cars and dining cars are operated between Winnipeg and Vancouver, parlor observation cars between Winnipeg and Edmonton, and compartment library cars between Edmonton and Vancouver. Additional compartment observation library cars, now nearing completion, will be placed in service between Winnipeg and Vancouver.

Optional Ticket Arrangements.—The following arrangements have been placed in effect:—C.N. Ry. issue of tickets and other lines issues of tickets good for passage over the C.N.R. are good for passage and will be honored on G.T.R. trains as shown below. G.T.R. issue of tickets and other lines issue of tickets good for passage over the G.T.R. are good for passage and will be honored on C.N.R. trains as shown below. These arrangements apply to all classes of tickets reading between, or valid for passage between or through the points named below:—1. Any two stations on C.N.R. or G.T.R., Toronto to Napanee, inclusive. 2. Toronto and Montreal. 3. Stations named in section 1 and Kingston, Brockville and Montreal. 4. Kingston and Montreal. 5. Ottawa and Montreal. 6. Ottawa and Quebec or Levis. 7. Any two stations, Montreal to St. Rosalie. 8. Any two stations, Chaudier to Levis and Quebec. 9. Any station, Montreal to St. Rosalie, any station Chaudier to Levis and Quebec. 10. Ottawa and Montreal and North Bay, Pembroke and South March. 11. Toronto and Mount Albert, Beaverton, Gagebridge and Brechin. 12. Perth Road and east, and Napanee and west.

Tickets reading via C.N.R. or G.T.R. between Winnipeg and Edmonton, also Winnipeg and Saskatoon, are valid and may, if passengers so desire, be honored for passage on the trains of either line between such points. This arrangement applies to all tickets which are valid between, or to or from, or through the points named above.

The optional ticket arrangements places at the disposal of the public all the train services of the Canadian National-Grand Trunk between the points shown, and in actual practice means that in carrying passengers the two lines are operating on one line.

Grand Trunk Pacific Railway Co-ordination.

Hon. J. D. Reid, Minister of Railways, is reported to have said at Winnipeg, July 16, that on his return to Ottawa

the question of joint management for the Canadian National Ry. lines in the west, and the Grand Trunk Pacific Ry. would be taken up, and he is reported to have added: "I shall have the personnel of the board definitely in mind when I return in a few weeks. The board will be along the lines of the one which operates the eastern lines, that is, five railway officials, with a man who has been actively engaged in managing a railway system, as chairman."

Producing Core-Hole Plugs in a Locomotive Shop.

The accompanying drawing shows a method of attaining rapid production in the machining of locomotive piston core-hole plugs or work of a similar nature, with an ordinary screw cutting lathe. By the use of this method I have found it possible to center, turn, and thread to a standard size an average of one plug every two minutes.

First a quantity of plugs are centered with the centering device shown in the drawing, a heavy punch mark being sufficient for this job, as absolute precision

Quantity Production of Core-Hole Plugs

is not necessary. Two toolposts are set in position, the first holding a turning tool and the second a threading tool. The turning tool is set about $\frac{1}{4}$ in. closer to the work than the threading tool, with the tools about three inches apart.

After the first plug has been turned to size, note the position of the cross feed handle which will enable the second and succeeding plugs to be turned to size with one cut and without using the calipers. When the plug has been turned the threading tool is brought into use.

After threading the first one to size, a stop clamp placed on the cross-slide ways will enable the operator to cut all following threads to the correct depth without the use of calipers or gauge.

The end of the driver is squared to fit the core recess in the plug. The tail center is offset to give the required taper. When the threading tool is in use the turning tool travels in the space forward of the plug.—H. L. Ruark in American Machinist.

Belgian Rolling Stock Orders.—Belgium has within the past few months ordered 450 locomotives, including 100 from Belgian manufacturers, 200 from Great Britain, 50 from Canada, and 100 from the United States. Orders for 1,200 steam railway passenger cars and a number of electric train passenger cars have also been given, mostly to Belgian manufacturers.

Aerial Transportation Notes.

Work is reported to have been started upon the preparation of an area behind the Rockliffe rifle butts at Ottawa for a government aviation field.

A press report states that it is expected that Camp Borden, Ont., will be opened on Aug. 1 as the chief training center of the Canadian Air Force.

The Aeronautical Federation of Canada was formed July 5 at a meeting of representatives of Canadian aero clubs at Winnipeg. It is proposed to hold a general meeting in connection with the new organization at Camp Borden, Ont., in October.

The Canadian Air Board and the Customs, Immigration and Colonization Departments have authorized the Virden Municipality, Man., to use by day only an area of land 800 yards in diameter, in the s.w. ¼ Sec. 15, Tp. 10, Range 26, west 1st Meridian, as a public customs air harbor.

F. W. Peters, General Superintendent, British Columbia District, C.P.R., and H. O. Bell-Irving, both of Vancouver, have been appointed civilian members of the Canadian Air Board's British Columbia advisory committee, the Lieutenant Governor of the province being chairman.

Two flying boats were delivered at Lake St. John, Que., July 19, by the "air route" from Halifax, N.S., to be used for exploration purposes in the region north of Lake St. John. The exploration and survey work, it is stated, is being financed by the Dominion and Quebec governments jointly.

W. Templeton, late Lieutenant Royal Navy, is reported to have been appointed pilot navigator at the government seaplane base, Jericho Beach, B.C. Work is reported to have been started June 12 on clear the site for the erection of the hangars, which were expected to be completed within six weeks thereafter. The personnel at the station will, it is stated, number 25, including 4 pilots and 18 mechanics.

The Canadian Air Board announced recently that flying certificates had been issued as follows:—pilots, commercial, 48; private, 46; engineers, 41; registered craft, 52; harbors, 25; the last named being located as follows:—Vancouver, one, and two projected; Edmonton, two; Winnipeg, two; Toronto, two; Montreal, three; and Hanna, Calgary, Saskatoon, Fiske, Moose Jaw, Virden, Brandon, Sault Ste. Marie, Niagara Falls, Grandmere, Truro and Ottawa, one each.

Bell-Baldwin Hydrosdromes Ltd. has been incorporated under the Dominion Companies Act, to manufacture, deal in and let or hire hydroplanes and all other kinds of water craft; to provide hydrosdromes, etc., and to carry on other allied business. The capital stock is to consist of 1,000 shares without nominal or par value, provided that the capital employed in the business shall be \$5,000 in \$5 shares. The office is to be at Baddeck, N.S. The company is to be classed as a private company.

Price Brothers & Co. Ltd., Quebec, Que., has started an aerial service to cover the territories over which the company operates. The chief work of the aerial service will consist at present of photographing with special aerial cameras, the company's timber limits and the various dams, river heads, burnt areas, etc., throughout the territory. It is stated that the machines engaged in

the service are two Martinsyde, type A, mark 1 sea planes convertible into land planes, with a climbing power under full load of 1,000 lb., and of 10,000 ft. in 15 minutes, with a maximum speed of 127 an hour.

The Canadian Air Force Association has been incorporated under the Dominion Companies Act with office in Ottawa, but without share capital, to promote the efficiency and advance the interests of the Canadian Air Force and to assume such share of the administration of such force constituted under the provisions of the Air Board Act, 9-10 Geo. V, chap 11, as may be authorized by the Governor in council. The incorporators are:—Hon. H. Guthrie, K.C., Minister of Militia; O. M. Biggar, K.C., Vice Chairman of the Air Board; Major General Sir Willoughby Gwatkin, K.C. M.G., C.B.; Lieut. Col. R. Leckie, D.S.O., Superintendent of Flying Operations; Lieut. Colonel J. S. Scott, M.C., Superintendent of Certificate Branch; E. Deville, LL.D., D.L.S., Surveyor General.

Freight and Passenger Traffic Notes.

The Association of United States Railway Executives has issued the following traffic data:—From Mar. 21 to June 13 the principal railways moved 8,264,485 carloads of freight, compared with 7,708,927 carloads during the corresponding period in 1919. From Jan. 1 to June 12, the railways carried 39,000,000 tons of coal more than in the same period in 1919.

The Cumberland Ry. & Coal Co. has made some changes in its freight and passenger tariffs, with the approval of the Board of Railway Commissioners, to conform with the tariffs of the Canadian National Rys., with which the company's line connects at Springhill Jct., N.S. The company's freight and passenger rates are now the same as those on the C.N.R. for the same distances.

Canadian National Rys. has put on a new night train between Moncton and Campbellton, N.B., leaving Moncton daily, except Sunday, at 3.20 a.m.; arriving Campbellton, 9.30 a.m.; leaving there 9.50 a.m.; arriving Mont Joli, 2.30 p.m.; Riviere-du-Loup, 4.35 p.m.; Levis, 9.20 p.m.; and Joffre, 9.55 p.m. Eastbound, leaves Joffre daily, except Sunday, at 6.35 a.m.; Levis, 7.20 a.m.; Riviere-du-Loup, 11.50 p.m.; Mont Joli, 3.50 p.m.; Campbellton, 8.35 p.m.; arriving Moncton 2.25 a.m. A standard sleeping car leaves St. John, N.B., daily, except Saturday and Sunday, at 11.45 p.m., connecting at Moncton for Campbellton, and leaves Campbellton daily, except Saturday and Sunday, on train 32, connecting at Moncton with train 9 for St. John.

Application for Increase in Express Rates.

The Express Traffic Association, acting for the express companies doing business in Canada, has applied to the Board of Railway Commissioners for an increase of 40% in rates. Following is the application, in part:—"Previous to 1911 our board made an exhaustive investigation into the express business in Canada. The investigation resulted in certain concessions to the public by the express companies, increasing the operating expenses of the companies and re-

ducing the express rates. In 1913 a further reduction in practically all the express rates was ordered. The express companies unavailingly protested against these reductions.

"In 1918 an increase was granted. What has actually happened shows that the increase in rates, instead of amounting to 37% east of Sudbury and 23% west of Sudbury, amounts to less than 23% on the whole traffic. The result is that the tolls as increased are not sufficient to take care of the actual operating expenses. The cost of living has gone up 100%, and the operating cost of the express companies has gone up proportionately. The Canadian railways have received freight rates increases of (so called) 15 and 25% respectively. These increases in reality represent a natural advance of about 31%, which, if granted, will entail a further substantial cost to the express companies, and narrow the spread between express and freight rates. The result is the express companies are operating on less than 61% of what the board in 1911 declared to be a fair and reasonable tariff. Reviewing the increased costs, the companies submit that they are entitled to further protection. When granted, this will still leave the totals 15% below parity of those put in force by the board in 1913. The companies claim a loss of \$2,800,000 for one individual company, and a continuing loss."

Railway Rolling Stock Orders and Deliveries.

The Timiskaming & Northern Ontario Ry. is reported to be in the market for about \$45,000 worth of general shop tools.

The Anglo-Newfoundland Development Co. has ordered 18 flat cars, 20 tons capacity, from Canadian Car & Foundry Co., for delivery in September.

Six hundred freight cars, part of the railway equipment ordered by the old Russian Government and which have been lying around Vancouver, B.C., for two or three years, are reported to have been sold to United States railways.

National Steel Car Corporation has received an order for 10 standard gauge gondola cars 18 ft. 9½ in. long, 8 ft. 8 in. wide, 10 tons capacity, double truck, with forged couplers for link and pin, for operation on a southern sugar cane plantation.

Canadian National Rys. have received 17 mail cars from Canadian Car & Foundry Co. out of an order of 20 placed in 1919; 22 medium type Pacific locomotives from Montreal Locomotive Works, out of an order of 32, and 3 switching locomotives from Canadian Locomotive Co., out of 30 ordered this year.

The C.P.R., between June 20 and July 13, ordered 2 vans 29 ft. long, from its Angus shops, Montreal; bought 1 D.T. locomotive crane, 12 tons capacity, and 1 Christie portable coal loading machine; and received 1 Santa Fe locomotive from its Angus shops, and 2 vans from its Winnipeg shops.

The Canadian Car & Foundry Co., between June 16 and July 16, delivered 1 observation car and 5 first class cars to Canadian National Rys.; 45 dryer cars to Citadel Brick Paving & Block Co.; 118 tank cars to Imperial Oil Ltd., all from Montreal, and 326 repaired box cars to Grand Trunk Pacific Ry., from Fort William, Ont.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Grand Trunk Pacific Ry.—A press report states that work has been started on the construction of the line from at Pelton, Rapin, B.C., a description of which was given in Canadian Railway and Marine World for June, pg. 297. Grand Pacific & Co. and Manitoba have been reported to have the contract. (June, pg. 297.)

Kettle Valley Ry.—A press report states that a contract has been let to P. J. Salvus for grading a branch line from South Penticton to the head of Dog Lake, B.C., 2.5 miles. The line will run for a portion of the distance through the Indian reservation. The route is through a level country covered with small brush, and the grading is expected to be completed within two months after a start has been made. This is the beginning of a line authorized to be built under an agreement with the British Columbia Government, which agreement was confirmed at the recent session of the B.C. Legislature. The total length of the projected line is 50 miles from Penticton to the irrigation settlement in the southern Okanagan Valley, near the International Boundary. The second section of the line will run from the southern end of Dog Lake and will extend to the International Boundary at Oroville, Wash. The two sections of the line will be connected by steamboat communication. It was reported at the time the bill confirming the agreement was before the Legislature that 25 miles of the total mileage would be built this year, and the remainder in 1921. (July, pg. 326.)

Northern Light Rys. Co.—A press report states that surveys are being made for a line from Swastika through the Kirkland Lake, Beaverhouse Lake, Larder Lake and Boston Creek mining areas to Boston Creek, on the Timiskaming & Northern Ontario Ry. C. E. Pinelle is reported to be in charge of the work. This is the second of the lines proposed to be built by the company.

A meeting of shareholders was called to be held in Toronto July 5, to complete organization of the company, to authorize the issue of bonds for the construction of the Elk Lake-Gowganda line, and for the other projected lines. (July, pg. 330.)

North West Route Limited.—The Dominion Parliament has incorporated a company with this title, with office at Winnipeg, to establish a system of railway and steamboat communication between Baker Lake and Great Slave Lake in the unorganized territory lying north of Manitoba, Saskatchewan and Alberta. The projected railway is to start at the westerly end of Baker Lake and to proceed northwesterly to the easterly end of Schultz Lake; a second stretch of railway is to start at the confluence of the Hanbury and Thelon Rivers and to proceed westerly and southwesterly to old Fort Reliance at the eastern end of Great Slave Lake; another line is to start from the confluence of the Hanbury and Thelon rivers and to proceed westerly to the northeasterly end of Artillery Lake and from the southwesterly end of the lake southwesterly to Old Fort Reliance on Great Slave Lake. These lines may be operated by steam, electricity or any other power. The company is also given power to dredge and otherwise improve the navigation of the Thelon River; to construct such auxiliary works on the

navigable waters reached, and to build wharves, docks, elevators, etc., along the route of the railway and navigation routes. (Mar., 1920, pg. 106.)

Quebec and Chibougamou Ry. Co.—A press report states that a contract between the Quebec Government and the Quebec & Chibougamou Ry. Co. for the construction of a belt line round Lake St. John, Que., is ready for signature. The company was incorporated at the last session of the Quebec Legislature to build a railway from Quebec City northerly to Chicoutimi, on the Saguenay River, and thence to Chibougamou Lake, with branch lines. The Legislature voted two land subsidies at its recent session, one for the building of a line from Malbaie to Ha Ha Bay, 75 miles, and the other for a line from Chicoutimi to St. Felicien, to the west of Lake St. John, running through the region situated east and north of Lake St. John, and branch lines, a total of 120 miles. This latter subsidy would apparently cover the line for which a contract is reported to be ready. (Mar., pg. 136, and Quebec Subsidies, Mar., pg. 122.)

Canadian Pacific Railway Construction, Betterments, Etc.

Joliette Freight Sheds Burned.—The freight sheds at Joliette, Que., were destroyed by fire, together with seven cars and a quantity of freight, on July 10, the total loss being estimated at \$100,000. The passenger station was saved with difficulty.

Timiskaming District.—A press report states that a contract has been entered into between the C.P.R. and the Quebec Government for the construction of a line from near Timiskaming or Kipawa to the Des Quinze River, Que., and that it has been arranged that the line will pass through Ville Marie, instead of running at the foot of the hills near by, thus adding two miles to its proposed length, but bringing it considerable additional territory. Construction work, it is stated, will be started at once.

Under the Interprovincial & James Bay Ry. charter the C.P.R., some years ago, built about 10 miles of line from Kipawa towards the Quinze River, and completed surveys for its extension to the Kipawa River. The Quebec Legislature voted a subsidy of \$1,600 for a line from Timiskaming to Kipawa via Ville Marie to the Des Quinze River, 66 miles, and an additional subsidy of \$6,400 a mile for the same mileage in the event of the Dominion Parliament not voting a subsidy on the usual terms. H. Roberts, Assistant Engineer, was given charge of a party to complete the survey work on the line. April, pg. 174. See also C.P.R. Construction, June, pg. 291.)

Levis Siding.—A press report states that a contract has been let to W. H. Patterson, Belleville, Ont., for rock excavation at Levis, Ont., mileage 150.6 on the lake shore line from Leaside to Smiths Falls, where it is proposed to put in some sidings.

Hamilton Jet. Interlocking Plant.—An order has been given for a 48 lever, Saxby & Farmer, improved interlocking and mechanical interlocking machine and mechanical interlocking ground parts, for the reconstruction of the interlocking pro-

tection at Hamilton Jet, Ont. The plant, when completed, will require 42 working men and 6 spare men, under supervision of a draftsman, three critical detectors, including, with approach locking, and annunciators. A special illuminated track diagram will be provided in the house for the information of the leverman.

Windsor Yard.—A press report states that plans for extensive yard improvements at Windsor, Ont., have been submitted to the Board of Railway Commissioners for approval, and that construction will be started as soon as this has been obtained. The improvements, it is stated, consist of a rearrangement of a number of existing tracks, the extension of the track accommodation, and the building of a freight shed to provide for handling 500 freight cars.

Sarnia, Ont.—In connection with the proposal made to the C.P.R. recently to build a line from near London to Sarnia, Ont., a press report states that the company's officials have been favorably impressed with the proposal and will probably recommend its adoption. The report also states that one of the company's engineers has been over the ground following the recent trip of President E. W. Beatty and his party.

Lanigan Northeasterly Branch.—A press report states that five townships are being laid out along the branch line under construction from Lanigan, Sask., northeasterly. The line authorized to be built extends from Lanigan, through Melfort into the Carrot River district, and plans for 60.90 miles have been approved by the Board of Railway Commissioners. A contract for building 50 miles of the line out of Lanigan was let in May, 1919, to Stewart & Welch, Calgary, Alta., but only 5% of the grading had been completed to Dec. 31, 1919. The new townships are located as follows:—Daphne, n.w. 34-37-18 w. 2nd meridian; Unwin, s.w. 13-35-20 w. 2nd meridian; Romance, s.w. 2-36-19 w. 2nd meridian; Magallen, n.w. 2-39-18 w. 2nd meridian; Naicam, n.w. 2-40-18 w. 2nd meridian. It is stated that Naicam will be the terminus of the branch for the present. (July, pg. 389.)

Spokane & British Columbia Ry.—Pursuant to the winding up order, in the matter of the Dominion Permanent Loan Co., the official referee advertised recently for tenders for \$1,500,000 of bonds and \$10,000 capital stock of the Spokane & British Columbia Ry., these bonds and shares comprising all securities issued by the railway company, whose line runs from Danville, near Grand Forks, B.C., to Republic, Wash., about 36 miles, further particulars of which were given in Canadian Railway and Marine World for June, pg. 103. We are advised that a number of tenders were received, but that none were sufficiently high to warrant acceptance by the liquidator.

Sir William Van Horne's Estate.—The Supreme Court of Canada gave judgment recently in the action brought by the British Columbia Government as to the collection of succession duties on the estate of the late Sir William Van Horne. The total estate was valued at \$6,000,000, of which \$300,000 was in British Columbia, and the B.C. Finance Minister claimed that in fixing the amount of succession duty to be collected in the province he could take into account the total value of the estate. This view has been upheld by the Supreme Court, on a final appeal. This decision, it is said, will govern the settlement of some 20 other estates.

Mainly About Railway People Throughout Canada.

William B. Bamford, whose appointment as District Freight Agent, C.P.R., Nelson, B.C., was announced in our last issue, was born at Belleville, Ont., Sept. 10, 1863, and entered railway service in 1880, with the Credit Valley Ry., which was afterwards taken over by the C.P.R., and has been, to 1886, telegraph operator at various points; 1886 to 1888, agent, Corbetton, Ont.; 1888 to 1892, agent, Elora, Ont.; 1892 to 1902, agent, Peterborough, Ont.; 1902 to 1906, Travelling Freight Agent, Toronto; 1906 to 1910, District Freight Agent, London, Ont.; 1910 to 1916, Division Freight Agent, St. John, N.B.; 1916 to 1920, District Freight Agent, Toronto.

E. W. Beatty, K.C., President, C.P.R., attended the Association of Railway Executives annual meeting at New York, July 16, when, among other matters, the more intensive use of railway equipment, was discussed.

Sir George Bury has resigned the Presidency of Whalen Pulp & Paper Mills Co. Ltd., Vancouver, B.C. A press dispatch says he has received "an appointment in an advisory capacity under certain large interests on the Atlantic seaboard."

W. G. Chace, Chief Engineer, Greater Winnipeg Water District Commission, which operates a railway between Winnipeg and Shoal Lake, Lake of the Woods, has resigned, and organized Research & Development Ltd., to initiate new industries for Manitoba.

A. Blake Chown, who has been appointed General Agent, Passenger Department, Canadian National-Grand Trunk Rys., New York, was born at Belleville, Ont., Aug. 4, 1887, and entered railway service, Apr. 1, 1907, since when he has been, to May, 1909, night ticket clerk, G.T.R., Belleville, Ont.; May 1909, to Mar. 1911, day ticket clerk, G.T.R., Belleville, Ont.; Mar. 1911 to Mar. 1913, Soliciting Passenger Agent, G.T.R., Toronto; Mar. 1913 to Dec. 1918, Travelling Passenger Agent, G.T.R., Pittsburgh, Pa.; Dec. 1918 to Mar. 1919, acting General Agent, Passenger Department, G.T.R., New York; Mar. 1919 to July 1920, General Agent, Passenger Department, G.T.R., New York.

Don Matthews Crawford, who has been appointed General Agent, Canadian National and Grand Trunk Rys., Cleveland, Ohio, was born at South Bend, Ind., May 28, 1886, and entered railway service Sept. 1, 1901, since when he has been, to Mar. 1, 1903, clerk and stenographer, Freight and Passenger Departments, Chicago Great Western Ry., Pittsburgh, Pa.; Mar. 1, 1903, to June 1, 1905, similar position, Seaboard Air Line Ry., Pittsburgh, Pa.; Oct. 1 to Nov. 5, 1905, stenographer, Freight and Passenger Departments, Pittsburgh & Lake Erie Rd., Pittsburgh, Pa.; Nov. 5, 1905, to Nov. 1, 1909, stenographer and clerk, G.T.R., Pittsburgh, Pa.; Nov. 1, 1909, to Feb. 16, 1914, Travelling Freight Agent, G.T.R., Pittsburgh, Pa.; Feb. 16, 1914, to July, 1920, Commercial Agent, G.T.R., Pittsburgh, Pa.

W. R. Devenish, Superintendent, Canadian National Rys., Moncton, N.B., is spending a month's vacation at Shelburne and other Nova Scotia points.

Mrs. Dickson, widow of M. C. Dickson, at one time District Passenger Agent, G.T.R., Toronto, died at Hamilton, Ont., July 14.

James Dunsmuir, formerly owner of the Esquimalt & Nanaimo Ry., the Wellington collieries, etc., and formerly Lieutenant Governor of British Columbia, and for some time a director of the C.P.R., who died at Victoria, B.C., June 6, bequeathed his entire estate, of which no estimate is made in the will, to his wife, and the hope is expressed that at her death, she will divide the property among the nine children, consideration being given to about \$10,000,000 of Canadian Northern Ry. 3% debentures guaranteed by the Dominion Government, which had been distributed to some of the children prior to his death.

R. H. Foster, formerly agent, C.P.R., Fort William, Ont., who died there recently, was buried at Montreal. He had been in C.P.R. service since a boy, and was the son of the late Wm. Foster, a former C.P.R. employee at Montreal.

Mrs. D. E. Galloway, wife of the Assistant to the President, Grand Trunk Ry., Montreal, has taken a cottage at Little Metis Beach, Que., for the summer.

U. E. Gillen, General Manager, Toronto Terminals Ry., Toronto, has been appointed chairman of the board of conciliation, dealing with the Toronto & Niagara Power Co.'s electrical workers' demands at Toronto and Niagara Falls, Ont.

Henry Goldmark, who was engaged by the C.P.R. in connection with the Angus shops construction in Montreal some years ago, is Vice President of the new engineering firm, Goethals, Wells & Co. Inc., which has been established in New York, N.Y., with Major General Goethals as President.

D. B. Hanna, President, Canadian National Rys., was on a C.N.R. train which was derailed near Honor, Man., July 13, it being stated that the derailment was caused by a switch having been tampered with.

J. H. Hanna, who has been appointed Secretary of the Board of Trade, Calgary, Alta., was in G.T.R. service for about 30 years before going to Calgary in 1903, resigning at that time as District Freight Agent, Hamilton, Ont. During the construction of the Grand Trunk Pacific Ry. he was engaged in making certain right of way purchases.

Lieut. Col. Thos. A. Hiam has been appointed Railway Expert, to the permanent Commission on Communication and Transit, under the League of Nations. He is expected to arrive in Toronto, from Stewart, early in August, and to sail from New York on Aug. 21, and proceed to Geneva. He was in the Canadian Northern Ry. service for some years prior to the war, and during the latter part of the time as private secretary to Sir Donald Mann. He went overseas with the Canadian Buffs in the autumn of 1916 as a lieutenant, and was at Witley Camp, Eng., for nearly a year, while the Buffs formed part of the 5th Canadian Division, and during which time he was promoted to captain and made assistant quartermaster. On the Buffs being broken up, for reinforcing purposes, he transferred to the Imperial Railway Troops, going to France in Feb. 1918, at captain, and was engaged for some time in railway operating work. He returned to England in Oct., 1918, on leave, and was sent almost immediately to Salonica, as railway transpor-

tation officer, and after being there a very short time, was transferred to Constantinople, promoted to major and made Deputy Assistant Director of Railway Transport, which department had charge of the Orient Ry. in European Turkey (Compagnie d'Exploitation des Chemins de Fer Orientaux) and also the Bagdad Line, which commences on the Bosphorus and extends to Bagdad, with a break from Nissibin to Samara, which is still under construction. This line is operated by the Societe Imperiale Ottomane de Chemin de Fer de Bagdad. From Constantinople he was transferred to Haidar Pasha as Assistant Director of Railways, and was promoted to lieutenant colonel. On his return to Canada at the close of the war he was appointed Vice President, Canadian North Eastern Ry. Co., and Vice President, Pacific Coast Exploration Co., at Stewart, B.C., of both of which companies Sir Donald Mann is President. It is said that there will be a conference in January to discuss the freedom of communications and transit, to which Canada and other members of the League of Nations are expected to send delegates.

Lady Hickson, widow of Sir Joseph Hickson, at one time General Manager G.T.R., is spending the summer at Murray Bay, Que.

E. J. Hilliard, who has been appointed Division Freight Agent, Canadian National Rys.-Grand Trunk Ry., Ottawa, Ont., was born at Montreal, Apr. 14, 1870, and entered G.T.R. service in 1886, since when he has been consecutively, to June, 1904, clerk, Passenger Department; in Chief Accountant's office; stenographer, General Manager's office and Division Freight Agent's office; Contracting Freight Agent, Montreal; Contracting Freight Agent, New York; Travelling Freight Agent, Montreal; chief clerk, Division Freight Agent's office, Montreal; Travelling Freight Agent, Moncton, N.B.; June, 1904, to June, 1919, Commercial Agent, Buffalo, N.Y.; June, 1919, to June, 1920, Division Freight Agent, G.T.R., Ottawa, Ont.

Charles Ketchum Howard, who has been appointed General Tourist Agent, Canadian National Rys., Toronto, was born at St. Andrews, N.B., Aug. 28, 1877, and entered railway service April, 1893, since when he has been, to 1900, operator and agent at various points, Atlantic Division, C.P.R.; 1900 to 1901, agent, C.P.R., Brownville Jct., Me.; 1901 to 1906, agent, C.P.R., McAdam Jct., N.B.; 1906 to 1910, agent, C.P.R., Fredericton, N.B.; 1910 to 1911, Superintendent, Arcootook Valley Rd., Presque Isle, Me.; 1911 to 1912, Travelling Freight Agent, C.P.R., St. John, N.B.; 1912 to 1915, Right of Way Agent, St. John and Quebec Ry., Fredericton, N.B.; 1915 to Mar., 1916, agent, Canadian Government Railways, Woodstock, N.B.; Mar., 1916, to Sept. 1, 1917, Commercial Agent, Canadian Government Railways, Boston, Mass.; Sept. 1, 1917, to July 1, 1920, General Agent, Traffic Department, Canadian Government Rys., latterly Canadian National Rys., Boston, Mass.

H. G. Kelley, President, G.T.R. and Grand Trunk Pacific Ry., attended the Association of Railway Executives annual meeting in New York in the early part of July.

E. R. Lenoir, a freight claims adjuster on the C.P.R., died suddenly at his home at Montreal July 17, following paralysis.

Canadian Government Railways — To
pay deficit of working expenditure
for year ended Mar. 31, 1920, author-
ity being hereby given to apply to-
ward payment of the total amount of
the said working expenditure the
amount of the receipts and revenues
for the said year; additional amount
required \$1,000,000

The Board of Railway Commissioners Empowered to deal with Coal Situation.

The Minister of Railways, Hon. J. D. Reid, and the Minister of Labor, Hon. G. D. Robertson, made the following report June 28:—"The undersigned, having been delegated by the Governor in council to give special attention to the coal situation and alleged shortage in coal supply, have the honor to report that: From Jan. 1 to June 1, 1920, the importations of both anthracite and bituminous coal from the United States exceeded the quantity received during the same period in 1919, but, because of the reserves being low, was scarcely sufficient to supply the normal requirements. Since April 15, 1920, and particularly June 1, receipts of coal have been very irregular and unsatisfactory.

"Ontario and Quebec are wholly dependent upon outside sources for their supply of coal. Ontario alone requires 3,500,000 tons of anthracite a year, or approximately 64,500 cars, which means an average shipment of about 200 cars a day for each day in the year. Since April 1 we were short on our daily receipts 125 cars a day. Ontario requires 11,000,000 tons of bituminous coal annually, equivalent to 220,000 cars of 50 tons each, or a daily shipment of 600 cars. From April 1 to June 15, 28,930 cars, or 380 cars a day were received, leaving a shortage in daily receipts of bituminous coal of 220 cars a day. The situation in Quebec is much similar, though accurate figures are not at the moment available.

"Our investigations clearly indicate a most serious situation so far as transportation in the United States is concerned, inadequate car supply and strikes of railway employes largely contributing to the serious congestion. Industries in the U.S. are, in many instances, curtailing their output or closing down for lack of fuel, and the government of that country has placed the control of the distribution of coal in the hands of the Interstate Commerce Commission, who have, we are informed, made three orders which have a bearing on the situation here, i.e., (1) Embargoed the exportation of coal from the Atlantic ports to outside countries; (2) Fixed priorities; (3) Are permitting only such cars to come to Canada as they are assured will be unloaded within 24 hours from the time they are placed, and, further, that the cars will be returned direct for re-loading. It is further apparent that this pooling arrangement and distribution through the commission in order of priority is having the effect of sending many Canadian coal cars to other destinations, rendering the car situation still more difficult.

"It is to be further observed that there were exported from Canada, between Jan. 1 and June 1, 1920, approximately 160,000 tons of coal from Nova Scotia to European ports, principally Holland and France. Prior to the war approximately 2,000,000 tons a year were brought from the Nova Scotia fields up the St. Lawrence, principally to Montreal, which supply has been almost entirely cut off. In view of the United States having embargoed the exported coal to foreign countries, because of the serious shortage at home, it will be difficult for Canada to consistently contend for increased supply from the U.S. unless an embargo is also placed upon the exportation of Canadian coal overseas.

"The provincial fuel commissioners find

their task rendered more difficult as a result of the order in council 3004, of Dec. 1918, becoming inoperative. In view of all the foregoing facts the undersigned recommend that the fuel control such as existed under order in council 3004 should again be made effective and that a fuel controller, or some board with the necessary power, should be established, with a view of making an agreement with the Interstate Commerce Commission of the U.S. to ensure a permanent and steady delivery such as will meet the Canadian requirement as far as is reasonably consistent, and to enable the provincial fuel commissioners to effectively direct and control distribution equitably."

Acting on the above recommendations, Sir Robert Borden introduced a bill in the House of Commons, which was amended, and finally passed as follows:

1. The Railway Act, 1919, chapter 68 of the statutes of 1919, is amended by inserting the following section as section 71a, immediately after section 71 thereof:—

"71a. (1) The Board shall have power to do and authorize such acts and things and to make from time to time such orders and regulations as the Board, by reason of real or apprehended scarcity of coal or other fuel supplies in Canada, may deem necessary or advisable for the provision of such supplies and for the distribution, control and disposition thereof.

"(2) Without restricting the generality of the foregoing terms, it is declared that the powers hereinbefore conferred upon the Board shall extend to the trading in and to the exportation, importation, production and manufacture of coal and other fuel supplies.

"(3) All orders and regulations made under this section by the Board shall have the force of law, and may be varied, extended, or revoked by any subsequent order or regulation; but if any order or regulation is varied, extended, or revoked, neither the previous operation thereof nor anything duly done thereunder, shall be affected thereby, nor shall any right, privilege, obligation, or liability acquired accruing, or incurred thereunder be affected by such variation, extension, or revocation.

"(4) This section shall continue in force until the last day of the next succeeding session of Parliament and no longer."

Protection of Maintenance of Way Employes.—The Railway Association of Canada has been giving consideration to the possibility of providing further protection for maintenance of way department employes, against accidents resulting from being struck by trains, and has recommended to member lines that the following instructions be issued to locomotive crews:—"Engineers on all trains shall sound whistle signal 14(L) when approaching curves where view of track is obscured."

Victoria Bridge, Montreal.—The sixtieth anniversary of the completion of the G.T.R. Victoria bridge over the St. Lawrence River at Montreal will occur Aug. 25. The original tubular bridge was opened for traffic by King Edward VII, then Prince of Wales, Aug. 25, 1860, and this was replaced by the present Diamond Jubilee bridge, which was completed in 1898.

The Great Northern Railway's Canadian Lines.

The annual report of the Great Northern Ry. Co. for the year ended Dec. 31, 1919, contains the following information regarding its Canadian lines:—"The company's investment in Canadian companies, on account of advances made to pay for property, construction, additions and betterments, has been increased during the year as follows:—

Manitoba Great Northern Ry.	\$4,186.40
Brandon, Saskatchewan & Hudson's Bay Ry.	894.09
Nelson & Fort Sheppard Ry.	2,870.79
Red Mountain Ry.	72.06
Crow's Nest Southern Ry.	5,991.84
Total	\$10,670.26

The President's report as to betterments during 1919 states that a half interlocking plant, with 6 levers, was installed at the crossing of the British Columbia Electric Ry. at Georgia St., Vancouver, B.C. The amount actually expended during the year on additions to Canadian lines was \$116,240.02 (credit), and the amount expended in betterments on the same lines was \$66,443.15. It was explained that the credit to additions for the Canadian lines occasioned by the removal of 7.8 miles of track of the New Westminster & Southern Ry.

Intensive Use of Railway Equipment.

At a meeting of the Association of Railway Executive in New York, July 16, a resolution was adopted, calling upon the member companies to devote their engineering energies to the more intensive use of existing equipment. The following programme was outlined:—

An average daily minimum movement of freight cars of not less than 30 miles a day. (The average daily movement now is 23.9-10 miles and the highest ever attained by the railways was 26 miles a day during the war period from Apr. to Dec., 1917).

An average loading of 30 tons a car. Reduction of bad order cars to a maximum of 4% on the total owned.

An early and substantial reduction in the number of locomotives now unfit for service, and,

Use of more effective efforts to bring about the return of cars to the owner roads.

Kettle River Valley Ry. Construction Financing.—An action has been brought in an Ontario court in the name of the Dominion Permanent Loan Co. against the Columbia & Western Ry. Co., the Kettle Valley Ry. Co., and the C.P.R. Co., to recover \$200,328 and interest under the terms of an agreement dated May 26, 1910, or in the alternative the like sum for breach of contract. It is claimed that under the agreement the loan company agreed to sell to the Columbia & Western Ry. 40% of the capital stock of the Kettle River Valley Ry. (now the Kettle Valley Ry., and a C.P.R. undertaking) and the defendant companies undertook to pay to the loan company 40% of the subsidies received from the Dominion Government for a railway from Midway to Merritt, B.C. It is further alleged that the defendants contracted to pay the loan company 40% of a British Columbia Government grant in respect of the construction of 150 miles of line. It is admitted that the defendants have paid various sums, but it is alleged by the loan company's liquidator that the amount claimed is still due.

His. J. J. McDonnell, Vice President and General Manager, Dominion Express Co.

It has been my privilege to keep in close touch with express matters in both Canada and the United States, and at the risk which always attends the making of comparisons, I venture the opinion that in the express service in Canada today, there is more of the old time efficiency and loyalty than is apparent elsewhere, and constant improvement in that direction is quite noticeable. There is "pride of service" and we "like our jobs". The labor turnover (the number of changes in the various positions) since the close of the war has been small by comparison, and is improving. It begins

An Edmonton press dispatch says that Premier Stewart of Saskatchewan, on

C. P. R. Information Bureaus.—The C. P. R. Colonization and Development Department has established three information bureaus at London, Eng., New York, N. Y., and Chicago, Ill., with headquarters at Montreal. Well equipped reference libraries, containing the fullest information about Canada, are attached to each of the bureaus, and are kept supplied with the latest information regarding new developments or opportunities, through the main reference library at the department's headquarters at Montreal and also through the medium of a reference service, which has been obtained through the co-operation of the various branches of the company's service. The London branch is in charge of Major E. A. Moore, Manager, Colonization and Development Department organization overseas.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Government Merchant Marine Ltd.—W. B. FINGLASS has been appointed Assistant Marine Superintendent, Vancouver, B.C.

B. C. KEELEY has been appointed General Agent, Vancouver, B.C.

T. LOUDEN has been appointed Assistant Superintendent Engineer, Vancouver, B.C.

Canadian National Rys.—C. BOVARD, Terminal Agent, is acting as Assistant Superintendent, Moncton, N.B., while W. A. Fitch is acting as Superintendent.

S. C. COATES, who resigned as City Ticket Agent, Toronto, June 30, has entered C.P.R. service as a sleeping car conductor.

GEO. COLLINS, Special Representative, who has also been acting as Division Freight Agent at Ottawa for some time, now has his office at Trenton, Ont., the position of Division Freight Agent at Ottawa having been abolished.

W. A. FITCH, Assistant Superintendent, is acting as Superintendent, Moncton, N.B., during the absence of W. R. Devenish, on holidays.

H. S. HEAD has been appointed Foreign Freight Agent, New York, U.Y. Office, Woolworth, Bldg.

C. K. HOWARD, heretofore General Agent, Traffic Department, Boston, Mass., has been appointed General Tourist Agent, Office, Toronto.

S. E. LEGER, heretofore City Freight Agent, Montreal, has been assigned to special duties there.

M. McCARRON, heretofore chief dispatcher, Newcastle, N.B., has been appointed chief dispatcher, Moncton, N.B., vice B. S. Ward, deceased.

T. S. TOZER, heretofore dispatcher, has been appointed chief dispatcher, Newcastle, N.B., vice M. McCarron, transferred.

Canadian National-Grand Trunk Rys. J. O. ADAMS, General Eastern Freight Agent, G.T.R., New York, N.Y., will also act in the same capacity for C.N.R., vice F. A. Young, General Agent, C.N.R., transferred.

W. J. BURR, General Agent, Passenger Department, G.T.R., Pittsburg, Pa., will also act in the same capacity for C.N.R., vice F. G. Wood, General Agent, C.N.R., transferred.

H. A. CARSON, City Freight Agent, G.T.R., Montreal, will also act in the same capacity for C.N.R., vice S. E. Leger, promoted.

A. B. CHOWN, General Agent, Passenger Department, G.T.R., New York, N.Y., will also act in the same capacity for C.N.R., vice F. A. Young, General Freight Agent, C.N.R., transferred.

D. M. CRAWFORD, heretofore Commercial Agent, G.T.R., Pittsburg, Pa., has been appointed General Agent, C.N.R. and G.T.R., Cleveland, Ohio.

W. R. EASTMAN, heretofore General Agent, Passenger Department, G.T.R., Boston, Mass., will act in the same capacity for C.N.R., vice C. K. Howard, General Agent, C.N.R., promoted.

W. K. EVANS, Commercial Agent, G.T.R., Cincinnati, Ohio, will also act in the same capacity for C.N.R.

I. W. GANTT, Assistant General Freight Agent, G.T.R., Buffalo, N.Y., will also act in the same capacity for C.

N.R., with supervision of traffic through the Niagara frontier and also of traffic under the jurisdiction of the freight offices at New York, N.Y., Philadelphia, Pa., Buffalo, N.Y., Pittsburg, Pa., Toledo, Cleveland and Cincinnati, Ohio.

A. H. GOW, heretofore in Division Freight Agent's office, G.T.R., Ottawa, Ont., has been appointed City Freight Agent, C.N.R. and G.T.R. there.

C. J. HAIGH, Commercial Agent, G.T.R., Philadelphia, Pa., will also act in the same capacity for C.N.R.

E. J. HILLIARD, Division Freight Agent, G.T.R., Ottawa, Ont., will also act in the same capacity for C.N.R. with territory east of North Bay to Hawkesbury, Ont., also Kingston-Harrowsmith, Ont., and east. The position of acting Division Freight Agent at Ottawa, held by Geo. Collins, is abolished.

E. LABREQUE, City Freight Agent, C.N.R., Quebec, Que., will also act in the same capacity for the G.T.R.

G. A. MCGUIRE, Commercial Agent, G.T.R., Buffalo, N.Y., will also act in the same capacity for C.N.R.

F. P. NELSON, heretofore in Division Freight Agent's office, G.T.R., Hamilton, Ont., has been appointed City Freight Agent, C.N.R. and G.T.R. there.

C. J. PIERCE, General Agent, G.T.R., Boston, Mass., will also act in the same capacity for C.N.R. in New England territory, vice C. K. Howard, General Agent, C.N.R., transferred.

L. J. ROULEAU, heretofore Commercial Agent, G.T.R., Quebec, Que., has been appointed Commercial Agent, C.N.R. and G.T.R., Sherbrooke, Que.

G. M. THOMAS, heretofore Division Freight Agent, C.N.R., Hamilton, Ont., has been appointed Commercial Agent, C.N.R. and G.T.R., Windsor, Ont.

S. G. WAGSTAFF, Commercial Agent, G.T.R., Toledo, Ohio, will also act in the same capacity for C.N.R.

R. J. S. WEATHERSTON, Division Freight Agent, G.T.R., Hamilton, Ont., will also act in the same capacity for C.N.R., vice G. M. Thomas, District Freight Agent, G.T.R., transferred.

F. G. WOOD, heretofore General Agent, C.N.R., Pittsburg, Pa., has been appointed General Agent, Freight Department, C.N.R. and G.T.R. there.

Canadian Pacific Ocean Services Ltd.—Major D. DRUMMOND, heretofore secretary to General Manager, Atlantic Lines, London, Eng., has been appointed General Freight Agent, Liverpool, Eng., vice A. H. Allan, Freight Traffic Manager, resigned to enter another company's service.

Canadian Pacific Ry.—J. S. ALLEN, heretofore Master Mechanic, Sudbury Division, Algoma District, Sudbury, Ont., has been appointed Master Mechanic, Schreiber Division, Algoma District, vice E. Freeman, transferred. Office, Schreiber, Ont.

G. M. BAILLIE, heretofore Agent, Fairville, N.B., has been appointed Assistant Superintendent, London Division, Ontario District, Windsor, Ont. This is a new position.

C. FRANCIS, heretofore Roadmaster, Newport and Orford Subdivisions, Quebec District, Farnham, Que., has been appointed Roadmaster, Chapleau, Ont., vice L. Hebert, transferred.

E. FREEMAN, heretofore Master Mechanic, Schreiber Division, Algoma District, Schreiber, Ont., has been appointed Locomotive Foreman, Cartier, Ont.

L. HEBERT, heretofore Roadmaster, Chapleau, Ont., has been appointed Roadmaster, Newport and Orford Subdivisions, Quebec District, vice C. Francis, transferred. Office, Farnham, Que.

J. L. JAMIESON, heretofore Superintendent, Vancouver Division, British Columbia District, Vancouver, has been appointed Superintendent Edmonton Division, Alberta District, with office at Edmonton, vice J. A. Macgregor, appointed Manager, Edmonton, Dunvegan & British Columbia Ry.

F. S. ROSSETER, Assistant Superintendent, Toronto Terminals Division, Ontario District, Toronto, was, on July 1, appointed acting Superintendent, Sudbury Division, Algoma District, Sudbury, Ont., T. A. Wilson, Superintendent, having been granted leave of absence for one month. Effective Aug. 1, he was appointed acting Superintendent, Chapleau Division, Algoma District, Chapleau, Ont., during the absence of W. R. Boucher, Superintendent, on holidays.

LEONARD H. SOLLY, Land Agent, Esquimalt & Nanaimo Ry., has been appointed to fill the vacancy in the C.P.R. Natural Resources Department's subcommittee in Vancouver, caused by the death of R. Marpole, who was chairman of that subcommittee.

C. A. WHEELER, heretofore Master Mechanic, Smiths Falls Division, Quebec District, Smiths Falls, Ont., has been appointed Master Mechanic, Sudbury Division, Algoma District, vice J. S. Allen, transferred. Office, Sudbury, Ont.

Edmonton, Dunvegan & British Columbia Ry.—J. A. MACGREGOR, heretofore Superintendent, Edmonton Division, Alberta District, C.P.R., is reported to have been appointed Manager, Edmonton, Dunvegan & British Columbia Ry. on its transfer to the C.P.R. for operation, with office at Edmonton, Alta.

Grand Trunk Pacific Ry.—A. D. CAREY, heretofore Assistant Superintendent, Smithers, B.C., has been appointed Superintendent, Edson, Alta., vice R. M. Halpenney, resigned.

F. W. HOPPER has been appointed General Agent, Passenger Department, G.T.P.R. and Grand Trunk Pacific Coast Steamship Co., San Francisco, Cal.

J. P. KIRKPATRICK has been appointed Assistant Superintendent, Smithers, B.C., vice A. D. Carey, promoted.

Grand Trunk Ry.—W. BIBBY, heretofore Supervisor of Track, Montreal, has been appointed Supervisor of Track, Cornwall, Ont.

A. A. SNYDER has been appointed Supervisor of Track, Montreal, vice W. Bibby, transferred.

H. C. SWARTS, bridge master, St. Thomas, Ont., is reported to have been appointed Superintendent of Bridges and Buildings, Eastern Lines, with office at Montreal.

Railways and Canals Department.—G. W. YATES, heretofore private secretary to the Prime Minister, and formerly private secretary to the Minister of Railways and Canals, has been appointed Assistant Deputy Minister of Railways and Canals, Ottawa.

Canadian National Rys. has put on a new local service between Stellarton and Mulgrave, N.S., leaving Stellarton, 4.30 p.m.; arriving Mulgrave, 8.10 p.m.; leaving Mulgrave, 7.30 a.m.; arriving Stellarton, 11.10 a.m.

The Reid Newfoundland Railway's Condition to be Improved.

The Newfoundland Legislature passed on July 11 an act providing for railway improvements for the Reid Newfoundland Railway, for the improvement of the railway, the provision of additional rolling stock, the purchase of additional rolling stock. The resolution on which the act was based was to have been introduced on July 8, but was not presented to the Premier until the following day. In the course of his speech he said it was the last thing in the world he could expect to have to do, to introduce resolutions that favored the Reid Newfoundland Co. by granting it, by way of loan or by favoring it in any other way. It was impossible for the government to attribute the necessary rolling stock; impossible for it to erect freight stations at Port aux Basques and at St. John's, and impossible for it to carry on the railway because it did not have the money necessary for these purposes. The company filed a memorandum with the government on June 30, giving reasons why money should be granted to put the road in repair, and showing the losses sustained by the company since the railway had been operated. The statements contained in the memorandum were not guaranteed by the government. The time had arrived to consider whether the railway was to be operated or not. In his opinion, and in that of his party it should be operated and \$1,000,000 must be borrowed to enable the railway to be run efficiently. This money would be expended as follows: \$300,000 for purchase of new fish plates to connect the rails; \$250,000 for terminals at St. John's and Port aux Basques, and \$450,000 to be paid over to the company to buy 6 locomotives, 50 box cars and 50 flat cars. The fish plates would be bought by the Government, and the company would put them in position on the railway. The money to be spent on terminals at St. John's would provide, among other things, a large freight shed above the Long Bridge; and general betterments would be carried out at Port aux Basques. The cost of the fish plates would be provided by the government, the Attorney General having advised that it was responsible for the same. The remainder of the sum voted would be a charge against the company, repayable with interest, out of any claim which the company might have against the government in 1957. Negotiations would be entered into with the company to have joint control of the railway by a commission from July 1, of this year, to June 30, 1921, the company to appoint three members, and the government three and a chairman. The government appointees would include an outside railway engineer, and an auditor. The resolutions were considered in committee July 10, and passed. The bill based on them was introduced and put through all its stages at the same sitting, the final reading being given to it at 1.20 a.m. (new time) Sunday, July 11.

The company's memorandum referred to in the Premier's speech points out that the railway was built according to the government specifications to meet the then (1890) requirements of the colony, the only change being that 50 lb. rails were used instead of 35 lb., and 65 lb. at the lower end of the Placentia line. No provision was made in the contracts for improvements over and above the speci-

fications of 1890. The company since the signing of the 1901 contract (under which the title to the railway passed from the Reids to the government at cost, and the Reids received a contract for the operation of the railway for 50 years from Aug. 1, 1901, on certain terms) have improved the rolling stock and equipment to meet the increasing traffic on the line. The company has been unable to increase the rolling stock in sufficient quantities since 1915 to meet the extra demands, caused by the sale and loss of local shipping during the war. The loss in operation during the six years preceding the war was \$363,057.12, while the loss in the years 1914 to 1919, inclusive, was \$1,544,429.13, the loss in 1919 alone being \$645,549.02. The total loss for 20 years operation up to the end of 1919 was \$3,263,116.34, all of which had fallen directly on the shareholders. The company states that the reason for the roadbed being in an unsatisfactory condition is that the standard laid down in the original specifications was not sufficiently high for a main line, and that, with the government's consent, heavier rolling stock was used than the standard of the road warranted, in order to endeavor to meet the traffic necessities. The total increased revenue for 1919 over 1914 was \$645,051.86, while the increase in operating expenses was \$1,159,813.75.

Application for Increase in Freight Rates.

The Railway Association of Canada sent the following application to the Board of Railway Commissioners on July 9, over the signatures of its President, H. G. Kelley, President, G.T.R. and G.T.P.R., and its Secretary, C. P. Riddell:—

"The Railway Association of Canada, on behalf of the railway companies, members thereof, and of all other railway companies within the Board's jurisdiction, hereby applies to the Board under sec. 325 of the Railway Act, and such other sections thereof as may be applicable, for authority to make a general advance of 30% in the tolls at present charged for the carriage of freight by the said companies. In support of such application the applicant respectfully states:—

"1. During the period since the outbreak of the war, the scale of expenditure of the said railway companies on capital, maintenance and operating accounts has increased to an extent unprecedented, which has greatly exceeded aggregate increases in freight and passenger revenues granted during such period.

"2. As a concrete example of the great burdens under which the railway companies are laboring, reference may be made to the result of the wage increase granted in 1918. The so called 25% advance in freight rates, granted under order in council 1863, effective Aug. 12, 1918, was intended to reimburse the railway companies for increased wage expense to which it was then estimated they would be put through the application of the rates of wages and working conditions which had then recently been fixed for the railways of the United States under the so called McAdoo award and supplements thereto, and which has been made applicable to Canada by order

in council 1768, effective Aug. 1, 1918. Contrary to all expectations, such increase in revenue proved far from sufficient to accomplish the purpose for which it was intended. During 1919 the cost of the material, as above mentioned, amounted on Canadian railways to more than \$80,000,000, while the increase in revenue derived from the advance intended as aforesaid to provide therefor, amounted to only approximately \$43,000,000, a shortage of at least \$37,000,000. Apart from the increase in wages, the prices of the principal supplies and materials in use on the railways, have increased more than 100% since the beginning of the war period.

"3. In order that the railway companies may maintain their systems in such a state of efficiency as to enable them to serve the interests of the public in a proper manner, it is essential that they be accorded an advance in tolls of at least the extent applied for herein.

"4. The increase in rates sought by this application is based entirely on present costs, and does not take into consideration any increase in wages or costs which may occur hereafter."

As the application is a request for a straight percentage increase based upon the costs of wages and material, which are of general application, the Board has decided that the case can best be heard at one sitting rather than at different places throughout the country, and the hearing will open at Ottawa Aug. 10.

Windsor-Detroit Railway and General Traffic Bridge.

At a meeting of the Detroit, Mich., Board of Commerce, July 15, at which a number of Windsor, Ont., people were present, steps were taken, according to a press report, for the construction of a press report, for the construction of a railway end general traffic bridge between Windsor and Detroit. This matter has been under discussion for some time; engineers have been making surveys, and tests of the river bed and of both the Canadian and the United States shores, and plans have been prepared for a bridge of the suspension type.

The report states that the approach to the bridge on the Detroit side would be located just above 24th St., and that the Canadian end would be near the easterly limit of Sandwich. The plans contemplate a suspension bridge of 1,770 ft. span, carrying two 28 ft. roadways, two 7 ft. sidewalks, two electric car tracks and four steam railway tracks. The estimated cost of the bridge suggested is \$28,000,000, including railway approaches of about a mile, on a gradient of about 1.5%. The bridge would have a height above water of 100 ft. at the harbor lines and 110 ft. at the center, in order to permit the free passage of ships. C. E. Fowler and G. Lindenthal are the engineers, under whose charge the surveys were made and the plans prepared.

C.P.R. Employees' Passes.—A Winnipeg report says:—"More than 5,000 annual long service passes have been distributed to employees of the Canadian Pacific Railway Western Lines. The pass is a permanent annual one, which includes the wife of a married man, and is for employees in the service for 10 years or more, covering the district in which they are employed. For employees in the service 20 years or over the pass extends over the whole Western Lines."

Traffic Orders by Board of Railway Commissioners.

Contract for Live Stock Transportation.

General order 300. June 30.—Re consideration of special form of contract for transportation of live stock, to be used by railway companies, and general order 298, June 2, 1920, approving forms of Live Stock Contract and Special Contract with Attendants in charge of stock, marked schedules A and B respectively: It is ordered that the date upon which the said forms of Live Stock Contract and the Special Contract with Attendants in Charge of Stock, marked schedules A and B respectively, on file with the board, shall become effective, be postponed from July 1, 1920, as provided for in general order 298, dated June 2, 1920, to July 15, 1920.

Cumberland Railway & Coal Co.'s Tariffs.

29,813. June 28.—Re application of Cumberland Ry. & Coal Co., under sec. 334 of the Railway Act, 1919, for approval of its Standard Passenger Tariff, C.R.C. 5: Upon the report and recommendation of the board's Chief Traffic Officer it is ordered that the said tariff be approved; the said tariff, with reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

29,814. June 28.—Re application of Cumberland Railway & Coal Co., under sec. 331 of the Railway Act, 1919, for approval of its Standard Freight Mileage Tariff C.R.C. 10: Upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the said tariff be approved; the said tariff, with reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

Classification of Snow Melters.

On the application for a ruling of the board in the matter of proper classification of snow melters, in connection with claims of Freeland Steel Tank Co., Winnipeg, against the C.P.R. for freight overcharges, Assistant Chief Commissioner McLean gave the following judgment June 30:—This matter has been conducted by correspondence. After some preliminary correspondence, the applicant was advised that the matter would be set down for hearing at Winnipeg. He, however, informed the board that he did not see the need to have it set down for hearing; and he further stated that if his complaint could not be settled by correspondence, he wished the board to withdraw the complaint as he had no further data to submit. Thereafter the matter was taken off the list. On consideration of the material before the board, it appears that what the applicant is interested in is the classification, not for the future, but as to past transactions. His contention is, in substance, that the articles should, by analogy, have been classed with a second-class rating, and that claims arising in 1918 should have been settled on the basis of second-class. The railway, in dealing with the matter from the standpoint of commodities which it regards as analogous, assessed freight charges on the basis of 1½ times first-class. The submissions made have been carefully considered by the board's traffic department, which reports that it considers the rating proposed by the railways on these articles, which hitherto have not been specifically classified, viz., 1½ times 1st class, L.C.L., is reasonable, having regard to the classification of other articles

most nearly analogous as to bulk, weight and structure. Since the date of the application, the railways have proposed a specific rating of 1½ times 1st class for the commodities in question, which it is proposed to incorporate in a supplement to the classification. No further action in the matter is necessary."

Hamilton Students' Passenger Fares.

Commissioner Boyce gave the following judgment July 3 on the complaint of the Canada, Park and Central Business Colleges, Hamilton, Ont., against proposed increases by the Hamilton Radial Electric and the Brantford & Hamilton Electric Railways in fares for students attending business colleges in Hamilton:—"The complaint was originally from the Canada Business College, of Hamilton, latterly supported by the Park and Central Business Colleges of Hamilton, that as regards students, or scholars, commutation tickets on the Hamilton Radial Electric Railway, and the Brantford & Hamilton Railway (subject to this board's jurisdiction), the railways were improperly restricting the use of such tickets to students attending the public and high schools in Hamilton, and, as a consequence, were discriminating against such students, resident in the suburbs or places on the railways outside of Hamilton, as were habitually attending business colleges and other institutions of learning, training or instruction in Hamilton. In other words, that the railways interpreted the term 'student' in the issue of these tickets, only to those students of the class mentioned, excluding from their benefit, students generally. The board is asked to exercise its jurisdiction to relieve against the alleged discrimination. The railways concerned contend that they are not bound to extend the privileges of these tickets to any except students attending public and high schools; that the business colleges, being purely business enterprises and operated for private gain, do not come within the railways interpretation of 'schools' and their students are not, therefore, entitled to the benefit of the rates referred to. The Hamilton Radial, on Sept. 26, 1919, filed Supplement 1 to O.R.C. 7 (effective Sept. 29, 1919), showing special reduced rates for public and high school students, as follows, in either direction, tickets being limited to one month.

	To	Miles	No. trips	Price.
Hamilton	Kentworth	3.35	16	\$1.85
"	Ghents	5.10	16	1.85
"	Canal	8.10	16	1.85
"	Burlington	10.55	16	1.85
"	Pine Cove	12.31	16	2.25
"	Bronte	16.73	16	3.00
"	Oakville	21.22	16	3.00
Oakville	Bronte	4.49	16	1.85
"	Burlington	10.57	16	1.85

"Note.—School tickets are issued only on presentation of certificate from principal, stating that student is attending school, and are good only on cars arriving at school district at 9 a.m. and returning on 4 p.m. and 5 p.m. cars. Not good on Saturdays, Sundays, or public holidays."

"Prior to this tariff being filed, the railways extended their students rates to students generally, including students attending business colleges. The new tariff imposes a very substantial increase of rate over former rate enjoyed by students attending business colleges, and all students except those classed in the tariff; the difference to the students unfavorably classed varying from 11 to 360% increase as shown by the state-

ment filed by Mr. Kerr on behalf of complainants at the hearing. I am unable to find in anything urged at the hearing, by the railways, any justification for the distinction between 'students' sought to be imposed by the tariff. Students are to be regarded as a class, and, as a class, they ought to be dealt with as regards rail fares. For the railway to say that privileges shall be extended to certain members of that class and denied to all others falling within the definition is, in my opinion, unfair treatment, amounting to unjust discrimination. Any commutation students rates ought to be made applicable to all students. There ought to be no more difficulty for the railways concerned to interpret the meaning of the word 'student' so as to apply the rates in a comprehensive manner than for the other railways who issue commutation rates to students. I do not think that the supplement filed ought to be permitted to remain in force. It is unsatisfactory and discriminatory in its application and works injustice. The complaints against it are, I think, well founded.

"By sec. 345, ss. 2 of the Railway Act the board is empowered to require the railways subject to its jurisdiction, whenever it sees fit, to grant and issue commutation tickets at such rates and on such terms as the board may order. This is not a case where the board is asked to create a new commutation area. Were it so, different considerations would govern the exercise of the statutory discretion vested in the board by the section cited. The railways have established the system and area; they applied it first generally to all students, the students attending the business colleges of complainants participating in the privilege as members of that class. The railways then, by the supplement complained of, sought to restrict that class, and continue the privilege of cheap rates to one section of it, and deny it to the others, and it is to remedy and equalize that condition of things that the board's jurisdiction is appealed to.

"By the board's order 29,512 of April 1, 1920, in the Commutation Rate Case, the tariff then settled by the board for scholars (or students) commutation passenger traffic was as follows:—

"(1) 40 trip tickets (scholars' tickets) good for 30 days on the basis of 4¼ mills per mile of travel, subject of a minimum charge per ride of 7½¢."

"The commutation tariffs filed, pursuant to this order, restrict the age of the scholar to 18 years and under. I think it would be a satisfactory adjustment of this complaint to direct the railways to substitute for the tariff now in force, a tariff of students (or scholars) commutation rates on the basis of the board's order above quoted, and applicable, as in the case of the tariffs filed by railways pursuant to the board's order, within the age limit, to all persons falling within the designation of students or scholars. These rates should be made effective Sept. 1, 1920, next. Order will go accordingly.

Railway from Victoriaville to Arthabasca.—The Minister of Railways gave a negative answer in the House of Commons recently, to the question, "Is it the intention of the government to build a branch line on the Grand Trunk Ry. from Victoriaville to Arthabasca, Que., 3 miles, so that the railway will reach the chief town of the Arthabasca district?"

Canadian National Railways Construction, Betterments, Etc.

Halifax Ocean Terminals.—A press report states that the Dominion Government has authorized the construction of a new pier and wharf at the Halifax Ocean Terminals. The pier is to be built on the site of the old pier, and the wharf is to be built on the site of the old wharf. The pier is to be 1,000 feet long and 100 feet wide, and the wharf is to be 1,000 feet long and 100 feet wide. The pier is to be built on the site of the old pier, and the wharf is to be built on the site of the old wharf.

Coaling Plants for Eastern Lines.—A press report states that the Dominion Government has authorized the construction of coaling plants at several points on the Eastern Lines. The plants are to be built on the sites of the old coaling plants, and the new plants are to be built on the sites of the old coaling plants.

St. John Station.—A press report states that the Dominion Government has authorized the construction of a new station at St. John. The station is to be built on the site of the old station, and the new station is to be built on the site of the old station.

Western Lines Betterments.—Tenders were received recently for the construction of the following works:—
Ellis, Ont.—One triple 7 x 12 ft. reinforced concrete box culvert, 238 ft. long overall, at mileage 36.4, Lake Superior Subdivision.
Glenwater, Ont.—One 14 ft. slab top open box culvert, at mileage 44, Port Arthur Subdivision.
Fort Frances, Ont.—A 5-stall locomotive shed and boiler room, and foundation work for a turntable.
Emerson and Gladstone Subdivision, Man.—Fencing. Victoria Beach Branch, Man.—Fencing on 29 miles.
Eaton, Sask.—A 5-stall locomotive shed and boiler house; foundation for a turntable, and labor for a 60,000 gall. water tank.

Nepawa, Man., Signalling.—The C.N.R. has ordered a 16-lever Saxby & Farmer interlocking machine, with 13 working levers and 3 spare spaces, and other attendant mechanical materials, for Nepawa, Man., to be installed by the company's own forces.

Prince Albert Northerly.—We were officially advised in Nov., 1919, that surveys had been completed in Sept., 1919, for a line from Prince Albert, Sask., northerly for about 40 miles, to serve the Paddock Wood district, but that construction would not then be gone on with. Early in June tenders were called for construction on this line, and we are now officially advised that a contract had been let to Hebb & Sibbald for grading and culverts on the first 22 miles of the line out from Prince Albert.

Acadia Valley Branch.—We are officially advised that the contract for grading and culverts, on the extension of this branch, from mile 25 to 43, has been let to John Timothy, Winnipeg.

Turtleford Extension.—As stated in Canadian Railway and Marine World for July, a contract for grading on this extension was let recently to the Western Construction Co., North Battleford, Sask. We have since been advised that the contract is for 23 miles, commencing at Turtleford, Sask., and running southeasterly.

Kamloops - Vernon - Lumby - Kelowna Line.—At a recent meeting of the Kelowna, B.C., Board of Trade, letters were read from Hon. Martin Burrell and Senator Bostock relative to construction on this line, which stated that it had been thought possible to get the line completed by August, but that, although construction had been pushed forward with all possible dispatch, there was still much heavy work to be done, and D. B. Hanna, President, advised that he could not give a definite date as to when the line would be ready for traffic. (July, 1920, p. 105.)

Grand Trunk Railway Construction, Betterments, Etc.

Toronto to Hamilton.—A press report states that the company's officials are at present engaged in the construction of a new line from Toronto to Hamilton, Ont.

Toronto to Hamilton, Ont.—When the work of track elevation from near Dufferin St., Toronto, to Mimico was done, it was found that the old track was too low into a four track one.

London Track Elevation.—A press report states that City Engineer's report on the G.T.R. track elevation problem in London, Ont., is ready for presentation to the city council. A report is also, it is said, being prepared by G.T.R. engineers. The City Engineer's report will, it is stated, deal with subways, at Rectory and Waterloo streets, and an overhead bridge at Egerton St., to take care of the eastern section of the city; a subway at Rideout St., to give uninterrupted communication between north and south London; while questions connected with the crossings at Richmond, Clarence and Wellington Streets are held over, pending further development of plans for a union station. (July, pg. 388.)

Information Badly Mixed Up.

Some of our United States contemporaries, and even a few Canadian ones, get hopelessly astray very often in respect to Canadian railway matters. The following, which appeared in the Engineering News-Record, New York, recently, under "Railways, Proposed Work," is a sample:—

"British Columbia.—Until July 2, by Dept. Railways and Canals, Western Bk., Ottawa, building 50 mi. line north from Prince Albert and 60 mi. line from that point east along Saskatchewan River, for Canadian Natl. Ry. 34 Sparks St., Ottawa. C. B. Brown, Moncton, N.B., Ch. Engr."

The work referred to is not in British Columbia, but Alberta. Tenders were not asked for by the Railways and Canals Department, but by the Canadian National Ry., the headquarters of which are not at 34 Sparks St., Ottawa, which is merely a ticket office, but at Toronto. C. B. Brown, Moncton, N.B., is Chief Engineer of the old Canadian Government Ry., and some additional mileage, now forming part of the Canadian National Ry., but has nothing to do with the Western Lines, of which H. A. Dixon is Chief Engineer.

Official Trip Over Canadian National Ry., Western Lines.—D. B. Hanna, President, C.N.R., left Toronto early in July for a trip over the lines to the Pacific Coast, accompanied by A. J. Mitchell, Vice President. S. J. Hungerford, Assistant Vice President, went as far as Winnipeg with him, and A. E. Warren, General Manager, Western Lines, met him at Port Arthur. On July 14 he visited Grand Beach on Lake Winnipeg, and on the return trip to Winnipeg four cars of the train he was on were derailed at Gonor, through a defect in, or tampering with a switch, but no one was hurt. On July 16 Mr. Hanna was joined at Winnipeg by Hon. J. D. Reid, Minister of Railways, and a few days later, accompanied by a number of C.N.R. officials, they proceeded via Prince Rupert to Vancouver and Victoria, and are expected to return to the east early in August.

Montreal Incline Ry.—The Montreal City Council has ordered the immediate removal of the debris of the dismantled incline railway up the mountain.

The Canadian Pacific Railway's War Veterans.

Up to June 30 the C.P.R. has given employment to 18,330 returned soldiers. When any C.P.R. man sailed for voluntary service overseas, he carried with him not only credit for six months pay, but also the promise of a position awaiting his return, of equal value to the one he left. That promise was more than kept, for the C.P.R. scale of pay was raised during the war to correspond with the increased cost of living, and re-employment in the same position in most cases meant re-employment at higher pay. Not only was the door thrown wide open to C.P.R. returned men, but for all new openings preference has been given to returned men in general, so that whereas the company's moral obligation covered only the 7,000 who applied for reinstatement, its actual record has been the employment of over 18,000 ex-service men—or more than 20% of the total payroll. The actual figures up to June 30 are as follows:—

Total reported as joining the army	11,602
Dead	1,100
Wounded	2,008
Re-employed in the service	7,008
Total soldiers given employment	11,322
Total soldiers given employment	18,330

Army service naturally upset the old order of life, and a percentage of those who might have come back to railway service in Canada drifted elsewhere. Of the various types of railway employe the trainmen and locomotive men appear to have remained most true to their old love, as the following figures show:—

	Enlisted	Killed or died on active service	Re- em- ployed
Train and locomotive men	1,340	270	1,068
Shop men	2,737	270	1,813
Clerical	3,077	280	1,820
Miscellaneous	2,860	313	1,789
Maintenance of way em- ployes	508	32	248
Total	11,062	1,100	7,008

Of the C.P.R. men re-employed, 370, or over 5%, won special distinction, including two V.C.'s; 2 C.M.G.'s; 17 D.S.O.'s; 3 with bar to D.S.O.'s; 3 D.S.C.'s; 54 M.C.'s; 47 D.C.M.'s; 180 M.M.'s; 13 with bar to M.M.; 17 M.S.M.'s; 13 Croix de Guerre, and one Legion of Honour. Particulars of some of these follow:—

Victoria Cross.—Robertson, John Peter, locomotive man, Medicine Hat; Stuart, R. N., officer, Atlantic Service.

Companion of Order of St. Michael and St. George.—Hesketh, J. A., D.S.O., D.C.M., Asst. Engineer, Winnipeg; Ramsey, C. W. F., Engineer of Construction, Montreal.

Distinguished Service Order.—Barber, H. G., Resident Engineer, Nelson; Bliss, R. H., clerk, Smiths Falls; Cantlie, G. S., Gen. Supt., Car Service, Montreal; Carmichael, John, engineer, B. C. C. Service; Coppock, R. C., officer, Atlantic Service; Cox, H. W. D., fitter, Medicine Hat; Doughty, E. S., Land Agent, Calgary; Gascoigne, F. A., Supt. Car Service, Montreal; Hesketh, J. A., Asst. Engineer, Winnipeg; Hillman, D., Div. Engineer, Sudbury; Flint, Chas., Resident Engineer, Edmonton; Leask, Thos. McCrae, Surgeon, Moose Jaw; Maitland, Oliver Mowat, clerk, Moose Jaw; Quine, J., engineer, B. C. C. Service; Ripley, B., civil engineer, Toronto; Stuart, R. N., officer, Atlantic Service; Wilson, R. (with bar), engineer, Atlantic Service.

Distinguished Service Cross.—Fergus-

son, Herbert J., officer, Atlantic Service; Haines, W. P., officer, Atlantic Service; Outram, Edmund, officer, Atlantic Service.

Legion of Honour.—Chalus, C., chauffeur, Brooks.

Officials Re-instated.—The C.P.R. policy of finding a position at least as good as the position given up was carried out in the higher ranks of the service, as well as in the lower. Thus for instance:

T. S. Acheson, who was employed, before joining the army, as General Agricultural Agent, Winnipeg, was re-employed in same capacity.

G. W. Curtis, who was employed as Industrial Agent, Montreal, was re-employed in same capacity.

M. L. Duffy, who was chief clerk, Freight Department, London, Eng., was re-employed as Agent at Glasgow.

F. A. Gascoigne, who was Superintendent Car Service, Montreal, resumed duty as Secretary-Treasurer Canadian Pacific Ocean Services Ltd., Montreal.

Gerald Hiam, who was District Freight Agent at Fort William, returned to duty as District Freight Agent, at Cleveland.

W. M. Kirkpatrick, who was Assistant Freight Traffic Manager, at Montreal, resumed duty as Assistant Freight Traffic Manager at Winnipeg.

T. M. Leask, who was Chief Surgeon at Moose Jaw, resumed duty as Chief Medical Officer there.

B. H. Mucklestone, who was Division Engineer, Natural Resources Department, Calgary, resumed duty as Division Engineer.

G. G. Ommanney, who was Special Assistant Engineer, Montreal, resumed duty as Assistant Engineer in Chief Engineer's Department, Montreal.

L. C. Ord, who was Assistant Works Manager, Angus shops, Montreal, resumed duty in same capacity.

C. W. P. Ramsey, who was Engineer of Construction, Montreal, and who took command of the Canadian Overseas Railway Construction Corps, resumed duty as Relieving Superintendent on Eastern Lines.

M. J. Robertson, who was Assistant to Manager, Real Estate Department, Montreal, returned to duty in his former position.

H. B. Yewdall, who was Purchasing Agent, Right of Way Department, Winnipeg, resumed his former position.

James Duff, who was General Townsite Agent at Calgary, was re-employed as Superintendent of Townsites, at Calgary.

G. E. Hall, who was Assistant General Storekeeper, Montreal, was re-employed in same capacity.

A. H. Kendall, who was Master Mechanic at Toronto, was re-employed as Master Mechanic, Quebec District.

Robt. McKillop, who was Superintendent, Montreal, was re-employed as acting Superintendent at Chapeau, and is now Superintendent at London.

A press report states that it is expected that early in August all freight trains operated by the Canadian National Ry. into and out of Quebec will be run over the Quebec bridge, and that the present car ferry service between Levis and Quebec will be abandoned, the car ferry, however, being held for use in emergencies. It is not expected that anything will be done in the way of taking Grand Trunk passenger cars into Quebec over the bridge until the autumn.

Railway Windbreaks for Snow and Sand.

By H. M. Winegar, Forestry Inspector, Canadian Pacific Ry.

Railways use two kinds of fences for snow and sand fences. One is a portable one which can be shifted and set in place from time to time, and a permanent one which is established on the right of way. The former fence is taken down in the spring and put up in the autumn. The advantage of the type of fence in style is that it is built 12 ft. and 16 ft. apart, it is easily handled. The maintenance, however, is very high, and the expense necessary in moving considerable. The temporary fence, however, is unsightly. Tree fences recommend themselves on account of their original cost, the small maintenance expense involved after plantations have been established several years, and because of their appearance. Their disadvantage is their liability to fire. Extra precautions are necessary on the part of the track forces to keep fire from getting into the plantation.

There are some fine examples of tree fences in the Ontario orchard belt. Some of these fences have evidently been located at least 50 years. On the wind-swept prairies, too, settlers have found trees an excellent protection both in winter and in summer. Railway officers have been aware of the practicability of this type of fence for some time, but the price of lumber and posts, until recently, has not made tree planting very attractive. However, tree planting today, in eastern Canada, can be done for less than one half the cost of wooden fences. Live fences are effective and economical. After the third and fourth year, no maintenance is required. They are decorative and do much to make the right of way attractive.

Planting has been done very successfully by the Intercolonial Ry. in northern New Brunswick, since 1887. Here the local red spruce has been dug up from nearby fields and transplanted. This work is still being carried on. When the trees reach a height of 9 to 10 ft., the tops are trimmed. Trees from 18 to 36 in. high have been planted in two rows. From time to time any failures have been taken out and replacements made. This is perhaps the most striking example of just what can be done along this line.

The Canadian Pacific and the Minneapolis, St. Paul & Sault Ste. Marie railways have been planting for a number of years in the prairie country. Moisture conditions limit the varieties to deciduous shrubs and trees. From six to eight rows of shrubs and trees are required. Locust, carragana, willow and poplar are the species used. An attempt is being made, after the plantations have been several years located, to interplant with spruce.

The ideal snow fence appears to be the white or red spruce of this country, or the Norway spruce, planted two or three rows staggered. The trees hold their foliage well to the ground. They grow rapidly, making from 10 to 16 in. annually, after having become established. They make an excellent snow barricade, and are striking in appearance.

Balsam, though of a more rapid growth than spruce, is subject to more enemies, is considerably more brittle, and is not so satisfactory in holding its lower branches. It should do well, however, in mixture.

Cedar is used extensively, and although of slower growth than any of the other species planted, when once established,

does extremely well. It makes an even more artistic show than perhaps any of the other species. North of Lake Superior, and west to the prairies, where jack pine predominates, the use of this tree is to be recommended. It is of quick growth, but has the drawback of losing its lower branches quickly, especially when planted close. It should be used in mixture with spruce, balsam or cedar. Norway pine has the same growing characteristics, but, like the jack pine, it will probably do well in the mixture. Use of hemlock has been recommended, but it would appear the least satisfactory of all trees mentioned.

A factor which affects the cost of planting trees and on which success of the plantations depends is the distance which trees have to be hauled. If it were possible to lift trees only a short distance, say within half a mile, the loss would be greatly reduced. It is obvious, however, that where trees are transported from wagons to cars and then taken to destination, drying out of the roots occurs, and the loss is greatly increased. Proper weather conditions are necessary for this work. Trees which are handled in cool, damp weather have a much better chance than if transplanted when weather is dry and hot.

There has been much discussion as to the time when trees should be planted. Successful work has been done in the spring, and again from the middle of September till heavy frost sets in. Where the soil is very heavy and difficult to work, and where heavy boulders are found, the expense is greater and the difficulty of establishing plantations much increased. If it is necessary to use a spade to work the ground, the roots of the trees are much more likely to get insufficient space than where ploughing is done. The following methods have been suggested for establishing tree fences. Trees are planted from 2 to 2½ ft. apart in rows. These rows are from 2 to 3 ft. apart. Two to three rows are necessary.

Nursery stock being impossible to obtain at reasonable figures, we are forced to depend largely on trees dug from the wood. Greater loss is anticipated from this class of material.

The smaller the trees planted, the greater the chance for success. The cost of lifting smaller trees and planting them is much less than the expense involved in lifting bigger stock. It is not practical, however, to use large trees. The expense would be too great, and handling and loss very high. Even nurseries do not handle large conifers, except at a prohibitive rate. Nursery stock is, of course, much more easily handled than wild grown trees. It appears to be good practice when natural grown stock is used to plant trees from 18 to 36 in. high.

The ground to be planted is prepared in the spring or autumn preceding the planting. Ploughing is done and a disc is used. If trees are to be planted in the autumn, the ground should be cultivated during the summer to keep down the weeds. It appears to be good practice to plough a strip about 12 ft. wide, 3 ft. of the plantation on either side being left for fire breaks. It is necessary to keep these fire breaks maintained for several years. Cultivation should be done for at least three or four years.

Extra protection should be taken to see that grass fire are not let near snow fences.

Quebec Public Service Commission Legislation.

The Quebec Legislature at its last session passed an act repealing of the Revised Statutes of 1909, chap. 3, sec. 3, dealing with the organization of the Quebec Public Utilities Commission, and replacing it by a new section. The title of the commission is changed to that of the Quebec Public Service Commission, and the words "public service" are defined to mean "every corporation, other than a municipal or school corporation, firm, person or association of persons subject to the legislative authority of the province, or any lessee, trustee, liquidator or receiver thereof, that owns, operates, manages or controls any system, works, plant or equipment for the conveyance of telegraph or telephone messages, or for the conveyance of passengers or goods over a railway or tramway, or upon any lake, river or stream, or for the production, transmission, delivery or sale of heat, light, water or power." If a municipal or school corporation carries on any of these operations, outside of its own territorial limits, it is brought under the commission's control to that extent.

The commission is to consist of a President, Assistant President and one other member, to be appointed by the government for 10 years, subject to removal for cause. Two commissioners shall form a quorum, and the President's decision as to matters of law shall prevail. In unopposed matters, one commissioner may act. The government may appoint a substitute for any commissioner to act on any matter in which it appears any of the commissioners may be interested. The commissioners may engage in any other occupation not inconsistent with the performance of his duties as a commissioner, but may not hold any shares, or other security of any public service, or have any interest in any patented device which may be used for the purposes of a business of public service. There shall be a Secretary of the commission, and expert and technical assistants shall be appointed from time to time as occasion may arise. The commission shall arrange its own laws of practice. Following are the salaries fixed in the act: President, \$7,000 a year; commissioners, \$3,500 each; Secretary, \$2,400.

The commission shall have jurisdiction in all matters under the control of the Executive Committee's Railway Committee, in all questions relating to the transportation of goods on the line of any tramway company; in all matters under the control of the Minister of Public Works and Labor as set out in the civil code articles 6592 to 6596 inclusive, and in other matters dealing with public service, rendered by corporations other than transportation companies.

Other sections of the act deal with the manner in which the commission shall exercise its powers. The orders of the commission may be appealed against to the Court of King's Bench appeal side. A report upon the company's work for each year ending June 30, is to be made to the Attorney General.

The commissioners are F. W. Hibbard, K.C., President; Sir George Garneau and F. C. Labuge, C.E. The Secretary is Jos. Ahern, K.C.

Toronto, Hamilton and Buffalo Railway Co's Annual Report.

Following are extracts from the report for the calendar year 1919. The report covers the operation of mileage as follows: main line, 79.88 miles; branches, 20.07 miles; lines operated under trackage rights, 4.36 miles; total road operated, 104.31 miles.

There was no change in the capital stock during the year, the amount authorized being \$5,500,000 and the amount outstanding remaining at \$4,512,500.

The funded debt Dec. 31, 1918, was \$5,955,000. It has been decreased by payments, Feb. 1, and Aug. 1, of 12th and 13th installments, respectively, on equipment trust notes, \$150,000. Total funded debt Dec. 31, 1919, \$5,805,000.

Summary of Financial Operations Affecting Income.

Railway operating income—1919	1918
Rail operations.....	1918
Revenues.....	\$2,500,916.78 \$2,005,481.67

Sundry adjustments.....	11,209.94
Balance at credit of profit and loss Dec. 31, 1919.....	\$255,718.28

During the year covered by this report the total operating revenues were \$2,500,916.78, a decrease from the previous year of \$544,564.89. Freight revenue was \$1,739,637.63, a decrease of \$568,173.34, due to a general falling off of business, largely attributable to the fact that in the previous year a considerable amount of war material was carried. Passenger revenue was \$581,430.11, an increase of \$148,903.56, due to the cessation of the war and the demobilization of the troops, permitting the resumption of regular passenger travel. Express revenue was \$28,310.00, a decrease of \$34,428.20. This decrease was caused by the fact that during the war period much heavy material was shipped by express to expedite its manufacture. Switching revenue was \$94,159.24, a decrease of \$26,602.77, which naturally follows the falling off of freight revenue.

Demurrage revenue was \$18,233.00, a decrease of \$71,400.50, due to the decrease in volume of business. Dining and buffet revenue was \$29,853.96, an increase of \$7,439.94, due to increase in passenger travel. Operating expenses were \$2,006,997.76, an increase of \$132,641.63, and equals 80.25% of operating revenues. This is 18.70% greater than the operating ratio of the previous year.

The fluctuations in operating expenses by groups were as follows:

Maintenance of way and structures, increase.....	\$ 78,262.81
Maintenance of equipment, increase.....	27,572.32
Traffic expenses, increase.....	3,483.74
Transportation expenses, decrease.....	46,121.85
Miscellaneous operations, increase.....	6,215.01
General expenses, increase.....	63,229.31
Net increase.....	\$132,641.63

The increase in operating expenses, excepting the general expenses group, is due to the various increases in the rates of pay granted practically all classes of labor during 1919 and to the fact that the increases granted in 1918 in accordance with U.S. Railroad Administration general order 27 were effective only during the last four months of 1918, and to the considerable increase in the cost of material.

The increase in expenses in the general expenses group is due entirely to the adverse exchange situation that obtained in the United States against Canada during the entire year. Much of our material is purchased and considerable miscellaneous expenses are incurred in the U.S., necessitating payment in U.S. currency, while the major portion of our revenues are paid to us in Canadian currency. The conversion of Canadian funds during the year cost the company \$76,495.18, and this has been charged to general expenses—other expenses.

After providing for dividends at the rate of 6% on outstanding capital stock, a surplus of \$67,771.40 was carried to profit and loss. The charges to road and equipment to Dec. 31, 1918, were \$12,818,467.09; net additions during 1919 were \$132,641.94. Total amount carried to Dec. 31, 1919, \$12,951,109.03.

The steel car ferry steamship Maitland No. 1, owned and operated by The Toronto, Hamilton & Buffalo Navigation Co., was continued in operation during practically the entire year, the mild weather experienced during January, February and March enabling the ship to remain in operation throughout the winter, it being necessary to tie up for a few days during March for repairs. The Maitland was then continuously operated until Dec. 23, 1919, on which date, while approaching Port Maitland in a dense fog, she ran on to a reef and could not be hauled off until a considerable portion of the cargo had been thrown overboard. The ship was placed in dry dock at Buffalo, overhauled and completely restored. The total loss due to the disaster, all covered by insurance, is estimated at \$80,000. After the completion of the necessary repairs the ship will be as good as new and will be placed in regular car ferry service at the opening of the navigation season of 1920. The net income for 1919 was \$6,418.21, a decrease of \$13,301.61 from the previous year, being 1.60% on the capital stock of the navigation company, all of which is owned by the T., H. & B. Ry. Co. This, in view of the general decline in freight business that occurred, is a very satisfactory showing. The operating income of the branch line extending

to Port Maitland was \$95,519.82. After deducting interest and other fixed charges the net surplus from the handling of traffic over this branch line was \$55,025.95. The revenue accruing to this company on business originated on or in connection with the Port Maitland line over and above the earnings on traffic handled over the branch itself amounted in the year to \$188,259.85, an increase of \$6,135.92 over the previous year.

Results of Government Control of British Railways.

A statement issued recently by the British Ministry of Transport shows that during the year ended Mar. 31, 1920, the controlled railways of the United Kingdom earned from passenger train traffic, £94,818,686; from goods train traffic, £89,485,894, and from government traffic, £18,264,182, a total of £202,568,762. This has to be reduced by £11,007,656 to cover cost of collection and delivery, £5,956 added for mileage demurrage and wagon hire, and £1,840,901 added under miscellaneous headings. Total revenue is, therefore, brought to £193,407,963, against which must be set an expenditure of £185,819,213, leaving a balance of £7,588,750. This is reduced by £447,680 by the loss on "Other businesses"—passenger road vehicles, steamboats, canals, docks, harbors and wharves, hotels, refreshment rooms and cars, etc.—to £7,141,070, to meet a total to be made up by the government guarantee of £48,490,600. This includes £47,440,000 as the standard year proportion of net receipts; while £1,050,600 has to be added to cover interest on capital works brought into use, bringing the net government liability to £41,349,530. This total does not represent the whole of the charge falling on the exchequer, since no account is taken of the liabilities which may attach to the government in respect of replacement of stock of stores and materials; abnormal wear and tear, and arrears of maintenance other than permanent way and rolling stock.—Railway Magazine, London, Eng.

Training of Future Railway Officials.

Sir Henry W. Thornton, General Manager Great Eastern Ry. of England, in addressing the Institute of Transport recently, said:—"Training and education of future railway officers will not be confined to specialization in a single subject. Education and training of competent officers of the railway is a matter in which the Institute of Transport can, and I have no doubt will, play a large part. The high railway officer of the future can no longer be exclusively skilled in the movement of traffic, or be a brilliant engineer or a great accountant. He will have to be all of these in a degree. An analyst primarily, with the ability to appreciate the full effect of such movements as we have lately passed through, the economic side of the problem and to foresee the future. There must be a call for men of better general education, of studious and scholarly habits of mind and judicial tendencies of thought. The day of the railway officer who follows precedent, merely because it is such, and is complacent in establishing practices, or dwells within the narrow confines of the department in which he was educated, is past."

Birthdays of Transportation Men in August.

W. J. Brown, General Agent, Passenger Department, Canadian National Ry., Montreal, Ont., Aug. 1, 1880.

C. B. Brown, Chief Engineer, Eastern Division, Canadian National Ry., Montreal, N.B., born at Ithaca, N.Y., Aug. 27, 1879.

J. S. Carter, District Passenger Agent, C.P.R., Nelson, B.C., born at Aurora, Ill., Aug. 14, 1883.

Hon. F. B. Carvell, K.C., Chief Commissioner, Board of Railway Commissioners, Ottawa, Ont., born at Bloomfield, N.B., Aug. 14, 1862.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1901, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the board are given in full on another page of this issue.

General order 300. June 30.—Ordering that date on which forms of Live Stock Contracts and the Special Contract with Attendants in Charge of Stock, Schedules A and B respectively, to general order 238, June 2, shall become effective, be postponed from July 1 to July 15.

29,768. June 18.—Approving agreement, June 5, between Bell Telephone Co. and Osprey Twp., Gray County, Ont. 29,769. June 21.—Rescinding order 28,804, Sept. 12, 1919, re G.T.R. siding on Lot 22, C. 1, Elizabethtown Twp., Que. 29,770. June 21.—Authorizing C.P.R. to build spur for Fraser Valley Milk Producers' Association, in Sumas municipality, New Westminster District, B.C. 29,771. June 21.—Relieving Grand Trunk Pacific Branch Line Co. and C.P.R. from maintaining signalman at crossing on Sundays, at Druid, Sask. 29,772. June 22.—Extending to Aug. 2, time within which G.T.R. may close, temporarily, to siding for Christie Henderson Co., Pulpinch Twp., Ont. 29,773. June 22.—Authorizing Canadian National Rys. to build spur for Imperial Oil Ltd. at Melfort, Sask. 29,774. June 17.—Amending order 26,031, Apr. 17, 1917, re G.T.R. subway and road diversions at Lyn Road, Elizabethtown Twp., Que., to provide that 25% of the cost of the extension, all \$15,000, be paid out of railway grade crossing fund. 29,775. June 17.—Authorizing Canadian National Pacific Ry. to cross and divert highway at Okanagan Branch at mile 26.4 from Kamloops Jct., in s.w. ¼ Sec. 30, T. 27, Range 20, west 4th meridian. 29,777. June 22.—Authorizing G.T.R. to build spur from corner of Rebecca St., and Ferguson Ave., Hamilton, Ont. 29,778. June 17.—Appportioning cost of transfer track between Canadian Northern Saskatchewan Ry. and C.P.R. at Yorkton, Sask.; 25% to be paid by C.P.R. and 75% by C.N.S.R. 29,779. June 17.—Authorizing diversion of Rosebud River and filling in of two bridges by C.P.R. in s.w. ¼ Sec. 30, T. 27, Range 20, west 4th meridian. 29,780. June 17.—Authorizing Canadian Northern Pacific Ry. to cross and divert highway at miles 11.9, 11 and 2, Vernon-Kelowna line, Okanagan Branch, B.C. 29,783. July 13.—Rescinding order 29,050, Nov. 17, 1919, re building of farm crossing by G.T.R. for A. McGuinness, Marysville, Ont., without prejudice to applicant to renew application for same. 29,857. July 15.—Authorizing Toronto, Hamilton & Buffalo Ry. to operate trains over crossing on Aberdeen Ave., Hamilton, Ont. 29,858. July 14.—Relieving G.T.R. from providing further protection at crossing of Victoria Park Ave., East Toronto, Ont. 29,859, 29,860. July 15.—Authorizing St. Thomas Municipal Ry. for three months from date to operate pay as you enter omnibuses between the end of the crossing at Wellington St. and Talbot St., St. Thomas, Ont.; in addition to watchmen already provided by L. & P. S. Ry., applicant to provide watchmen between mile 5 and mile 6, on crossing to have charge of railway and street traffic; cars of both companies to stop before crossing, and railway cars

Among the Express Companies.

G. Allen has been appointed agent, Dominion Ex. Co., Kingston, Ont., vice F. W. Carr, transferred.

D. M. Wilson, formerly agent, Dominion Ex. Co., Medicine Hat, has been appointed agent, Banff, Alta.

W. Kelly, heretofore cashier, Dominion Ex. Co., Swift Current, Sask., has been appointed agent, Moose Jaw, Sask.

D. F. Martin, heretofore route agent, Dominion Ex. Co., North Bay, Ont., has been appointed route agent, Toronto.

C. R. Fitzsimmons, heretofore agent, Dominion Ex. Co., McAdam, N.B., has been appointed agent, Woodstock, N.B.

J. H. Whitehouse has been appointed agent, Dominion Ex. Co., Kamloops, B.C., vice H. L. Maltby, transferred to Macleod, Alta.

R. Murray has been appointed acting route agent, Dominion Ex. Co., North Bay, Ont., vice D. F. Martin, transferred to Toronto.

C. H. Badendick has been appointed cashier, Dominion Ex. Co., Swift Current, Sask., vice W. Kelly, transferred to Moose Jaw, Sask.

The Canadian National Ex. Co. has opened offices at Perthuis, Que., and Cameron Falls, Ont., and has closed its office at Cronyn, Ont.

A. T. Grimmer, St. Stephen, N.B., has been appointed agent, Dominion Ex. Co., McAdam, N.B., vice C. R. Fitzsimmons, transferred to Woodstock, N.B.

H. L. Maltby, heretofore agent, Dominion Ex. Co., Kamloops, B.C., has been appointed agent, Macleod, Alta., vice J. D. McLaren, transferred to Banff, Alta.

W. J. Malcolm, heretofore chief bill clerk, Dominion Ex. Co., Toronto, has been appointed agent, Galt, Ont., vice E. Anderson, transferred to Windsor, Ont.

J. I. M. Grant, heretofore cashier, Canadian Ex. Co., St. Catharines, Ont., has been appointed agent, Bradford, Ont., vice G. A. Oliver, resigned from the service.

E. Anderson, heretofore agent, Dominion Ex. Co., Galt, Ont., has been appointed acting agent, Windsor, Ont., vice W. Aitchison, agent, resigned from the service.

W. J. Gasper, heretofore messenger, Dominion Ex. Co., Halifax to Sydney, N.S., has been appointed agent, Dartmouth, N.S., vice T. B. Spencer, resigned from the service.

The Board of Railway Commissioners has approved location and details of express buildings to be built for Canadian Ex. Co. at G.T.R. stations at Bracebridge and Huntsville, Ont.

The agreement arrived at between the Canadian National Ex. Co. and its employees, at the end of June, provides for wage increases averaging approximately 25%. It is stated that the annual increase to the company's wage bill will be about \$200,000, the increases covering about 600 employees at various points between the Atlantic and Pacific Oceans.

The Association of Railway Executives decided at New York, July 16, according to a press report, to recommend to all railways that U.S. express business continue to be handled under Federal control, as it was during the war, by one agency, the American Railway Ex. Co. The reason for this recommendation is stated to be, that the four original express companies have practical-

ly ceased to exist. A standard form of contract between the Canadian railway companies and the American Railway Ex. Co. is being prepared and submitted to the Interstate Commerce Commission for approval.

Justice Masten, of the Ontario Supreme Court, has recently decided that the action of the Ontario License Board in forbidding them to accept liquor consignments from the firms concerned. This judgment was given on an application of a firm of liquor dealers at Kenora, Ont., for a mandamus to compel the Dominion Ex. Co. to accept shipments of liquor for export out of Ontario to foreign countries. A similar judgment was given in Calgary, Alta., July 6, where a test case against the Dominion Ex. Co. was tried, the judgment declaring that the company is bound to receive and carry any liquor tendered to it by dealers.

The Dominion Express Co.'s London-Paris Air Service.

A distinctly novel attraction was provided recently in the Canadian Pacific Ry. office windows at Charing Cross, London, Eng., viz., an excellent model aerodrome of the Aircraft Transport & Travel, Ltd., at Hendon, together with scientifically accurate models of various types of aeroplanes and airships. Such a display in a railway and shipping office is a sign of the times, also marking much enterprise on the part of the Dominion Express Co., Ltd. Realizing the importance of maintaining a really "express" service, if its name is still to be justified, the Dominion Express Co. made arrangements to act as passenger and parcels agents for the Aircraft Transport & Travel, Ltd., on its London-Paris daily air service. It is thus possible for either passengers or parcels to be booked for conveyance by aeroplane to or from London and Paris through any of the Dominion Express Co.'s offices in Europe, and these, in addition to London, are to be found in important cities such as Liverpool, Glasgow, Manchester, Birmingham, Bristol and Paris. The Dominion Express Co., holding, as it does, the exclusive right of shipping express parcels over the entire C.P.R. system, as agents for the aeroplane service can ensure that an express package scheduled to go on a certain ship actually reaches its destination in Canada in the shortest possible space of time. The timetable shows that only 24 hours is occupied on the journey to or from London and Paris—urgent letters are carried at 2s. 6d. an ounce over the ordinary letter rates. Parcels for delivery in Paris on the same day have to be handed in at 62 Charing Cross, London, S.W.1, before 10.30 a.m. The parcels rates range from 1s. 6d. to 2s. 6d. a pound, according to quantity, while special rates are quoted for large and regular consignments. The single fare for passengers is 15 guineas, which includes a car to convey the passenger to Hounslow, the starting point.—*Railway Magazine, London, Eng.*

Canadian National Ry. Rolling Stock. There has been deposited with the Secretary of State at Ottawa, duplicate and original of a lease and agreement dated May 1, made by the Canadian National Rolling Stock Ltd. to the Canadian Northern Ry. Co., covering certain rolling stock, attached to which is an assignment to the Girard Trust Co.

The Railway Situation in the Gaspé Peninsula.

In connection with the railway situation in the Gaspé Peninsula of Quebec, to which considerable attention has been attracted recently by questions in Parliament, and by an investigation of the condition of the Atlantic, Quebec & Western Ry. and the Quebec Oriental Ry., and the services given by them, conducted by the Board of Railway Commissioners, a petition has been forwarded to the Dominion Government asking that these lines be taken over and consolidated as a branch of the Canadian National Ry. The petition is reported to have been largely signed in all the parishes lying between Matapédia and Gaspé, along the route of the two lines, a distance of 202 miles. C. Marcell, M.P. for Bonaventure County, has written D. B. Hanna, President, Canadian National Ry., calling attention to what has been done, and claiming advantages that would accrue to the C.N.R. through the development of the country through which the lines pass, were they efficiently operated. He also points out that by the construction of a railway bridge across the Restigouche River between Cross Point, Que., and Campbellton, N.B., connection would be afforded with the Intercolonial Ry. and the International Ry. of New Brunswick. The construction of the bridge referred to was a work in which the late Thos. Malcolm, who built the International Ry. of N.B., was greatly interested, and endeavored to carry through, but without success.

A cablegram states that at a meeting of Atlantic, Quebec & Western Ry. shareholders in London, Eng., the chairman referred to correspondence and interviews with members of the Dominion Government regarding the sale of the line, but that no decision had then been reached in regard to it.

Electric Railway Department

The Hydro Electric Railway Situation in Ontario.

Sir Adam Beck, Chairman of the Hydro Electric Power Commission of Ontario, issued the following statement on June 29:—

"Subsequent to the Dominion Government acquiring the Canadian Northern Ry. and the various electric lines, viz., the Toronto Eastern, the Toronto Suburban and the Niagara, St. Catharines & Toronto Railways, the Chairman of the Hydro Electric Power Commission approached the Minister of Railways and Canals to determine what arrangement might be made to acquire these electric railway lines from the Dominion Government, thus avoiding the duplication and paralleling of electric railways in the districts in which the municipalities had already voted in favor of radial railways, as well as in those districts in which the municipalities contemplated constructing electric railways. The Minister of Railways and Canals was in full accord with such a policy, and gave an option to the Commission for the sale of the Toronto Eastern Railway, partly constructed, in the district between Toronto and Bowmanville, upon which the municipalities subsequently voted and carried by large majorities.

"When the vote was taken from Port Credit to St. Catharines as a part of the line between Toronto and Niagara Falls, the submission of the bylaws for the construction of the section from St. Catharines to Niagara Falls was delayed, the Commission contemplating the acquiring of the Niagara, St. Catharines & Toronto Ry. as a part of this system, thus saving duplication and paralleling of existing lines in the Niagara district.

"At a subsequent conference with the Minister of Railways and Canals, and a sub-committee of the Privy Council appointed for this purpose, an agreement was reached which the Chairman of the Hydro Electric Power Commission was prepared to recommend to the Commission, that the municipalities submit by-laws and agreements for the acquiring and operation of the Toronto Eastern, Toronto Suburban, and Niagara, St. Catharines & Toronto Rys., which recommendation and agreement was subsequently approved by the Dominion Cabinet. The offer agreed upon and the recommendation of the Chairman are as follows, contained in a memorandum to Hon. J. D. Reid, Minister of Railways, dated June 22, 1920:—

Offer for Electric Lines.

"I have discussed with the members of the Ontario Government the question of purchasing the three electric railways in Ontario owned by the Canadian National Rys., viz., the Toronto Eastern Ry., the Toronto Suburban Ry., and the Niagara, St. Catharines & Toronto Ry. I informed them of the discussion with the sub-committee of the Dominion Cabinet when last in Ottawa, and advised them that I was prepared to recommend the taking over of the said electric railways on the following terms:—

"Toronto Eastern Ry.—Price, \$706,000, payable by Hydro Power Commission 4½% 50-year bonds, guaranteed by Province of Ontario.

"Toronto Suburban Ry.—On this railway there are \$2,628,000 of outstanding 4½% bonds due 1961. This is to be

taken over by the Hydro Power Commission, the Commission to assume the bonds.

"Niagara, St. Catharines & Toronto Ry.—Price for this railway to be \$3,544,374.10. On this road there are \$1,098,000 5% bonds due 1929. The Hydro Power Commission will assume these bonds, and give Hydro Power Commission bonds guaranteed by the Province of Ontario, 4½% 50-year bonds for the difference between \$1,098,000 and \$3,544,374.10.

"It was understood in the discussion with the sub-committee of the Dominion Cabinet that the Toronto Suburban Ry. and the Niagara, St. Catharines & Toronto Ry. must be taken together.

"I understand a meeting of the Ontario Government will be held tomorrow,

Canadian Electric Railway Association.

Honorary President, Lieut.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co.

Honorary Vice President, Acton Burrows, Proprietor and Editor, Canadian Railway and Marine World.

President, A. Gaboury, Superintendent, Montreal Tramways Co.

Vice President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.

Honorary Secretary-Treasurer, pro tem, A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.

Executive Committee, The President, Vice President, and F. D. Burpee, General Manager, Ottawa Electric Railway Co.; C. C. Curtis, Manager, Cape Breton Electric Co.;

A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.; Geo. Kidd, General Manager, British Columbia Electric Railway Co.; M. W. Kirkwood, General Manager, Grand River Railway Co. and Lake Erie & Northern Railway Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Railway Co.; R. M. Rende, Superintendent, Quebec Railway Light & Power Co.; Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Railway Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Railway Co.

Official Organ—Canadian Railway and Marine World, Toronto.

and may I ask that you authorize me to say the Dominion Government are prepared to accept this offer?

"It is understood if the Hydro Power Commission take over these radials railways on behalf of the municipalities it is one of the conditions, in view of the above agreement as to price, that an exclusive traffic agreement will be made for all traffic between the above electric railways and the Canadian National Government-owned railways."

Following is the balance of Sir Adam Beck's statement to the public in this connection:—

"In the case of the Toronto Eastern Ry., the municipalities voted in favor of acquiring and extending the railway in the fall of 1919, and have executed their agreements for the acquiring and extension of this property. It covers the district between Toronto and Bowmanville, 45 miles in length.

"The Toronto Suburban Ry. is constructed and operated in the district between Toronto and Georgetown, Guelph, Toronto, Weston and Woodbridge, and within the limits of the city of Toronto,

and is 64 miles in length. The municipality of Brampton, in this district, has expressed its desire for a connection with the Toronto Suburban and Toronto. The acquiring of the Toronto Suburban will eliminate the necessity of constructing the line between Port Credit and Guelph, as a part of the Toronto-to-London line, as the Toronto Suburban will provide the service to Guelph and will connect with the Toronto and Hamilton line at or near the Humber.

"The Niagara, St. Catharines & Toronto Ry. operate approximately 81 miles of railway in the Niagara Peninsula, between St. Catharines and Niagara Falls; St. Catharines, Thorold, Welland and Port Colborne; St. Catharines and Niagara-on-the-Lake, and St. Catharines and Port Dalhousie.

"Under the proposed agreement and recommendation for the acquiring of the above electric railways from the Dominion Government the arrangement for financing is similar to that adopted by the Commission in the acquiring of the Sandwich, Windsor & Amherstburg Ry. from the Detroit United Rys. and the Guelph Radial Ry. from the city of Guelph.

"The only money required by the Commission for the equipment, construction and operation of electric railways under contemplation for 1920 will be approximately \$1,000,000, and for 1921, \$2,500,000, as the Commission does not intend to make any unnecessary expenditure on account of radial railway construction until the cost of labor and material will warrant.

"The Hydro Electric Power Commission at its meeting today approved the recommendations and offer of the Dominion Government, and issued instructions that application be made to the Ontario Government for an order in council authorizing the submission of agreements and bylaws by the municipalities interested in the districts covered by the above mentioned lines.

"The municipalities interested are as follows:—

"Toronto Suburban Ry.—Townships of Etobicoke, Vaughan, Toronto, Chingawacousy, Esquesing, Nassagaweya, Eramosa, Puslinch, Guelph; villages of Woodbridge, Georgetown, Acton; towns of Weston, Brampton; cities of Toronto, Guelph.

"Niagara, St. Catharines & Toronto Ry.—Townships of Niagara, Grantham, Stamford, Louth, Thorold, Pelham, Crowland, Humberstone; villages of Port Dalhousie, Humberstone; towns of Niagara, Merriton, Thorold, Port Colborne; cities of St. Catharines, Niagara Falls, Welland."

The Ontario Government Refuses the Commission's Request.

Hon. E. C. Drury, Premier of Ontario, wrote Sir Adam Beck on July 6 as follows:—"In reply to the communication from the Hydro Electric Commission regarding the Toronto Suburban Ry. and the acquiring of the Niagara, St. Catharines & Toronto Ry., I beg to say, that the Government has given this matter its very full and careful consideration, and has decided, for the reasons set forth in the accompanying memorandum, to defer action in regard to the acquisition of these roads until such time as we have

which would be a great advantage to the availability of the roads with both present and future traffic. The Commission, however, is not prepared to proceed with the construction of such railways further than the present stage, as it is not possible to get on with the work unless it is taken in hand as a whole, not because of any feeling of lack of confidence in either hydro electric power or in the Hydro Electric Commission, but because the Government, while responsible to the people of Ontario, feels that it should employ every means to fully inform itself of the feasibility and advisability of these great projects. The enquiry will be pushed with all possible speed, and as soon as every unnecessary delay should the Government finally decide to proceed with the project."

The following memorandum accompanied Mr. Drury's letter to Sir Adam Beck. "While the Government realizes the importance of rapid and economic transportation and is much impressed by the case presented by Sir Adam Beck and the municipalities, it cannot disregard the many and serious problems involved in the proposals now presented for the purchase and construction of hydro radial railways under government guarantees, and having now reached a conclusion as to the action it ought to take in the matter, it conceives it to be its duty to give reasons for the course it proposes to follow."

"Under the provisions of the Hydro Electric Railway Act, 1914, and amendments thereto, the Commission is authorized to enter upon the construction (or purchase) and operation of electric railway lines when the municipalities interested shall, in respect of any proposed line, have signed agreements containing terms and conditions laid down by the act, and deposited with the Commission debentures as to the amount of their respective shares of the costs of construction and equipment of the line. The Commission then issues its own bonds, guaranteed by the Lieutenant-Governor in council. The bonds thus issued and sold are to all intents and purposes the bonds of the province."

Lines Under Commission's Operation. "The only railways now being operated under this legislation are the Sandwich, Windsor & Amherstburg Ry. and the Windsor & Tecumseh Ry. These railways run from Tecumseh to Amherstburg, through Ford City, Walkerville, Windsor, Ojibway and Sandwich, about 25 miles. They were acquired early this year by the Hydro Electric Power Commission for \$2,039,000, which was paid by the issue of 40-year bonds of the Commission guaranteed by the province. The report of the Commission for 1919, referring to these lines, states that 'the estimates indicate that some \$250,000 will have to be spent to bring them into fair operating shape.'"

"The Hydro Electric Power Commission is also operating the Peterborough St. Ry., which was purchased by the province in 1916 along with the Seymour Power System. In the report of the Hydro Electric Power Commission for 1919 there is this statement: 'It was found that the service given was much better than supplied any other city of corresponding size, and that the revenue was really not sufficient to cover all legitimate charges.' In his report of last March respecting the Hydro Electric Power Commission, Mr. Clarkson states that this road showed losses in 1918 and 1919. These are the only street railways at present operated by the Commission."

The London & Port Stanley line is owned by the City of London and operated by a local municipality."

Lines Proposed to Be Bought.—"The scheme now submitted for the approval of the Government covers the following lines to be built or acquired from the Dominion Government:—

"1. Toronto, Port Credit, St. Catharines line.—Estimated cost of construction as revised by W. S. Murray, consulting engineer, New York, and brought down to date, \$22,298,635.

"2. Toronto Eastern Ry., Toronto to Pickering, Whitby, Oshawa and Bowmanville.—Estimated cost of construction, including right of way and partial grading to be acquired from Dominion Government at a cost of \$706,000 (estimates made in Sept., 1919), \$8,360,794.

"3. Hamilton, Galt, Guelph, Elmira line.—Estimated cost of construction, estimates made Nov., 1919, \$6,530,659.

"4. Port Credit to London line.—Estimated cost of construction, estimates made in 1916, \$8,499,769.

"5. Toronto Suburban line, Toronto to Woodbridge and Toronto to Guelph.

"6. Niagara and St. Catharines line, Niagara Falls, St. Catharines and Port Colborne.

"These two systems to be acquired from the Dominion Government at a cost of \$6,170,374.

"This makes a total of \$51,780,231.

"It is suggested that the Toronto to Guelph link of the Toronto Suburban system may be substituted for the Port Credit to Guelph link of the Port Credit to London line, and that this would mean a saving of about \$2,000,000 for construction expense, so that approximately the estimated cost of the proposed lines to be built or purchased is, in round figures, \$50,000,000.

"Sir Adam Beck has furnished to the Government the following memorandum with reference to the proposals now under consideration:—

"**Toronto-Port Credit-St. Catharines Ry.**—Reports and estimates were submitted in 1915 to the municipalities between Toronto and Port Credit re the construction and operation of this section as a part of the Toronto to London line; bylaws were submitted in Jan., 1916, and for the section between Port Credit and St. Catharines, in 1917 and 1919, and were passed by large majorities. Fifteen municipalities have executed agreements with the Commission, authorizing the procedure with this work, and assuming the responsibility for the railway and its operation between Port Credit and St. Catharines, and have deposited with the Commission debentures for the full amount; the Commission has issued bonds to the extent of \$11,360,363, all of which have been guaranteed by the province. A great part of the engineering work has been completed in the final survey of these sections of the Toronto-Port Credit-St. Catharines Ry. and right of way purchased between Toronto and St. Catharines to the value of \$800,000.

"**Toronto Eastern Railway.**—In May, 1919, some 10 municipalities in this district passed resolutions, requesting the Commission to negotiate on their behalf for the acquiring of the properties owned by the Toronto Eastern Ry., and to prepare reports on the completion of its construction and its extension to Toronto. An option on the property was obtained by the Commission; bylaws were submitted to 10 municipalities from Oct. 1919, to Jan. 1, 1920, under the Hydro Electric Railway Act, all passing with large majorities, for the acquiring and

completion of construction of this section of the hydro electric railways. The municipalities have all executed agreements, authorizing the Commission to proceed with this work. A number of municipalities have passed the necessary bylaws for the issue of debentures to be deposited with the Commission."

Hamilton-Galt-Elmira-Guelph Electric Ry.—On Jan. 1, 1920, bylaws under the Hydro Electric Railway Act were submitted to 14 out of 17 municipalities in this district, and, of those, 13 municipalities carried with large majorities, while 3 have still to be submitted to the electors. The Commission has been able to obtain a credit of \$1,000,000 in the bank by placing some of its bonds of the Toronto-Port Credit-St. Catharines line as collateral, and this amount it is believed will be sufficient for the present year in the purchasing of right of way, the engineering and the preparation of the right of way, for commencement of operations when conditions warrant.

"The contemplated work for 1921, provided conditions remain as at present, will require an expenditure of approximately \$2,500,000. It is the intention of the Commission to proceed with the work of constructing electric railways only to such extent and as rapidly as conditions as to revenues and the cost of materials and labor will warrant."

"With reference to the negotiations of the Commission with the Dominion Government, the Commission has an option on the Toronto Eastern Ry. for \$706,000, for which amount the Government is prepared to accept the bonds of the Commission, for 50 years, at 4½%."

"The Commission has also received an offer from the Minister of Railways and Canals for the sale of the Toronto Suburban Ry., at present operating between Toronto and Guelph, and the Niagara, St. Catharines & Toronto Ry., operating in the district between St. Catharines to Niagara Falls, St. Catharines to Welland and Port Colborne, Port Dalhousie and Niagara-on-the-Lake, for which the Minister of Railways and Canals is prepared to recommend to the Dominion Government the acceptance, in payment thereof, of the Commission's bonds for 50 years at 4%."

"Sir Adam has also furnished the following memorandum (condensed), which gives further useful information with respect to the lines which it is proposed to acquire from the Dominion Government:—

"The Toronto Eastern Ry. was designed to give a passenger and express service between Toronto and towns east thereof as far as Bowmanville, together with a freight service, working in conjunction with the Canadian Northern (now Canadian National) service. Owing to the physical characteristics of the district, the G.T.R. runs about two miles south of Whitby, Oshawa, and Bowmanville, while the Canadian Northern is, generally speaking, about the same distance north. These three towns are developing industries of importance; especially is this true of Oshawa, which is now the largest shipping point between Montreal and Toronto. With an hourly passenger service on a line of this nature, the traffic would naturally go to the electric line, on account of the frequency of service, just in the same manner as the Metropolitan Division of the Toronto & York Radial Ry. eliminated the passenger service on the G.T.R. between Toronto and towns as far north as Newmarket. There would be considerable intertown traffic due to the indus-

trial growth of Oshawa. The growth of the city eastward would be facilitated and encouraged by such a service. Unquestionably there would be a suburban business develop eastward that does not now exist, and steam lines would be largely relieved of local traffic within this zone.

"The eastern terminus of this line is the eastern boundary of the town of Bowmanville. It runs through the town along Wellington St., a short block north of the main business street (Kingston Road). The line from Bowmanville to Oshawa, nine miles, is almost a straight line, keeping close to the Kingston Road, as this is the principal highway along which traffic passes in the district. The line passes through Oshawa along Bond St., again a short block north of the Kingston Road. From Oshawa to Whitby, 4½ miles, the line keeps as close as possible to the Kingston Road, and passes through Whitby along Mary St., a block north of the Kingston Road. From Whitby to Pickering, six miles, the line is still adjacent to the Kingston Road. From this point to the Scarborough Golf Club, eight miles, the line goes south of the Kingston Road and, at some points, is adjacent to the G.T.R. From this point a location was proposed westward to a junction with the Canadian Northern tracks near the Kennedy Road, and from there down the East Don to a terminal at Queen St.

"The work completed consists of a portion from the eastern limit of the town of Bowmanville, through Bowmanville, Oshawa and Whitby. The portion on the streets through these towns is laid with 80 lb. steel, and between towns 60 lb., with continuous angle bars. This track is all ballasted and was left in first class shape. From the western limit of Whitby to Pickering the line was graded, but no track was done. From Pickering to the Scarborough Golf Club the major portion of the right of way was acquired, but nothing further was done between these points.

"The Niagara, St. Catharines & Toronto Ry. consists of the following lines: Main line, Port Dalhousie to Niagara Falls, 16.74 miles; Welland Division, Thorold to Port Colborne, 18.53 miles; Lake Shore Division, St. Catharines to Niagara-on-the-Lake, 12.18 miles; St. Catharines local lines, 9.59 miles; Niagara Falls local lines, 4.63 miles. Total, 61.67 miles. The line operates both a freight and passenger business, the latter consisting of a regular interurban service, together with a local street railway service in the cities of St. Catharines and Niagara Falls. The district served is a very important one industrially, as it has many large pulp and paper plants. Steel, electrical and chemical plants of magnitude are also located there. The Niagara, St. Catharines & Toronto Ry. serves almost all the industries of the district—a very large proportion exclusively. Following are operating statistics:—

Year.	Gross revenue.	Expenses.	Net revenue.
1918	\$ 940,407.31	\$669,980.87	\$270,426.44
1919	1,030,756.32	796,349.83	234,406.49

"The Toronto Suburban Ry. consists of the following:—Main line, local city line, 10.45 miles; Weston to Woodbridge, 7.50 miles; Lambton to Guelph, 46.325 miles. Following are the operating statistics:—

	Fiscal 1918.	Calendar 1918.	Calendar 1919.	Calendar 1920.
Revenue—	\$277,413	\$314,167	\$394,514	\$545,000
Expenses—	224,213	276,107	352,472	392,000
Net earnings—	\$53,200	\$38,060	\$42,042	\$153,000

"The estimates for 1920 conditions are based on increasing (1) service on Guelph Division from three to eight round trips a day; (2) passenger rates, from 2 to 2½c. a mile; (3) wage schedule, to pay from 46 to 50c. per hour; (4) increase equipment for local and through service and to prepare for freight which is not being handled at present."

The Government's Pronouncement.—The Government's memorandum contains:—"The broad question of policy is now up for determination. Shall this Government adopt the principle of publicly-owned and operated radial railway systems for the province as a whole, and proceed energetically through the Hydro Electric Power Commission, as conditions may warrant, with the construction (or acquisition) and operation of such a system? The answer involves many considerations. In 1908, before hydro development started, the direct debt of the province was \$17,250,000, with an indirect liability on guaranteed bonds to the amount of approximately \$8,250,000, making a total debt, direct and indirect, of between \$25,000,000 and \$26,000,000. Today the direct debt of the province amounts to \$104,000,000, while its indirect debts amount to about \$21,000,000. The credit of the province, therefore, stands pledged at present for the repayment of \$125,000,000.

"To date the province has advanced approximately \$56,750,000 to the Hydro Electric Commission, and in connection with the Central Ontario system, owned by the province. In addition to such advances, it has guaranteed bonds for \$8,326,000 in connection with the purchase by the Commission of the Ontario power system and certain minor systems. This means that of the obligations of the province now outstanding approximately \$65,000,000, or 52% of its present debt, is represented by assistance to the Hydro Electric Commission. The obligations of the province are not, however, limited to the moneys and guarantees which it has already given, but, so far as can be estimated, it will in the near future have to supply between \$32,000,000 and \$33,000,000 more in cash to complete the Chippawa, Nipigon and other electrical power work in process of construction; \$3,000,000 to \$4,000,000 may also have to be advanced for the proposed auxiliary steam plant authorized at the last session of the Legislature. In 1921 bonds of the Ontario Power Co. (owned by the Commission) to the amount of about \$2,500,000 will fall due, and the province will undoubtedly have to render assistance by way of cash or guarantees to meet them. In this way the province is practically committed to advance between \$37,000,000 and \$40,000,000 more to the Commission in connection with its power projects within the next year or two, and if the cost of completing the Chippawa works should exceed the present estimate of \$45,000,000 the amount will have to be still further increased.

"From the above it will be seen that with the completion of the Chippawa works and the construction of the proposed auxiliary steam plant the advances already made by the province, those which will have to be made in the near future, and the guarantees given and to be given, will amount to between \$103,000,000 and \$104,000,000, all in connection with the power development, transmission and distribution systems controlled and operated by the Commission. These amounts the province and the municipalities are bound to repay. The outcome of the Chippawa projects is awaited with deep interest and much expecta-

tion by the people of Ontario, for the scheme has become so extensive and costly that the Province, providing as it is doing, all the moneys for its construction, is most vitally interested in its successful completion and operation. The exact effect of the Chippawa development, in so far as the cost of power developed by it and the burden to be assumed by the municipalities in connection with it are concerned, cannot be definitely determined until the works are completed, but the Government rests confident in the belief that the municipalities will continue to be able to pay, with advantage and without embarrassment to them, such prices for hydro as will permit repayment of the \$104,000,000 before mentioned to be made over the sinking fund period. The necessity of raising \$38,000,000 to complete the works and for other purposes of the Commission, is so far as the province is concerned, however, a very heavy burden, particularly when the province has to raise other large amounts of money in connection with its highway development and other requirements.

"Hydro radial projects, while they may to some degree facilitate the distribution of power as incidental to the operation of the railways, are entirely new and separate from the main object and scheme of the Commission and with the enormous amounts involved in their construction must be considered on their merits and to a large extent independently and separately from the hydro electric power project. Radial railway projects with high power and high speed lines are, so far as Canada is concerned, practically a new field of enterprise. It is true that there are certain radial lines in the province, but it would hardly be fair to judge the merits of the projected new scheme on the basis of the experience of the lines now in operation. If that were done, the outlook would not be encouraging. On the other hand, there are many high speed lines in operation in the United States, constructed at much less cost than is possible at present, and if current report is to be accepted, many of them are now meeting difficulties in continuing their operation, by reason of greatly increased costs. The experience of these lines, if fully investigated, would undoubtedly furnish some basis for measuring the probable revenue and costs of operation of the projected hydro radials.

"There has been a considerable amount of general discussion on the subject of radials, and municipalities, which the suggested lines are proposed to serve, have considered the matter and signified their wishes in respect thereto. There has, however, been practically no publicity given to the exact details of construction costs, operating expenses and expected revenue, or as to the fares or rates to be charged in the light of increased costs and other changes since the termination of war. Since estimates were presented for the consideration of the municipalities, the Dominion has taken over the Grand Trunk Ry. and the Canadian Northern Ry., and these railways, being now owned by the Dominion Government, their cost of operation has to be paid by the public. The effect of this situation was not before the municipalities at the time when several of the radial projects were voted upon. Neither had the present system of public highways for the province been adopted at the time when the municipalities voted on the bylaws and the effect of these highways when constructed when the expected revenues of the radials has not been publicly investigated or discussed.

and freight are proposed to be charged? Under the Ontario Railway Act 2c. a mile is the maximum passenger rate, but it would appear that the estimated earnings for the proposed radials are based on a higher rate than this.

"7. With reference to the railways which it is proposed to purchase from the Government, it would not appear to be wise to complete such purchase without first having had a thorough examination and valuation by some independent person or body.

Commission to be Appointed.—"Some of the foregoing arguments may not be valid and none of them may be conclusive against the ultimate adoption of the proposals. They are, however, as it appears to the Government, conclusive against their adoption at the present time and until the whole subject has been fully and exhaustively examined, because, if and when the Government goes ahead, the province will be committed not only to the present proposals but to a province-wide, publicly owned radial electric scheme operated by the Hydro Electric Power Commission, involving an ultimate mortgage of the province and of the municipalities interested of scores of millions of dollars. The matter is of far too great importance to be dealt with hastily or lightly. The Government has therefore decided to appoint a commission to go into the whole problem from every point of view and present a report for its information and guidance. The commission will be requested to proceed immediately with its task, to hold public enquiries and to report without unnecessary delay. In the meantime all action in the direction of further outlays or the assumption of further responsibilities in radial matters by the Hydro Electric Commission will be stayed."

Sir Adam Beck's Rejoinder.

In making public the Premier's letter and memorandum, which he said would be of interest to the municipalities concerned, Sir Adam Beck added:—"It is necessary, to a proper understanding of the present situation, and of the need for the speedy decision promised by the Prime Minister, to remember that important commitments have already been made on behalf of the Government and the municipalities, whose debentures are on deposit with the Hydro Power Commission, to the extent of almost \$13,500,000. These debentures are a guarantee against bonds issued by the Commission for municipal radial railway purposes. Work inaugurated includes extensive acquisition of right of way costing over a million dollars. The commitments made by the present Government embrace the following:—

"1. The Government validated and made legal and binding on the Commission the agreements for the construction and operation of electric railways and guaranteed the bonds on the Sandwich, Amherstburg and Essex district railway to the amount of \$2,100,000.

"2. Validated agreements and made them legal and binding on the Commission and municipalities for the construction and operation of the Toronto Eastern Ry. to the amount of \$8,360,736.

"3. Endorsed the bonds of the Port Credit to St. Catharines section to the extent of \$11,360,000.

"4. Enacted legislation legalizing the construction of the Toronto and Port Credit section to the extent of \$7,536,000.

"In all, it has dealt with expenditures on account of hydro electric railways to the extent of \$29,446,736. The Hydro Electric Power Commission has made

application for the following additional commitments on behalf of the municipalities interested:—

"1. Order in council for authority for municipalities in the Niagara, St. Catharines & Toronto Ry. district to submit bylaws and guarantee bonds for \$2,862,000."

"2. Order in council for authority for municipalities in Toronto Suburban Ry. district to submit bylaws and guarantee of bonds for \$197,000.

"3. Guarantee of bonds to be handed the Dominion Government for acquiring the Toronto Eastern Ry. properties for \$706,000.

"This makes a total of \$3,915,000. The Commission has committed itself to expend not more than \$1,000,000 in 1920, and \$2,500,000 in 1921 on improvements and equipment and the purchase of additional right of way.

"The Sandwich, Windsor & Amherstburg Ry., comprising 48 miles, is already under successful operation by officers of the Commission on behalf of the municipalities interested. The right of way for the Toronto-St. Catharines line has been acquired to the extent of 80% of its total length."

Appointment of Investigating Commission.

On July 15 it was announced that the government had appointed a commission, its duties being defined as follows:

1. To enquire into and report upon the whole question of hydro electric railways and all matters which in the opinion of the commissioners are relevant thereto, with particular reference to the matters that are raised by and discussed in the government's statement issued on July 9.

2. To make such suggestions and recommendations in connection with or arising out of any of the subjects thus indicated as in the opinion of the said commission may be desirable.

That for such purposes the said commissioners be authorized and instructed to take such steps for the acquirement of information as may be in their opinion necessary.

The commission as appointed originally consisted of Hon. Justice R. Y. Sutherland of the Ontario Supreme Court's High Court Division; W. A. Amos, Vice President United Farmers of Ontario, Palmerston; Fred. Bancroft, who is a member of the Pattern Makers Union, and a reporter on the Toronto Star; A. F. Macallum, B.A.Sc., C.E., City Commissioner of Works, Ottawa, and T. A. Russell, President Russell Motor Car Co., Toronto. A few days later Mr. Russell declined to act, owing to his position as a motor manufacturer having been criticised, and Brig. General C. H. Mitchell, C.M.G., D.S.O., Dean of Toronto University Applied Science Faculty, was appointed in his place. At a preliminary meeting of the commissioners June 19, at which only three were present, it was stated that the Attorney General had authorized the Hydro Electric Power Commission and the Hydro Electric Railway Association to engage counsel at the government's expense.

The Montreal Tramways Co. has not, according to a press report, paid anything to the city on account of the \$500,000 a year which it was to pay out of its gross revenues under the contract of Jan. 1918. The amount now owing is \$1,250,000, on which the company pays interest. It is reported that the Montreal Administrative Commission is not insisting on payment, fearing that if it did a further increase in fares might result.

Toronto Railway Asks Postponement of Payment of City Percentage.

The Toronto Railway's General Manager wrote the Mayor of Toronto July 13, as follows:—"Under the street railway agreement the company pays the city a graded scale of percentage on its gross earnings, which is paid in monthly instalments on the first of each month, and which have been regularly paid by the company during the term of its franchise. Owing to the excessive increases in wages and material, the company now finds that under the present rates of fare it cannot meet its obligations promptly and pay the percentages monthly as in the past, and respectfully requests the indulgence of the city to allow the payments, or such part of them as the company may require, to be deferred until the end of the franchise, so as to enable the company to meet the pay rolls, ordinary expenses of the company and other obligations, on the understanding that the accumulated percentages owing to the city will be a first charge on the company's assets, to be deducted out of the award of the arbitrators when the company is being taken over by the city on Sept. 1, 1921. Perhaps it would simplify the proposition were the company to meet its monthly obligations by giving notes, payable at such dates as would be agreeable to the city. In this connection, whatever will meet the approval of the City Solicitor would be satisfactory to the company. This request would not be made were it not for the fact that the company's pay rolls, commencing July 1, will be about \$2,000,000 a year more than the pay rolls of 13 months ago, this being the increase in wages during that time. I sincerely hope the council will see its way clear to comply with the company's wish in the above request, and by doing so the city will not be running the slightest risk of losing one cent, while it will be helping the company over a very trying period."

The letter was referred to the City Solicitor for advice.

New England Street Railway Club Visits Montreal.

A party of about 80 members of the New England Street Railway Club left Boston, Mass., June 28, for a trip to Montreal. En route the party was increased by members of the New York Electric Railway Association, who were returning from a convention at Bluff Point, N.Y., and by electric railway men joining at the points between Boston and Montreal. On June 29 the party was taken on a sightseeing trip round the city by the Montreal Tramways Co., visits being paid to the company's stations and shops. A luncheon was served at the Pointe aux Trembles substation, A. Gaboury, Superintendent, acting as host for the company. In the evening the party was entertained by the company at dinner, at which speeches were made by E. A. Robert, President, Lt. Col. J. E. Hutcheson, General Manager, and a number of the visitors. The Montreal Harbor Commissioners provided a tug for the party for a trip round the harbor on July 30, and they left Montreal on the return trip the same evening.

The Hamilton St. Ry. started on July 11 an extra Sunday service between 8.30 and 10 a.m., to suit the steamboat traffic.

Three Rivers Traction Co's One-Man Cars.

The Three Rivers Traction Co. Three Rivers, Que., has added to its equipment recently 4 one-man cars, an illustration of one of which is given herewith. The general dimensions are as follows:

Overall length	27 ft. 6 in.
Overall width	6 ft. 6 in.
Wheel base	12 ft. 6 in.
Track gauge	4 ft. 8 1/2 in.
Clearance over track	10 ft. 6 in.
Clearance over sidewalk	10 ft. 6 in.
Clearance over street	10 ft. 6 in.

The car body is of non-convertible type, wood construction, built specially for one-man nearside operation and single end control. The sides are straight, and sheeted vertically with narrow t. and a central folding door on each side of the body, the top sash being made stationary and the bottom sash made to raise to open.

The roof is of arch type, with exhaust ventilators and adjustable grids on the interior on each side, also one in front vestibule. The underframe is of composite construction, having wood sills, reinforced with steel plates, which are riveted to cross sills, to form a complete steel frame. The flooring is 3/4 in.

thick, square, designed to be used by the heaters than is necessary to bring the car up to the required temperature. When that temperature has been reached, the current is automatically cut off. The thermostat takes the control of the heating equipment out of the motorman's hands.

The lighting system is arranged with 5 lights in the body of the car, using the compensating series lamp fixture with reflectors. Lights over doors, sign and farebox are arranged with 6 lights on a circuit controlled by a lintern switch, which solves the problem of the dead circuit of lights. When one light burns out, the sixth lamp takes the place of the burntout by the simple turning of a knob until the lamp lights. The selector switch "feels" for the break in the circuit and automatically remedies it. The correction is almost instantaneous.

The cars are mounted on radiax trucks, 12 ft. wheel base with 33 in. Davis cast steel wheels and 4 1/2 in. hot rolled axles.

Each car is equipped with 2 Westinghouse 101-B-2 motors, with K-10 controller, and Westinghouse schedule S-M-1

Three Rivers Traction Co's One-Man Car.

thick t. and g. hard yellow pine, covered with hardwood floor matting laid lengthwise in the aisle.

The interior trimming is red cherry, with no bulkheads at either end. The front vestibule is made extra long, and step opening extra wide, so that entrance and exit can be made by it. Each opening has an individual folding door and step operated by the National Pneumatic Co.'s air engine, so arranged that the motorman can operate them singly. The vestibule is equipped with brass p.a.y.e. rail dividing entrance and exit, also motorman. A fare box is attached to the entrance rail, with a light arranged to illuminate the box without a glare in the motorman's eyes. The rear vestibule is circular, with an emergency exit door, controlled by the motorman from his position in the front vestibule. There is a circular seat, which accommodates five passengers, running around the rear vestibule. The seats are the builder's standard stationary type, covered with twill weave rattan and brass grab handle on back. The curtains are pantasote, mounted on metal rollers. Sanitary hand straps are provided at the longitudinal seats, 9 in. all.

There is a buzzer equipment with button, and current procured from trolley. There are 10 cross seat heaters per car, with one in the front vestibule, which are connected to a thermostatic control, a most important development of recent years. The thermostat never al-

straight air brake equipment, H.B. life guards, an Ideal trolley catcher, and snow scrapers.

Change of Rule of Road in British Columbia.

An act passed by the British Columbia Legislature at its last session, to amend the Highway Act, Revised Statutes, 1911, provides for the repeal of secs. 17, 18 and 19, which deal with the rule of the road. Three new sections, similarly numbered, are enacted, which reverse the rule of the road hitherto in operation in the province, and make the new rule conform to that generally in force elsewhere in Canada. The act divides the province into two areas, viz.: Traffic District 1, including Vancouver Island, the other islands and the mainland lying west and south of the following boundary: commencing on the International Boundary at the southeast corner of Tp. 1, Range 27, west of the 6th meridian; thence along the eastern boundary of the railway belt to the southeast corner of Tp. 2, Range 26, west of the 6th meridian; thence north along the boundaries of Tps. 2, 3, 4 and 5, Range 26, west of the 6th meridian; thence west along the north boundary of Tp. 5, Range 26, to the west bank of the Fraser River, along the river bank to the north boundary of Tp. 14, Range 27, west of the 6th meridian; thence west along the north

boundary of Tp. 14, Range 27, 28 and 29, to the northwest corner of the 14th and 29th meridional districts; thence west only along the northern boundary of the 14th and Prince Rupert provincial electoral districts to the Pacific Ocean. Traffic District 2, comprising all the portions of the province, including islands and mainland, not comprised in Traffic District 1.

The new rule of the road is not to take effect in traffic district 1 until Dec. 31, 1921, unless by proclamation covering either the whole or any part of the district. The act became operative in District 2 July 15. District 1 includes the territory within which the British Columbia Electric Ry. operates, and was excluded in order that time may be given to that company to make the necessary changes in turnouts, cars, etc. The question of the cost of these changes is under consideration, and it has been reported that the government may undertake to meet part of the cost, which is estimated at about \$750,000.

Operation of One-Man Cars in St. John, N.B.

The New Brunswick Power Co.'s proposal to operate one-man cars in St. John, N.B., was met with considerable opposition from the employees, who took the ground, generally, that such cars are not safe to operate, and that the safety of passengers would be imperilled. The matter was brought to an issue July 10, when T. H. McCauley, General Manager, refused to sign the wages agreement unless a clause was inserted binding conductors and motormen to operate one-man cars similar to those operated elsewhere by international union men. The men expressed their willingness to operate cars of a certain type at an increased wage, and with certain other concessions, and decided to go out on strike July 12 if their terms were not agreed to. As a result of negotiations the following agreement was reached: "It is hereby agreed by the New Brunswick Power Co. and Messrs. Campbell and Moore, representatives of Division 663 of Amalgamated Association of Street and Electric Railway Employees of America, that the agreement as already drawn up as to wages and working conditions be signed by the company and the men's authorized representatives, and that a further agreement be drawn up to the effect that the company may go on and finish one or two cars as already started, that same be given a demonstration by the company and that, in the event of such cars proving satisfactory to the city commissioners and citizens of St. John, the employees and company agree to further negotiate as to the safety and reasonableness, wages, and working conditions of operating the same. In the event of no settlement being reached, both sides agree to submit the whole matter to arbitration or conciliation under the Lemieux Act."

A trial trip of the type of one-man cars proposed to be operated was made July 16. A local press report says: "The car is the old two-man type, with the rear door closed up, two doors, in and out, provided at the left side of the forward end of the car. Brake and controller are the same as on the present type, but are augmented by the rear brake, brought forward to the motorman's place, to be used in emergency. Under the new system the motorman opens and closes doors, collects fares, issues transfers and operates the car."

Increases in Electric Railway Passenger Fares.

Brandon Municipal Ry.—A press report states that the Brandon, Man., City Council's street railway department will put in operation a 10c. cash fare during the exhibition, but will continue the sale of tickets at 6 for 35c. The regular cash fare is 7c., but the report states that it was decided to put on the increased cash fare during the exhibition in order not to delay traffic while making change.

Brantford Municipal Ry.—We are officially advised that in order to provide for the increase of wages referred to on another page, the Brantford, Ont., Municipal Ry. Commission has abolished the old rate of 6 tickets for 25c. and established a straight 5c. fare. For the convenience of passengers 5 tickets are sold for 25c. It is said that since the increased rate went into effect there has been no reduction in the number of passengers carried, and that about one-third of the fares collected are tickets.

British Columbia Electric Ry.—A press report states that the company applied to the Victoria City Council for an agreement under which the cash fare to be charged on the electric lines in the city will be increased from 5c. to 7c.

Calgary Municipal Ry.—The Calgary, Alta., City Council on June 24 adopted a new fare schedule, which is compared with the old one as follows:—

	New.	Old.
Cash	10c.	5c.
Two tickets for	15c.	10c.
Tickets for 25c.	4	5
Tickets for 31	20	25
Children's tickets for 25c.	8	8

A press report states that during the first week of the operation of the new fares, the cash receipts only dropped off about 50%, while the sale of tickets practically doubled.

Dominion Power & Transmission Co. The Board of Railway Commissioners passed order 29,865, July 10, as follows: Re complaint of the Canada, Park, and Central Business Colleges, Hamilton, Ont., against the proposed increase by the Hamilton Radial Electric and the Brantford & Hamilton Electric Railways in fares for students attending business colleges in Hamilton: Upon hearing the complaint at the sittings of the Board held in Hamilton, Oct. 29, 1919, the complainants and the railway companies being represented at the hearing, and what was alleged, it is ordered that the Hamilton Radial Electric and the Brantford & Hamilton Electric Railways substitute for their tariffs of students' or scholars' commutation rates now in force, a tariff or tariffs of such rates, to apply to scholars of 18 years of age and under, on the following basis, viz.: 40-trip tickets (scholars' tickets), good for 30 days, on the basis of 4 1/4 mills a mile of travel, subject to a minimum charge per ride of 7 1/2c., the said tariff or tariffs to become effective not later than Sept. 1, 1920.

The Brantford & Hamilton Electric Ry. put in operation June 25, Special Passenger Tariff C.R.C. 5, replacing Standard Passenger Tariff C.R.C. 1, which had been in operation since Aug. 18, 1908. In the old tariff while in many cases the rates charged were fixed on the maximum mileage rate authorized by the Board of Railway Commissioners, there were a number of fares which were not up to that standard. In the new tariff the rates charged are in all cases based on the maximum mileage rates authorized. The following table giving the different stations between

Hamilton and Brantford, with the mileage, and the old and new rates, single and return, shows the nature of the change made:—

	Miles.	Old rate	New rate
Station 3	1.07	10c.	15c.
Station 5	4.90	15c.	25c.
Station 7	5.90	15c.	30c.
Ararster	6.70	20c.	35c.
Station 11	7.20	20c.	35c.
Station 13	8.80	25c.	40c.
Trinity	10.69	30c.	50c.
Alberton	12.16	30c.	50c.
Station 19	14.43	30c.	50c.
Station 21	15.43	35c.	60c.
Langford	16.25	40c.	60c.
Station 23	17.00	40c.	70c.
Station 25	18.56	40c.	70c.
Station 27	18.86	40c.	70c.
Cainsville	19.35	45c.	90c.
Echo	20.53	50c.	90c.
Brantford	22.91	55c.	1.00

The Hamilton, Grimsby & Beamsville Electric Ry. put Special Passenger Tariff O.R.B. 5 in operation June 28, cancelling O.R.B. 3, dated Mar. 26, 1913, and supplements. The following table shows the stations from Hamilton with the mileage and the old and new rates, single and return:—

	Miles.	Old rate	New rate
Reservoir	3.00	5c.	10c.
Bartonville	4.23	10c.	15c.
Red Hill	5.90	10c.	20c.
Stoney Creek	7.50	15c.	25c.
Frutland	10.73	15c.	30c.
Smiths	11.10	20c.	35c.
Winona	12.31	25c.	40c.
Chines	14.30	25c.	50c.
Grimsby	18.27	30c.	55c.
Thirty	21.00	40c.	65c.
Beamsville	22.60	40c.	70c.

The increases are more in the nature of adjustments, and bring the rates between the different stations up to the maximum authorized.

A press report states that books of 400 mile tickets have been increased from \$5 to \$6, and that conductors have been instructed to collect the full number of mileage tickets, for example, 18 tickets are collected for the Hamilton-Grimsby trip, and 22 for the Hamilton-Beamsville trip, instead of 17 and 21 respectively as formerly.

The Lake Erie & Northern Ry. put into effect, on June 15, a special passenger tariff of local and excursion passenger fares, C.R.C. 41, the single fares being on the basis of 2 1/2c. a mile, and the return fares 90% of double the one way fares.

Levis County Ry.—At a special meeting of the Lauzon, Que., municipal council, July 6, the question of the electric railway service was under discussion, but no decision was reached. The refusal of the council to concur in the Levis County Ry.'s recent application for an increase of fares, in order that employees wages might be increased, led to a strike. The other municipalities have granted the increased fares, as stated in Canadian Railway and Marine World for July, but the Lauzon council is still standing out. The company is now giving a service only in the municipalities which have granted the increased fares.

London St. Ry.—The fare on the Springbank line is reported to have been increased to 4 tickets for 25c., children's tickets remaining as before, 2 for 5c. The special Sunday rate of 15c. return from the center of the city to Springbank has been abolished. These changes were authorized by the Ontario Railway and Municipal Board, which is in charge of the line.

Toronto & York Radial Ry.—We are officially advised that changes have been made in this company's fares as follows:

Metropolitan Division:—On the line from Farnham Ave. to stop 26, strips of 5 tickets are sold for 25c., the former strips of 6 tickets for 25c. and 25 for \$1 have been cancelled. The strips of 10 tickets issued at Toronto, Aurora and Newmarket for Keswick and other points on the Sutton line are cancelled; and the 50 trip tickets heretofore issued at various stations on the line to Toronto, Newmarket, Aurora and Richmond Hill have been cancelled. Passengers formerly using such tickets are now charged the regular fares.

Scarboro Division:—On the line from Woodbine to stop 20, strips of 5 tickets are sold for 25c., in place of 6 for 25c. heretofore.

Mimico Division:—On the line from Sunnyside to New Toronto (stop 25), strips of 5 tickets for 25c. are being sold instead of 6 for 25c. as formerly, and for the Sunnyside-Long Branch (stop 20) trip, the regular rate with a return fare of 15c. is charged, the old rate of 4 tickets for 25c. being cancelled.

The Toronto Suburban Ry.'s Standard Passenger Tariff C.R.C. 1 has been approved by the Board of Railway Commissioners.

Winnipeg Electric Ry.—The hearing of the company's application for authority to charge a higher fare on its lines in Winnipeg, which has been pending before the Manitoba Public Utilities Commission since Dec. 1918, was closed July 6.

The Commissioner then took up the applications of the Winnipeg, Selkirk & Lake Winnipeg Ry. and of the Suburban Rapid Transit Co., subsidiaries of the W. E. Ry. Co., for authority to increase fares on their lines. The companies in their applications asked for a 15% increase, but at the opening of the hearing the companies' counsel intimated that this would be withdrawn, and the entire question of the rates of fares left to the Commissioner. E. Anderson, K.C., for the Rapid Transit Co., submitted the following to the Commission:—It is proposed to discontinue entirely giving return tickets from the City of Winnipeg to any point on the Suburban Rapid Transit line. It is proposed to ask for a cash fare of 10c. in each of the following zones: Between Deer Lodge and Kirkfield park; between Kirkfield park and the new rifle range; between the new rifle range approach and Headingly. It is suggested that there should be a class of tickets issued, 2 for 15c., one of which will be good for use in any of the zones in question. It is further suggested that rates for school children will be one half the regular fare. Mr. Anderson added it was proposed that the above increases should also apply to the Charleswood line south of the Assiniboine River. The propositions were discussed with representatives of the municipalities present, and the Commissioner, in reserving decision, stated that further discussion with all the parties interested would likely be necessary.

One of the incidents arising out of the Winnipeg Electric Ry.'s application to the Manitoba Public Utilities Commission for power to charge increased rates was the initiation of proceedings by the Winnipeg City Council in the Manitoba Court of King's Bench to secure an injunction to prevent the company charging an increase of fare authorized by an interim order of the Public Utilities Commissioner. Judgment was given by Jus-

Electric Railway Projects, Construction, Betterments, Etc.

the country, fully to acknowledge the action. In the course of the trial of the powers of the Polish People's Committee and of its constitutionally, were intended to be reported to the first, the country and I have no doubt whatever that this would be the case. Thus, in the hands of this case to interfere with the Constitutional system, however intended I may be that this are in the way of persuasion. No appeal from that could be that this, so that the situation must be recognizing the defendant from, serving also affect the Constitutional system must be recognized.

On the other hand, if Justice Curran is correct in his view, the Public Utilities Commission is not a party to the action at all. Although not a party to the action, the validity of the act was directly called into question and if the court had decided that the act was unconstitutional, the Public Utilities Commissioner would have been deprived of his office without being afforded an opportunity of putting it to a defense. There is to doubt that it was open to the city to proceed directly against the Public Utilities Commissioner and to have raised the question of the validity of the act in this manner. Another alternative method of settling the question, which would also be sound in law, is provided by the stipulations in the law by which the Lieutenant Governor in council may refer to the Court of King's Bench any matter upon which there seems to be doubt as to what court has the jurisdiction to handle it.

In his judgment commenting on the appointment and powers of the Commission, Mr. Justice Curran said: "I have no doubt at all that the Public Utilities Act is a constitutional and wholly within the legislative powers of the Provincial Legislature to enact, and that the Public Utilities Commissioner was and is legally appointed and can function in all of the powers delegated to him by that act. Further, that in no case where he acts within his jurisdiction can his orders or acts be called or questioned in this court. What the legislature could lawfully do by enactment, it could lawfully delegate to a tribunal created and set up by it for that purpose. Beyond that authority expressly or by plain inference or intention conferred such tribunal cannot legally act."

At the resumed hearing on July 20, counsel for the company is reported to have stated that the suggested 7c. fare would give a return of 5.4% to the shareholders, but an 8c. fare would be necessary to give them a fair return on the capital invested. The shareholders have not received any return on their investment for the past five years.

Moncton Will Not Take Over Electric
 The city of Moncton, N. B., voted yesterday on July 3, by a vote of 530 to 475, defeated a bylaw to approve an agreement between the city and the Moncton Tramways, Electricity & Gas Co. for the sale of the company's street railway and electric lighting and power plant to the city. The agreement, which the city was authorized to enter into with the company by an act passed at the New Brunswick Legislature's last session, provided for the purchase of the company's electric light plant and electric railway in the city, also certain lands, from May 31, 1920, for \$165,000, to be paid before May 31, 1921, with interest, and subject to certain adjustments to be settled by the city auditor.

Brantford Municipal Ry. We are officially advised that the Brantford, Ont., Railway Commission has decided to establish a bus service in West Brantford, at present not served by the B. M. Ry. It is expected that the bus service will be started early in August. The type of bus to be used will be of light construction, and will have a seating capacity of 18.

The tracks for an electric line to serve the West Brantford district are laid to the Lorne bridge, on account of the doubtful safety of which the line will not be extended until a new bridge is built. A bylaw for the erection of a new bridge has been approved, and it is expected that construction on it will be started next spring. (May, pg. 257.)

Hull Electric Co.—We are officially advised that the Hull, Que., City Council proposes to repave Main St. and City Hall St., with asphalt. (April, pg. 202.)

Hamilton St. Ry.—The Hamilton, Ont., City Council has under consideration a bylaw authorizing the construction of a line from Margaret St. to Paradise Row and thence westerly to within 800 ft. of the Hamilton & Dundas Ry. It is reported that the company is ready to proceed with construction as soon as the necessary authorization is given by the city. (Mar., pg. 145.)

Montreal Tramways Co.—A press report states that the Montreal Tramways Commission has authorized the repairing of the company's tracks on St. Catherine St. east, from the C.P.R. bridge to Maisonneuve, the work to be done at once.

With regard to the construction of the projected extension of line to Kelley St., the Montreal Administrative Commission is reported to have advised the Tramways Commission that the M. T. Co. will be supplied with lines and levels at once so that the laying the new tracks can be started. The construction of this line was arranged for in the contract of 1918, the time of starting the work being dependent upon the city securing the necessary right of way for the extension of Kelley St.

The Montreal Tramways Commission and the Montreal Administrative Commission are reported to have reached an agreement as to the route of the proposed line of 12,000 ft. from Mount Royal Ave. to Shakespeare Road, to within 60 ft. of the mountain top. The cost of the construction is estimated at \$250,000. It is expected that the line will be completed and ready for operation by next spring. (May, pg. 257.)

New Brunswick Power Co. Work is reported to have been started on the construction of a loop at Glen Falls, and on a turn on Charlotte St., opposite the market. St. John, N.B.

It is proposed to build a large shelter at King Square, and smaller ones at five other points on the lines. (July, pg. 392.)

Nipissing Central Ry.—A press report states that the Liskeard, Ont. Board of Trade and other bodies in the district are urging on the Ontario Government the necessity of extending the Nipissing Central Ry. from Liskeard to North Timiskaming, Que., 18 miles. The N. C. R. charter was granted originally by the Dominion Government to a private company, and gave authority to build electric railways in Ontario and Quebec, and

to generate and distribute electric power. The majority rights were assumed subsequently by the Ontario Government, and the line is managed by the Timiskaming & Northern Ontario Ry. Commission. (April, pg. 202.)

Quebec Ry. Light & Power Co.—We are officially advised that the company is building about half a mile of new track, from the corner of Paquet's factory on Dorchester St., over Lavigner bridge, to connect with the track in Stadacona Village.

A press report states that application has been made to the Board of Railway Commissioners for authority to extend the company's lines in Belvedere Ward, Quebec, to St. Malo. (July, pg. 392.)

Regina Municipal Ry.—A press report states that a Y is being built on Hill Ave., in Lakeview, for the white line cars, in lieu of that formerly used near the legislative buildings ground, which is being removed so that the site may be used for the erection of the Saskatchewan war memorial. (June, pg. 316.)

St. Thomas Municipal Ry.—A press report states that an arrangement has been made with the London & Port Stanley Ry., the Michigan Central Rd., and the Pere Marquette Rd., and approved by the Board of Railway Commissioners, under which one-man cars will be operated on the St. Thomas Municipal Ry. for three months, when the question of the permanent protection at the railway crossings will be dealt with by the Board. It was hoped that the new cars would have been put in operation July 15, but as the Board of Railway Commissioners permission had not been received, in writing, the starting of the cars was put off for a week.

Winnipeg Electric Ry.—Street railway traffic over the Maryland bridge is reported to have been suspended July 1, by the City Engineers instructions. Pending reconstruction of the bridge cars on the Croydon Ave., the Sherbrooke St. and the Academy Road lines have been re-routed.

Toronto Civic Ry.—We are officially advised that work has been started on widening of Bloor St., Toronto, from 66 to 86 ft., between Quebec Ave. and Runnymede Road, and that when this has been completed a second track will be laid on this section of the city's line. It is expected to have the work completed by the autumn. (June, pg. 316.)

Sudbury-Copper Cliff Suburban Electric Ry. Proposed Sale.—In connection with the company's offer to sell its undertaking to the town of Sudbury, Ont., for \$222,921, payment to be made in municipal debentures, referred to in Canadian Railway and Marine World for July, a press report of July 20 states that the town council's finance committee had advised that the town's financial condition does not permit of the purchase being made at present.

London & Lake Erie Ry. & Transportation Co.'s Property.—A press report states that the Ontario Highways Department proposes to take over the section of the right of way of the old London & Lake Erie Ry. & Transportation Co.'s electric railway between Talbotville and St. Thomas, Ont., and incorporate it in one of the projected provincial highways.

Electric Railway Employees' Wages, Working Conditions, Etc.

Brantford Municipal Ry.—We are officially advised that the new schedule of wages agreed upon between the Brantford, Ont., Municipal Ry. Commission and motormen and conductors, dates from June 1. Following is a comparison of the new and old rates per hour:

	New.	Old.
First year	16c.	39c.
Second year	18c.	41c.
Third year	20c.	43c.

The agreement provides that 9 hours work, to be completed in 12 consecutive hours, shall constitute a day; time and a half to be paid for overtime. Two year men pay half the cost of uniforms, afterwards uniforms are supplied free.

Calgary Municipal Ry.—We are officially advised that the wages for conductors and motormen and for motor-conductors on one-man cars for this year, as compared with the rates paid in 1919, are as follows per hour:—

	1920.	1919.
Conductors and Motormen—		
First six months	62½c.	45c.
Second six months	62½c.	50c.
Third six months	62½c.	55c.
Fourth six months	62½c.	60c.
Motor-Conductors—		
First six months	62½c.	50c.
Second six months	62½c.	55c.
Third six months	62½c.	60c.
Fourth six months	62½c.	65c.

Hull Electric Co.—A board of conciliation has been appointed to deal with the matter of the wages of the motormen and conductors. Under the agreement between the company and its employees, which expired July 1, the men were paid from 34c. to 41c. an hour, according to length of service. They have asked for an all round increase to 65c.

Hydro Electric Ry., Essex Division, formerly Sandwich, Windsor & Amherstburg Ry.—The agreement between the S. W. & A. Ry. Co. and its employees as to wages expired July 1. The employees asked the Hydro Electric Power Commission of Ontario, which took over the line on Mar. 31, for a minimum rate of 50c. and a maximum rate of 60c. an hour. An offer of 40c. an hour for the first three months 45c. an hour, for the next six months, and 55c. an hour after nine months was reported to have been rejected by the employees June 28. It was reported later that the men had agreed to accept an increase of 5c. an hour, half of what they asked, with the understanding that the matter will be again discussed at the expiration of three months.

New Brunswick Power Co.—A press report states that as the result of a conference held July 6 between representatives of the company and of the employees' union an increase of wages of about \$1 a day has been granted.

Sarnia St. Ry.—A press report states that a small increase of wages has been granted, which the man have stated they are willing to accept until the Sarnia City Council gives the company authority to charge increased fares.

Hull Electric Co.—The wage agreement between the Hull Electric Co. and its conductors and motormen expired July 1. The men, some time ago demanded a flat increase to 65c. an hour, the existing rate being from 34c. to 41c. an hour, according to length of service. As the matter could not be adjusted, a board of conciliation was appointed, the company nominating G. Kelley, of Ottawa, as its representative, and the men, J. Gibbons, of Toronto. These two having failed to agree on a chairman, the

Minister of Labor appointed Capt. W. P. Grant, Manager, Daly Co., Ottawa.

Winnipeg Electric Ry.—The award of the board of conciliation appointed to deal with the employees demands for increased wages presented to the company April 8, was given out July 12. In addition to specifying altered working conditions, the draft agreement submitted by the men named the wages, the table below showing the old rates per hour and those asked:—

	Old	Proposed
	Week-days	Week-days
First 6 months	46c.	54c.
Second 6 months	49c.	54c.
After 1 year	52c.	57c.
After 2nd year	55c.	60c.

The board, which consisted of Judge R. H. Myers, Winnipeg, chairman; C. E. Dafeo, Winnipeg, representing the company, and R. S. Ward, representing the men, awarded the men a 10% increase instead of the much larger one asked for. A press report of July 13 stated that the company would accept the award but it was rejected by the men by a vote of 481 to 473 July 18, a large number not voting.

A. W. McLimont, Vice President and General Manager, is reported to have said in an interview on July 20 that the increased wages awarded meant an increased operating expenditure of about \$300,000 a year, of which \$65,000 would have to be found immediately to provide for back pay to May 1, when the old agreement expired.

Electric Railway Notes.

The Regina, Sask., Municipal Ry. is equipping the six old cars bought in England with Westinghouse motors.

The Toronto Civic Ry. has ordered 25 double end Birney safety cars from J. G. Brill Co., Philadelphia, Pa. Delivery was expected at the end of July.

The Hydro Electric Power Commission of Ontario is reported to have decided to buy two additional mogul steam shovels, 56 contractors cars, and 3 locomotives, for the Chippawa power development work.

The Mayor of Toronto on July 12 instructed the City Solicitor to enter proceedings against the Toronto Ry. to compel it to operate all its cars during the rush hours at noon and in the early evening.

Calgary, Alta., city commissioners have, according to a press report, advised the city council to buy 12 additional electric heaters for cars on Calgary Municipal Ry. at a total cost of \$2,160.

The St. Thomas, Ont., City Council is reported to have under consideration the question of submitting a bylaw to the ratepayers providing for the operation of cars on Sundays on St. Thomas Municipal Ry.

The board of conciliation appointed to deal with the wage question on the Toronto Suburban Ry. consists of Judge Barron, Stratford, Ont., chairman; G. D. Kelley, Ottawa, representing the company, and L. Braithwaite, Toronto, on behalf of the men.

The Hamilton & Dundas St. Ry. has refused to put on a late Sunday night car from Hamilton to Dundas, Ont. It

is said that the Dundas Town Council will take up the matter with the company when the summer car schedule for 1921 is being arranged.

The Nova Scotia Tramways & Power Co. put in operation the new railway terminals-Armadale service in Halifax, N.S., July 7. The company took representatives of the city council and other of the city's business interests over the new route the day before.

The Ontario Railway and Municipal Board, which is operating the London St. Ry., is reported to have decided to speed up the service by eliminating a number of stops in the center of the city, and to add to the convenience of passengers by posting up time schedules at various points.

The Winnipeg Electric Ry. intends to subdivide River Park and place it on the market for building lots. The park was acquired by the company when it took over the old horse car system in 1893, and has been used as an amusement park. It is reported that the city may buy and acquire it.

The Montreal Tramways Co. was sued recently by N. Sauve in the Quebec Superior Court for damage for injuries received in Sept., 1918, while boarding one of its cars. The evidence showed that Sauve attempted to board the car while it was in motion, and the court held that the accident was caused entirely through his fault, imprudence and want of care, and dismissed the action.

The Saskatoon, Sask., City Council is reported to have decided on July 6 to cut down the car service on the Saskatoon Municipal Ry. from a 12 minute one to a 15 minute one, the alteration taking effect July 19. It is reported that the loss on the operation of the line this year to May 31 was \$11,381, exclusive of a claim paid of \$11,700; and that the estimated loss for Jan. was \$6,500. The estimated saving through the operation of the new time schedule is said to be \$100 a day.

The Windsor, Essex & Lake Shore Rapid Ry. has bought two interurban passenger cars, and one combination car, used formerly by the Richmond-Ashland Ry. Co., Richmond, Va. The following are the principal dimensions,—length over all, 58 ft.; length of passenger compartment, 34 ft.; length of smoking compartment, 10 ft. The cars have been used very little and are in excellent condition. The combination one has a passenger compartment 10 ft. long, with side doors on each side, 6 ft. 3 in. x 5 ft. wide. They are fitted with G.E. straight and automatic air brakes.

The Toronto Suburban Ry. has received 2 freight express cars from Preston Car & Coach Co. for its Toronto-Guelph line. They are equipped with four 240A Canadian General Electric motors 650-1500 volts, and have the following dimensions,—length over buffers, 51 ft. 8 in.; length over vestibule, 50 ft.; projection of buffers, 10 in.; radius of buffers, 5 ft. 8 in.; width over sheathing 9 ft 1½ in.; width over sills 9 ft.; width over all, 9 ft. 4½ in.; height, rail to under side of sill, 3 ft. 8 in.; height, floor to roof, 7 ft. 10½ in.; height, rail to top of running board, 12 ft. 6 in.; height, rail to center of drawbar, 2 ft. 10½ in.

The Detroit United Rys., in an amendment to its bill in the traction fare case pending in the Circuit Court, gave notice July 1 that it will establish 8c. cash fares or 7 tickets for 50c. on all non-franchise lines, Aug. 1.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and C.P.R.

	1919	1920
Income	\$1,000,000	\$1,000,000
Expenses	800,000	800,000
Profit	200,000	200,000

Calgary Municipal Ry. A. C. C.

The Calgary Municipal Ry. A. C. C. has been authorized to issue \$1,000,000 of bonds for the purpose of financing the city's electric railway system. The bonds will be issued in three series of \$333,333 each, and will be payable in 1921, 1922, and 1923.

	1919	1920
Income	\$1,000,000	\$1,000,000
Expenses	800,000	800,000
Profit	200,000	200,000

Cape Breton Electric Co.

	1919	1920
Income	\$1,000,000	\$1,000,000
Expenses	800,000	800,000
Profit	200,000	200,000

Montreal Tramways Co.—The directors have authorized the payment of a dividend of \$2.50 a share on the common stock for the quarter ended June 30. This is the third regular dividend on common stock since the company resumed paying dividends at the beginning of this year. In addition to this the company has paid three deferred dividends amounting to 7 1/2%, and it is expected that further payments on account of deferred dividends will be made shortly.

Toronto Civic Railway.

	1919	1920
Income	\$1,000,000	\$1,000,000
Expenses	800,000	800,000
Profit	200,000	200,000

During the same period in 1919, the number of passengers carried was 12,004,954, and total receipts \$202,260.

Toronto Railway.

Winnipeg Electric Ry. Co. A special

general meeting of shareholders was called to be held in Winnipeg July 27 to ratify a bylaw amending a bylaw authorizing the issue of \$3,000,000 of 7% cumulative preference stock, which was approved by the shareholders May 20. The new bylaw provides for the payment of the dividend of 7% in quarterly instalments instead of half yearly. The shareholders were also to be asked to sanction a bylaw repealing the bylaw au-

thorizing the issue of paid up common stock as a bonus in connection with the sale of the preference stock and also to pass a resolution authorizing the directors to dispose of the preference stock at such price and on such terms as they may think advisable.

Mainly About Electric Railway People.

Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, was nominated by the Toronto Board of Control, on July 7, as arbitrator, to represent the city, in connection with the taking over of the Toronto Ry. in 1921.

W. H. Breithaupt, President, Wellington-Waterloo Ry., Kitchener, Ont., has been re-elected Chairman of the Kitchener City Planning Commission for a third year.

H. L. Kromstrom has been appointed Accountant, Levis County Ry., succeeding H. S. C. Moffatt, resigned to take a position in Sherbrooke, Que.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., was expected to sail from England on July 7, and to reach Vancouver before the end of July.

C. E. Peeling, who resigned his position as Manager, Cornwall Street Ry., Light & Power Co., Cornwall, Ont., a few months ago, to enter the Illinois Traction Co.'s engineering department's service at Peoria, Illinois, has been appointed Superintendent, Palmetto Power & Light Co., at Florence, South Carolina.

Hon. J. L. Perron, K.C., one of the Montreal Tramways Co.'s counsel, and who is a member of the Quebec Legislative Council, has been appointed a member of the Quebec Government, without portfolio.

Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry., and family, are spending some time in Muskoka.

London Street Railway Fares and Wages Situation.

A report of the London St. Ry.'s operation for June has been submitted to the London City Council's street railway committee by C. B. King, the company's manager, who is managing the line under the Ontario Railway and Municipal Board. A press report states that the receipts were not up to expectations, and that there is no probability that the men will be paid any advance on the 48c. an hour rate, on which they consented to operate the line for two months. It is also stated that it is doubtful whether that rate can be maintained with the existing fare and service of cars.

The situation as to service, fares and the future of the railway is being discussed generally, but with no definite conclusion in sight. It is stated that the Ontario Railway and Municipal Board in its management of the line is disregarding the bylaw in regard to cars, etc. The men want 52c. an hour, and it is stated that there will be no improvements made in the service until the men are paid at that rate. The city council will not meet again until September and it is added that arrangements may be made to have a vote taken in October on the fare question, but at any rate there will be questions submitted to the ratepayers at the municipal elections on Jan. 1, 1921, on the fare situation, as well as the purchase of the line.

Telegraph, Telephone and Cable Matters.

D. B. Hanna, President, Canadian National Ry., has been elected a director of the Dominion Telegraph Co., succeeding Dr. C. O'Reilly, deceased.

The committee passed at the Dominion Parliament's recent session provide under "Public works, chargeable to income," \$17,500 for purchase of submarine cable.

The Western Union Telegraph Co. is laying 150 miles of cable between Placentia, Nfld., and St. Pierre, Miquelon, with the cable steamship Lord Kelvin. This will give an additional cable connection between these two points.

The board of conciliation appointed to deal with the dispute between the C.P.R. and its telegraph operators consists of County Judge R. D. Gunn, Ottawa, chairman; F. H. Phippen, K.C., Toronto, representing the company, and J. T. Gunn, Toronto, on behalf of the men. The operators demand an increase of 25% in wages.

The Telephone Pioneers of America will hold their annual convention at Montreal, Sept. 10 and 11, this being the seventh meeting of the association since its formation. A party will leave New York Sept. 8, and travel by way of Albany, Clayton, Thousand Island, St. Lawrence River and Lachine Rapids, and will make the return trip through Lake George.

The Old Time Telegraphers' and Historical Association entertainment committee has arranged the following tentative programme for the annual reunion, which will be held at Toronto, Aug. 31, Sept. 1 and 2:—Aug. 31, business meeting, luncheon, automobile drive round the city, visit to Canadian National Exhibition, including performance before grand stand, with the pageant The Empire Triumphant; Sept. 1, boat trip to Queenston, thence by Gorge Route to Niagara Falls; Sept. 2, visit to Canadian National Exhibition, dinner at King Edward Hotel.

Telegraph and Telephone Line Estimates.

The further supplementary estimates for the year ending Mar. 31, 1921, passed at the Dominion Parliament's recent session, contain the following items:—

	\$ amount
Telephone and telegraph lines generally, repairs, repoling, shifting and completion of lines under construction	10,000
Land and cable telegraph lines, Lower St. Lawrence and Maritime Provinces, including working expenses of systems required for cable service, further amount required	10,000
Alaska, further amount required	12,000
British Columbia, Vancouver Island District, further amount required	8,000
British Columbia, mainland, further amount required	7,000
Saskatchewan, further amount required	7,500
Yukon system, further amount required	12,000

Toronto Transportation Commission.

The Toronto City Board of Control on July 21 nominated, for consideration by the City Council, the following to be members of the commission to take over the Toronto Ry. in 1921 and manage it: P. W. Ellis, wholesale jeweller, President Toronto Hydro Electric Commission and Chairman Queen Victoria, Niagara Falls Park Commission; Fred. Miller, of Roger Miller & Sons, harbor contractors, Toronto; and Geo. Wright, hotel proprietor, who is a member of the Toronto Hydro Electric Commission.

Marine Department

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Steel Plates for Shipbuilding.—The estimates passed at the Dominion Parliament's recent session contain \$500,000, amount required in connection with contract made by the Marine Department with the Dominion Iron & Steel Co. for delivery of steel plates.

Launching of Steamships.—Since Canadian Railway and Marine World for July was issued, we have been advised of the following launchings of steel cargo steamships for Canadian Government Merchant Marine:—

June 26, s.s. Canadian Carrier; Marine Department contract 33; builder's yard no. 44; approximately 4,350 d.w. tons; Port Arthur Shipbuilding Co., Port Arthur, Ont.

June 29, s.s. Canadian Winner; Marine Department contract 29; builder's yard no. 1; approximately 8,390 d.w. tons; Harbour Marine Co., Victoria, B.C.

July 27, s.s. Canadian Conqueror; Marine Department contract 51; builder's yard no. 78; approximately 8,390 d.w. tons, Canadian Vickers Ltd., Montreal.

The aft section of s.s. Canadian Squatter, Marine Department contract 45; builder's yard no. 5; approximately 4,575 d.w. tons, was launched, July 20, by British American Shipbuilding Co., Welland, Ont., and we were advised that the forward section would be launched about a week later. The two sections will be towed to Montreal, and joined together at Canadian Vickers Ltd. plant.

Deliveries of Steamships.—In addition to the steamships mentioned in Canadian Railway and Marine World previously, the following deliveries have been made to Canadian Government Merchant Marine:—

June 24, s.s. Canadian Trapper; Marine Department contract 17; builder's yard no. 459; approximately 5,100 d.w. tons, Davie Shipbuilding & Repairing Co., Lauzon, Que. This ship loaded a general cargo at Montreal and sailed from there June 30 for London, Eng.

July 11, s.s. Canadian Rancher; Marine Department contract 14; builder's yard no. 6; approximately 5,100 d.w. tons, Tidewater Shipbuilders Ltd., Three Rivers, Que. This ship was tentatively taken over by the Marine Department Dec. 27, 1919, but not fully accepted, as there were a number of things to be completed. She was transferred to Canadian Government Merchant Marine on July 11, loaded general cargo at Montreal and sailed for the United Kingdom on July 16.

Appointments of Officials.—B. C. Kelley has been appointed General Agent, Canadian Government Merchant Marine Ltd., and is in charge of its office at Vancouver, B.C. W. B. Finglass has been appointed Assistant Marine Superintendent, and Thos. Loudon has been appointed Assistant Superintendent Engineer. They all have their offices in suite 110, Canadian National Rys. station, Vancouver.

Officers of Steamships.—The following masters have been appointed to steamships by Canadian Government Merchant Marine Ltd. since those mentioned in our last issue:—Canadian Gunner, Capt. C. Wallace, vice Capt. R. G. Hunter; Canadian Miner, Capt. A. Blouin, vice Capt. M. Fraser, resigned; Canadian Trap-

per, Capt. J. E. Faulkner; Canadian Rancher, Capt. H. T. M. Leonard, vice Capt. M. Robertson; Canadian Voyageur, Capt. A. E. Sprosen, vice Capt. J. D. Mackenzie, resigned. Engineers have also been appointed as follows:—Canadian Exporter, H. J. Robinson; Canadian Prospector, T. A. Porter; Canadian Sailor, B. Miller; Canadian Otter, W. Tough; Canadian Ranger, W. Harrison; Canadian Victor, W. D. McGregor; Canadian Observer, J. Davies.

The s.s. Canadian Recruit, which went ashore on Vache Reef, near the mouth of the Saguenay River, Dec. 20, 1919, and which was subsequently abandoned to the underwriters, was refloated July 17, and towed to Tadoussac Bay, and thence to Lauzon, where she will be docked and examined, and probably repaired by the Davie Shipbuilding & Repairing Co. The

land June 24 and June 26 respectively, in tow of the tugs Cross and Schofield, which took them through the Welland Canal. They left Port Dalhousie, June 27 and 28 respectively, being towed by the Sincennes-McNaughton Line's tugs Macsincio and Muscalonge, and arrived at Montreal July 5, where they will be joined together at Canadian Vickers Ltd. plant.

The British American Shipbuilding Co. launched the aft section of s.s. Canadian Squatter; Marine Department contract 45; builder's yard no. 5; approximately 4,575 d.w. tons, July 20, and expected to launch the forward section about a week later. The two sections will be towed to Montreal and joined together at Canadian Vickers Ltd. plant.

Canadian Vickers Ltd., Montreal, launched the s.s. Canadian Conqueror; Marine Department contract 61; builder's yard no. 78; approximately 8,390 d.w. tons, on July 27, the christening being performed by Mrs. A. R. Gilham, wife of the Managing Director.

Davie Shipbuilding & Repairing Co., Lauzon, Que., delivered the s.s. Canadian Trapper; Marine Department contract 17; builder's yard no. 459; approximately 5,100 d.w. tons; to the Marine Department, and she was transferred to Canadian Government Merchant Marine for operation, on June 24. The keel of this ship was laid Mar. 11, 1919, and she was launched Oct. 9, 1919.

The Davie Shipbuilding & Repairing Co. advised us July 16, that the s.s. Canadian Hunter; Marine Department contract 18; builder's yard no. 460; approximately 5,100 d.w. tons; had made a trip from Three Rivers to Quebec, under her own steam, and was being cleaned up, and painted, preparatory to delivery to the Marine Department.

Dominion Shipbuilding & Repair Co., Toronto, which is building two steel cargo steamships for Canadian Government Merchant Marine, viz., Canadian Pathfinder and Canadian Engineer, each approximately 3,500 d.w. tons, advised us recently that it expected to launch them in August and September respectively.

Harbour Marine Co., Victoria, B.C., launched the s.s. Canadian Winner, Marine Department contract, 29; builder's yard no. 1; approximately 8,390 d.w. tons, for Canadian Government Merchant Marine Ltd., on June 29, the christening being performed by Mrs. S. F. Tolmie, wife of the Dominion Minister of Agriculture. This is the first steel freight steamship of this tonnage to be built at Victoria, and is one of two under contract with this company for Canadian Government Merchant Marine. The contract was signed Jan. 24, and the keel laid July 14, 1919. The second ship, to be named Canadian Traveller, is under way, the keel having been laid Aug. 9, 1919. The general dimensions are,—length over all, 413 ft. 1 in.; length b.p., 400 ft.; breadth moulded, 52 ft.; depth moulded, 31 ft.; draft when loaded, 25 ft. 1 in. They are of the two deck type, with poop, bridge and forecastle and are equipped with triple expansion engines having cylinders 27, 44 and 73 in. diam. by 48 in. stroke, 3,000 i.h.p., supplied with steam by 3 single ended boilers, each 15½ x 11½

Dominion Marine Association.

President, A. E. Mathews, Managing Director, Mathews Steamship Co., Toronto.

First Vice President, H. W. Cowan, Director of Operation, Canada Steamship Lines, Montreal.

Second Vice President, A. A. Larocque, President, Sincennes-McNaughton Line, Montreal.

Executive Committee, E. H. Beazley, Union Steamship Co. of British Columbia, Vancouver; W. E. Burke, Canada Steamship Lines, Montreal; T. R. Enderby, Montreal Transportation Co., Montreal; L. Henderson, Montreal Transportation Co., Montreal; W. J. McCormack, Algoma Central Steamship Line, Sault Ste. Marie, Ont.; G. J. Madden, George Hall Coal Co. of Canada, Montreal; E. W. Stewart, Point Anne Quarries Ltd., Toronto; Jno. Waller, Keystone Transportation Co., Montreal; Lorne C. Webster, Webster Steamship Co., Montreal; J. Wilkie, Imperial Oil Ltd., Toronto; A. A. Wright, honorary member, Toronto.

General Counsel, Francis King, M.A., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

salving of the ship was undertaken by the General Wrecking Co. and the Quebec Wrecking & Salvage Co., and it was accomplished by the use of compressed air. The damage is stated to be considerable. The Canadian Recruit, which is of 3,964 d.w. tons, was built by Collingwood Shipbuilding Co., Collingwood, Ont., in 1919. She sailed from Montreal, Dec. 8, with a general cargo for Kingston, Jamaica, and Havana, Cuba, and experienced serious trouble with ice, after passing Crane Island, on Dec. 16, and lost her rudder, and eventually drifted with the ice and went on the Vache Reef, Dec. 20.

British American Shipbuilding Co., Welland, Ont.—As stated previously in Canadian Railway and Marine World, the s.s. Canadian Otter; Marine Department contract 44; builder's yard no. 4; approximately 4,575 d.w. tons, was launched in two sections, the aft section on Mar. 25, and the forward section April 13. The two sections left Wel-

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for and which orders are to be carried out. The figures given in the column headed "Long tons dead weight" show the approximate total deadweights, subject to modification as they may vary above or below the figures given and as they may be ascertained after the ships are completed, and of course, the total prices will vary accordingly.

The following contracts are used in the column giving the type of the vessels to be built: s.d., single deck; 2.d., two deck; 3.d., three deck; l.k., lake type; p. poop; b. bridge; f.c.s.e., forecastle.

Canadian Pacific Ocean Services s.s. Empress of Canada.

The Canadian Pacific Ocean Service, Ltd., has announced that the s.s. Empress of Canada, built at Glasgow, Scotland, will sail on a world circling trip, stopping at numerous ports, including Port Said, Suez, Bombay, Colombo, Singapore, Batavia, Manila, Yokohama, etc., and she is expected to arrive at Vancouver in June, 1921, after which she will be operated between Vancouver, Japan, China, and Philippine Islands.

The s.s. Empress of Canada will proceed from Glasgow to Liverpool, where the cruise on a world circling trip will commence about Mar. 15, 1921, visiting various ports and allowing time for sight seeing and shore excursions. Visits will be made to the following ports: Gibraltar, Monaco, Naples, Port Said, Suez, Bombay, Colombo, Singapore, Batavia, Manila Hong Kong, Shanghai, Kobe, Yokohama, and thence to Vancouver, the fares for the entire journey ranging from \$1,500 for a 4 berth outside cabin on D deck to \$12,600 for suites. Fares up to \$2,000 include \$200 accommodation on any C.P.O.S. ship across the Atlantic, over \$2,000 include \$250 accommodation, and those desiring to travel by any other Atlantic line on the return journey will be allowed \$100. The fares include railway tickets on the American continent, but not meals, or sleeping berths, or any expenses in Europe, or any shore excursions. An allowance of \$25 will be made for passengers joining the ship at Monaco instead of Liverpool, but their expenses to Monaco must be paid by themselves. Those desiring to leave the ship in China or Japan may proceed in a later C.P.O.S. steamship to Vancouver within 12 months from leaving Liverpool. The Empress of Canada is expected arrive at Vancouver about June 3, 1921, and a special train will be run across Canada for those anxious to return to Europe quickly.

She is built with cruiser stern, and with bilge keels of the most recent type, which will reduce rolling to a minimum, and she will be equipped with turbine engines capable of developing a speed of 22 knots an hour, using oil fuel.

Her dimensions are approximately,—length over all 644 ft., length b.p. 625 ft., breadth 77 ft., depth 53 ft., tonnage 21,000 gross. Her construction will embody all the latest improvements, and special attention is being given to the interior fittings. The first class entrance and stairway amidship will lead with a wide double flight from the entrance on A deck down to the dining room on D deck. The entrance on A deck will be panelled in wide and narrow alternating panels running the full height of the deck and tinted in light cream. The balustrades to the well and staircase will be of polished Honduras mahogany of Georgian design, and the staircase will lead in a wide sweeping flight to the af-

ter end of the dining saloon. The entrance will be linked up to all the principal public rooms on A deck, with a wide and well lighted gallery. The cabin dining saloon on D deck will be approached by a main stairway of similar character, the aim being to make the room as light as possible and to give it the utmost appearance of height, by means of long vertical panels. The center portion will be carried up in a well the full height of C deck and will be bounded by an arched clerestory. At the forward end of the room the whole of the upper portion of the bulkhead will be covered by a large specially woven piece of modern tapestry. The center raised portion of the room will be decorated to represent the inner courtyard of an old coaching inn of the 16th century, the sides of the well being supported by massive oak posts, and the whole will be lighted by projecting oak oriel windows giving on to passages on each side. The open air illusion will be increased by painting the ceiling in a sky effect, and by covering the floor in lino tile designed as stone paving. The cabin lounge will be a paint-scheme in delicate and varied colors. By discarding the use of metal casings, for large teak windows, greater light will be obtained than usual, and the room will be well lighted from the port and starboard sides, by groups of large windows proportionate in size to the area of the room. At the forward end doors will lead into the card room and writing room, the former to be panelled in French walnut with veneered and quartered panels, and the latter furnished in the William and Mary style, and panelled in African black bean, a wood at present very little known or used. The drawing room will be in Queen Anne style, panelled in mahogany framing with veneered panels. The center portions will be considerably higher than the average, with a large flat circular bay on the starboard side with two recesses for writing, etc. The smoking room will be Jacobean in character, panelled in oak with antique finish, and surmounted by a fretted cornice. The children's room will be panelled in polished birchwood, surmounted by a pictorial frieze illustrating nursery rhymes, the ceiling being specially painted to illustrate the planetary system, giving the names of the various planets, etc.

Vancouver Drydock.—A Vancouver, B. C., press dispatch of July 21 stated that the contract between the Dominion Government and J. Coughlan & Sons Ltd., for building a drydock on Burrard Inlet, had been signed, and that work would be started within 60 days. The order in council authorizing this contract, and giving particulars of its terms, was published in Canadian Railway and Marine World for March, pg. 156, and some additional particulars were published in April, pg. 211.

Kingston Harbor.—Sir Henry Drayton, Minister of Finance, who represents Kingston, Ont., in the House of Commons, is reported to have written the Kingston Board of Trade recently, that he had been informed that the Public Works Department had authorized the removal of approximately 41,533 cu. yds. of material to be dredged from Kingston harbor, and that tenders would be called for immediately.

Imperial Shipping Committee.

A London, Eng., press dispatch states that the British Government has appointed as a committee, consisting of representatives of Great Britain and the other British dominions and colonies, to be known as the Imperial Shipping Committee, and on which Canada is represented by Sir George H. Perley, High Commissioner in England, and Newfoundland by Sir Edgar R. Bowring. The duties of the commission are:—(1) To enquire into complaints from persons and bodies interested with regard to ocean freights, facilities, and conditions in the inter-imperial trade, or questions of a similar nature referred to them by any of the nominating authorities and to report their conclusions to the governments concerned. (2) To survey the facilities for maritime transportation by such routes as appear to them to be necessary for trade within the empire, and to make recommendations to the proper authority for the co-ordination and improvement of such facilities with regard to the type, size, and speed of ships, depth of water in docks and channels, construction of harbor works, and similar matters.

Junior Hydrographer for Naval Service Department.

The Civil Service Commission invites applications for appointment as junior hydrographers, at an initial salary of \$1,680 a year, which will be increased upon recommendation for efficient service at the rate of \$120 a year until a maximum of \$2,040 has been reached. This initial salary will be supplemented for the present fiscal year by the bonus provided by law. Duties.—Under direction, to assist in making surveys of shore lines and sea, lake, and river bottoms, to supervise the work of small parties in the field; and to perform other related work as required. Qualifications.—Graduation in engineering from a school of applied science of recognized standing; two years of experience in hydrographic survey work; tact, good judgment and ability to manage men; good physical condition. Examination.—Subjects and weights, as follows: Education and experience, 3; oral interview, if necessary in the Commission's opinion, 1. The only vacancy at present in this class is at Ottawa, in the Hydrographic Branch Naval Service Department.

Government's Canal Policy.—The National Liberal and Conservative Party's policy, announced at Ottawa, July 1, contains the following:—"Such further development of the existing canal systems of Canada as is necessary to improve navigation and cheapen transportation; with the additional object in view of developing the production and use of electrical energy for domestic, agricultural, municipal, industrial and railway purposes, and under such prudent regulations as will thoroughly safeguard the interests of the people."

Vancouver Harbor Commission Salaries.—A Dominion order in council has been passed, approving a bylaw passed by Vancouver, B.C., Harbor Commissioners, fixing the following yearly salaries from Mar. 1, 1920: Secretary, \$4,500; Chief Engineer, \$4,500; Assistant Chief Engineer, \$3,000; Harbor Master, \$3,600; Port Warden, \$3,600; Chief Accountant, \$3,000; Assistant Chief Accountant, \$2,400; Wharf Superintendent, \$2,400.

General Shipbuilding Matters Throughout Canada.

Canadian Allis-Chalmers Ltd., Bridgeburg, Ont.—The s.s. North American, which was launched by this company recently, is to be operated in the coast service out of New York, by the North American Line. She is of the same type of steel steamship as adopted by the Imperial Munitions Board, for 3,500 tons d.w., two of which, viz., War Magic and War Vixen, were built by this company. Another ship of this type is under construction at Bridgeburg, for coast operation, by the same owners.

Canadian Vickers Ltd., Montreal.—The s.s. Loch Tay, completely recently for Norwegian interests, after running her trial trips early in July, took on an oil cargo at Montreal, and sailed for Norway.

Chester Basin Shipbuilding Co., Chester Basin, N.S. launched the 3 masted schooner Mary L. Oxner, 200 tons register, at the end of June, for W. Duff, M.P., Lunenburg, N.S. The company has another similar ship on the stock for the same managing owner and it was expected to be ready for launching by the end of July.

J. Coughlan & Sons, Vancouver, B.C.—The s.s. Margaret Coughlan, some details of which were given in our last issue, and an illustration of which is published in this issue, was built by this company for Canada Western Steamships Ltd., one of its subsidiaries, and sailed from Vancouver, June 19, provisioned and ready for sea, for Chemainus, Genoa Bay, B.C., and Bellingham, Wash. where she loaded railway ties for Grangemouth, Scotland. This is said to be the first ocean going steel freight steamship built in Vancouver, by a local firm, and operated by a Vancouver company. She is of 8,800 d.w. tons capacity, and fitted with Kincaid engines, burning oil fuel, and during her trials she attained 13.69 knots an hour, with half her propeller out of the water, her average on the run to her loading port, 60 miles, being 12.23 knots an hour.

The s.s. Indus, builder's yard no. 16, which was launched June 30, has been bought by J. A. Sturrock, on behalf of the Swedish East Asiatic Line, Gothenburg, Sweden. She underwent her trial trip July 20, and later proceeded to a U. S. Pacific port to load flour and grain. She is of the same dimensions, tonnage, etc., as the s.s. Margaret Coughlan, details of which were given in our last issue, which is illustrated in this issue, and which was built for Western Canada Steamships Ltd., a subsidiary of the building company.

Dominion Shipbuilding & Repair Co., Toronto, launched the s.s. Floraba for the Gulf Navigation Co., New Orleans, La., July 7, the christening being performed by Mrs. G. Abanza, wife of that company's President. The Floraba is a sister ship of the s.s. Gonzaba, the launching of which was mentioned in our last issue.

William Lyall Shipbuilding Co., which operated a wooden shipbuilding yard at Vancouver, B.C., while building vessels for the British Government and others, during the war, has obtained judgment there for \$1,343,015, against R. Van Hemelrick, agent for the Belgian Government, in connection with an order for 6 five masted schooners, the purchase of which was cancelled before delivery could be made.

Midland Shipbuilding Co., Midland, Ont., is building a steel cargo steamship of the lake type, with raised quarter deck, to British Corporation's requirements for lake and ocean service, for Great Lakes Transportation Co., Midland, Ont. Her dimensions are,—length over all 259 ft., length between perpendiculars 246 ft., breadth 42½ ft., depth 21 ft. She will be equipped with triple expansion engines, with cylinders 18, 30 and 50 in. diam. by 42 in. stroke, 1,000 i.h.p., built by Great Lakes Foundry & Machine Co., Midland, and supplied with

track bulkheads will be built up from top of the floor timbers to the under side of the deck, the material used being 6½ x 12 in. 50 ft. coast fir, scarfed in the usual way; floor timbers 4 x 12 in. x 36 ft., placed 2 ft. centers. The bottom is of 3 x 14 in. x 50 ft. planking running fore and aft, and the sides are stiffened with a truss of 5 posts, supporting a top run of 1½ in. rods, and a deck lead of 1½ in. rods between each post. The estimated tonnage is 450 gross. The dimensions are,—length of deck, 184 ft.; length over all, 185 ft. 4½ in.; beam at side plank-

Steel Cargo Steamship, Margaret Coughlan, approximately 8,800 d.w. tons, built for Western Canada Steamships Ltd., by J. Coughlan & Sons, Vancouver, B.C.

steam by a Scotch boiler 13 ft. diam. by 11 ft. long, at 180 lbs., built by John Inglis Co., Toronto. She will have a speed of about 10 knots an hour, when loaded. The keel was laid Mar. 1, and when she is launched, which is expected to be about Sept. 1, she will be named Glenclova.

Nixon Construction Co., Vancouver, B.C.—The C.P.R. has ordered a car barge and steam tug from this company for service on Okanagan Lake. The barge will have two tracks, with rail capacity for 8 cars, and there will be a steam winch at the after end between the tracks for loading and unloading at landings where there is no engine crew to do the work. There will be a watertight transverse bulkhead about 24 ft. from the bow and the stern respectively. The

ing 36½ ft.; beam at side nosing, 37 ft.; depth over all at side, 6 ft. 11½ in.; crown of deck 6 ft.

The tug boat will be of coast fir throughout, except the heads, and it will be sheathed with cedar. The hull will be planked with 2½ in. and the ceiling with 2 in. coast fir. The hull will be salted and will also be protected with galvanized sheets, 16 gauge, to enable the boat to operate in 10 in. of ice, should it be necessary. The propelling machinery will consist of a single set of compound vertical condensing type engines, built by Polson Iron Works, Toronto, of 27.3 n.h.p., with cylinders 12 x 3 x 6 in. stroke, driving a single screw about 80 in. diam. Steam will be supplied by a marine cylindrical type boiler, with two furnaces, at a working pressure of 160

Mainly About Marine People.

A. H. Allan, formerly Manager, Canadian Pacific Ocean Services, Ltd., Liverpool, Eng., has resigned. It is reported that he will return to Canada shortly, and that he will probably undertake steamship work in New York.

Hugh Allan, formerly of the Allan Steamship Line, Mrs. Allan, and Miss Rachel Allan, who have been spending some time in Canada, left Quebec, July 14, for England.

Hon. C. C. Ballantyne, Minister of Marine and Fisheries, and of Naval Service, which positions were vacated by Sir Robert Borden's resignation of the Premiership, was re-appointed to the same positions in Hon. Arthur Meighen's administration, and sworn in at Ottawa, July 10, leaving immediately afterwards for a rest at St. Andrews, N.B. An Ottawa dispatch says that he will leave for the Pacific coast about Aug. 10, to look into harbor, fishery and other matters, visiting Vancouver, Victoria and Prince Rupert.

E. H. Beazley, Managing Director, Union Steamship Co. of British Columbia, who was killed in an aeroplane accident at Minor Park, Lulu Island, B.C., May 24, left an estate valued at \$77,550, consisting of his home at Shaughnessy Heights, Vancouver, shares in B.C. Marine Ltd., and insurance. A life interest is left to the widow, with remainder to three children. As the result of an enquiry into the accident, by the Canadian Air Board, Major A. C. Baker, who operated the machine, was held to be responsible for Mr. Beazley's death, having attempted to carry out a spin without being able to regain control, in contravention of the Air Board's rules, and the Pacific Aviation Co. was also blamed for not observing the air regulations.

Mrs. G. M. Bosworth, wife of the Chairman, Canadian Pacific Ocean Services, Ltd., left Montreal July 14 for Great Britain. She will christen the company's new ship Empress of Canada, which will be launched at Glasgow on Aug. 17. Mr. Bosworth will leave for Great Britain on Aug. 4.

Charles Dennehy, Assistant Manager, Pacific Steamship Co., Vancouver, B.C., died towards the end of June from injuries sustained at a fire in his apartment, when he made a plucky but unsuccessful leap for life. He was for some time in charge of the Returned Soldiers' and 7th Battalion Clubs, and was also a member of the Amputation Club. The funeral, which was of a military character, was attended by representatives of the various steamship and railway companies in the province.

E. Edwards, heretofore surveyor of shipping for the Great Lakes Register, Cleveland, Ohio, is reported to have been appointed Lloyd's representative for British Columbia at Vancouver, vice John Whitehead, who has been transferred to London.

H. S. Folger, formerly General Manager, St. Lawrence River Steamboat Co., and Thousand Island Steamboat Co., now owned by Canada Steamship Lines Ltd., died at Kingston, Ont., July 8, aged 53, following a stroke of paralysis. He was born in the U.S. and entered the steamboat business, of which firm his father was the head. He eventually became General Manager of the two steamboat companies named, and after the acquire-

ment of these properties by Canada Steamship Lines he continued as a general brokerage business in Kingston and acted as Deputy U.S. Consul there.

Luke Murray Hatfield, whose appointment as Assistant Marine Superintendent, Canadian Government Merchant Marine Ltd., Montreal, was announced in our last issue, was born at Yarmouth, N.S., Apr. 4, 1880, and entered navigation in 1896, when he had been, to 1898, seaman on sailing ship Lansing, trading foreign; 1898 to 1899, on Canadian coasting freight and passenger steamships, Hugh Cann & Son, Yarmouth, N.S.; 1899 to 1901, second officer, freight and passenger steamships, Yarmouth, N.S., and Boston, Mass., Yarmouth Steamship Co., Yarmouth, N.S.; 1901 to 1909, second and first officer, cargo steamships, trading foreign, William Thomson & Co., St. John, N.B.; 1909 to 1911, master, cargo steamships, trading foreign, same company; 1911 to 1912, master, freight and passenger steamships, New Orleans to Honduras, Vaccaro Bros., New Orleans, La.; 1912 to 1914, master, cargo steamships, trading foreign, William Thomson Co., St. John, N.B.; 1914 to 1915, master, cargo steamships, trading to Hudson Bay, Dominion Government; 1915 to 1916, master, Canadian coasting freight and passenger steamships, Hugh Cann & Sons, Yarmouth, N.S.; 1916 to 1918, master, cargo steamships, trading foreign as transports, William Thomson & Co., St. John, N.B.; 1918 to 1920, master, cargo steamships, Canada to Mediterranean and Great Britain, Imperial Munitions Board, E. C. Downing, Manager, Cardiff, Wales.

H. E. A. Hawken, heretofore Chief Registrar of Shipping, Marine and Fisheries Department, Ottawa, who, since the superannuation of Cameron Stanton, Assistant Deputy Minister of Marine and Fisheries, on Mar. 31, has been acting in the latter capacity, has been appointed Assistant Deputy Minister. He was born Sept. 28, 1879, and entered the civil service Jan. 7, 1902.

J. C. Irons, local manager, Union Steamship Co. of New Zealand (Canadian-Australian Royal Mail Line), Vancouver, B. C., was married in Scotland July 8 to Mrs. M. S. Rearden of Vancouver, and will return to Vancouver during August.

Alex. Johnston, Deputy Minister of Marine and Fisheries, left Montreal, July 13, with a number of Dominion Steel Corporation's directors, for Halifax, where a special general meeting was held July 15, after which the party proceeded to New Glasgow and Sydney.

P. J. Melvin, at one time Export Freight Agent, Canadian Pacific Ocean Services, Montreal, and latterly with Marine Navigation Co. of Canada, Ltd., has commenced business in conjunction with J. Mauro and J. D. Williams, of St. John, N.B., as the Atlantic and St. Lawrence Stevedoring and Contracting Co., Ltd. Office, 167 Commissioner St., Montreal.

J. W. Norcross, President, Canada Steamship Lines Ltd., will, it is reported, be also deputy chairman of the board of directors, and chairman of the executive committee of the British Empire Steel Corporation, to which the Canada Steamship Lines Ltd. is to be leased.

F. Ruddock, formerly of F. & J. Ruddock, shipbuilders, St. John, N.B., died there July 10, aged 82.

The Toronto Shipbuilding Co. Ltd., Toronto, was incorporated in 1918, under the Ontario Companies Act, to build and repair ships, and to carry out contracts for two such ships, viz., Wm. Ogilvie and Wm. Dwyer, for the British Government, under orders from the Imperial Munitions Board, has succeeded in obtaining from the company two last contracts of E. Russell, contractor, Toronto, was chiefly interested.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C.—The four masted barkentines which are being built by this company at the Cholberg yards, Victoria, under aid by the Dominion Government, will, it is stated, be built so that auxiliary power may be added later. It is said that shaft logs will be built into the hulls, suitable for twin propellers. Keels of the first three ships have been laid, and construction will proceed on the three together.

The further supplementary estimates for the year ending Mar. 31, passed at the Dominion Parliament's recent session, contain the following item:—To provide, by way of advances to Victoria (B.C.) Shipowners Limited, for the construction of four ships at an estimated cost of \$250,000 each, not less than 60% of the workmen employed in such construction to be returned soldiers; advances to be made on progress certificates under the supervision of an engineer of the Marine Department and not to exceed \$175,000 on each ship. Such advances to be secured by first mortgage on the ships and to be repayable with interest at the rate of 6% per annum, such interest to be a first charge on the aggregate net operating revenue from the ships. Also to provide salary of a Government inspector at a rate not exceeding \$250 a month, \$703,000.

The first annual meeting of shareholders was held July 8. The report, which was presented and adopted, referred chiefly to the agreement with the Cholberg Shipyard for the immediate construction of three ships, it being left to the company to decide whether three or four will be built under the agreement, much depending on the cost of construction. In the company's agreement with the Dominion Government, under which aid is granted for building ships, provision is made for the construction of four, and \$175,000 for each of the four is being advanced by the government on mortgage, bearing interest at 6% per annum. Brigadier General R. B. Clark was added to the board of directors.

A. W. Wilson, assistant engineer of the Reel River about the end of the month, within the city limits, so as to make it navigable for the larger steamboats from Lake Winnipeg. No dredging has been done at the place since 1911.

The C. P. O. S. Steamship Empress of Britain Being Reconditioned for Regular Service.

An interesting feature of the present reconstruction period is the reinstating of the large passenger ships which by reason of their speed and radius were able to serve for cruiser patrol and convoy escort duty during the war. The C. P.O.S. Empress of Britain, commissioned in Aug., 1914, served on the South Atlantic patrol, and after close on a year of service was fitted out as a transport carrying troops to the Dardanelles, Egypt and India; also from Canada for the western front during the remainder of the period of hostilities. The nature of the service may be appreciated from the fact that she was able to accommodate 5,000 officers and men, in addition to her own complement.

The Canadian Pacific Ocean Services, Ltd., which placed her in the hands of her builders, the Fairfield Shipbuilding & Engineering Co. of Glasgow, Scotland, for reconditioning and the carrying out of extensive alterations which have as an object the provision of most luxurious and up to date conditions for passengers, have also arranged for her conversion from coal to oil fuel burning. The bunker capacity sufficient for round voyage requirements, Liverpool to Quebec, viz., 3,500 tons, has been obtained by converting the original coal bunkers for the carriage of fuel oil. The boilers, which are contained in two separate watertight compartments, are of the multitubular return tube (Scotch) type, there being 6 double ended and 4 single ended, with a total of 60 furnaces. All boilers are under Howden's system of forced draft and supply steam at a pressure of 200 lb. a sq. in. The indicated horse power of the twin quadruple expansion engines is 18,000. With oil fuel burning there is an increase in boiler efficiency of 7%, while the utilization of the whole of the furnace perimeter throughout the length, as effective heating surface, results in improved circulation, and diminution of the distorting strains which cannot be avoided under the conditions of coal burning.

Owing to the higher calorific value of oil, the evaporation is considerably increased and the weight of oil in comparison with coal required for equivalent evaporation is in the rough proportion of 2 to 3. The increase in propulsive efficiency which results from maintenance of steady head of steam, in comparison with the inevitable drop during period of cleaning coal fires, and fuel economy by elimination of disposal of ashes at sea, are important features governing the adoption of oil burning. With this vessel under conditions of coal burning it was necessary to discharge overboard 30 tons of ashes a day.

The cleanliness of machinery spaces where oil fuel is used is well known, and a definite saving is effected in handling of stokehold bilges, while the reduction in upkeep expenses due to lower deterioration of structure is appreciable. It will be seen that from the labor point of view the stokehold complement work under conditions improved to an extent which render them incomparably more comfortable than they were when undertaking the arduous duties associated with coal firing. The laborious work of coal trimming is replaced by pumping, and the old-time fireman becomes a boiler attendant, who, under the guidance of the engineer officer, regulates the sup-

ply of oil to the boiler furnaces and attends to the cleaning of the oil burners.

The bunkers are being arranged for the carriage of fuel oil of a minimum flash point of 150° F., and special provision is being made for the efficient carriage and handling of heavy grade Mexican fuel oil. The suction pipes are large bore, for assistance in pumping, mains being 8 in. bore, and branches to bunkers 4 in. bore. Heating coils are being fitted in the bunkers, to ensure maintenance of the necessary fluidity when in cold climates. The system of working is generally as follows: Oil transfer pumps draw from fuel bunkers and discharge to settling tanks of a capacity sufficient for 24 hours supply. Oil fuel pumps draw from settling tanks, through suction strainers, and discharge through heaters to burners which are arranged in the boiler furnace fronts. Oil filters are fitted in the line of discharge from heaters to burners and oil meters for measuring quantity used are also incorporated in the pipe lines. The system adopted is on the Wallsend-Howden principle, burners being Dahl patent.

For normal working, oil is heated to 200° F. and delivered to burners at a pressure of 100 lb. a sq. in. This combination, in conjunction with burner nozzle, which is arranged to give conical spray, ensures the degree of atomizing of the oil which is essential for the obtaining of complete combustion. This atomizing is an important factor in oil burning, as, should large globules of oil enter the furnaces, the outer skin only becomes charred, resulting in an oily mass being deposited in the smoke tubes.

Each boiler room has its own separate equipment, comprising one oil transfer pump of the Weir's vertical type, and oil fuel sets in duplicate, each consisting of Weir's pump and oil fuel heater of capacity suitable for the supply of one complete section of boilers. The feed pumps are Weir's horizontal type cast iron fitted, while heaters are capable of raising temperature of oil to 320° F., when working under steam supply, at the pressure of the exhaust, which is normally 5 lb. a sq. in. There are therefore 4 separate oil fuel sets, and each has a designed capacity of 12,500 lb. oil an hour. The oil circuits are arranged to facilitate warming up, prior to starting all or any of the boilers which may have been out of use, and the fuel may be circulated past the burners, after passing through the heaters. Valves for regulating supply of oil to burners have been grouped for convenience in handling.

The air supply requisite for combustion of the fuel is delivered to furnaces under Howden's system of forced draft by eight 72 in. double inlet fans of the centrifugal type, each driven by 30 b.h.p. protected type adjustable speed motors, shunt wound with series steadying turns, speed of revolution being 500 per minute on 100 volt circuit. For convenience in starting, after ship has been in port some days, special lighting up heaters are provided, these being Admiralty T. B.D. type. To facilitate ready checking of combustion conditions, a system of smoke observation mirrors is included, and the operating staff will therefore be able to verify adjustments for economy without leaving the boiler room.

Special attention is being given to the

lighting and ventilation of boiler rooms, while the painting of spaces, hitherto dark and dirty, as is inevitable with coal burning, will make for increased efficiency in operation.—Marine Engineer and Naval Architect, London, Eng.

The Empress of Britain will be put in the Liverpool-Quebec service, leaving Liverpool, Sept. 1, on her first voyage after being re-fitted, etc. In addition to being converted to a fuel oil burner, as stated above, she is being completely refitted, 4 additional suites being placed forward on the upper promenade deck, and 2 in the center, and 4 more single cabins with baths are being installed. Ten single cabins have been added on the lower promenade deck, and 24 single rooms have been added on the deck below the lower promenade deck. The third class accommodation has been thoroughly overhauled, and subdivided.

Sir Thomas Fisher on the C.P.O.S. Ltd.

London, Eng., July 3. — Sir Thomas Fisher, K.B.E., Manager, Canadian Pacific Ocean Services, Ltd., returned from Montreal last week by the R.M.S. Empress of France. Speaking to a press representative, he said: "My visit was for the purpose of reporting to and consulting with the Chairman and directors. The establishment of a direct passenger service between Canada and Italian ports was one of the matters under consideration, also that of additional shipbuilding, the cost of which is now becoming so serious that, like other large shipowners, C.P.O.S. will exercise great caution in regard to new construction. As matters stand, no shipbuilder can conclude any definite contract, and the system of payment according to cost of material and labor, plus percentages, makes it impossible to estimate, even approximately, what the eventual actual cost of a vessel will be. Under this system we have had to pay far more than the extreme outside original calculations. Moreover, the great advance in wages has, unfortunately, not meant greater efficiency or celerity in construction."

Questioned as to vessels now under construction, Sir Thomas Fisher said:—"On Saturday (July 3) the Montcalm will be launched by John Brown & Sons, Clydebank, and will, I can only hope, be ready for service next February. She is an improvement on our Metagama and Melita type of 2-class steamships, and is 500 ft. long by 70 ft. beam, 68 ft. depth from the boat deck, with a tonnage of about 16,200. The Empress of Canada is expected to be launched from the Fairfield yards on the Clyde, and the naming ceremony will be performed by Mrs. G. M. Bosworth, wife of our Chairman. The Empress of Canada will be the finest and fastest vessel crossing the Pacific Ocean. She is intended to make her maiden voyage to Vancouver via the Mediterranean next March, and already many enquiries for the round the world passage are being made. Our Transatlantic mail steamer, Empress of Britain, which has been practically rebuilt since the war, will, I hope, be ready to leave Liverpool for Quebec on Sept. 1, and will carry three classes of passengers and be fitted as an oil burner."—"Canada."

Canadian Notices to Mariners.

The Department of Marine has issued the following notices:

Another red buoy, 4 ft. high, with a black band, will be placed at the entrance to the harbor of St. John's, Newfoundland, to mark the position of the wreck of the ship "Hulk."

British Columbia, Haro Strait, and Discovery Island.—The Department of Marine has issued the following notice: "The light on Discovery Island, Haro Strait, is to be kept burning at night, and in foggy weather will sound one long blast of the whistle followed by two short blasts. Ship masters are requested to keep a lookout for her when in these waters and give her a safe berth in passing."

British Columbia, Strait of Georgia, and the Fraser River.—The Department of Marine has established to mark the south side of the new dredge channel north of Westham Islands which leads into the new main channel, north of Brush Island, of the Woodward group. Mariners proceeding by river will, after passing black can buoy 25 head 99° on the alignment of the Woodward range, leaving the three conical buoys on the starboard hand. The dredged cut marked by the above buoys is approximately 5,000 ft. long and 300 ft. wide in center, widening to 500 ft. at each end.

British Columbia, Vancouver Island.—The commanding officer of C.G.S. Stadacona reports the existence of a rock on the south side of Pipestem Inlet, off a small islet north of Georgina Point; the north end of Image Island in line with the south end of Refuge Island bearing 290° (s. 85° w. mag.) leads over the rocks; the westernmost peak on Black Mountain bearing 41° (n. 16° E. m) marks the position of the rock, which is 6 ft. wide and about 40 ft. long parallel with the shore, with deep water all round; it is not marked by kelp and has only 1½ ft. of water over it at low tide.

Cape Breton Island.—The Fourchu bell buoy, on the southeast coast of Cape Breton Island, has been moved to a new position about 1,500 ft. from Fourchu Head lighthouse.

Lunenburg.—The Lunenburg Marine Railway Co. is rebuilding patent slips 1 and 2, and building a new slip 3, in Lunenburg harbor.

New Brunswick, Bay of Fundy.—The fixed white light on Midgik Bluff, at the entrance to Magaguadavic River, Passamaquoddy Bay, has been replaced by an occulting white light, automatically occulted at short intervals. The light is unwatched.

New Brunswick, Northumberland Strait, Richibucto Cape.—Without further notice range lights will be established; character, fixed white light; order, 7th dioptric; elevation, 25 ft.; visibility, 5 miles from all points of approach from water; lights in line lead boats of shallow draft into shelter behind the breakwater.

New Brunswick, St. John Harbor.—The Partridge Island light and bell boat in St. John harbor, Bay of Fundy, will be replaced by a black steel cylindrical gas and bell buoy showing an occulting white light, in 26 ft. of water, near the east end of Partridge Island.

Northumberland Strait.—The front light on the channel range at Richibucto harbor entrance, in Northumberland Strait, has been moved 42 ft. north of its old position and about 665 ft. from the back light.

The north beach range lights in Richibucto harbor, Northumberland Strait, have been moved, the front light on the shore behind breakwater, 58 ft. north of its old position, and the back light about 40 ft. north of its old position, and 345 ft. from the front light.

The bar range lights in Richibucto harbor, Northumberland Strait, have been moved, the front light about 100 ft. east of the old position and the back light about 1,400 ft. east of the old position and 275 ft. from the front light.

Newfoundland.—A flashing red acetylene gas light, showing a flash of 0.3 sec. duration, for 3 seconds, has been established at Square Head, on the north side of Bonavista Harbor, Bonavista Bay. The light is at an elevation of 57 ft., on a white square wooden pyramidal tower.

Nova Scotia, Cape Breton Island.—The Fourchu whistle buoy, on the south coast of Cape Breton Island, off Fourchu Inlet, has been moved to a new position, a quarter of a mile from Pot rock.

Nova Scotia, Annapolis.—The fixed white electric light on the outer end of government pier, Annapolis wharf, has been discontinued.

The Bass Rock buoy, consisting of a red wooden spar, in 54 ft. depth, and the Frying Pan Bar buoy, consisting of a black wooden spar, in 48 ft. depth, have been established in the Canso harbor approach.

Eight spar buoys, 4 red and 4 black, have been established to mark the channel from the point of beach, opposite Shingle Point lighthouse, northward to Grants Island ledge, at Port Herbert.

Nova Scotia, southeast coast, entrance to Prospect Harbor.—On rock at eastern end of Saul's island, a gas beacon has been established showing an occulting white acetylene light, automatically occulted at short intervals, and consisting of a red lantern on a white pole with black steel tank at base; the light is unwatched, has an elevation of 28 ft., and is visible for 7 miles from all points of approach.

Ontario, Bay of Quinte.—Without further notice, the fixed white light on the pier, on the north side of the channel, will be replaced by an occulting white acetylene light, automatically occulted at short intervals. The light will be unwatched.

Ontario, Georgian Bay.—Change in position of range lights,—front light, on east side of mouth of Nottawasaga River, 247 ft. northeast of old site; back light, 264 ft., 111° 10' from front light; the alignment leads over the bar outside the mouth of the river, with a least depth of 5 ft.

Ontario, Lake Huron and Georgian Bay.—A new edition of sailing directions for Canadian shores on Lake Huron and Georgian Bay, has been published by the Naval Service Department's Hydrographic Survey. Price 25c.

Ontario, Lake Huron, Georgian Bay.—Beacons in the inside channel, between Penetanguishene and Parry Sound, have been rebuilt, as follows: Red Rock beacon, on summit, white wooden, diamond shaped, slatwork daymark; Kerr Island beacons, on south shore of island, white,

wooden, diamond shaped, slatwork daymarks; Kings Bay (Big Davids Bay) beacons, on south shore of island, south of Kings Bay, white, wooden, diamond shaped, slatwork daymarks.

Ontario, Lake Ontario.—Without further notice, the gas buoy that was adrift will be replaced on its former position, at the outer end of the dredged cut, 1½ miles 320° 30' from the Thames River main light.

Ontario, Lake Superior, Thunder Bay, Port Arthur Harbor.—On or about June 1, the occulting white light on the crib-work break, 31 ft. from the south end of the northerly breakwater, will be changed to an occulting red light.

Ontario, Lake Superior.—An auxiliary hand fog horn has been placed at the lighthouse on Michipicoten Island, on the south side of Michipicoten Island, and will be sounded should the fog bell become disabled.

The light on the northwest extremity of Otter Island will be re-established without further notice. Its character will be flashing white catoptric, showing one flash every 8 seconds, for half the time between flashes, or 4 seconds. The light will be totally eclipsed for the remainder of the time, a fixed light of 450 c.p. will be visible through which the stronger flash will show, the naked light will be 450 c.p. and the flash 20,000 c.p., the illuminant being petroleum vapor burned under an incandescent mantle.

Ontario, Ottawa River.—A black wooden spar buoy has been established on the north edge of shoal, about 3,750 ft. west of Carillon dam, at the west entrance to Carillon Canal.

Prince Edward Island, North Rustico Harbor.—A red bell buoy, of the steel cylindrical type, marked Rustico, in white letters, has been established off the entrance to the harbor, 1½ miles from North Rustico main light.

Prince Edward Island, Northumberland Strait.—Whistle buoy off the south extremity of Tryon shoals has been replaced by a red gas and bell buoy, of the steel cylindrical type, showing an occulting white light.

Prince Edward Island, Northumberland Strait, Little Sands.—On shore, at inner end of breakwater, a fixed red light, 7th order, dioptric Chance duplex lamp, at an elevation of 54 ft. on a white square wooden tower 13 ft. high, has been established, visible from all points seaward.

Quebec, Gulf of St. Lawrence.—The submarine bell buoy off Fame Point, about half a mile north of the lighthouse, has been withdrawn.

Quebec, Lower St. Lawrence River.—During June, July, August, September and October the Geodetic Survey Branch of the Interior Department will be using signal lamps for surveying purposes along the north and south shores of the lower St. Lawrence River. Mariners are warned that they must not confuse these

lights with aids to navigation. Search lights may be set up at the following points—north shore, Iberville, Lavale, Bersimis, Manikongan, St. Nicholas, St. Augustin, Trinity, Cawee; south shore—Mont Joli, Sandy Bay, Val Marie, Montane, Leclerc, Les Machins, Cap Chat, Edward.

Quebec, River St. Lawrence.—The barge Cuba lies sunk in 6½ fathoms of water, 3,750 ft. from Berthier wharf. A green steel cylindrical gas buoy showing an occulting white light has been established 115 ft. from the wreck.

Quebec, River St. Lawrence.—The wooden beacon on Wood Pillar Inlet has been destroyed, and will not be rebuilt.

Quebec, River St. Lawrence.—The master of the s.s. Gyp reports the extension of a derelict, on June 19, about 11 miles northeasterly from Rivière à la Martre. The derelict is a menace to navigation.

Quebec, River St. Lawrence, Ship Channel between Quebec and Montreal.—The pier supporting the front light of the Gentilly range lights has been carried away by ice, and, until further notice, a temporary light has been placed on a platform on piles on the same site.

Quebec, St. Lawrence River.—A new edition of the St. Lawrence River Pilot, above Quebec, comprising sailing directions from Quebec to the east end of Lake Ontario, has been published by the Naval Service Department's Hydrographic Survey. Price 25c.

United States, Lake Huron.—An auxiliary fog signal has been placed at Fort Gratiot light station on the mainland, at north entrance to St. Clair River. When foggy on river, but clear on lake, diaphone will sound a blast of 5 seconds duration every 60 seconds; no change in steam whistle, which will sound as heretofore when foggy on lake.

United States, Lake Memphremagog.—On or about June 10, the fixed red light at Whipple Point will be replaced by a flashing white light, showing a flash of 0.3 sec. duration, every 3 seconds.

United States, Lake Superior.—Commencing about May 19, the submarine fog signal at Whitefish Point light station, will be sounded continuously during navigation season.

United States, Lake Superior.—The submarine bell, in 30 fathoms, 2,185 yards north of White Fish Point light-house, will, after May 25, strike 4 strokes every 16 seconds.

United States, St. Marys River.—The east side upper light 6, in the West Neebish channel, has been destroyed, and, until it is rebuilt, a temporary gas buoy, showing a flashing red light, has been established in 22 ft. of water, on the channel bank, immediately above the location of the light.

United States, St. Marys River.—Ship masters are advised that, during the next two or three months, a floating plant will be employed by the lighthouse service, in rebuilding structures in the Middle Neebish channel. It is requested that ships exercise care to slow down in passing work of construction, to avoid damage to the floating plant and other work.

Age of Stokers.—The International Congress of Seamen at Genoa, Italy, has decided to place on the agenda for the next conference, a proposal that no seaman under 18 years old be employed as a trimmer, or stoker, on a ship. Another proposal, that no persons under 17 years old be employed on night watches on ships, between 8 p.m. and 6 a.m., did not obtain the necessary two-thirds vote to get a place on the agenda.

Hudson Bay Navigation.

The Lamson-Hubbard Canadian Co. has chartered the s.s. Thetis for a trip to Hudson Bay ports. The Thetis arrived at Montreal, July 10, from Newfoundland, where the party for the north was completed, and she sailed July 15, with a selected crew, under Captain A. C. Smith, who has had over 20 years experience of Hudson Bay navigation, having been master at different times of the Hudson's Bay Co.'s steamships Nascopie and Pelican. The s.s. Thetis was built at Dundee, Scotland, in 1881, and is screw driven by engine of 98 h.p. Her dimensions are,—length 181.1 ft., breadth 30.9 ft., depth 19.1 ft.; tonnage 828 gross, 396 net. She was originally bought by the U.S. Government, with the s.s. Bear, for the Greeley Relief Expedition, and sent to Cape Sabina, bringing back seven of a party of 25 men, who had been stranded there. She was later acquired by interests associated with Job Bros. & Co., St. John, Nfld., and is owned by the Thetis Steamship Co. Ltd., St. John's, Nfld.

The Hudson's Bay Co.'s s.s. Nascopie sailed from Montreal during July on her annual trip with stores for the company's various trading posts in Hudson Bay and James Bay, etc. The company's s.s. Pelican, which also loaded stores at Montreal for the company's posts, sailed July 9 for the north. The company's s.s. Discovery was stated recently to be in England preparing for its annual trip to Labrador and Bay ports. One of the passengers on the s.s. Nascopie is an Eskimo who is being returned to Chesterfield Inlet, about 400 miles from Fort Churchill, where he is to be tried for murder by a special court to be sent from Canada for the chief purpose of impressing the natives.

The s.s. Empress and the wharf property at Ottawa which were bought by W. H. Dwyer Ltd., Ottawa, for between \$21,000 and \$22,000 from the receiver of the Central Railway Co. of Canada, are being operated by the Empress Navigation Co., Ottawa, in connection with the Capital Amusement Co., the ship being run between Ottawa, Ont., and Montebello, Que. The Empress Navigation Co. also bought the s.s. Victoria from the Victoria Navigation Co., Thurso, Que., recently, and she is being operated between Ottawa, Ont., and Thurso, Que., daily except Sunday. The s.s. Empress was built at Ottawa in 1873, when she was named Peerless, and was rebuilt and renamed Empress, at Montreal, in 1886. She is paddle wheel driven by engine of 152 h.p. and has the following dimensions,—length 185.3 ft.; breadth 27.6 ft.; depth 8.1 ft.; tonnage 678 gross, 372 net. She was operated for several years on the Ottawa River in connection with the old Carillon & Grenville Ry., and when this railway ceased operation she was acquired by the Central Ry. Co. of Canada, and operated on the St. Lawrence between the Lachine Rapids and Montreal.

Beeson's Marine Directory of the Northwestern Lakes, for 1920, the 34th year of publication, in addition to the customary information as to steamships, both Canadian and U.S., operating on the Great Lakes, contains a number of interesting articles relative to shipping generally. A diagram showing some details of the large ships built during the past 20 years, gives the s.s. W. Grant Morden, owned by Canada Steamship Lines, as the largest steamship on the Great Lakes.

Steamship Terminal for Sydney, N.S.

Some details were given in a previous issue of Canadian Railway and Marine World, in regard to plans prepared by the Public Works Department for the construction of a terminal dock at Sydney, N.S., on account of which \$100,000 has been included in this year's estimates. The total cost of the work is about \$800,000. The dock will be built near the old railway pier, at Barrack Point. The wharf will be 540 ft. long, 72 ft. wide, with a berth on each side 350 ft. long by 100 ft. wide, and with a depth of 30 ft. of water at low tide. There will also be a berth on each side, with a depth of water of 20 ft. at low tide, each berth being 150 ft. long by 100 ft. wide. The wharf shed will be 450 ft. long by 40 ft. wide, with a 4 ft. platform on each side at the same level as a freight car floor, with a railway track on each side of the wharf, with 3 ft. clear width between a box car and the outer edge. The wharf will consist of 25 concrete crib piers, filled with stone, and the bridge from the shore will be an earth embankment, with two railway tracks extending to each side of the wharf, and a wagon road leading from the west along the shore to George St.

Shipbuilding Statistics.—For the quarter ended June 30, 3,570,000 gross tons of shipping were turned out of United Kingdom yards, compared with 2,105,000 from U.S. yards in the same period. The total construction of the world for the same period was 7,720,000 gross tons, compared with 8,017,000 tons for the same quarter in 1919. The U.S. shipbuilding report of a year ago showed it to be ahead of United Kingdom shipbuilding by about 1,350,000 gross tons. The average gross tons of the British ships under construction is 4,012, while the average of U.S. ships is 5,609. The United Kingdom and the U.S. are far ahead of all other countries in shipbuilding, the nearest being Holland, with an output for the quarter ended June 30 of 400,000 tons, Canada being next with 40,000 tons.

Drifter Sales.—Canadian Railway and Marine World, for July, stated that the Anderson Co. of Canadian hold sold T.R. 59 to T. M. Kirkwood, Montreal, and that he had arranged options on a further nine through the Naval Service Department. We are advised that the sale was made direct by the Naval Service Department, which has also sold drifters 61 and 99 to the same buyer, who has an option on a further number. T. M. Kirkwood states that these drifters cost originally \$84,000 each, and he is offering them, newly painted and ready for sea, at \$16,000 each at Halifax, N.S., or \$17,000 delivered at any port to the head of Lake Superior. The Naval Service Department has also sold drifters 70 and 95 to Capt. Alex. Smith, Dartmouth, N.S.

Marine Public Works Contracts.—The Dominion Public Works Department has awarded the following contracts:—June 24, Rebuilding of wharf at Little Current, Manitoulin Island, Ont., Wm. Birmingham, Kingston, Ont., schedule of prices; July 2, Dredging at Port Arthur, Ont., Canadian Dredging Co., Midland, Ont., class B, 28c. a cu. yd., scow measure; July 5, Dredging, quarantine station, Williams Head, B.C., main and coal wharf, Pacific Coast Construction Co., Vancouver, B.C., class B, 48c. a cu. yd. in situ.

THE author returned to Halifax, N. S., shortly after dark, but with some satisfaction. While the mail boat brought me out here, I was engaged for on the route between New Brunswick and Prince Edward Island.

The British Board of Trade has recommended that the crew of the Imperial Oil Ltd. s.s. Luz Blanca, which was sunk by German submarines off Halifax last May 1, 1918, be granted a grant. Two of the crew were killed by shell fire from the submarine, the remainder being rescued and taken to Halifax.

The s.s. Princess, owned by Farquhar & Co., Halifax, N.S., has been sold to Peruvian parties, and is expected to sail from Halifax for Peru during August. She was built in 1896, was for some time in the Newfoundland trade, and was bought by Farquhar & Co. in 1919. She is 542 tons gross, 125 tons net, and has been thoroughly overhauled and refurnished this year.

The Maritime Wrecking Co.'s tug *Sarnia* (city and the Halifax Tow Boat Co.'s tug *W. F. Roobling* left Halifax during July for Norfolk, Va., where they are taking in tow a sand-sucker for use in the St. John, N.B., harbor. The sand-sucker is said to be the largest in the world, being of the following dimensions: length 200 ft., beam 80 ft., with about 30 pontoons for carrying pipes.

Canada Steamship Lines Ltd. is stated to have opened its Nova Scotia-Prince Edward Island-Newfoundland service with the sailing of the s.s. Corunna, which was taken to Sydney, N.S., from Montreal about the middle of July, and it is stated that the Corunna will shortly be replaced by the s.s. Mapledean. The s.s. Corunna is owned by the Dominion Iron & Steel Co. and was built at Leith, Scotland, in 1891. She is screw driven, by engine of 99 h.p., and has the following dimensions,—length 230 ft., breadth 34.1 ft., depth 19.7 ft.; tonnage 1,269 gross, 792 net.

The Lunenburg Marine Railway Co. is rebuilding its patent slips 1 and 2, and building a new slip 3, details of which are as follows:—No. 1, length over all 120 ft., depth at high water on block, 11½ ft. forward, 16½ ft. aft, with lifting power of 400 tons, it has 2 tracks with cradle; No. 2, length over all 85 ft. and 110 ft., depth on blocks, 11½ and 15½ ft. forward, and 15½ and 18½ ft. aft, with lifting power of 300 and 600 tons, there are two tracks with cradles, which can be coupled into one, making it 195 ft. long; No. 3 will be 180 ft. long on block, 10 ft. deep forward, and 17 ft. aft.

with lifting power of 1,000 tons, it will have two tracks with one cradle.

The Quebec Harbor Commissioners have completed the alterations to shed 18 on the breakwater. An additional story has been built on the front half, with a passage way run from end to end, wide enough to swing a small gangway from the shed to steamship decks at high tide.

The s.s. Vega, owned formerly by the Interlake Steamship Co., (Cleveland, Ohio), has been bought by the Port aux Quilles Lumber Co., Montreal, and has been transferred to the Canadian register, under the name of Sapin. She was built in 1906, and is 416 ft. long, with 50 ft. beam, and 4,382 gross tons.

The Brockville-Morristown Transportation Co. is reported to have bought the s.s. Victoria from the Detroit and Windsor Ferry Co., Detroit, Mich., to replace the s.s. H. P. Bigelow, destroyed by fire recently.

The Northern Navigation Co.'s s.s. Hamonic grounded on a reef near Harbor Beach, July 7, during high winds and fog, while on her way to Sarnia. She was released a few hours later, without damage.

The Couchiching lock, on the Trent Valley, Canal, near Washago, was opened for traffic July 6, thus giving direct water communication between Trenton, on Lake Ontario, and Honey Harbor, on Georgian Bay.

The s.s. New York, which was libelled at Kingston, early in July, on account of wages due to the crew, was, after being released, again libelled for the Collingwood Shipbuilding Co., for \$400 due for repairs. The matter was settled, and the ship released.

The Great Lakes Transportation Co., Midland, Ont., is having a steamship built by the Midland Shipbuilding Co., for its Great Lakes service. Details of the ship are given on another page of this issue, under General Shipbuilding Matters Throughout Canada.

The dredge Kennaquhair, which was bought by the Dominion Government in 1917, for terminal and harbor work at Port Nelson, Hudson Bay, and which has been berthed at Cornwall, Ont., since then, will, it is reported, be taken to Cape

[illegible]

It is reported that the Great Steamship Company has secured the greatest steamship terminals in the world, it having secured about 1,100 ft. of water front along the Hudson River at West Street, New York. It has also secured the most complete and up to date terminal facilities.

The s.s. Kronprinz Frederick Wilhelm, one of the former German passenger steamships, which was allocated to Canadian Pacific Ocean Services, Ltd., has been overhauled and equipped for fuel oil burning and is now in the company's Atlantic service. Her dimensions are,—length 610 ft., breadth 68.3 ft., depth 38.6 ft.; tonnage, 17,082 gross. She sailed from Liverpool July 14, and arrived at Montreal July 24.

The North Atlantic Pacific Conference is reported to have agreed to increase passenger rates to Europe by \$15 for first class cabin and \$10 for second class. The new scale has been put into effect on all steamship lines operating from New York to the upper European ports. The companies claim that they are compelled to pay extremely high prices for bunker coal, labor and materials generally. Reports indicate that the trans-Atlantic passenger traffic, which has been unprecedented, is slowing down to some extent, but it is stated that nearly all companies are fully booked to the end of August.

The Lunenburg Marine Railway Co., Lunenburg, N.S., has deposited with the Public Works Department, Ottawa, under the Navigable Waters Protection Act, plans of works in Lunenburg harbor, existing and proposed.

The Commercial Cable Co. has completed the erection of new storage sheds at Upper Water St., Halifax, N.S., and it is reported that an additional cable ship will be placed in service shortly, operating from Halifax.

The Newfoundland Government, in dealing with supplementary estimates, at a sitting of the legislature early in July, promised consideration of additional facilities in steamship service with St. Marys and Trepassy, in Placentia Bay.

The Newfoundland Government has bought the s.s. Lobelia from the British Government, and is reported to have bought three other steamships from the U.S. Government, for use in the coastal mail and passenger service in Fortune Bay, Northern Labrador, Humbermouth Bay, etc.

The Canadian National Rys. car ferry Prince Edward Island underwent some repairs at Charlottetown, P.E.I., early in

The following commerce passed through the Sault Ste. Marie Canals during June, 1920:

Dominion Government Aid for Shipbuilding.

Canadian Railway and Marine World for July contained the resolution adopted by the House of Commons on motion of the Finance Minister, Sir Henry Drayton, to make advances to shipbuilders. Following is the complete text of the bill, An Act respecting the Shipbuilding Industry, which was based on the resolution, as passed by Parliament.

Whereas large numbers of men are employed in the shipbuilding industry in Canada; and whereas at the present time there is no sufficient demand for the construction of ships by Canadian purchasers and the Government of Canada has ceased placing further orders; and whereas inhabitants of European countries are desirous of placing orders for ships in Canadian yards, but owing to the present rates of exchange and the depreciated value of foreign currencies they are unable to finance such orders; and whereas it is advisable to assist in financing the construction of ships in existing Canadian shipyards: Therefore, His Majesty, by and with the consent of the Senate and House of Commons of Canada enacts as follows:

1. In any case where a person (hereinafter called "the purchaser") has entered into a contract with a shipbuilder for the building in Canada of a vessel of not less than 3,000 tons, and such contract is approved by the Ministers of Finance and Marine and Fisheries, and a sum not less than 10% of the price of such vessel is paid by the purchaser to the shipbuilder in cash at the time the contract is entered into, and, if such cash payment is less than 20% of such price, the payment to the shipbuilder of a further sum which with the said cash payment will amount to not less than 20% of such price not later than six months after such time, and the payment of a further sum not later than nine months after such time, if the previous payments are less than 25% of such price which will be sufficient with the other said payments to amount to at least 25% of the total of such price are contracted for and secured to the satisfaction of the Minister of Finance; and the payment of an additional 25% of the price is arranged between the purchaser and the shipbuilder and secured to the satisfaction of the Minister of Finance, the Governor in council may authorize the Minister of Finance to endorse on behalf of His Majesty promissory notes drawn by the purchaser in favor of the shipbuilder for the 50% of the price of the said vessel. The Governor in council shall prescribe the place where such

notes shall be paid, the method of counting them, and the time when such notes shall be paid.

Provided that the first of such notes shall be made payable at a date not less than 21 months after the time the contract was entered into, and the last of such notes shall be made payable at a date not later than 57 months after such time.

A first mortgage on the vessel for the full amount of the notes so endorsed by the Minister of Finance, in such form as the Minister of Justice may approve, shall be given to His Majesty, and the said vessel shall be registered in Canada, and the register shall not be transferred until the amount secured by the mortgage has been fully satisfied and paid. Until the amount secured by the mortgage is fully satisfied and paid, the vessel shall be insured and kept insured in favor of His Majesty for such amount and against such risks and in such insurance companies as the Minister of Finance may determine.

Provided that if the vessel is being built for an alien, and the provisions of this Act with respect to mortgaging the vessel cannot conveniently be complied with, such security for the amount of the said promissory notes endorsed by the Minister of Finance shall be furnished by the purchaser as may be approved by the Governor in council.

2. The whole amount that notes may be endorsed on behalf of His Majesty as herein provided shall not exceed \$20,000,000, and no notes shall be endorsed as aforesaid until 25% of the contract price shall have been paid in cash.

3. An account in detail of the endorsements made or liabilities incurred under the provisions of this act shall be laid before Parliament within 15 days if Parliament is then sitting, and if not sitting then within the first 15 days of the session next ensuing.

Canadian Railway and Marine World is advised that applications for assistance, under the act's provisions, should be made to the Marine Department, which will pass upon the business aspects of the propositions, before they are dealt with by the Minister of Marine and Fisheries, and the Minister of Finance respectively.

British Shipping Control Ended.—The British Government has announced the removal of control over all shipping, including limitations on freight, as from July 15, although it is stated that formal licenses will still be necessary.

The new steamer, the *Bravo*, owned by the Canadian Pacific, is now at Vancouver, and is being fitted out for service. The ship is 140 ft. long, 22 ft. beam, and 10 ft. draft. She is to be built at the shipyard of the Canadian Pacific, Ltd., at Vancouver, B.C.

The new steamer, the *Bravo*, owned by the Canadian Pacific, is now at Vancouver, and is being fitted out for service. The ship is 140 ft. long, 22 ft. beam, and 10 ft. draft. She is to be built at the shipyard of the Canadian Pacific, Ltd., at Vancouver, B.C.

The Vancouver Harbor Commissioners have passed a by-law, effective Aug. 1, imposing a tax on all cargo landed within the harbor, of 5c, a ton, with certain exceptions. Until this bylaw was passed, no charge had been made at the port on the cargo of ships, but only on the ship tonnage. It is stated to be the intention to utilize the ship tonnage tax as a fund for the wharfage on the Commissioners' property, in about two years, or on the completion of the Bullantyne pier.

The Kettle Valley Ry., which is operated under lease by the C.P.R., will handle traffic on Dog Lake between Penticton and Okanagan Falls with the C.P.R. s.s. *York*, which was run formerly on Okanagan Lake. The s.s. *York* was built at Toronto in 1901 and shipped in knockdown shape to Okanagan Landing and was re-erected there. She is screw driven, by engine of 12 h.p., and has the following dimensions,—length 88 ft., breadth 16.2 ft., depth 4.9 ft.; tonnage 134 gross, 91 net.

The board of conciliation, consisting of Mr. Justice Murphy, chairman; E. A. James, for the C.P.R., and J. Taylor, for the employees, appointed to deal with the demands of the C.P.R. freight handlers on the water front at Vancouver, reported during July. It is stated that the majority report does not recommend any increase in wages, but agrees that men called upon to do more than ten hours work in 24 hours should be paid for the excess time at \$1.35 an hour for checkers and \$1.20 an hour for truckers, against \$1.10 and \$1 respectively at present. A minority report is being presented by J. Taylor, who represented the men.

The British Columbia Telephone Co. has bought the barge *Iwalandi* to convert into a cable ship for laying cables through the Gulf of Georgia. The *Iwalandi* was built at San Francisco, Cal., in 1881, as a private yacht, and was sold afterwards to Hawaiian parties and operated in the sugar trade between California and Honolulu and was later on the run between San Francisco and Seattle in the freight trade. A short while before the war she was bought by a Vancouver concern, and later her engines were removed and sent to Japan, where they were installed in another ship, and the *Iwalandi* passed to the Imperial Munitions Board for use as a barge. Her dimensions are,—length 148 ft., breadth 27 ft., depth 8.5 ft.; tonnage 275 net.

Car Ferry Steamship Maitland No. 1. Particulars of the operation of this steamship, for 1919, are given in the Toronto, Hamilton & Buffalo Ry.'s annual report for another page of this issue.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:—

Collision of s.s. Picton with Laurier Pier, Montreal.

Held at Montreal, June 12, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. J. Stuart and J. C. Caine, as nautical assessors, into the collision of the s.s. Picton with the Laurier pier, Montreal, June 8. The evidence showed that while, in some cases, the casting off of the stern tow line may be trivial, in this case it proved to be a factor in the damage caused by the s.s. Picton. Owing to an eddy, at the end of the Tarte pier, causing an inward flow, the moment the line was cast off the stern of the ship, she gradually left the wharf until she was within 150 ft. of the Laurier Pier. In the meantime, those on the bridge of the Picton had been warned that her engines were not ready to respond to orders, and no attempt was made by the master or pilot to secure the ship to the wharf, both of them relying on the two tugs in attendance. The evidence with respect to orders to the tugs was conflicting, but the court accepted the version of the masters of the tugs, who stated that they had no orders, and found that the responsibility for the damage caused to the pier, rested with the pilot, A. Perreault, who allowed the Picton to approach too close to the pier, this being brought about by the stern line having been cast off before her engines were ready, and without orders from either the pilot or master, in consequence of which, the stern of the ship drifted 150 ft., before any action was taken. The pilot erred in judgment and was therefore reprimanded and cautioned to be more careful in future. The master of the Picton, M. Mathias, was also cautioned, for the reason that his engines were not ready, it being his duty to see that his ship did not leave her berth before everything was in order. The opinion was expressed that an order to pass a breast line ashore should have been given, when it was found that the stern line had been cast off. The tugs were held not to be in any way to blame for the accident.

Capt. C. J. Stuart, one of the assessors, reported that he could not agree to exonerating the masters of the tugs. He stated that while of the opinion that it was the duty of the tugs to obey orders from the ship in tow, he did not consider that their duties ended there, but that they should be able, owing to experience, to anticipate the pilot's orders and have such control as to avoid such an accident, and for this reason he considered that the masters of the Sincennes-McNaughton Line's tugs Mathilda and Mascinco were jointly responsible for the casualty.

Stranding of the s.s. Quebec.

Held at Montreal, June 21, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and C. J. Stuart, as nautical assessors, into stranding of Canada Steamship Lines' s.s. Quebec near Three Rivers, Que., June 3. The court decided that the pilot, E. Gauvreau, erred through over confidence in his courses, and that he was in default for not taking a cast of the lead occasionally, to ascertain if his vessel was keeping in navigable waters. Being an unlicensed pilot, the court had no method of dealing with him, but to find him at fault. The court held that the first offi-

cer showed a lack of knowledge as to his duties while in charge, and it took into consideration that he was a stranger in that service and had not received specific instructions as to the role he had to play in connection with the pilot and wheelman. He was therefore only reprimanded severely, and cautioned to use better judgment in future, and acquire a better conception of his duties and responsibilities as a first officer. The court expressed the opinion that in view of the evidence adduced, the chemical fumes from the Wayagamack mills played an important part in the casualty, as they cast a mist over the surroundings, obliterating all lights at intervals. It therefore strongly recommended that some action be taken in order to cause the elimination once and for all of these fumes, which to its knowledge have been a nuisance and a danger to navigation in the vicinity of Three Rivers for some time past.

Stranding of s.s. Manchester Division.

Held at Montreal, June 24, by Capt. J. B. Henry, Wreck Commissioner, assisted by Capt. J. C. Caine and C. J. Stuart, as nautical assessors, into the stranding of Manchester Liners' s.s. Manchester Division in Quebec harbor, June 7. The court expressed the opinion that the casualty was due to the parting of a new 9 in. hawser leading from the starboard bow to the tug Belle. There was nothing to indicate undue chafing of the rope, which was protected on the stem by a paunch mat, and the evidence of the master of the Belle showed that the rope parted well clear of the stem. After the parting of the rope, the only practical manoeuvre was thought of, and acted upon, by the master and pilot, going full speed ahead, with the helm hard a starboard, in an endeavor to bring the ship's head round to port, but owing to the squally condition of the wind, this could not be executed before she took the bank and stranded beam on, the striking being so light, as not to be perceptible to those on board. No reason for the parting of the rope could be given, except that there was an unknown defect. No negligence was attributed to those handling her, and both master and pilot were exonerated, the court recommending that in going into this berth, vessels should use a line from each bow.

Stranding of s.s. Hamonic.

Held at Sarnia, Ont., July 21, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. E. Millard and W. A. Glass as nautical assessors, into the cause of the grounding of the Northern Navigation Co.'s s.s. Hamonic off Hardwood Point, Lake Huron, July 7. The master, Capt. O. M. Wing, stated that he had been in command since 1913, without accident. On July 6 he had occasion to alter his course, to counteract leeway caused by a strong breeze off the port side. His compasses was but imperfectly adjusted in the spring and as a result he had found an error by observing ranges. He also stated that the towing log had a new propeller and he had not had the opportunity of verifying its running. The sounding machine was in order but not used, one reason being that one of the crew would have had to be called from his sleep if it had been used. He was advised by the second officer that he had passed the s.s. Huronic inside and assumed from that that he was steering a correct course and was in a proper posi-

tion as to location. The second officer called him when fog came on, with the information that he had seen a light once, but had not had time to take a bearing. He had not heard the fog horn at Port aux Barques, but kept up his speed until the ship struck. Soundings showed that there was 18 ft. forward and 16 ft. aft, and interior soundings revealed a leak in no. 1 hold. The ship was released by the use of tugs. The second officer, Andrew Allan, stated that the ship was steered correctly and that he had not offered any suggestion as to reduction of speed or soundings, assuming that the captain was master of the situation. The master was recalled and notified that on his own evidence the court would likely find him in default and deal with his certificate, and that if he wished to make a defence and secure counsel, the court would adjourn, but he elected to leave the case in its hands.

The court found that the master was in default and stated that he gave his evidence in a straightforward and honest manner. It did not consider the accident due to an error in judgment or careless behavior, but to an omission to exercise the necessary caution. Owing to his youth, clean record and straightforward evidence, the court exercised leniency and suspended his certificate, 6939, for two months from July 21 to Sept. 20. The second officer, Andrew Allan, was exonerated, but cautioned that his responsibility and duties demand more than to call the master and pace the bridge.

Welland Canal Lock Gate Accident.

Canada Steamship Lines' s.s. Maple-grove, downbound, with a cargo of wheat, July 11, struck the lower gates of lock 2 in the Welland canal, plunging through them in an 18 ft. descent to the level below. The rush of water released from the level above also carried out the heel of both upper gates in lock 1 level. Three spare gates were placed in position, and navigation resumed July 12, after a suspension of 33 hours. Considerable trouble was experienced in getting the two lower gates out of the lock, they being jammed together between the lock walls. The floor of the lock on the outer recess was covered with several feet of material washed into it from the level above, and the removal of this by divers required considerable time. The ship is believed to have suffered heavy damage, and after the removal of her cargo, she is to be placed in dry dock for examination and repairs. The damage to the canal lock is estimated at \$7,500. It is said that the accident was caused by the engines going ahead instead of reversing while entering the lock.

Welland Ship Canal.—It is reported that there is to be a resumption of work on the various uncompleted contracts on the Welland ship canal. Some work was done on these contracts last year, especially to relieve the unemployment situation, due to demobilization, the plants being closed down again in December.

Glen Transportation Co. Ltd. has been incorporated under the Dominion Companies Act, with \$500,000 authorized capital and office at Midland, Ont., to carry on a general transportation, towing, wrecking and salvage business, and in connection therewith to own and operate steam and other ships.

**Agreement between Canada Steamship Lines, Ltd., and British Empire
Steel Corporation.**

Empire Steel Corporation Ltd. was rated by the business company's publisher as the 10th largest in Mechanical Engineering.

Whence the humming company, the
unmuffled, under the Unmuffled Com-
pany. And for the others, and others.

amongst others, of carrying on a general business of water borne transportation; incorporated under the Nova Scotia Companies Act with like objects and powers, as well as the mining of coal, the production of iron and steel, and the construction of vessels, with power to enter into any agreement of the nature agreed upon between the parties hereto; and whereas

duction of the operations of the respective companies, the reciprocal privileges and benefits, the transportation by the Steel Company of the Steel Company's products, and the facilities of the Steel Company for the construction and repair of vessels, will be of immense advantage one to the other, in consequence the parties have agreed and covenanted one toward the other, as hereinafter set forth; therefore this agreement witnessed: For and in consideration of the sum of \$1 to each in hand, one paid to the other, the receipt whereof is hereby acknowledged, and further the considerations hereinafter mentioned, it has been covenanted and agreed between the parties as follows:—

1. The Steamship Company undertakes for 25 years, from and after July 1, 1920, to operate and manage the business of the Steamship Company, and to conduct the same in all respects as efficiently as heretofore, for the profit and/or loss of the Steel Company, which shall be entitled to any surplus profit arising therefrom after deduction therefrom of all expenses of such operations, including management and direction expenses, and the further deduction hereinafter mentioned, the Steel Company on its part to bear any loss or deficiency;

2. Out of the surplus revenues arising from the operations and expenses as hereinbefore provided, the Steamship Company shall retain and pay the amount necessary to meet interest on its outstanding debenture stock and/or bonds, mortgages, whether due by the Steamship Company or its subsidiaries, and a dividend at the rate of 7% per annum, payable quarterly, on the Steamship Company's issue of preferred and common stock outstanding, as well as making provision for requisite depreciation and sinking fund which in no event shall be less than the depreciation and sinking fund required by the trust deed securing the company's debenture stock and/or bonds, and should the revenues of the Steamship Company and its subsidiaries be insufficient for such purposes the Steel Company covenants and agrees to supply the deficiency as required;

3. The Steel Company on its part further covenants and agrees to provide or advance such additional cash capital as the Steamship Company may reasonably require from time to time for its operations and extensions to secure the repayment of which provision or advances the Steamship Company shall give proper security therefor, covenanting to pay a reasonable rate of interest thereon having regard to prevailing conditions.

4. In consideration of the foregoing, and in the part of the Stiel Company, and the Stoenberg Company agree to transfer and pay over to the Stiel Company its surplus net earnings, subject to the business of Stoenberg, during the currency of this agreement:

force for such period beyond the term of 25 years as aforesaid until cancelled by one year's notice in writing given by either party to the other, but shall in no event extend beyond the period of 99 years;

6. Furthermore, for the consideration aforesaid the Steamship Company covenants and agrees that the Steel Company, provided it has not in the meantime increased its outstanding capital stock, by the declaration of stock dividends or stock bonuses to its shareholders, shall during the period of 25 years from the date hereof have the right at any time to purchase all the then existing assets and undertakings of the Steamship Company, including goodwill, but subject to the assumption of its liabilities, as a going concern, upon the payment or transfer by the Steel Company to the Steamship Company of 125,000 shares of 7% cumulative preference stock, 120,000 shares of cumulative second preference stock, and 66,500 shares of common or ordinary stock of the Steel Company, such shares to be fully paid and of the par value of \$100 each. In the event of this option being exercised the said shares of the Steel Company shall carry dividends from the date in respect of which the last dividends have been paid upon the shares of the Steamship Company, or the Steel Company shall pay to the Steamship Company the equivalent in cash:

7. Nothing herein contained or covenanted to be agreed and performed by the Steamship Company shall be construed as a covenant on the part of the Steamship Company which would in any way affect or impair that company's obligations towards the trustees representing its bondholders and/or debenture stockholders, nor shall the steamship company be held hereunder to any obligation which would have any such effect until such time as the said debenture stock and/or bonds have been retired or the consent of said bondholders and/or debenture stockholders duly obtained in accordance with the provisions of the trust deed therefor, and after all legal requirements have been complied with.

8. This agreement shall not become effective and binding on the part of the Steamship Company until it has been approved, ratified and confirmed at a special general meeting called for such purpose, and until its board of directors shall have passed a resolution declaring that it is satisfied with the organization of the Steel Company;

9. Failure on the part of the Steel Company to make any payment to the Steamship Company as provided for in and by paragraph 2 hereof shall, at the option of the Steamship Company, after giving 90 days' notice, and should such default then continue, render this agreement null and void.

Agreement for Acquisition of Canada Steamship Lines' Stock.

The following agreement has been entered into between the British Empire

state corporation and the President. From 1917, the former being referred to in the agreement as "the company" and the latter as "the president."

both of the par value of \$100, all fully paid, issued and outstanding, of Canada Steamship Lines Ltd., and has made an offer to the shareholders of Canada Steamship Lines Ltd. to exchange for the said 125,000 shares of its preferred stock 125,000 shares of 7% cumulative preference stock of the company and 12,500 shares of the common stock of the company, all fully paid and of the par value of \$100; and to exchange for 120,000 shares of the common stock of Canada Steamship Lines Ltd. 120,000 shares of second cumulative preference stock and 54,000 shares of common stock of the company, all fully paid and of the par value of \$100; and whereas for the purpose of carrying into effect such exchange, the company has agreed to deposit with the trustee its shares as hereinbefore described; therefore this agreement witnesseth:—

1. The company agrees to exchange, the trustee on its part accepting the deposit thereof on behalf of the shareholders of the Steamship Company, (a) 125,000 shares of its 7% cumulative preference stock, all fully paid and of the par value of \$100 each, and (b) 12,500 shares of its common stock, all fully paid and of the par value of \$100 each, for 125,000 shares of the preference stock of Canada Steamship Lines Ltd.; and to exchange (a) 120,000 shares of its 7% second cumulative preference stock, fully paid and of the par value of \$100 each, and (b) 54,000 shares of its common stock, all fully paid and of the par value of \$100 each, for 120,000 shares of the common stock of Canada Steamship Lines Ltd.;

2. The company covenants and agrees forthwith after the execution hereof to deposit with the trustee, for the purpose of making the exchange as hereinbefore referred to, said 125,000 shares of its preference stock, 120,000 shares of its 7% cumulative second preference stock, and 66,500 shares of its common stock:

3. Upon such deposit as aforesaid, the trustee shall give notice to the shareholders of Canada Steamship Lines Ltd. of the terms of this agreement with an invitation to them to make the exchange as herein provided, and shall in exchange for each share of preferred stock of Canada Steamship Lines Ltd. give to the holders thereof one share of 7% cumulative preference stock and the equivalent of one-tenth of a share of common stock of the company, and in exchange for one share of the common stock of Canada Steamship Lines Ltd. give to the holders thereof one share of 7% cumulative second preference stock and the equivalent of 45% of a share of common stock of the company;

4. The shares of stock of Canada Steamship Lines Ltd. so acquired is exchange by the trustees as aforesaid shall be held by the trustee on behalf of the company, and upon its request transferred to the name of the company;

5. The company shall not be called upon to issue, nor shall the trustee be called upon to deliver, certificates for fractional shares but the trustee shall

deliver to the persons entitled thereto its own certificate covering such fractions issued in favor of the persons entitled thereto, and upon receipt by the trustee from time to time of the dividends payable upon such shares pay the same over to the holders of such certificates in the proportion in which they are entitled thereto;

6. The shares of preferred stock of the company shall, at the time of the exchange herein provided for, carry dividends for the term and in proportion to the dividends accrued on the stock of Canada Steamship Lines Ltd. If, however, they do not do so, the difference shall be adjusted either by the shareholder

or paying the difference to the trustee or the trustee paying the difference to the shareholder, the amount necessary for the latter purpose having been previously supplied to the trustee by the company;

7. This agreement to exchange shall be binding and effective upon the company until Nov. 30, 1920, unless such time be further extended by the company, at the expiration of which time, or an extension thereof, the trustee shall return to the company any shares of its stock not so exchanged and the remaining shareholders of Canada Steamship Lines Ltd. shall thereafter cease to have any such privilege of exchange.

Fisheries Control Transferred to Marine and Fisheries Department.

The following Dominion order in council no. 1,227 was passed May 29:—"The committee of the Privy Council have had before them a report, dated May 27, from the Minister of the Naval Service, submitting as follows with reference to the minute of council, 1,574, approved June 16, 1914, transferring to the Minister of the Naval Service from July 1, 1914, the duties and powers theretofore vested in the Minister of Marine and Fisheries with respect to the sea coast and inland fisheries, the management and regulation and protection thereof, and the payment of fishing bounties; as well as all such matters as refer to the fisheries of Canada:—

"1. That following the transfer of the Fisheries Branch from the Department of Marine and Fisheries to the Department of the Naval Service, the name of either department was not changed. This has caused, and continues to cause, much confusion in the public mind, and in the press of the country, and otherwise the Fisheries Branch is commonly referred to as a portion of the Department of Marine and Fisheries;

"2. That there is nothing in common in the duties of the Naval Service Department and of the Fisheries Branch. While the Fisheries Protection service, the duty of which is to prevent illegal fishing in Canadian waters by foreign fishing vessels, is carried on by the Department of the Naval Service, the vessels of that fleet are Naval Service vessels, and co-operation between this service and the Fisheries Branch can be as readily effected if the latter were a portion of the Department of Marine and Fisheries as under present conditions;

"3. That at the time the Fisheries Branch was transferred to the Department of the Naval Service, the work of that department was comparatively light; but owing to conditions brought about by the war, and the reorganization of that department, the work thereof will in future require the full attention of the Deputy Minister. On the other hand, as the shipbuilding programme of the Marine and Fisheries Department will soon be completed, the Deputy Minister of that department can fittingly resume the responsibility for the administration, under the Minister, of the Fisheries Branch;

"4. That as the records and the staff of the Fisheries Branch are distinct from those of the Naval Service, the transfer of the Fisheries Branch from the Department of the Naval Service could be effected without interference with the functioning of either the Department of

the Naval Service or the Fisheries Branch."

"The Minister, therefore, recommends that under the authority of 8-9 George V, chap. 6, that the above cited minute of council of June 16, 1914, be cancelled, and that the duties and powers thereby vested in the Minister of the Naval Service, with respect to the sea coast and inland fisheries, the management, regulation and protection thereof, and everything relating thereto, and the payment of fishing bounties; also all such matters as refer to the fisheries of Canada, shall, from July 1, 1920, be vested in the Minister of Marine and Fisheries, and that the latter department undertake from that date the administration of all matters and acts connected with the fisheries of Canada.

"The Minister also recommends that the unexpended balance of the parliamentary appropriation for Fisheries for the fiscal year 1920-21, amounting to \$1,275,000, and the appropriation for fishing bounty amounting to \$160,000, be transferred from the Naval Service Department to the Marine and Fisheries Department from July 1, 1920.

"The Minister further recommends that as the work of the Fisheries Branch will need to be carried on as distinct from that of the Marine Branch of the Marine and Fisheries Department, and by separate staffs, and that as the General Superintendent of Fisheries, the chief administrative officer of the Fisheries Branch, will be in practice an assistant deputy minister and will act for the Deputy Minister in his absence, so far as all fishery matters are concerned, the title of General Superintendent of Fisheries be changed to that of Assistant Deputy Minister of Fisheries.

"The Minister also recommends under the authority of sec. 45 of the Fisheries Act, chap. 8, statutes of 1914, and under the authority of sec. 20 of the Meat and Canned Foods Act, that in all fishery regulations adopted under the authority of sec. 45 of the Fisheries Act, and in all regulations adopted under the authority of sec. 20 of the Meat and Canned Foods Act, where any power or duty is conferred or charged upon the Minister of the Naval Service, from July 1, 1920, such power may be exercised and the duty shall be discharged by the Minister of Marine and Fisheries. The Committee concur in the foregoing recommendations, and submit the same for approval."

Under the provisions of this order, W. A. Found, heretofore General Superintendent of Fisheries, is now Assistant Deputy Minister of Fisheries.

Mail Subsidies and Steamship Subventions Estimates.

The further supplementary estimates, for the year ending Mar. 31, 1921, passed at the Dominion Parliament's recent session, contain the following items:—

Mulgrave and Vancouver steam service between, further amount required	5,000
Petit de Grat and Mulgrave, steam service between, further amount required	5,000
Victoria and Vancouver, way ports and Skagway, steam service between, further amount required	1,000
Victoria and West coast of Vancouver Island, steam service between, further amount required	25,000
Campment d'Ours Island and mainland on Georgian Bay, ferry service between	1,000
Grand Manan and the mainland, steam service between, further amount required	2,000
Halifax, Canso and Guysboro, steam service between, further amount required	2,000
Halifax and Newfoundland, via Cape Breton ports, steam service between, further amount required	2,000
Vancouver, and Northern ports of British Columbia, steam service between, further amount required	8,000
Charlottetown, Pictou and New Glasgow, steam service between	2,000
Pictou, New Glasgow, and Antigonish County ports, schooner service between	1,500

Projected Dominion Commercial Port in England.—The City of Portsmouth, Eng., is reported to have under consideration a scheme prepared by Sir Maurice Fitzmaurice, who was, at one time, on the board of engineers for the designing of the Quebec Bridge, for the development of Langstone harbor at Portsmouth, Eng., as a general commercial port. It is stated that the scheme, which was estimated before the war to cost about \$5,000,000, will now probably cost \$12,000,000, and this is heavier than the corporation feels that it can undertake at present. It has therefore decided to ask the governments of the various British dominions to consider the possibility of co-operating in the development.

Sale of Dominion Government Submarines.—The Naval Service Department will receive tenders to Aug. 23 for the purchase of submarines C.C.1, built of steel, length 144 ft., beam 15 ft., displacement on surface 310 tons, displacement submerged 373 tons, built in 1914, and C.C. 2, built of steel, length 151½ ft., beam 15 ft., displacement on surface 310 tons, displacement submerged 373 tons, built in 1914. These ships will be sold as they lie at Halifax, N.S. They were built by the Seattle Construction & Dry Dock Co., Seattle, Wash., for the Chilean Government, and bought by the Dominion Government on the outbreak of war. They were then named Antofagasta and Iquique respectively.

The Caraquez & Gulf Shore Ry., which was taken over by the Dominion Government, as at June 1, full particulars of which were given in Canadian Railway and Marine World for July, on page 384, is now known as Caraquez Subdivision, Campbellton Division, Maritime District, Canadian National Rys. R. H. Martin is Superintendent of the division at Campbellton, N.B., and H. V. Musgrave is Assistant Superintendent.

Naval Service Estimates.—The further supplementary estimates for the year ending Mar. 31, 1921, passed at the Dominion Parliament's recent session, contain the following items:—To provide for the maintenance of the Royal Canadian Navy, further amount required, \$1,700,000; pay of temporary officers and clerks at headquarters, Halifax and Esquimaux dockyards, \$60,000.

Atlantic and St. Lawrence Stevedoring & Contracting Co. Ltd. has been incorporated under the Dominion Companies Act, with \$25,000 authorized capital, and office at Montreal, to carry on a general stevedoring business. The incorporators are: P. J. Melvin, J. Mauro, stevedores; H. B. MacLean, manager; W. Audas and J. A. Mancotel, all of Montreal.

Canadian Railway and Marine World

September, 1920

Snow Fighting Equipment.

By W. H. Winterrowd, Chief Mechanical Engineer, Canadian Pacific Railway.

In certain portions of Canada and the United States the successful and regular movement of trains during the winter often depends upon the use of special equipment, the purpose of which is to remove snow and ice from the tracks and from the direct right of way. The object of this paper is to describe briefly the various types of such equipment. In a study of snow fighting equipment, it is interesting to note that its development is very largely due to Canadians and to Canadian railways, although snow conditions in Canada are no more severe than those met with on roads passing over the Rocky or Cascade Mountains in the United States.

The Russell design of snow plough was first put in service in 1885 on the Intercolonial Ry., now a part of the Canadian National Rys. The present rotary snow plough is a development of the invention of a compound revolving snow shovel, patented in 1869 by J. W. Elliott, a Toronto, Ont., dentist. This elementary device was modified by Mr. Orange Jull of Orangeville, Ont. The Jull rotary was taken up by the Leslie Bros., also of Orangeville, who built a full size model which was tried in the C.P.R. yards at Parkdale, Toronto, in 1884. The success of this trial led the Leslie Bros. to have made for them a complete plough which was tried by the Union Pacific Rd. during the winter of 1886-87. This plough was the forerunner of the modern rotary.

Orange Jull also invented, in 1889, the Jull centrifugal excavator. This type was not a success. Only one or two were built. The principal types of snow fighting equipment may be generally classified as follows: Locomotive and pilot ploughs, push ploughs, wing ploughs, spreader ploughs, machine ploughs, flangers, ice cutters and snow sweepers.

Locomotive and Pilot Ploughs.—As far as the writer can ascertain, the first snow plough ever built was of the push plough type. This was a wedge shaped wooden plough mounted on trucks and pushed in front of a locomotive. As this plough derailed frequently, an endeavor was made to take advantage of the weight of the locomotive. A plough was constructed utilizing the front end of the locomotive as a support. This was called a locomotive plough and fig. 1 shows an application made in 1880. This plough was made of steel. Locomotive ploughs are still in use today and their general arrangement has not been changed, except to adapt them to larger locomotives. The mold plates are generally built on a strong frame, which is bolted to the

front bumper in place of the pilot. On some of the original locomotive ploughs a framework fastened to the front of the pilot supported the nose of the mold plates. With the construction shown in the illustration it is usual to apply cast iron wearing shoes, which rest on and slide along the top of the rail if the weight and force of the snow cause a depression of the nose of the plough. Several railways have advised that occasionally locomotive ploughs are permanently secured to the front of a locomotive assigned only to plough service, thus making a complete unit available at any time. For severe work this locomotive may be assisted by others.

The pilot plough was developed for use in light snow. One form of pilot plough is made by either boarding over

sisting of a substantially built car, with a wedge shaped plough attached to its front end. This plough is generally pushed by one or more locomotives. The car may be fitted with flangers for cleaning the space between the rails. When the car is equipped with wings for widening the cut it is called a wing plough. Many railways use, for snow of moderate depth, a plough secured to the front end of a flat or ballast car, as shown in fig. 4, the car being loaded down with scrap iron or other heavy material. A more permanent construction is shown in fig. 6, where the mold plates are attached to the front end of a specially constructed car. This figure shows a plain, square nosed, single track plough without wings or flangers. The side walls are carried down over the trucks

to prevent snow from working into them.

Push ploughs were frequently built V-shaped, simply throwing the snow to each side, without lifting it appreciably. These ploughs did not always prove satisfactory, as the snow was crowded aside, and if drifts were deep or in cuts it fell back on the track after the plough had passed.

In hard drifts this plough packed the snow. In heavy side drifts, the form of the plough tended to derailment. Also, when backing, unless shields were supplied, snow was picked up on the back

Fig. 1. One of the first locomotive snow ploughs.

the front of the pilot or filling between the slats with wood, thus converting an ordinary pilot into a makeshift snow plough. This arrangement has not always proved satisfactory, as the construction of pilots is not always sufficiently substantial to resist the strains imposed when ploughing. The pilot ploughs usually constructed consist of mold boards of steel plate securely fastened in front of and over the pilot, and braced to the front bumper and smoke box. These ploughs vary in size and shape. An early plough of such type is shown in fig. 2.

In moderate snows which do not pack hard or drift, and where the railway is free from deep cuts, and train operation is fairly frequent, locomotive and pilot ploughs are of great assistance in maintaining an open line. They are used on both freight and passenger locomotives.

Some types of modern pilot ploughs are shown in diagrammatic form in fig. 3. To obtain the greatest efficiency the angle formed by the mold plates should be fairly acute so that snow will slide aside instead of being pushed along in front of the plough.

Push Ploughs and Wing Ploughs.—A push plough is a self contained unit, con-

sisting of the mold plates and carried into the trucks. The square-nosed plough, fig. 5, was developed to overcome these objections. The front of this plough consists of two wedges. The main, or bottom wedge (a), with its cutting edge horizontally across the track, is a plane inclined upward and backward. Its purpose is to lift the snow. The upper, or vertical superimposed wedge (b) is set some distance back from the front edge and is either V-shaped for single track operation, fig. 6, or triangular for double track operation, fig. 7. The upper wedge throws clear of the track the snow which has been lifted by the bottom wedge. On single track ploughs the vertical wedge is placed centrally and snow is thrown to both sides of the track. On double track ploughs the vertical cutting edge is placed at the side of the plough so that all the snow is thrown to one side.

The advantages of the square nosed plough are obvious. The snow is lifted and thrown without being packed, and with greatly reduced side thrust to the plough. Many modern ploughs of this type have an additional feature known as the drop nose. This consists of a plate hinged to the front of the bottom, or lifting, plane in such manner that it

under the pressure of the snow between the rails, forcing the snow to a depth of 12 in. or thereabouts. The snow is then either carried by means of elevator wings or is compressed into cylinders controlled from the top of the plough. Fig. 5 shows a typical section of a push and pull plough.

Russell Plough.—This is the most powerful plough in the Russell design. The power, which is at the front of the square nosed type, is transmitted back to the rear by a bar reinforced with structural steel. The framing on which the snow is pushed is laid back on its nose, between a heavy timber called the "back bone." Power is applied directly to the front of the plough through a steel reinforced timber bar, hinged or pivoted to the "back bone." This bar extends between the two center sills the entire length of the car frame. At its rear end the coupler is attached. A 4 in. clearance on each side of the bar permits sufficient lateral movement for adjustment on curves. This method of transmitting power directly to the front of the plough is said to be responsible for the claim that Russell ploughs are seldom derailed. On account of the heavy pressure on the front of the square nosed plough, the Russell design is fitted with a front truck which has journal bearings on each side of each wheel. Each axle, therefore, has four journals. The surfaces of the plough which come in contact with the snow have been developed to minimize resistance. The back end of the car is several inches narrower than the front, in order to relieve the car of snow friction against its sides. The top of the plough is fitted with a cupola or lookout from which its operation is controlled. These ploughs are made in several sizes for both single and double track operation and are often equipped with elevator wings and flangers. The wings of the Russell plough are of the elevator type. The face of each wing is formed into two concave chutes called elevators. These chutes slope upward at an angle of approximately 30 deg. This type of wing first loosens the snow at the side of the cut and then carries it up and out. The distance the snow is thrown depends upon the speed at which the plough is traveling. These wings are forced out into position by means of gearing operated within the car. When not in use these wings fit into recesses in the side of the car.

Fuller Plough.—Another style of push plough is that designed by the Union Pacific Rd. and known locally as the Fuller plough, see fig. 11. The framing is 30½ ft. over end sills, and is composed principally of wood. The side sills are 12 in. by 13 in. members. The center sill is 12 x 12 in., and the two intermediate sills are each 6 x 8 in. The end sills are 12 x 16 in., and the entire frame, in addition to being mortised and tenoned, is braced by brackets and held together by ¾ in. bolts. In addition, the coupler castings at each end are connected by two 1½ in. diameter rods, extending the entire length of the frame and passing through the 12 x 24 in. body bolsters. At the front end of the frame is a system of bracing that supports the steel plough. The steel mold plate, 11 ft. wide, is of the square nosed type, the vertical wedge and the horizontal wedge being constructed of continuous 3/16 in. plate, in order to eliminate angles, joints and riveting at the junction of the two wedges. At the nose the mold plate is radiused downward. For 3 ft. back of the lower cutting edge, the framing under the nose is filled solid with wood, sec-

Fig. 2. An early form of locomotive pilot snow plough.

Figure 3

curely bolted. The nose piece is a triangular steel bar over which the cutting plate is placed. The front end of the plough, when depressed, is carried on

cast iron shoes. These slide along the rail and are arranged so they can be readily replaced in case of breakage. The sides below the mold plates are carried

Fig. 4. Snow Plough, attached to Ballast Car.

Fig. 5. Push Snow Plough, plan

Fig. 6. Push Snow Plough, wing type, for single track, Canadian Pacific Ry.

Figure 7.

down to within 8½ in. of the rail, in order to prevent snow crowding in under the front truck. The bottom portion is hinged to facilitate truck inspection.

The car is of the ordinary box type, equipped with doors and windows, and has at the front end a small cupola, with seats for accommodation of the operator. All devices for the operation

of the plough are located in this cupola. Over the rear truck is a large box, filled with blast furnace slag to weigh down the back end. The ploughs are fitted with a flanger but have no wings. They have been built for single and double track operation, the only difference being in the construction of the mold plates and the plough framing.

Canadian Pacific Railway Steel Plough. For many years the C.P.R. has built its ploughs of steel. It was the first railway to build and use an all-steel plough. The service given by this type has been very satisfactory. The all-steel plough has a number of advantages, including greater strength, lower maintenance cost, and affords greater protection to the men operating it. These steel ploughs have been built for both single and double track operation, and are equipped with drop nose, wings, and in some instances with ice cutters and flangers similar to those applied to rotary snow ploughs, all devices being controlled from the cupola. Two styles of ploughs have been built. The type shown in fig. 12 is used in territory where light, dry snows are frequent. On this type the roof extends forward over the mold plates to prevent snow flying upward. The other type shown in fig. 13 does not have the extension roof and is used where snows are usually wet and heavy. Fig. 14 shows a double track all steel plough, and fig. 15 a general arrangement drawing of the single track type.

Trucks.—The rear truck is of the standard arch bar freight type, with 33 in. diameter cast iron wheels mounted on 4¼ in x 8 in. M. C. B. axles. It is equipped with Simplex truck bolsters, M. C. B. coil springs and roller side bearings. The wheel base is 5¼ ft. The front truck is a special design of arch bar type, with 28 in. diameter steel tired wheels mounted on 5 x 9 in. M. C. B. axles. Simplex truck bolsters are used, the ends of which are fitted with a combination roller and wedge lateral motion device. This truck has no springs, the space usually occupied with springs being fitted with a wooden block. The first front trucks used under these ploughs had no lateral motion arrangement, and the wheels were mounted on locomotive truck axles with inside journals. The bearings and boxes were, therefore, practically inaccessible, except when the plough was standing over a pit. This resulted in numerous hot journals. Occasionally the arch bars bent sidewise, indicating the need of some lateral motion to prevent excessive side strain when the ploughs were passing through sharp curves and guided by the flanged wearing shoe. The present truck, with outside journals, and with lateral motion device, has overcome these troubles.

Brakes.—The rear truck only is equipped with brakes. The air brake consists of a schedule K. D. 812 equipment; the brake pipe extends the full length of the plough with standard angle cock and hose at the rear. On the front end of the pipe an angle cock is located behind the mold plate. Access to it is had through a small hinged door in the mold plate and connection is made by means of a special length of air hose. The hand brake is the ordinary standard box car type.

Draft Attachment.—The rear end is equipped with draft gear. At the front a standard pilot coupler is supported in a large steel casting riveted to the sloping front of the plough.

Underframe.—The center sills consist of two 15 in., 33 lb. rolled steel channels, with top and bottom cover plates. The side sills are 15 in., 33 lb. channels. The bolsters are box section, consisting of pressed plate diaphragms, with top and bottom cover plates. Approximately 6 ft. back of the center of the front truck is a very strong cross strut, consisting of two 15 in., 22 lb. channels applied horizontally to the top and bottom of

The center sill, the lifting wedge, and the front center plate, are supported by two 10 in., 20 lb. channels, riveted to the front end of the center sill channels, and to the center end posts. The sides of the lifting wedge are supported by two 10 in., 20 lb. channels. These are supported by the front bolsters and extend diagonally upward and

backward to a point just back of the front center plate, to the roof. The center of the bottom, or lifting wedge, is supported by two 10 in., 20 lb. channels, riveted to the front end of the center sill channels, and to the center end posts. The sides of the lifting wedge are supported by two 10 in., 20 lb. channels. These are supported by the front bolsters and extend diagonally upward and

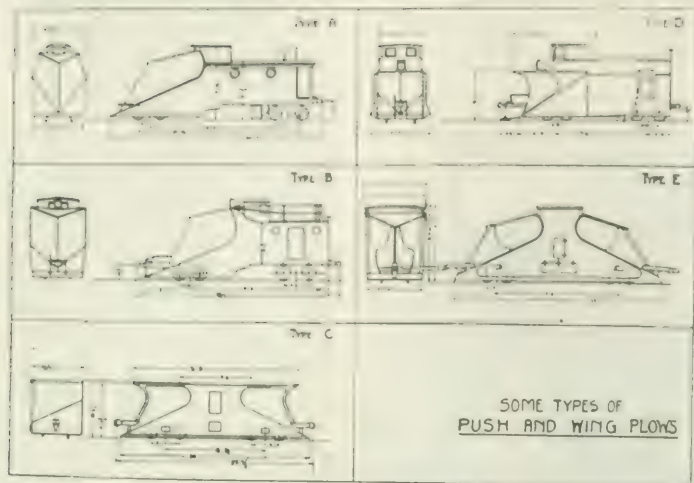

Figure 8.

Fig. 9. Russell Snow Plough, with wing elevator.

Fig. 10. Russell snow plough, with wing elevator, Grand Trunk Railway.

center sills, at a point just back of the front center plate, to the roof. The center of the bottom, or lifting wedge, is supported by two 10 in., 20 lb. channels, riveted to the front end of the center sill channels, and to the center end posts. The sides of the lifting wedge are supported by two 10 in., 20 lb. channels. These are supported by the front bolsters and extend diagonally upward and

backward to a point just back of the front center plate, to the roof. The center of the bottom, or lifting wedge, is supported by two 10 in., 20 lb. channels, riveted to the front end of the center sill channels, and to the center end posts.

End Construction.—The ends are constructed of 3/16 in. flat steel sheets. Attached to the side frames are heavy corner angles extending from the bottom of the side sills to the top of the side plate.

The cupola consists of a steel frame made of plates and angles.

The drop nose consists of a heavy plate, carried on large cast steel hinges. The

front nose is supported with removable flanged rail shoes, provided with hardened steel wear plates. Adjustable cutter plates, which extend down on either side of, and between the rails, are bolted to the front edge of the nose. These plates are beveled to a sharp edge, and are applied in a number of narrow widths, so that sections can be renewed if damaged. The drop nose is operated from the cupola by an air operated toggle arrangement placed under the nose frame.

The plough side sheets extend from the end of the lifting wedge to about midway between the trucks. They are very well braced and stiffened, particularly at the lower edge, where contact with hard ice is likely, in order to resist inward bending caused by side pressure.

Wings.—At the back edge of the side plates, steel extension wings are attached by four heavy steel hinges. The width of plough over sides is 10 ft. The width over ends of wings, when fully extended, is 16 ft. When folded, these wings are flush with the side of the plough. The outer edges of the wings are provided with a beveled extension, about 4 ft. in height. When the wings are folded, this beveled extension fits snugly against the body side sheet, and extends under the side sill as far as proper clearance for the rear journal box will permit. This beveled extension prevents snow from gathering when the plough is backing up.

Interior Finish.—Wooden furring strips are fastened to the interior of the plough body and cupola frame, and to these furrings standard tongue and groove caboose lining is applied. The floor is of 1 1/4 in. freight car decking. A platform is provided for the plough operator. The cupola windows are fitted with double glass, with air space between. There is one window in each side, and one at the back of the body of the car. Furnishings consist of a work bench, standard caboose stove and oil lamps.

The operating mechanism is shown in fig. 16. The drop nose is raised and lowered by air operated cylinders located inside the car and securely anchored to the center sills. The operating valve is located on the right hand side of the cupola. The wings are forced outward by air pressure applied in large cylinders fastened to the bottom of the underframe. The piston rods in the cylinders are made of large diameter pipe, with a hinged connection fitted at each end. The wings are closed by air pressure, applied in two short stroke locomotive driving brake cylinders, fastened under the side sills. The push rods are attached to levers. One end of the lever is anchored to the underframe and the other end is attached to a chain connected to the wing. Separate operating valves, located in the cupola, are provided for each wing. The supply of compressed air is obtained from the air brake system, and to permit repeated movements of the drop nose, or wings, promptly and without interference to the operation of the air brakes, storage reservoirs of large capacity are provided, these being located inside of the car. In front of the cupola, on a platform, is an electric headlight. Current for this light is obtained from the locomotive headlight set through a suitable extension cord.

This article will be continued in next issue of Canadian Railway and Marine World. Additional illustrations alluding to the article appear on pages 473, 474 and 475.

Electrification of Montreal Harbor Terminal Railway.

Canadian Railway and Marine World for October, 1919, contained some preliminary particulars about the electrification of the Montreal Harbor Commissioners' Terminal Railway, of which the following is a more extended description, from the Commissioners' report for 1919, issued recently:—

The Montreal harbor railway terminals consist of surface lines situated between Victoria Bridge and the Imperial Oil wharf, having a total trackage of 58 miles. During the summer of 1918, nine steam locomotives were in operation, and it was seen that if the service was to be maintained to its highest efficiency additional locomotives would be required to avoid congestion. Important electrified freight terminals were visited, and conditions closely studied, with a view of adopting the best system for the Montreal harbor terminals.

Electrification for freight yards and terminals has been found very economical and satisfactory in every way, electric locomotives being considerably more efficient than steam locomotives, especially during winter. In view of the climatic conditions, and the highly successful operation of the Canadian National Rys. lines through the Montreal tunnel terminals, which have a 2,400 volts direct current overhead system in use, a similar system was considered for the Montreal harbor terminals, and plans and other necessary details were at once got under way for laying out the work, in order that the minimum amount of time would be lost in getting the electric locomotives running. Plans and specifications were sufficiently advanced in July, 1919, to call for tenders for the material, the work being carried out by the electrical department. The work was subdivided into four main sections as follows:—1. Power station machinery equipment. 2. Control, protective and signal equipment. 3. Overhead catenary line material. 4. Rail bonding material. Sufficient material necessary for a start was received during Sept., 1919, and a commencement was made in the latter part of that month. Construction was carried on steadily throughout the winter on the overhead line work, as well as the track, it being found more advantageous to erect this material when the traffic conditions on the system were the least congested.

The Power Station is designed for an ultimate capacity of three 1,000 k.w. motor generator sets, the units having a very heavy overload capacity for a short period to meet railway conditions, and capable of carrying 250% load for five minutes. Each set will consist of a 3-piece unit, consisting of a 1,500 h.p. 2,300 volt 3-phase, 60 cycles, 720 r.p.m. synchronous motor, direct connected to a 500 k.w. 1,200 volt, 720 r.p.m. compound wound, d.c. generator on either end, each generator being permanently connected in series giving a 1,000 k.w. at 2,400 volts. Exciters for the synchronous motor and generator fields are mounted on the same bedplate. Each of the motor generator sets, when mounted upon its frame, will weigh 40 tons, and cover a floor space of 28 x 8 ft. and approximately 7 ft. high. Water-cooled, oil insulated power transformers of 2,000 k.v.h. will be installed, taking the power at the incoming lines, voltage of 11,000 volts and stepping it down to 2,300 a.c. for the synchronous motors. These transformers when in

weight approximately 30 tons.

The southward roll, remote from the power station, will be supported by the cross spans and the main messenger, the cross spans being spaced at 110 ft. intervals, with insulating material in the center of the spans. The cross spans will be spaced at 110 ft. intervals, with insulating material in the center of the spans.

will be supported by the cross spans and the main messenger, the cross spans being spaced at 110 ft. intervals, with insulating material in the center of the spans.

Although the main messenger will be the conductor, consisting of 400 strands of wire, the cross spans will be supported by the cross spans and the main messenger, the cross spans being spaced at 110 ft. intervals, with insulating material in the center of the spans.

Fig. 14. Double track, steel snow plough, Canadian Pacific Railway. See page 471.

cross spans, power transformers and excitors.

The overhead line equipment will consist of cross span and bracket construction supporting the main messenger, which will be 7/16 in. extra galvanized Siemens-Martin steel cable anchored in half-mile sections. The anchor poles will

be as required.

Wooden poles will be used where development is not completed, these poles being Western cedar timber, varying in length from 40 to 65 ft., as conditions demand. The poles will be butt treated with hot carbolineum as a preservative,

and the attention must be paid to the method of welding the copper bonds to the rail joints, in order to get the best results when the road comes in operation. Two bonding crews were at work through the winter and have placed over 7,000 bonds. The cross bonding at the switch points and cross-overs will be completed by the end of the year. The type of bond used is a steel armored terminal gas welded, copper stranded, bond, capacity 4/0, 7 in. long, cold pressed and headed. The welding outfits are composed of oxygen-acetylene cylinders, connecting to welding torches with regulating valves, flexible hose and gauges.

Steady progress is being maintained with all four sections of the construction, notwithstanding the difficulty of getting this special material, and a considerable amount of the work is well advanced.

Seats on Locomotives.—The Board of Railway Commissioners passed general order 293, April 26, 1920, providing, inter alia, that all locomotives of railway companies subject to the board's jurisdiction be equipped with a seat for brakemen. Upon reading what is filed on behalf of the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, and the Railway Association of Canada, it is ordered that paragraph 1 of general order 293 be amended by adding thereto the following, viz.: "Provided, however, that such seat shall not be located in a position that will interfere with the seating space or seats provided for engineer and firemen, or that will obstruct their view from side windows."

Railway Lands Patented.—Letters patent were issued during July for Dominion railway lands in Manitoba, Saskatche-

Fig. 15. General arrangement, single track snow plough, C.P.R. See page 471.

be very heavily guyed in all directions. The cross spans will be supported by wooden and steel poles at spacings of 150 ft. on tangent double track, and 120 ft. or 105 ft., as conditions require on curves or yards.

Cross-span messengers will consist of 5/16 in. high strength galvanized steel cable, the tension on all messengers be-

ing and should give long life. Steel poles will be used when permanent conditions exist, the poles being set in concrete carried well above the ground level.

The rail bonding, while not a very noticeable part of the construction of the system, a highly important section of the system. All the return current must get back to the power station by the rails,

wan, Alberta and British Columbia, as follows:—

W. B. Bulling, ex-Assistant Freight Traffic Manager, Eastern Lines, C.P.R., now of Knowlton, Que., born at Montreal, Sept. 16, 1858.

W. E. Burke, Director of Operation, Canada Steamship Lines, Ltd., Montreal, born at Belleville, Ont., Sept. 23, 1881.

A. D. Cartwright, Secretary, Board of Railway Commissioners, Ottawa, born at Kingston, Ont., Sept. 30, 1864.

A. S. Dawson, Chief Engineer, Department of Natural Resources, C.P.R., Calgary, Alta., born at Pictou, N.S., Sept. 6, 1871.

H. B. Dufief, Assistant to Solicitor, Grand Trunk Pacific Ry., Winnipeg, born at Washington, D.C., Sept. 16, 1883.

W. E. Duperow, General Passenger Agent, Grand Trunk Pacific Ry., Winnipeg, born at Stratford, Ont., Sept. 4, 1872.

R. S. Elworthy, General Agent, Passenger Department, Canadian Pacific

A. Hector, Port Agent, Canadian Government Merchant Marine Ltd., Halifax, N.S., born there, Sept. 12, 1882.

W. B. Howard, District Passenger Agent, C.P.R., Toronto, born at Chatham, N.B., Sept. 15, 1877.

W. R. Howard, dispatcher, C.P.R., Brownville Jct., Me., born at St. Andrews, N.B., Sept. 14, 1871.

Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., Montreal, born at Brockville, Ont., Sept. 15, 1858.

G. C. Jones, Assistant to President, G.T.R., Toronto, born at Clyde, N.Y., Sept. 24, 1869.

C. B. King, Manager, London St. Ry., London, Ont., born at Galena, Ind., Sept. 12, 1871.

S. King, London, Ont., ex-director, National Steel Car Co., Hamilton, Ont., born at Thetford, Norfolk, Eng., Sept. 12, 1853.

C. C. Labrie, Purchasing Agent, Canadian National Rys., Vancouver, B.C., born at Quebec, Que., Sept. 8, 1882.

R. E. Larmour, General Freight Agent,

London, Eng., Sept. 27, 1883.

C. S. Richardson, District Freight Agent, C.P.R., Buffalo, N.Y., born at New York, Sept. 26, 1870.

W. D. Robb, Vice President, Transportation and Maintenance, G.T.R., Montreal, born at Longueuil, Que., Sept. 21, 1857.

A. Scott, Resident Engineer, Prince Edward Island Ry., Charlottetown, P.E. I., born at Kirkcaldy, Scotland, Sept. 6, 1884.

R. A. Sewell, Superintendent of Car Service, Eastern Lines, C.P.R., Montreal, born at Brampton, Ont., Sept. 2, 1880.

J. M. Silliman, Engineer, Maintenance of Way, Susquehanna Division, Delaware & Hudson Rd., Oneonta, N.Y., born at Easton, Pa., Sept. 8, 1885.

F. W. Sterling, District Freight Agent, C.P.R., Edmonton, Alta., born at Thornbury, Ont., Sept. 13, 1879.

H. A. Young, formerly with Ontario Storage & Cartage Co., Ltd., Toronto, now of Buffalo, N.Y., born at Brooklyn, N.Y., Sept. 1, 1864.

Freight Rate Increases.

In their original applications the carriers proposed general percentage increases in freight rates in the respective groups as follows: eastern, 30%; southern, 31%; western, 24%. Following such general percentage increases, they indicate their willingness, where necessary, to revise rates to restore in so far as is deemed practicable existing recognized relationships and differentials, and as to coal and grain in certain important situations such readjustments are proposed in this proceeding. It is stated that the percentage method is not only on the whole the fairest to all interests by distributing the burden in proportion to the haul, but that it is the only way in which the desired increased revenue may be obtained without complications and delays due to tariff difficulties and to the lack of accurate statistics from which to determine the amount of revenue which may reasonably be expected from flat or maximum increases on particular commodities. It would be desirable, if it were possible, to determine definitely the commodities, the sections of the country, and even the individual rates which can best bear the burden of increases, and the relationships of the rates and differentials which will be disturbed by a percentage increase. This is precluded by the necessity of prompt action upon the main issues presented.

Percentage Increases Versus Flat Increases and Maintenance of Differentials and Relationships.—Many shippers have directed their testimony and argument principally to the method of increasing the rates rather than to the amount of the increases. Shippers are far from unanimous in their views and may be divided into three groups, viz., those who seek the preservation of existing relationships and differentials either by specific or flat increases or by applying the percentage increase to base rates and employing in connection therewith differentials from and to other points; those who advocate a percentage increase in instances, contending that differentials should increase in the same ratio as all other rates and charges; and those whose advocate a percentage increase with a maximum. While established or differential relationships of rates are not general, there are many such adjustments; some fixed by the carriers and others by us, and it is contended by some shippers that in such cases it is desirable in readjusting the rates to maintain the differentials. Many relationships in cents per unit were disturbed by the increases made by the Director General, except upon a few commodities of heavy movement which were subject to specific increases in cents or dollars and cents per unit. A relatively small proportion of these relationships have subsequently been restored. It is evident that there are many competitive situations where no recognized differentials have ever existed but where, nevertheless, the rates have been made to reflect competitive conditions. Such situations greatly outnumber those where "fixed relationships" have been established.

It is generally understood that on traffic to and from western trunk line territory and the southwest Chicago enjoyed for years a differential of 20c., first class, over St. Louis. This was thought to be a fixed, long-standing difference, and well entitled to bear the title differential. Under general order 28 it was increased to 25c. We are now asked on behalf of certain Chicago interests not

to increase this differential. In this connection it is interesting to note that on traffic to and from the east the St. Louis rates are made uniformly 117% of the Chicago rates, so that under any general increase in rates the spread between the St. Louis rates and the Chicago rates is automatically widened. In 1914 the first rate from New York to St. Louis was 13c. higher than to Chicago. The difference is now 19c., although the percentage relationship is the same now as it was in 1914. There is apparently no more justification for maintaining Chicago's differential over St. Louis on traffic to the west than for maintaining the differential of St. Louis over Chicago on traffic from the east. Practically all rates in official classification territory are constructed upon a percentage basis, and attention is directed to the important fact that not a single interest has here maintained, with the possible exception of Chicago, that we should depart generally from the percentage basis which has so long prevailed.

In favor of maintaining differentials, it is said that they have been fixed in most cases after careful investigation, and that they represent the proper measure of differences in the rates; that often they represent the maximum differences which will permit more distant shippers to compete with those in close proximity; that to increase rates by a percentage tends to decrease the radius in which goods are marketed, and thus by lessening competition prices are advanced; and that in all cases the margin of profit has not increased proportionately to prices. Those who oppose maintaining differentials at this time contend that the value of the dollar expressed in terms of commodities shipped today is in reality but one-half its former value, and, therefore, a differential which was fixed at a given amount several years ago should, to have the same economic effect, be greater today; that there have been general increases in the prices of practically all commodities, in wages, and in the charges for nearly all services, and that differentials should not be made an exception to the rule; and that as increased operating costs are the underlying reason for the proposed increased rates, the additional service represented by the differential, being more expensive than heretofore, should pay greater rates as well as other services. The adoption of specific increases in cents per unit instead of percentage advances will, of course, maintain existing relationships. However, the carriers almost uniformly oppose this method and it is not generally advocated by shippers. Further, the difficulty of its adoption is apparent because of the lack of reliable statistics from which to determine the probable additional revenue from a given increase. It should also be noted that everyone who advocated this method insisted that flat increases be applied but once to combination rates. The complicated nature of tariff publication to make such an arrangement effective, when different percentages of increase are being made in different groups, is apparent.

Without attempting to pass finally upon the question whether in given cases differentials should or should not be maintained, it is evident that no general programme of maintaining differentials can be made effective coincident with the increases here approved without materially delaying their effective date as definite testimony covering individual situations is before us in only a

very few cases. To maintain differentials by applying the percentage increases to base rates and adding thereto existing differentials cannot be done without materially lessening the amount of additional revenue to be derived by the carriers, as generally differentials are added to rather than deducted from base rates. After carefully considering the situation we find that with the exceptions hereinafter noted general percentage increases made to fit the needs of the groups of lines serving each of the four groups must be considered for present purposes the most practicable. This conclusion is without prejudice to any subsequent finding in individual situations.

Provisions for Improvements, Betterments, or Equipment.—Section 15a of the Interstate Commerce Act provides that during the two years beginning Mar. 1, 1920, the Commission shall take as such fair return a sum equal to 5½% of such aggregate value, but may, in its discretion, add thereto a sum not exceeding one-half of one per centum of such aggregate value to make provision in whole or in part for improvements, betterments or equipment, which, according to the accounting system prescribed by the Commission, are chargeable to capital account. The increases here authorized are intended to yield the additional ½ of 1%. The record leaves no doubt as to the needs of the country for additional transportation facilities. All carriers participating in the increases will be expected to make appropriate provision for additional improvements, betterments, or equipment of a character chargeable to capital account and to make report to us semi-annually, as of Dec. 31 and June 30, showing what portion of the increased revenue resulting from the increases here authorized has been devoted to that purpose.

Conclusion as to General Increases.—We are of opinion and find that the following percentage increases in the charges for freight service, including switching and special services, together with the other increases hereinbefore approved, would under present conditions result in rates not unreasonable in the aggregate under sec. 1 of the act and would enable the carriers in the respective groups, under honest, efficient, and economical management, and reasonable expenditures for maintenance of way, structures, and equipment, to earn an aggregate annual railway operating income equal, as nearly as may be, to a return of 5½% upon the aggregate value, for the purposes of this proceeding, of the railway property of such carriers held for and used in the service of transportation and ½ of 1% in addition; eastern group, 40%; southern group, 35%; 2 western group, 35%; mountain-Pacific group, 25%.

In view of the different percentages of increase herein approved, it becomes necessary to make provision for rates between the various groups. Where rates are constructed by the use of combinations upon gateways between any two groups, the through rates should be increased by applying to each factor its respective percentage. Rates between points within a group and points on the border line of such group should be increased according to the percentage applicable to the group. Where a river constitutes a boundary line between two groups, points on both banks thereof shall be considered as border line points. Joint or single line through rates between points in one group and points in other groups should be increased

hardship results from the general percentage increases, and their special attention is called to these commodities to the end that such action may be taken as the facts may seem to warrant.

Live Stock and Packing House Products.—Shippers contend that the condition of the live stock industry is such as to make it probable that the full percentage increase proposed by the carriers will discourage production and distribution. Live stock is produced throughout the country, but the consuming markets in the north and east are to a considerable extent dependent upon the stock produced in the west and southwest. Drought conditions have prevailed here and there in recent years and the present condition of the producers does not appear favorable. However, it is not clear that this condition results from transportation charges. The Director General in increasing rates on live stock applied a maximum of 7c. per 100 lb., while the full 25% increase was applied to packing house products. To apply again a maximum to live stock, as requested by shippers, without similar maximum upon packing house products, will in all probability tend to lessen the movement of the southwestern and western stock to local packing plants and increase the movement to the larger and more distant plants in the middle west. One of the principal difficulties of which complaint has been made by the live stock producers is the lack of prompt and efficient service. To encourage the long haul movement as against the short haul movement under present conditions of car supply would tend to increase rather than reduce the transportation difficulties. From Montana to Chicago the rate is 55c. and on hogs 62c. per 100 lb. These are among the highest rates now in effect applicable to heavy movements. Under the general basis of increase herein approved, these rates would be advanced 18c. and 21c., respectively, approximately 1/5c. per lb. It is concluded that the facts before us at this time do not warrant any exception to the percentage method of increasing the rates on either live stock or packing house products.

Iron ore.—A considerable proportion of the iron ore consumed in the U.S. originates on ranges in Minnesota and Michigan near the head of Lake Superior. This ore moves to furnaces on Lake Michigan and Lake Superior; to furnaces on Lake Erie and in Pennsylvania, Ohio, and other states. The movement is by rail to the upper lake ports, and when destined beyond, by lake vessels to the lower lake ports. Because of the keenly competitive situation between the respective furnaces, the Director General adopted a specific increase of 30c. a ton upon iron ore in lieu of a percentage, which was applied to the movement from the Michigan and Minnesota ranges to the upper lake ports, but not from lower lake ports to eastern destinations, thus resulting in an equal increase in cents per ton for the rail transportation to each of the competing furnaces. Under this plan the rates of the western carriers up to the lake ports were increased approximately 57%, whereas the rates of the eastern carriers from the lower lake ports were not increased. In this proceeding the eastern carriers propose first to apply an increase of 22c. a ton and then impose thereon the general percentage increase. The testimony of ore shippers is conflicting, some proposing no further increases from the ranges to the lake ports, some favoring double in-

crease in the rates from the lower lake ports, others proposing no exceptions to the general percentage increases proposed on traffic generally. The returns made by the principal ore carrying roads from the Minnesota ranges to Lake Superior ports indicate that such lines are in a much more prosperous condition than the western carriers generally. It is concluded that at this time no increases should be made in the rates on iron ore from the Minnesota or Michigan ranges to Lake Superior or upper Lake Michigan ports. Other rates on iron ore may be increased according to the percentages herein approved.

Other Ores.—In some of the western states there is a considerable movement of low grade ores, some of which are valued at \$5 a ton or less. Shippers of these low grade ores contend that further increases in the rates thereon will result in curtailing or destroying their movement. The evidence before us in this proceedings, however does not warrant exceptions to the general percentage increases at this time.

On grain and grain products we are asked to apply in connection with such percentages as may be approved, a maximum increase. For the same reasons that have led to the conclusion that neither specific nor maximum increases are desirable, we find that upon this record no exception should be made of the general percentages upon these commodities, except as noted. There are in the middle west a number of important grain markets through which it has been customary to maintain an equalization of the rates from important producing states to important consuming regions, under which the sum of the rates into and out of the various markets is in most cases equal. This adjustment differs from an ordinary differential basis in that it is in substance providing an equal through charge over various routes between the same points by the use of sums of proportional rates rather than the establishment of joint through rates or of transit. The application of different percentages in the various groups will result in dislocation of this equalization. Carriers and shippers unite in recommending that this equalization be continued, because of the keenly competitive situation of the various markets and of the lines of railway serving such markets. However, sufficient detailed information to cover fully the situation is not before us upon this record. We find that the grain rates into and out of these markets may be increased by the general percentages herein approved, with the understanding that the carriers will, within thirty days after the service of this report, file tariffs restoring the equalization through the grain markets now enjoying that basis. This should be done after conference with interested shippers, and, if desired, we will lend our co-operation in the premises.

Port Differentials.—The eastern carriers express of record their willingness to preserve existing relationships between the rates to and from the eastern ports. No objection to this proposal was made. This result can be readily accomplished for the reason that all rates in official classification territory between the ports and points west of the Buffalo-Pittsburg line are based on the New York-Chicago rates. The base rates may be increased and existing port differentials maintained. It is our view that in filing the increased rates here authorized a provision of this character should be made.

Applications of Boat Lines.—There have been filed in this proceeding applications for increased rates by a number of boat lines. The record shows that the expenses of the boat lines have increased in general at least in the same proportion as expenses of the railways. Authority is therefore granted to boat lines subject to our jurisdiction to increase their rates to the same extent as increases are herein granted to railroads operating between the same points or in the same territory. In the construction of rail and lake rates, the present parity between Chicago and Duluth should be maintained.

Freight Rates of Electric Lines.—Petitions have been filed in this proceeding by a national organization of electric lines, seeking permission to increase their rates in the same proportion as the rates of trunk lines are advanced. The operating costs of these lines have, on the whole, increased in approximately the same ratio as those of steam railways. In some instances there is competition between the electric lines and the steam railways. We conclude that the freight rates of electric lines may be increased by the same percentages as are approved herein for trunk lines in the same territory. This is not to be construed as an expression of disapproval of increases, made or proposed in the regular manner, in the passenger fares of electric lines.

Minimum Carload Charge, Minimum Class Scale, and Minimum Charge per Shipment.—There is now in effect, with certain important exceptions, a minimum charge of \$15 a car on carload traffic, applicable to line haul movements. There are also minimum class rates in the three classification territories. We find on the record no explanation of the underlying basis of the minimum carload charge or the minimum class scales and no justification for increasing them. It is our understanding that these minima were imposed as a revenue measure in connection with rates substantially lower than those authorized in this report. We also find that the minimum charge per shipment for less than carload traffic should not be increased.

Specific Divisions.—In many cases divisions between carriers are in the form of specific amounts per unit. It is obvious that unless divisions of this character be increased, such lines will receive no benefit from the increases herein approved, while the other carriers will receive more than the respective percentage increases applicable to the traffic. It is concluded that where carriers earn specific amounts as their compensation out of through rates or fares, such amounts should be increased in the same percentages as the through rates or fares. Where the divisions of carriers participating in through rates or fares are in fixed amounts per unit and are absorbed by other carriers, such absorptions should be increased in the same percentage as the through rates or fares.

Joint Rates to and from Foreign Countries.—Nothing herein should be construed as authorizing any increases in the proportions of joint through rates to or from points in foreign countries accruing in such foreign countries. The proportions of such rates accruing within the U.S. may, however, be increased to the extent herein approved for domestic rates in the same territory.

Fourth Section Departures.—In instances where the approval herein of different percentages of increase results in departures from the provision of sec.

and the cost the carrier will be expected to effect in respect to such departure by said date not later than Nov. 1, 1920, and to file on or before that date applications seeking permission to continue such operations. Temporary 4th section orders will be granted by appropriate order.

Disposition of Fractions.—In computing and applying all increased rates as authorized herein fractions will be treated as follows: Where rates are stated in amounts per 100 lb. or any other unit, except as provided in the succeeding paragraph, fractions of less than $\frac{1}{2}$ c. will be omitted. Fractions of $\frac{1}{2}$ c. or greater but less than 1 c. will be stated as $\frac{1}{2}$ c. Fractions of $\frac{1}{2}$ c. or greater will be increased to the next whole cent. This rule will also be followed in computing passenger fares. Where rates are stated in dollars per carload, including articles moving on their own wheels, when not stated in amounts per 100 lb. or per ton, amounts of less than 25c. will be dropped; thus, \$25.24 will be stated as \$25. Amounts of 25c. or more but less than 75c. will be stated as 50c.; thus, \$25.65 will be stated as \$25.50. Amounts of 75c. or more, but less than \$1, will be raised to the next dollar.

Outstanding Orders.—An order will be entered modifying outstanding orders of the Commission to the extent necessary to permit the carriers to make effective the increases herein authorized.

Effective Date of New Rates and Subsequent Adjustments.—In view of the existing situation it is important that the increased rates be made effective at as early a date as practicable. The increases herein approved may be made effective upon not less than five days notice to the Commission and to the general public by filing and posting in the manner prescribed in the Interstate Commerce Act. The authority herein granted will not apply to any rates, fares, or charges filed with this Commission to become effective later than Jan. 1, 1921.

Most of the factors with which we are dealing are constantly changing. It is impossible to forecast with any degree of certainty what the volume of traffic will be. The general price level is changing from month to month and from day to day. It is impracticable at this time to adjust all of the rates on individual commodities. The rates to be established on the basis hereinbefore approved must necessarily be subject to such readjustments as the facts may warrant. It is conceded by the carriers that readjustments will be necessary. It is expected that shippers will take these matters up in the first instance with the carriers, and the latter will be expected to deal promptly and effectively therewith, to the end that necessary readjustments may be made in as many instances as practicable without appeal to us.

An order putting the judgment into effect was passed on the same date and a supplemental report was made Aug. 11, indicating specifically the percentages of increase that should apply to freight rates within Illinois territory; between points in Illinois territory and points in the eastern group; and between points in Illinois territory and points in the western group. The new rates went into effect Aug. 26.

The following change was made in regard to passenger fares:—In our original report we said, in effect, that in computing passenger fares the carriers should follow the same rule for the disposition of fractions as was approved

for the publication of freight rates where stated in amounts per 100 lb. of any other unit, except as otherwise specifically provided. Our attention is now called to the fact that it has long been the custom of the carriers in constructing passenger fares to round out fractions to the next full cent. It is our view that the practice heretofore observed may be applied in constructing the increased passenger fares, the surcharges for occupants of sleeping and parlor cars, and baggage charges, authorized in our original report.

Cost of Railway Stationery.

An Erie Rd. official has compiled figures showing the company's expenditure for stationery and for steel rails from 1915 to 1919, inclusive, as follows:—

Year	Stationery	Rails	Per ton
1915	\$200,133.50	\$694,184.00	\$74.00
1916	250,980.10	\$72,116.00	41.60
1917	360,463.82	652,870.00	31.50
1918	402,931.84	\$89,200.00	16.80
1919	541,474.65	781,143.00	40.80

Commenting on this, he says:—"It will surprise many employees to know, as these figures demonstrate, that stationery calls for such enormous outlay; and it will help to justify the efforts we have been making to convince employees who use paper and other articles included under the heading of stationery, that the subject is deserving of all the attention it is receiving."

Regulations Respecting Great Northern Railway Locomotives in British Columbia.

The Board of Railway Commissioners passed order 29,914, July 19, as follows: Re fire protective appliances on Great Northern Ry. locomotives: Upon reading the reports and recommendations of the Board's Chief Operating Officer, and Chief Fire Inspector, it is ordered as follows:—

1. That the Great Northern Ry. file with the Board, on or before Aug. 1, 1920, and on or before April 1 of each succeeding year, until otherwise ordered, a list showing the locomotives, designated by number, assigned to service on its railway between Michel, B.C., and the International Boundary, near Gateway, Montana, and between Nelson, B.C., and the International Boundary, during the intervening part of the year before Nov. 1.

2. That, should it be necessary for the railway company, at any time during the said period, to substitute, or to make an emergency assignment to the lines in question, of any locomotive not so listed with the Board, the company shall immediately give advance notice of such intention, in the form of a telegram addressed to the Board at Ottawa and to the Board's district fire inspectors at Cranbrook and Nelson, B.C.

3. That in the cab of every locomotive actually operated over any portion of the said railway between Michel and the International Boundary, there shall, during the period between April 1 and Nov. 1, be posted a certificate, signed by a responsible official of the company, to the effect that the fire protective appliances on such locomotive have, within a period of not to exceed one week, been thoroughly examined, all defects repaired, and that such fire protective appliances, at the time of the issue of the certificate, are in good order, in full compliance with the requirements of the

Board pertaining thereto, such certificate to show the date of such inspection and the character of defects found and repaired, and to be available for inspection by any authorized officer of the Board. A copy of each such certificate shall also be forwarded promptly to the Board's Chief Operating Officer at Ottawa.

Freight and Passenger Traffic Notes.

The Canadian National Rys. put in operation on Aug. 5, from Toronto, and on Aug. 9, from Winnipeg, compartment-observation-library cars on trains 3 and 4 between Toronto and Winnipeg. These cars are of steel construction throughout.

The Board of Railway Commissioners has ordered the C.P.R. to restore the train service between Calgary and Macleod, Alta., which was discontinued in January, such restoration to take place with the autumn change of timetables, and in any case not later than Oct. 1.

The Board of Railway Commissioners passed order 29,911, July 23, as follows: Upon its appearing that the C.P.R. Co. reduced its daily passenger train service between Nelson and Slocan, B.C., to a tri-weekly service without notice, as required by the Board's circular 139, of Jan. 13, 1915, and upon reading the protests filed against the change made in such service, it is ordered that the C.P.R. be directed forthwith to restore the daily service formerly in existence between Nelson and Slocan, pending compliance by the company with the requirements as to notice of the said circular 139, and such action by the Board, if any, as it shall deem necessary in the premises.

The Caraqueet & Gulf Shore Ry., acquired as from June 1 by the Dominion Government, has been incorporated in the Canadian National Rys. (Levis and east) as Caraqueet Subdivision. A mixed train leave Bathurst main line station at 8.40 a.m., arriving Tracadie, N.B., at 6.20 p.m., and a mixed train leaves Tracadie at 7 a.m. and reaches Bathurst main line station at 4.20 p.m. Both trains run in and out of Shippegan, but do not run into or out of East Bathurst.

The C.P.R. Tourist Department's statistics show that in 1919 the foreign tourist travel in Canada was 85% more than in 1919, and that up to midsummer this year last year's record had been passed, so that this season will be by far the best on record.

Inverness Railway & Coal Co.'s Property Sold.

The Inverness Ry. & Collieries Ltd. is the title of a new company which is reported to have bought the Inverness Ry. & Coal Co.'s assets, the title passing to the new company by an order of a Nova Scotia court on July 31. The purchase is said to include the developed coal mines, the mining areas, the railway, and the shipping wharf. The railway extends from Inverness Jct., about a mile from Point Tupper, N.S., on the Intercolonial Ry. section of the Canadian National Rys., and runs northeasterly on Cape Breton Island to Inverness, 62 miles. The company's properties have been operated by a receiver for the bondholders, under an agreement, for some time. During 1919 the purchase of the line by the Dominion Government was urged, and although there were negotiations, nothing definite was arrived at.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John, N.B. Bridge.—The bridge over the St. John River, at the reversible falls, St. John, N.B., is to be replaced by a new structure a few feet further up stream and work has been started on the foundations for the abutments and on the rock excavation for the approach from the St. John end. We were advised Aug. 24 that the plans were being prepared for submission to the Board of Railway Commissioners at an early date. There have been some negotiations between the company and the city in regard to the bridge, and the city is reported to have decided to ask the Board to require that the new bridge be 90 ft. above high water, which is the same as the highway bridge, a little farther down the stream. The present railway bridge is 84 ft. above high water.

McAdam Jet.—A press report states that a contract has been let to J. A. Grant & Co., for the erection of three frame construction double houses at McAdam, N.B., for employees. The company is also reported to have let contracts for the erection of an addition to the car repair shops, and a brick addition to the machine shop at McAdam.

Block Signals in Maine.—A press report of Aug. 16 states that an order had been given for the installation of block signals on 25 miles of the company's lines in Maine, and that A. Price, General Manager, Eastern Lines, Montreal, and J. W. Woodman, General Superintendent, New Brunswick District, had gone to Augusta, Me., to confer with the Public Utilities Commission with respect to the matter.

Palais Station, Quebec.—A press report states that extensions to 2 umbrella train shelters at the Palais Station, Quebec, are under construction. The original shelters were each 250 ft. long, and the additions will make them each 403 ft. long.

Chateau Frontenac Extension.—Excavation work for the addition to the Chateau Frontenac, Quebec, is, a press report states, being proceeded with rapidly, and it was expected that work on the foundations would be started by the end of August.

Timiskaming-Kipawa Line.—We are officially advised that negotiations have been in progress for some time between the Quebec Government and the C.P.R. Co. with reference to the construction of a railway from Timiskaming to Kipawa, Que., under the Subsidy Act passed by the Legislature last session, but the agreement has not been signed at the date of our advice.

Islington Station.—The Board of Railway Commissioners has extended for three months the time within which the company shall erect a station at Islington, Ont.

Walkerton Subdivision.—The Board of Railway Commissioners has authorized the rebuilding of bridge at mile 27.7, Walkerton Subdivision, Ont.

Algoma District.—The Board of Railway Commissioners has authorized the rebuilding of bridges 28.89, North Bay Subdivision, and 41.85, Heron Bay Subdivision, Ont.

Winnipeg Subways.—A recent press report states that a meeting has been called in Winnipeg to ascertain the public feeling regarding a suggestion that a proposed subway under the C.P.R. tracks be at Sherbrooke St., and not at Salter St.

Manitoba District.—The Board of Railway Commissioners has authorized the rebuilding of bridge 3.1 over the Assiniboine River, at St. Thomas, Man.

Donan, Man., Interlocking Plant.—A press report states that the company has ordered a 28 lever Saxby & Farmer interlocking machine, with working levers and 4 spare spaces, for installation at Donan, Man. The machine will be installed by the company's signal construction forces.

Govanlock Subdivision.—The Board of Railway Commissioners has authorized the rebuilding of bridge 276, Govanlock Subdivision, Sask.

Rosetown Southeasterly Branch.—The Board of Railway Commissioners has approved plan, profile and book of reference of the portion of this branch from mile 20, in Sec. 27, Tp. 27, Range 16, west 3rd Meridian, to mile 24.64 in Sec. 3, Tp. 27, Range 16, west 3rd Meridian; the revised location of the branch from mile 55.41 to 60.22, and has authorized the construction of the line at grade across four highways.

Saskatchewan Locomotive Houses.—A press report states that tenders were received to Aug. 18 for heating the locomotive house extensions at Regina, Weyburn and Moose Jaw, Sask.

Moose Jaw Southwesterly Branch.—The Board of Railway Commissioners has approved plan, profile and book of reference for revised location of extension of the Moose Jaw Southwesterly Branch, Assiniboia to Consul, Sask., from mile 0, in Sec. 4, Tp. 4, Range 27, to mile 32.3, in Sec. 3, Tp. 3, Range 23, west 3rd Meridian. This branch is already in operation from Moose Jaw to Assiniboia, connecting there with the Weyburn-Lethbridge line, and the section approved of covers the 32.3 miles southerly and westerly, through the Wood Mountain district towards Consul, also on the Weyburn-Lethbridge line. A contract for grading of 35 miles southerly and easterly from Consul was let in 1919 and it was reported in the Saskatchewan Legislature last spring that 12.3 miles had been graded at the end of 1919. Work is reported to have been gone on with during this year.

Acme to Empress.—The Board of Railway Commissioners has approved combined plan, profile and book of reference showing revised location (Alberta Land Survey) of portion of the Acme to Empress section of the Langdon North Branch, from Sec. 18, Tp. 20, Range 22, west 4th Meridian, mile 59.94, to Sec. 7, Tp. 29, Range 20, west 4th Meridian, mile 75.73.

Alberta District.—The Board of Railway Commissioners has authorized the rebuilding of bridge 45.5 on the Crownsnest Subdivision.

Alberta District Betterments.—Tenders were reported to be under consideration recently for the following works:—Replacing a 12 ft. concrete arch culvert at Lacombe; waterproofing, abutments, Saskatchewan Ave. bridge, Edmonton; alteration and extension of station at Stettler; replacing timber trestle bridge at Nevis, and erection of 30 miles of woven wire fencing.

Contracts have been let, a press report states, for the following works in this district:—To Bennett & White Construction Co., Calgary, Alta., turntable, coaling plant and ash plant, at an esti-

mated cost of \$40,000; to A. G. Creelman & Co., Calgary, Alta., locomotive house and boiler house at an estimated cost of \$60,000.

Bassano, Alta.—Contracts for construction of turntable, coaling plant and ash plant costing \$40,000 for C.P.R. has been let to Bennett & White Construction Co., Calgary, and for construction of roundhouse and boilerhouse costing \$60,000, to A. G. Creelman & Co., 212 7th Ave. W., Calgary.

British Columbia District.—The Board of Railway Commissioners has authorized the rebuilding of the following bridges:—17.1 over the Spuzzum River, Cascade Subdivision, and 28.6, on Nakusp Subdivision.

Coquitlam Freight Shed.—The freight shed at Port Coquitlam, B.C., was destroyed by fire Aug. 5, and the passenger station narrowly escaped catching fire, in a fire which destroyed a number of stores and houses.

Nanose Bay Ferry Slip.—A press report states that the new ferry slip at Nanose Bay, Vancouver Island, is practically completed. The apron hoisting machinery was reported to have been shipped to the site on Aug. 9. (Aug., pg. 428.)

Canadian National Railways Construction, Betterments, Etc.

Plans for the new railway line from the Atlantic to the Pacific and New.

The new railway line from the Atlantic to the Pacific and New.

The new railway line from the Atlantic to the Pacific and New.

Western Lines.—50,000 to be delivered on Duluth, Winnipeg & Pacific Ry. in Minnesota; 400,000 to be delivered on Canadian National lines between Port Arthur and Rainy River; 25,000 to be delivered on Canadian National lines in Minnesota; 50,000 to be delivered on Canadian National lines in Manitoba; 1,000,000 to be delivered on Canadian National lines between Armstrong and Winnipeg; 600,000 to be delivered on Canadian National lines in Alberta; and 875,000 to be delivered on Canadian National lines in British Columbia.

Halifax Southwestern Ry.—The Board of Railway Commissioners has authorized the rebuilding of the following bridges between Halifax and Yarmouth, N.S.:—Port Wade Subdivision:—Over Riverdale River, mile 9.8; Feindels bridge, mile 18; over La Have River, mile 18.2; over Shannon River, mile 37.5. Caledonia Subdivision:—Over Pleasant River, mile 12.5. Liverpool Subdivision:—Over East Pubnico River, mile 217.8; over Pubnico River, mile 220; over Big Brook, mile 221.3; over Rider's Brook, mile 227.7; over Argyle River, mile 229.6; over Tusket River, mile 238.1; over Salmon River, mile 239.7; and over Acadia stream, mile 242.8.

Coaling Plant Contracts.—We are officially advised that a contract has been given to Williams & Wilson Co., Montreal, for the construction of mechanical coaling plants as follows:—Point Tupper, N.S., 100 tons capacity; Pirate Harbour, N.S., 100 tons; Truro, N.S., 250 tons; Newcastle, N.B., 100 tons.

St. John Improvements.—A press report says that the work in progress at the C. N.R. Island yard at St. John, N.B., comprises grading for yard extension, diversion of creek, construction of three pile trestles, signal and telegraph changes, drainage and fencing changes, rearrangement of existing main line and yard tracks, and the laying of new tracks. The approximate quantities of the principal items which this work covers are: rock cut, 5,000 cu. yd.; fill, 45,000 cu. yd.; creek diversion, 60,000 cu. yd.; ballast, 10,000 cu. yd.; lifting and relaying tracks, 3.3 miles; switches, 27; laying new tracks 4.7 miles, switches 31; relining existing tracks, 2.3; two double track pile trestles; one single track pile trestle.

A recent press report states that the warehouse leased to T. McAvity & Sons on McLeod's Wharf, St. John, was being valued preparatory to being sold to the C.N.R., and that it will be pulled down and the site used for additional tracks to be laid next spring.

St. John River Bridge, Fredericton.

Tenders were received to Aug. 21 for the construction and completion of the substructure for a steel truss railway bridge over the St. John River at Fredericton, N.B., which will be part of the work being done in connection with the development of the through C.N.R. route from the National Transcontinental line at McGivney Jet., over a section of the old Canada Eastern Ry. into Fredericton, and thence over the recently completed section of the St. John & Quebec Ry. to St. John. The bridge will be 1,932 ft. 7½ in. long from face to face of ballast walls on abutments, with an elevation of 34 ft. to base of rail, the ordinary high water level being 19.87 ft., low water being 1.98 ft., and lowest point in the river bed being 19.0. The bridge will be built 65 ft. south, or down stream, from the present bridge. The substructure will consist of 2 concrete abutments, 9 piers with granite faced noses, 1 pivot pier, 2 dock-filled timber rest piers for swing span. One pier is to be taken to solid rock foundation and the others will be on pile foundations. The superstructure will consist of one 70 ft. deck plate girder span; two 163¼ ft. through truss spans, five 238¼ ft. through truss spans, one 241½ ft. through truss swing span and one 60 ft. deck plate girder span.

Pettitcodiac River Bridge.—Tenders were received to Aug. 28 for the construction of the substructure of a single track railway bridge near Salisbury, N. B., at mile 1.4 on the Albert Subdivision, viz., the line from Salisbury to Albert. The bridge will be located on the center line of the present bridge. It will be 433 ft long face to face of ballast walls on abutments, and will have an elevation of 49 ft. to base of rail. The extreme high water at spring freshet is 36 ft. 5 in., at ordinary high tide 26 ft. 2 in., and at ordinary low tide 16 ft. 8 in. The substructure will consist of 3 concrete piers, on solid rock foundation, and an alteration of 2 old abutments. The superstructure will consist of 4 pony truss spans, each 105 ft. long.

St. Lawrence Subdivision Revisions.—Contracts have been let for clearing, fencing, grading and building trestles, culverts and bridge substructures, on the following deviations of main line on the St. Lawrence Subdivision, Canadian Northern Quebec Ry. as follows:—Burril deviation, between Glenada and St. Boniface, mile 87.6 to 91.6; East Yamachiche deviation, between St. Boniface and Charette, mile 94.82 to 96.3; St. Ursule deviation, between Fremont and St. Justin, 110.15 to 114.89; to Angus Sinclair, contractor, Toronto; St. Paulin deviation, between Charette and St. Paulin, mile 101 to 104.6, to V. T. Bartram, contractor, Toronto. Full information as to the objects of these deviations, their character, etc., was given in Canadian Railway and Marine World for July.

Charney to Quebec Bridge.—A press report states that a contract has been let to J. R. O'Neil for building a line from Charney, about 8 miles east of Levis, Que., to the Quebec Bridge, and that work has been started.

Quebec District Structures.—A press report states that a contract has been let to W. M. Fletcher & Co., Toronto, for the erection of 8 concrete bridge and other structures at points on Quebec District.

Forfar to Findley, Ont. — A recent

press report states that a engineering party had arrived at Findley, Ont., to study a route for a branch line from the C.N.R. to the G.T.R. Toronto-Montreal line, and that the construction of this piece of line would place Kingston in direct communication with Ottawa and shorten by 25 miles the distance between the two cities, by combining the C.N.R. and G.T.R. lines. We are advised that a preliminary survey of a rough kind was made, but that the building of such a line has not been seriously considered by the management, nor have outside representations been made as to the desirability of building it.

Western Line Betterments Contracts. A press report states that contracts for the following works have been let:—Locomotive house addition at Fort Frances, Ont., estimated cost of \$20,000, to Claydon Co., Winnipeg; addition to locomotive house at Swan River Man., estimated cost \$20,000, to Claydon Co., Winnipeg; locomotive house and water tank at Eaton, Sask., to E. M. Nesbitt Co., Edmonton, Alta.; alteration to station buildings and locomotive house at Prince Albert, Sask., to H. H. Luke, Prince Albert; erection of locomotive house and machine shop at Saskatoon, Sask., estimated cost \$125,000, Shannon Bros., Saskatoon.

Moose Jaw Subway.—A press report states that a reinforced concrete subway is under construction at Moose Jaw, Sask., at an estimated cost of \$60,000, P. M. Graham being the contractor.

Prince Albert to Paddock Wood.—The route map of the branch under construction from Prince Albert, Sask., northeasterly to the Paddock Wood district, shows a line branching off from the present line on the north bank of the Saskatchewan River and proceeding northerly to Little Red River, thence northerly and easterly, crossing the Garden River, in the direction of Paddock Wood. Hatt & Sibbald have a contract for grading the first 22 miles of the line.

Turtleford Southeasterly Branch.—The Board of Railway Commissioners has approved of location plans for an extension from Turtleford, Sask., to Sec. 4, Tp. 48, Range 12, west of the 3rd Meridian, mile 0 to 68.7. A contract was let in June to the Western Construction Co., North Battleford, Sask., for grading 22 miles of this line.

Alberta Line Plans.—The Board of Railway Commissioners has approved of plan and profile showing location of a line through Tps. 26 and 25, Ranges 1 and 2, west 4th Meridian, Alta., and has authorized the construction of the line across 8 highways. The area within which this line is routed is just west of the Saskatchewan-Alberta boundary and south of the Saskatoon-Calgary line, which crosses that boundary at Alasca.

Kamloops - Vernon - Lumby - Kelowna Branch.—The Board of Railway Commissioners has approved of plan, profile and book of reference showing revised location through D.C. 474, group 1, Kamloops Division, B.C. D. B. Hanna, President, C.N.R., is reported to have met the Kamloops City Council, Aug. 2, while on his trip over the western lines, and to have stated that he expected that all C.N.R. trains would run into the city within 30 days thereafter. He, how-

ever, held out little hope that the branch line to Vernon and other points in the Okanagan Valley would be completed this year, as he feared it would be impossible to procure the rails.

Vancouver Terminals.—Various questions connected with the terminal and other works for the C.N.R. in Vancouver, B.C., was under discussion between the Minister of Railways and D. B. Hanna, President, C.N.R., on the one hand, and the Vancouver City Council on the other, during the recent visit of the Minister and the President. The provision of these terminal facilities and other works is called for under an agreement made between the city council and the Canadian Northern Pacific Ry. Co., to which agreement the B.C. Government is a party, and for the carrying out of which works the government has guaranteed the principal and interest of terminal bonds. In connection with the carrying out of a large work of reclamation at False Creek flats. The transfer of the C.N.P. Ry. properties to the Dominion Government brought in a new factor, and the negotiations which took place resulted in the laying before the city council of a memorandum from Mr. Hanna, setting out the work the Canadian National Ry. proposed to do, and the adoption of a resolution by the city council on July 28 approving of the same. The memorandum, after an introductory statement as to the changed conditions since the original agreement was signed, stated that the Canadian National Ry. did not desire to evade the terms of the original agreement, but would carry them out in their entirety, with the following exceptions:—The building of the proposed hotel; the electrification of the terminals, and the construction of a tunnel. These two latter works would only be proceeded with at a future date when they might be essential in the public interest and when financial conditions permitted. The Canadian National Ry. will proceed to carry to completion the terminal work at False Creek, which includes filling, the removal of the bridge, lowering of Main St., paving the same and so forth, and in addition will assume any and all liability in connection with the Champion and White difficulty, so that the injunction may be removed and the work of completing the sea wall proceeded with at once. The memorandum pointed out that there had already been expended on these works a larger amount than the agreement called for, and that in order to complete them according to the terms of the memorandum additional sums aggregating over \$1,000,000 would be required. Since the agreement as to the construction of the tunnel and the electrification of the terminal lines was made, an agreement had been made with the Great Northern Ry. which secured the C.N.R. entrance into Vancouver, provision being made for the construction of additional lines. In view of this and in view of the government policy as to capital expenditures, it was considered to be in the best interests of all to defer these works.

New Westminster-Vancouver Line.—The Minister of Railways, and D. B. Hanna, President, C.N.R., met representatives of the New Westminster City Council and the New Westminster Board of Trade, July 28, with regard to the agreement between the city and the Canadian Northern Pacific Ry. Co. for the construction of its main line to Vancouver through the city. Mr. Hanna is reported to have said that the company had agreed to carry its industrial track

to the North Arm of the Fraser River. That agreement would be carried out as soon as the money was available, but as to whether the line would then go on further towards Vancouver he could not say. The Minister of Railways is reported to have said that as far as he was concerned as soon as finances permitted the C.N.R. main line would be built through New Westminster, practically upon the terms of the original survey.

In connection with this matter the New Westminster City Council is reported to have given permission Aug. 11 for the building of a commercial track from the Fraser River Bridge along Front St. to near Lytton Square, and for the erection of a temporary freight shed at the end of the line in Lytton Square, subject to the railway agreeing to continue to pay city taxes on the property.

Victoria Terminals.—Work is reported to have been started upon the erection of a locomotive house and machine shops at Point Ellice bridge, on the Songhees Reserve, as part of the C.N.R. terminal facilities in Victoria, B.C., Robertson & Partners being the contractors. The contract price is said to be \$39,500.

The Minister of Railways and D. B. Hanna, President, C.N.R., visited the terminal site, July 26, and inspected the work in progress. The Minister is reported to have advised the Premier of British Columbia that the survey of the land required for terminal purposes south of Point Ellice bridge would be proceeded with, and that upon the transfer of the property from the B.C. Government to the C.N.R. the construction of the remainder of the terminal would be gone on with. (Aug., pg. 436.)

Suggestions to Shippers by Rail.

The Railway Association of Canada has issued the following bulletin:—

A machine broke down from being run at too low a speed! For lack of moisture in the factory air, a cotton fabric failed to take smoothly its rubber surfacing—the air made the nap stand out. In other words, your goods or any man's goods or service require at least some consideration from the user if they are to do justice to themselves. All your pains go to waste if your customer or client neglects to use your product as it is intended to be used. And so with railway service to you. While the constant vigilance of the managements must keep up the performance of actual railway staffs, nothing but voluntary co-operation can maintain the shipping efficiency of that other part of the transportation machine, the consignor and the consignee. Consequently, while attending as closely as possible to their own interior efficiency, Canadian railways must appeal to the users of railway service with regard to the exterior efficiency of the transport system. May we suggest, therefore, that you instruct your secretary to prepare for you a report somewhat along the following lines:

1. As to containers.—What is our shipping room staff using to pack our goods? Is it really a cheap container? Or is its seeming cheapness offset by the loss of time, or temper, and possibly of customers by its frequent failure to protect our shipments? Or by the worry and fuss and loss of time in having to duplicate orders that should have gone through unbroken in the first place?

Is our container pilfer-proof? Is it, for example, a carton sealed with strip

paper? Easily slit and resealed? Or is it protected with wire seals less easily violated?

Are our men using a crate where they could use plain sackings—as in the case of a certain cushion manufacturer, who cut the weight of a shipment in two by using burlaps? Or should we crate our goods on six sides where we now protect only four?

Are we using cardboard where we should use crating, or a solid box?

2. Marking.—How does our shipping room staff address our shipments? With good clean whole stencils? Or with daubs of a worn-out paint brush? Do the invoices show the name and address of our customer clearly and accurately—including the name of the county and province? Or is there a temperamental scribbler making them out? Do the markers copy them from the invoice just as clearly? Or with one eye on the invoice and the other on Bill Brown's imitation of Babe Ruth on the ball field?

Do they use tags that are easily torn off? Or is the marking placed where it can't come off? And will be seen easily?

Has your head shipper a copy of the Canadian Freight Association's rules and regulations?

3. Bills of lading.—Who makes them out. Does he or she write a fair hand? Even so, why are they not made out on the typewriter, most people can use a machine well enough for that purpose?

4. Time of shipment.—Does our shipping room work overtime? If so, is it necessary? Is there any reason why the work should be bunched at the end of the day? Or could some of it be got rid of, for example, in the morning when the freight sheds are not so rushed?

We venture to suggest enquiry along these lines, and improvement wherever possible along the lines indicated. Your co-operation in using railway service in the best possible way will be of great assistance to the carriers, and, therefore, to all Canadian industry.

Postal Railway Tunnel in London.

A 9 ft. tunnel about 6½ miles long for carrying automatic railway trains to transport mail is about to be built in London, Eng. Plans were developed some years ago, and in fact the operating system was worked out by the help of an experimental line reproducing both grades and curves of the proposed railway. The tunnel is to extend from the Paddington district post office to the Whitechapel post office. It is to carry two tracks of 24 in. gauge, and the trains operating on these tracks are to be handled by remote control. On account of the necessity of avoiding other tunnels and subsurface structures, the depth of the tunnel below ground surface will vary from 28 to 87 ft. At stations the tracks are to be separated about 20 ft., to accommodate elevators and mail chutes between them.

Railways Employes Wages.—In appearing before the Board of Railway Commissioners, in Ottawa, Aug. 20, in support of the Railway Association of Canada's application for increased freight and passenger rates, H. G. Kelley, President of the Association, and of the G.T. R. and the G.T. Pacific Ry., said that the association had decided to recommend Canadian railways to adopt the new schedule fixed by the U.S. Labor Board, at Chicago, July 20, which would involve an increased expenditure of some \$65,000,000 a year.

Merging the Grand Trunk Ry. System into Canadian National Railways.

Transfer of Grand Trunk Pacific Ry. Management to Canadian National Railways.

The following order in council, no. 1495, was approved by the Governor General on July 10, 1920, and made public until about the middle of August:—"The committee of the Privy Council have had before them a report, dated July 9, from the Minister of Railways and Canals, submitting as follows: That on virtue of an order in council passed on Mar. 9, 1910, pursuant to Chapter 22 of the Statutes of 1910, he was appointed receiver of the Grand Trunk Pacific Ry. System as in such order defined. That pursuant to the provisions of the Grand Trunk Ry. Acquisition Act, 1919, and of the agreement made thereunder, which was confirmed by statute passed at the last session of Parliament, a committee of management of the G.T.R. System has been appointed for the purpose of ensuring the operation of that system, in so far as it is possible to do so, in harmony with the Canadian National Rys., the two systems being treated, in the public interest, as nearly as possible as one system. That by reason of the appointment of such committee of management and the co-operation therewith of the board of directors of the Canadian Northern Ry. Co., which board controls the management and operation of the Canadian National Rys., large economies have already been effected, and improvements made, through co-operation in respect of both the G.T.R. System and the Canadian National Rys., and other improvements in facilities and service are in contemplation, with the view of effecting still further savings in the joint management and operation.

"That the board of directors of the Canadian Northern Ry. Co. have advised the Minister that still further economies may be effected, without impairing the efficiency of the railway service, by placing the management and operation of the Grand Trunk Pacific Ry. System under the same management as the Canadian National Rys., and they have recommended that steps be taken to that end. That heretofore the management and operation of the Grand Trunk Pacific Ry. System has been conducted by the Minister as receiver, through the officers and staff of the respective companies composed in such system as contemplated by the original order in council. It is provided in clause 10 of the said order as follows:—'All officers except the board of directors of any company included in the Grand Trunk Pacific Ry. System, shall continue to discharge for the government receiver, till further orders or directions by him, duties in connection with the operation and management of the undertakings and work of any company included in the G.T.P. Ry. System, similar to their present duties, so that no interruption in the operation and management thereof may occur.' That the Minister is advised that he has power, under the said clause, by 'further orders or directions' to vary the duties of the said officers and staff and to arrange for the effective co-ordination in the operation and management of the G.T.P. R. System with the Canadian National Rys. as herein outlined. That President Kelley, the executive head of the G.T.R. System, has expressed to the Minister that it would be of material advantage, and cause a large saving in cost of operation, if such co-ordinating action were effected.

and the management, and therefore recommends such arrangement being carried out.

"In view of these facts and the recommendations of the executive heads of the Canadian National Rys. and of the G.T. R., the Minister recommends that he be authorized to place the operation and management of the G. T. Pacific Ry. System under those who now, or may hereafter, compose the board of directors of the Canadian Northern Ry. Company, as defined as aforesaid, with power, as incidental to such management, to appoint and discharge officers and staff, and to do all things necessary to ensure the operation of the said system in harmony with the Canadian National Rys.; it being understood, however, that the issuance and control of receiver's certificates for the purpose of financing be reserved to the Minister as receiver, as heretofore; and that all actions of the said board of management which if done by him as receiver would have required the authorization or sanction of the Exchequer Court of Canada, be done by the said board only upon, or with, such authorization or sanction. The Minister also recommends that such appointment be made for an indefinite term, terminable at any time, either by himself as receiver, or upon the instructions of the Exchequer Court of Canada. The Minister further recommends that the foregoing arrangement be subject to the approval of the Exchequer Court of Canada. The committee concur in the foregoing recommendation and submit the Extensions of Jurisdiction.

Hon. J. D. Reid, Minister of Railways and Canals, as Receiver, Grand Trunk Pacific Ry. Co., issued the following circular Aug. 23:—"In pursuance of order in council 1595 and with a view of effecting every economy by means of co-ordination of organization; effective Aug. 23, the management of the Grand Trunk Pacific Ry. for the Receiver, is placed under the board of directors of the Canadian National Rys. W. P. Hinton, heretofore Vice President and General Manager, G.T.P.R., having resigned as General Manager, is hereby appointed Consulting Officer to the Receiver with headquarters at Winnipeg."

D. B. Hanna, President, Canadian National Rys., issued circulars, Aug. 23, stating that in pursuance of authority issued by the Receiver, under which the management of the Grand Trunk Pacific Ry. has been placed under the board of directors of the Canadian National Rys., the jurisdiction of the following officers of the Canadian National Rys. has been extended over the G.T.P.R. lines, viz., A. J. Mitchell, Vice President in charge of Accounts and Finance; R. C. Vaughan, Assistant to President; M. H. MacLeod, Vice President in charge of Operating, Maintenance and Construction; S. J. Hungerford, Assistant Vice President in charge of Operating, Maintenance and Construction; C. A. Hayes, Vice President in charge of Traffic; Gerard Ruel, General Counsel.

The jurisdiction of the following Canadian National Rys. officials has been extended over the Grand Trunk Pacific Ry. and the Grand Trunk Pacific Coast Steamship Co.—A. E. Warren, General Manager, Western Lines, Winnipeg; H. H. Melanson, Passenger Traffic Manager, Toronto; Geo. Stephen, Freight Traffic Manager, Toronto; R. Croelman, Assistant Passenger Traffic Manager,

Winnipeg; W. G. Manders, Assistant Freight Traffic Manager, Winnipeg; E. Langham, General Purchasing Agent, Toronto.

A. A. Tisdale, heretofore Assistant to Vice President and General Manager, also Purchasing Agent, G.T.P.R., Winnipeg, is reported to have been appointed Assistant to General Manager, C.N. R. and G.T.P.R., at Winnipeg.

H. H. Brewer, heretofore General Superintendent, G.T.P.R., Winnipeg, has been appointed Assistant General Manager, C.N.R. and G.T.P.R., with jurisdiction over Canadian National lines west of Armstrong, Ont., and west of and including Port Arthur, Ont., to Lobstick Jct., Alta., also G.T.P.R. lines from Winnipeg to Edmonton, inclusive, with office at Winnipeg. J. R. Cameron, heretofore Assistant General Manager, C.N. R., Winnipeg, has been appointed Assistant General Manager, C.N.R. and G.T.P.R., with jurisdiction over C.N.R. lines west of Lobstick Jct., Alta., and over G.T.P.R. lines west of Edmonton, Alta., including Vancouver Island lines, with office at Vancouver.

W. E. Duperow, heretofore General Passenger Agent, G.T.P.R. and G.T.P. Coast Steamship Co., Winnipeg, has been appointed General Passenger Agent, C. N.R. and G.T.P.R. from and including Port Arthur, Ont., to Lucerne, B.C. Lucerne station on the C.N.R. is 263.1 miles west of Edmonton, Alta., and is west of the Yellowhead Pass. On the G.T.P.R., the station is 258 miles west of Edmonton. His office is at Winnipeg. S. Osborne Scott, heretofore General Passenger Agent, Western Lines, C.N. Rys., Winnipeg, has been appointed General Passenger Agent, C.N. Rys., and G.T.P. R., with territory Lucerne, B.C., and west, including G.T.P. Coast Steamship Co. Office, Vancouver, B.C.

The following officers have been given jurisdiction over freight traffic on the Canadian National, Duluth, Winnipeg & Pacific, and Grand Trunk Pacific Rys., lines west of Duluth, Minn., Port Arthur and Armstrong, Ont., viz.:—A. E. Rosevear, heretofore General Freight Agent, G.T.P.R., has supervision of grain, grain products and live stock. J. M. Horn, heretofore General Freight Agent, C.N. R., has supervision of traffic not otherwise assigned. J. M. Macrae, heretofore Assistant General Freight Agent, C.N. R., has been appointed Assistant General Freight Agent of the three lines mentioned above. W. Hatley, heretofore Assistant General Freight Agent, C.N.R., has been given supervision of the publication of tariffs and divisions of the three lines mentioned above.

Co-ordination of Services, Grand Trunk Ry. and Canadian National Rys.

In addition to the appointments in the traffic departments of both lines, mentioned in Canadian Railway and Marine World for August, the following have been made since:

E. F. Flinn, heretofore General Freight Agent, G.T.R., Lines West, will also act as General Western Freight Agent, Canadian National Rys.

R. F. Clark, General Agent, Freight Traffic, Canadian National Rys., continues in that capacity.

C. A. Gormally, Foreign Freight Agent, G.T.R., Lines West, will also act in same capacity for Canadian National Rys.

J. D. McDonald, General Passenger Agent, G.T.R., Lines West, will also act

as General Western Passenger Agent, Canadian National Rys.

C. G. Ortenburger, General Agent, Passenger Department, G.T.R., will also act in same capacity for Canadian National Rys.

Detroit, Mich.—W. H. Spicer, heretofore District Freight Agent, G.T.R., Lines West, in charge of Michigan Territory, will also act for Canadian National Rys., vice F. A. Shaw, General Agent, transferred.

H. H. Hamill, General Agent, Freight Department, G.T.R., Lines West, will also act in same capacity for Canadian National Rys.

G. H. Burgess, General Agent, Passenger Department, G.T.R., will also act in same capacity for Canadian National Rys.

Duluth, Minn.—C. A. Skog, Division Freight and District Passenger Agent, Canadian National Rys., will also act as District Passenger Agent, Grand Trunk Pacific Ry.

Grand Rapids, Mich.—A. Z. Mullins, General Agent, G.T.R., Lines West, will also act in same capacity for Canadian National Rys., Freight Department.

London, Ont.—A. S. Munro, Commercial Agent, G.T.R., will also act in same capacity for Canadian National Rys.

Milwaukee, Wis.—H. W. Ploss, Commercial Agent, G.T.R., Lines West, will also act in same capacity for Canadian National Rys., Freight Department.

Minneapolis, Minn.—G. H. Brown, General Agent, G.T.R. Freight Department, Lines West, will also act for Canadian National Rys.

W. J. Gilkerson, General Agent, Passenger Department, G.T.R., will also act in same capacity for Canadian National Rys.

Montreal.—D. O. Wood, heretofore Traffic Manager, Export and Import Department, Canadian National Rys., Toronto, has been appointed General Foreign Freight Agent, Canadian National-Grand Trunk Rys., with office in Board of Trade Building, Montreal. He has general supervision of these railways export and import traffic, via Atlantic and Pacific Coast ports.

R. J. Foreman, heretofore Assistant to Vice President, Traffic, G.T.R., has been appointed Foreign Freight Agent, Canadian National-Grand Trunk Rys.

J. A. Wright, heretofore Assistant Foreign Freight Agent, G.T.R., has been appointed Assistant Foreign Freight Agent, Canadian National-Grand Trunk Rys.

St. Louis, Mo.—W. H. Burke, General Agent, G.T.R., Lines West, will also act in same capacity for Canadian National Rys., Freight Department.

St. Paul, Minn.—A. H. Davis, General Agent, Freight and Passenger Departments, Canadian National Rys., will also act in same capacity for the Grand Trunk Pacific Ry.

Saginaw, Mich.—C. E. Wagner, Commercial Agent, G.T.R., Lines West, will also act in same capacity for Canadian National Rys., Freight Department.

Stratford, Ont.—V. G. Snell, Division Freight Agent, G.T.R., Stratford, Ont., will also act in same capacity for Canadian National Rys.

Toronto.—F. R. Porter, heretofore Assistant General Freight Agent, G.T. Pacific Ry., Winnipeg, has been appointed Foreign Freight Agent, Canadian National-Grand Trunk Rys., Toronto.

Geo. Pepall, heretofore Assistant Foreign Freight Agent, G.T.R., has been appointed Assistant Foreign Freight Agent, Canadian National-Grand Trunk Rys.

F. G. Gould, heretofore City Freight Agent, G.T.R., will also act in the same capacity for Canadian National Rys.

Quebec.—P. Mooney, Assistant General Freight Agent, Canadian National Rys., will also act as General Agent, Freight Department, G.T.R.

Arbitration of G.T.R. Stock Values.

It is expected that the arbitrators, Sir Walter Cassells, Right Hon. Sir Thos. White, and W. H. Taft, will hold an organization meeting in Montreal, in September, but no announcement has been made as to the date.

Aerial Transportation Notes.

G. M. Crail has been appointed Air Station Superintendent at Summerland, B.C., under the Canadian Air Board.

Canadian Vickers Ltd., Montreal, will, it is said, install facilities for assembling seaplanes for the Canadian Air Board.

Two of the six air craft which are to constitute the equipment of the government flying station at Jericho Beach, B. C., are reported to have been delivered.

A London, Eng., cable states that during the first year of civil flying in England there were 38,954 flights, and that there was only one fatal accident.

An Ottawa press report of Aug. 18 stated that the report that aerial trips from Halifax, N.S., to the Pacific coast, to be made in 50 hours, would soon be started, were premature, and that no decision has been reached as to when the experimental trip would be made.

A Paris cablegram states the Germans will attempt to outdo every other nation in aerial transportation, and that airships are to be built 800 ft. long, 80 ft. wide and 100 ft. high; driven by 34 gasoline motors of from 150 to 200 h.p. each. Each airship will, it is said, be fitted with 300 cabins with two beds in each, and other accommodation similar to that on an ocean liner. Each ship will have an air speed of 68 miles an hour, with a radius for a non-stop flight of 8,000 miles, and will land in water, in which their speed will be 35 miles an hour. The flight time from Germany to New York will be approximately 50 hours.

The Civil Service Commission is about to appoint two air certificate examiners for the Air Board, at an initial salary of \$2,400 a year, to be increased by \$180 a year until a maximum of \$3,300 a year has been reached. The duties of the examiners will be, under the direction of the Superintendent of Certificate Branch, Air Board, to examine, approve, and recommend the issue of licenses to air pilots, navigators, and engineers; to examine, approve, and recommend the issue of certificates of airworthiness of flying machines; to examine, approve, and recommend the issue of licenses to aerodromes; to assist in the selection of, and make recommendations in connection with.

The U.S. aerial express no. 1, stated to be the largest seaplane on the American continent, arrived at Toronto, Aug. 11, from New York, on its way to Cleveland, Ohio. It covered the 984 miles between New York and Toronto in 9 hr. 24 min., the trip from Montreal occupying 3 hr. 22 min. The maximum speed attained was 115 miles an hour, with an average on the whole journey of about 100 miles an hour. She was built at the U.S. Navy yard, Philadelphia, and left there Aug. 6 for Atlantic City, and she

left Toronto Aug. 12 for Cleveland. She is equipped with 2 motors of 400 h.p. each, has a wing spread of 110 ft. and is capable of lifting 6,200 lb. The cabin is divided into 7 compartments, the forward one being fireproof for mail; behind is the pilot's cabin, with accommodation for two persons; the third division is the main cabin, with accommodation for 8 persons, and behind this again is the observation section, with glass sides and seating accommodation for 6, and there is also a smoking compartment with accommodation for 7 passengers and a place for baggage. The machine was in charge of T. F. Dunn, President of the U.S. Aerial Express Co., and it is stated that a regular service will be inaugurated, probably early in 1921, calling at Toronto, Buffalo, Cleveland and Detroit.

The Edmonton, Dunvegan & British Columbia and Allied Railways' Position.

The three railway companies in Alberta promoted by J. D. McArthur, of Winnipeg, are the Edmonton, Dunvegan & British Columbia Ry. Co., the Central Canada Ry. Co., and the Alberta & Great Waterways Ry. Co. Of these the first named has built a railway from Edmonton City boundary to Spirit River, 360.8 miles, with a branch from Spirit River to Grand Prairie, 54.8 miles; the Central Canada Ry. Co. has built a line from McLennan to Peace River, 49.8 miles, while the Alberta & Great Waterways Ry. Co. has built a line from Carbondale for about 290 miles, approximately to Fort McMurray, the E. D. & B.C. Ry. being the main stem. After negotiations, which had been in progress for a considerable time, the Alberta Government has taken over the Alberta & Great Waterways Ry. and the other two lines have been, without a change of ownership, given over for operation to the C.P.R. for five years. The members of the Alberta Government have been appointed directors of the Alberta & Great Waterways Ry. Co., with the Premier as President. An arrangement has been made under which J. D. McArthur may buy the line within seven years on repayment of the money expended by the government during its period of control.

The other two lines have been taken over by the C.P.R. under an operating agreement for five years. D. C. Coleman, Vice President, Western Lines, C. P.R., is reported to have said in a recent interview:—"I should like to underline the portion of the Premier's statement which describes the agreement as covering an operation arrangement only. The C.P.R. has not acquired the stock of the company, but has only undertaken to manage the property for a term of years on behalf of the owners and those interested through advances and guarantees. The election of a new board of directors was agreed to in order that the C.P.R. should have full control of the operating and the reconstruction of the road, subject, of course, to proper scrutiny of all expenditure by representatives of the Alberta Government, and by others who have an interest in the property. The agreement also embodies an option to purchase, which may be exercised by the C.P.R. at any time during the life of the agreement." tion with air routes; to conduct examinations in the theory and practice of air pilotage and air navigation; and to perform other related work as required.

Transportation Appointments Throughout Canada.

... of the Department of Operating, Maintenance and Construction; C. J. HAYES, Vice President in charge of Traffic; GERARD RUEL, General Coun-

The jurisdiction of the following Canadian National Rys. officials has been extended over the Grand Trunk Pacific Railway and the Grand Trunk Pacific Steamship Co.:—A. E. WARREN, General Manager, Western Lines, Winnipeg; H. H. MELANSON, Passenger Traffic Manager, Toronto; GEO. STEPHEN, Freight Traffic Manager, Toronto; R. CREELMAN, Assistant Passenger Traffic Manager, Winnipeg; W. G. MANDERS, Assistant Freight Traffic Manager, Winnipeg; E. LANGHAM, General Purchas-

ing Agent, Winnipeg. J. HASTLEY, Assistant General Freight Agent, C.N.R., Winnipeg, will have supervision of the passenger traffic of the Canadian National, Duluth, Winnipeg and Pacific and Grand Trunk Pacific Rys., lines west of Duluth, Minn., Port Arthur and Armstrong, Ont. Office, Winnipeg.

J. M. HORN, heretofore General Freight Agent, C.N.R., Winnipeg, will have supervision of freight traffic, other than grain, grain products and live stock, on the Canadian National, Duluth, Winnipeg and Pacific and Grand Trunk Pacific Rys., lines west of Duluth, Minn., Port Arthur and Armstrong, Ont. Office, Winnipeg.

J. M. MACRAE, heretofore Assistant General Freight Agent, C.N.R., Winnipeg, has been appointed Assistant General Freight Agent, Canadian National, Duluth, Winnipeg and Pacific, and Grand Trunk Pacific Rys., lines west of Duluth, Minn., Port Arthur and Armstrong, Ont. Office, Winnipeg.

A. E. ROSEVEAR, heretofore General Freight Agent, G.T.P.R., Winnipeg, will have supervision of grain, grain products and live stock traffic, on the Canadian National, Duluth, Winnipeg and Pacific and Grand Trunk Pacific Rys., lines west of Duluth, Minn., Port Arthur and Armstrong, Ont. Office, Winnipeg.

S. OSBORNE SCOTT, heretofore General Passenger Agent, Western Lines, Canadian National Rys., Winnipeg, has been appointed General Passenger Agent, with jurisdiction over the passenger traffic of the Canadian National, Duluth, Winnipeg and Pacific and Grand Trunk Pacific Rys. in the territory Lucerne, B.C., and west, including Grand Trunk Pacific Steamship Co. Office, Vancouver, B.C.

A. A. TISDALE, heretofore Assistant to Vice President and General Manager and also Purchasing Agent, G.T. Pacific Ry., is reported to have been appointed Assistant to the General Manager, Western Lines, Canadian National Rys., and G.T. Pacific Ry., Winnipeg.

Grand Trunk Pacific Ry.—See Canadian National Rys.-Grand Trunk Pacific Ry.

Canadian National Rys.-Grand Trunk Ry.—G. H. BROWN, Commercial Agent, G.T.R., Minneapolis, Minn., has also been appointed General Agent, Freight Department, C.N.R., there.

J. H. BURGIS, General Agent, Passenger Department, Western Lines, G.T. R., Detroit, Mich., will also act in the same capacity there for the C.N.R.

W. H. BURKE, Commercial Agent, G.T.R., St. Louis, Mo., has also been appointed General Agent, Freight Department, C.N.R., there.

E. F. FLINN, General Freight Agent, Western Lines, G.T.R., Chicago, Ill., has also been appointed General Western Freight Agent, C.N.R., there.

R. J. FOREMAN, heretofore Assistant to Vice President (Traffic), G.T.R., Montreal, has been appointed Foreign Freight Agent, Canadian National-Grand Trunk Rys. Office, Montreal.

W. J. GILKERSON, General Agent, Passenger Department, Western Lines, G.T.R., Minneapolis, Minn., will also act in the same capacity there for the C.N.R.

C. A. GORMALY, heretofore Division Freight Agent, G.T.R., Chicago, Ill., has been appointed Foreign Freight Agent, Western Lines, G.T.R., and will also act

Canadian Government Merchant Marine. J. G. WOOD, heretofore General Agent, Freight Department, Canadian National Rys., Winnipeg, will have supervision of the passenger traffic of the Canadian National, Duluth, Winnipeg and Pacific and Grand Trunk Pacific Rys., lines west of Duluth, Minn., Port Arthur and Armstrong, Ont. Office, Winnipeg.

Canadian National Rys.—J. F. AYER, heretofore General Agent, St. Louis, Mo., has been appointed General Agent, Freight Department, Kansas City, Mo.

J. H. CORCORAN has been appointed General Travelling Agent, Office, Moncton, N.B.

J. H. DUFF has been appointed Superintendent, Edmundston, N.B., vice W. F. Sawyer, transferred.

J. IRWIN, heretofore Superintendent, Calgary, Alta., has been appointed Superintendent, Edmonton Division, Western District, vice W. E. Robert, resigned. Office, Edmonton, Alta.

J. E. LeBLANC, heretofore District Passenger Agent, Montreal, has been appointed District Passenger Agent, Quebec, Que., and his former position, and that of Assistant General Passenger Agent, Quebec, Que., have been abolished. Office, 7 Dufort St.

W. F. SAWYER, heretofore Assistant Superintendent, Edmundston, N.B., has been appointed Assistant Superintendent, St. Maurice Division, Quebec, Que.

R. M. STUBBS has been appointed City Freight Agent, St. Paul, Minn.

The Cochrane Division, extending from O'Brien to Cochrane, not including O'Brien; Cochrane to Hearst; Hearst to Grant; Grant to Armstrong, including Armstrong, W. B. WAY, Superintendent, Cochrane, Ont., has been detached from the Central District, Western Lines, from Aug. 1, and incorporated into the Quebec District, Eastern Lines.

Canadian National Rys.-Grand Trunk Pacific Ry.—The Minister of Railways and Canals, as Receiver G.T.P.R. Co., gave notice on Aug. 23 that in pursuance of order in council 1595, and with a view of effecting every economy by means of co-ordination of organization, the management of the G.T.P.R., for the Receiver, had been placed under the board of directors of the Canadian National Rys. and that W. P. HINTON, heretofore Vice President and General Manager, G.T.P.R. Co., having resigned as General Manager, had been appointed Consulting Officer to the Receiver, with headquarters at Winnipeg.

D. B. Hanna, President, Canadian National Rys., issued circulars Aug. 23 stating that in pursuance of authority issued by the Receiver, under which the management of the G.T.P. Ry. had been placed under the board of directors of the Canadian National Rys., the jurisdiction of the following officers of the Canadian National Rys. had been extended over the G.T.P.R. lines, viz.: A. J. MITCHELL, Vice President in charge of Accounts and Finance; R. C. VAUGHAN, Assistant to President; M. H. MacLEOD, Vice President in charge of Operating, Maintenance and Construction; S. J. HUNGERFORD, Assistant

D. O. Wood.
General Foreign Freight Agent, Canadian National-Grand Trunk Rys.

ing Agent, Toronto.

H. H. BREWER, heretofore General Superintendent, G.T.P.R., Winnipeg, has been appointed Assistant General Manager, C.N.R. and G.T.P.R., with jurisdiction over C.N.R. lines west of Armstrong, Ont., and west of and including Port Arthur, Ont., to Lobstick Jct., Alta., also over G.T.P.R. lines from Winnipeg to Edmonton, Alta., inclusive. Office, Winnipeg.

J. R. CAMERON, heretofore Assistant General Manager, C.N.R., Winnipeg, has been appointed Assistant General Manager, C.N.R. and G.T.P.R., with jurisdiction over C.N.R. lines west of Lobstick Jct., Alta., and over G.T.P.R. lines west of Edmonton, Alta., including C.N.R. Vancouver Island lines. Office, Vancouver, B.C.

W. E. DUPEROW, heretofore General Passenger Agent, G.T.P.R. and G.T.P. Coast Steamship Co., Winnipeg, has been appointed General Passenger Agent, with jurisdiction over the passenger traffic of the Canadian National, Duluth, Winnipeg & Pacific and Grand Trunk Pacific Rys., lines west of Duluth, Minn., Port Arthur and Armstrong, Ont., and east of Lucerne, B.C. Office, Winnipeg.

in the same capacity for the C.N.R., his former position being abolished. Office, Chicago.

F. G. GOULD, City Freight Agent, G. T.R., Toronto, will also act in the same capacity for the C.N.R.

H. H. HAMILL, General Agent, Freight Department, G.T.R., Detroit, Mich., will also act in the same capacity there for the C.N.R.

J. D. McDONALD, General Passenger Agent, Western Lines, G.T.R., Chicago, Ill., has also been appointed General Western Passenger Agent, C.N.R., there.

P. MOONEY, Assistant General Freight Agent, C.N.R., Quebec, Que., has also been appointed General Agent, G. T.R., there.

A. Z. MULLINS, Division Freight Agent, G.T.R., Grand Rapids, Mich., has also been appointed General Agent, Freight Department, C.N.R., there.

A. S. MUNRO, Commercial Agent, G. T.R., London, Ont., will also act in the same capacity for the C.N.R.

C. G. ORTENBURGER, General Agent, Passenger Department, Western Lines, G.T.R., Chicago, Ill., will also act in the same capacity there for the C.N.R.

G. PEPALL, Assistant Foreign Freight Agent, G.T.R., Toronto, will also act in the same capacity there for the C.N.R.

H. W. PLOSS, Commercial Agent, G. T.R., Milwaukee, Wis., has also been appointed General Agent, Freight Department, C.N.R., there.

F. R. PORTER, heretofore Assistant General Freight Agent, Grand Trunk Pacific Ry., Winnipeg, has been appointed Foreign Freight Agent, Canadian National-Grand Trunk Ry., Toronto.

V. G. SMITH, Division Freight Agent, G.T.R., Stratford, Ont., will also act in the same capacity for the C.N.R. there.

W. H. SPICER, District Freight Agent, G.T.R., Detroit, Mich., will also act in the same capacity there for the C.N.R., vice F. A. Shaw, General Agent, Freight Department, C.N.R., transferred.

C. E. WAGNER, Commercial Agent, G.T.R., Saginaw, Mich., will also act in the same capacity there for the C.N.R.

D. O. WOOD, heretofore Traffic Manager, Export and Import Freight Department, C.N.R., Toronto, has been appointed General Foreign Freight Agent, Canadian National-Grand Trunk Ry., with general supervision of the export and import traffic of these railways through Atlantic and Pacific ports, and his former position has been abolished; A. F. Read, General Foreign Freight Agent, G.T.R., having, at his own request, been relieved of official duties, on account of ill health, and granted leave of absence until Dec. 31, when he will be superannuated. Office, Board of Trade Building, Montreal.

J. A. WRIGHT, Assistant Foreign Freight Agent, G.T.R., Montreal, will also act in the same capacity for the C.N.R.

The Canadian Nationals Ry. Passenger Tariff Bureau has been transferred to new offices in the G.T.R. Passenger Traffic Department, McGill St., Montreal, and for the present R. F. Macleod, Assistant to Passenger Traffic Manager, C.N.R., continues in charge of, and has immediate supervision over, the C.N.R. Passenger Tariff Bureau.

Canadian Pacific Ry.—W. S. HALL, heretofore Trainmaster, Red Deer, Alta., has been appointed Superintendent, Cranbrook Division, British Columbia District, vice C. S. Maharg, transferred to Vancouver. Office, Cranbrook.

R. A. McADAM has been appointed Master Mechanic, Smiths Falls Division,

Quebec District, vice C. A. Wheeler. Office, Smiths Falls, Ont.

C. S. MAHARG, heretofore Superintendent, Cranbrook Division, British Columbia District, Cranbrook, has been appointed Superintendent, Vancouver Division, British Columbia District, vice J. L. Jamieson, whose appointment as Superintendent, Edmonton Division, Alberta District, Edmonton, was announced in our last issue. Office, Vancouver.

Chicago & North Western Ry.—B. H. BENNETT has been appointed General Canadian Agent, with office at Toronto, which position he occupied prior to the taking over of United States railways by its Federal Government. Recently he has been Travelling Agent, with headquarters at DeKalb, Ill.

Cunard Line, Anchor-Donaldson Line, Anchor Line.—F. C. TURNER, heretofore Travelling Passenger Agent, Robert Reford Co., Montreal, has been appointed Travelling Passenger Agent, Montreal.

Edmonton, Dunvegan & British Columbia Ry., Central Canada Ry.—LT. COL. J. G. REID, heretofore in charge of construction of C.P.R. Lanigan North Branch, has been appointed Chief Engineer and Superintendent, in charge of maintenance and operation.

F. W. STERLING, District Freight Agent, C.P.R., Edmonton, Alta., has also been appointed District Freight Agent,

E.D. & B.C.R. & C.C.R. there.

Grand Trunk Ry.—J. CAMERON, heretofore Chief of Tariff Bureau, Chicago, Ill., has been appointed Assistant General Freight Agent, Western Lines. Office, Chicago, Ill.

J. M. SPARLING, heretofore chief clerk to Vice President (Traffic), has been appointed Assistant to Vice President (Traffic), vice R. J. Foreman, promoted. Office, Montreal.

H. C. SWARTZ, Master of Bridges, and Buildings, Southern Division, St. Thomas, Ont., has been appointed Superintendent of Bridges and Buildings, Eastern Lines, as reported in our last issue, vice J. H. Johnston, assigned to other duties. Office, Montreal.

L. A. VERONEAU has been appointed Chief of Tariff Bureau, Western Lines, Chicago, Ill., vice J. Cameron, promoted.

Pacific Great Eastern Ry.—A. B. BUCKWORTH, for some time representing the interests in British Columbia of E. R. C. Clarkson & Sons, auditors, Toronto, and latterly in charge of the liquidation of the Spokane & British Columbia Ry., has been appointed Manager, P.G.E.R., which is owned by the British Columbia Government. Office, Vancouver, B.C.

R. WILSON, heretofore Auditor, has been appointed Assistant General Manager and Comptroller. Office, Vancouver, B.C.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alaska Ry.—A recent epidemic of influenza disorganized the construction forces on the northern division of this U.S. Government work and delayed it considerably.

Esquimalt & Nanaimo Ry.—A press report states that a contract has been let to G. F. Wilson, Nanaimo, B.C., for the erection of a station building there, at an estimated cost of \$25,000. The specifications are said to call for a frame building 131 ft. x 36 ft., finished outside in brick veneer and roughcast, on a concrete basement. The central portion of the building will be two storeys, the upper story to be set apart as rooms for employees.

Owing to some delays in the approval of plans for the substructure of the proposed new bridge at Johnston St., Viceroy, the city council has not yet been able to invite tenders for the work. The town, the city council has not yet been bylaw provides for construction starting on Sept. 1, but it was stated Aug. 6 that a contract could not be let in the time. It was said, however, that the city engineer would put some men at work on certain fills necessary for the bridge and its approaches. The bascule section of the bridge is being provided by the E. & N. Ry. Co. (June, pg. 297.)

Grand Trunk Pacific Ry.—In an interview, on his return to Ottawa on Aug. 8, from a trip over the Canadian National Ry. and the G.T. Pacific Ry., the Minister of Railways is reported to have said that the G.T.P.R. will require a considerable expenditure to be made on it to bring its roadbed up to standard. The work would include the rebuilding of a number of bridges and the filling in of a number of trestles.

While at Prince Rupert, B.C., July 23, the Minister is reported to have expressed surprise at the condition of the terminal facilities there, and to have in-

formed the citizens at a public meeting that he would take up the question of the provision of adequate terminals with Canadian National Ry. officials and have the work proceeded with as soon as possible. (Aug., pg. 248.)

Kettley Valley Ry.—We are officially advised that a contract has been let to W. P. Salvus, Penticton, B.C., for grading a line from South Penticton to the head of Dog Lake, about two miles. The work is without any feature of engineering interest. This is the first section of a line to be built from Penticton southerly to near the International Boundary, for which an agreement was entered into between the company and the British Columbia Government. The second section of the line is to extend from the south end of Dog Lake to a new townsite near Fairview, but we are officially advised that it is not likely this will be put under construction this year. In order to provide for the settlers in the district the company has bought from the C.P.R. Co. the steamship York, to be transferred to Dog Lake and used in hauling freight and towing barges. Provision is made in the agreement with the B.C. Government for the construction at a later date of a line along one side of the lake to connect the two sections of line. (Aug., pg. 428.)

Northern Light Ry. Co.—A press report states that negotiations are in progress for placing the bonds of this company, which proposes to build light railways in the northern mining camps of Ontario, to link them up with the Timiskaming & Northern Ontario Ry. Another report states that surveys have been completed for a line from Elk Lake to Gowanda, and that surveys are being made for a line from Swastika to the Kirkland Lake and the Larder Lake areas. (Aug., pg. 428.)

Spokane International Ry.—A project for a new bridge and approaches, and also of making the bridge of a greater width than that planned in the original plan, is being considered by the Spokane International Ry. Co. The bridge is to be built over the Spokane River, and will connect the city of Spokane with the city of Kelowna, B.C. The bridge is to be built on the site of the old bridge, which was destroyed by fire in 1914. The new bridge is to be built on a new site, and will be a steel truss bridge, 1,000 ft. long, and 40 ft. wide. The bridge is to be built on a new site, and will be a steel truss bridge, 1,000 ft. long, and 40 ft. wide.

Timberlake & Northern Ontario Ry.—The board of directors of the Timberlake & Northern Ontario Ry. Co. has decided to build a new bridge over the Timiskaming River, and to make the bridge of a greater width than that planned in the original plan. The bridge is to be built on the site of the old bridge, which was destroyed by fire in 1914. The new bridge is to be built on a new site, and will be a steel truss bridge, 1,000 ft. long, and 40 ft. wide. The bridge is to be built on a new site, and will be a steel truss bridge, 1,000 ft. long, and 40 ft. wide.

Occupation of Toronto New Union Station Offices.

The Toronto Terminals Ry. Co., which is building the new office station, has had at its disposal the necessary for some time past. U. E. Gillen, General Manager; J. R. Ambrose, Chief Engineer, and other officials being located in the center wing on the fourth floor. The whole of the eastern wing will be devoted to post office purposes, the second, third and fourth floors in the western wing will be devoted to offices, and there will also be some other offices in the center wing, on the third and fourth floors. Final arrangements for the allotment of the office space between the different railways have not been completed. In the meantime it is said that in the western wing the second floor will be divided between the C.P.R. and G.T.R. and possibly the Canadian National Ry., the C.P.R. will have the whole of the third floor, and the fourth floor will be divided between the Canadian National Ry. and the G.T.R.

The following C.P.R. officials will remove their offices Sept. 15, from the old union station building to the new one, viz.:—H. C. Grout, General Superintendent; W. M. Neal, Assistant General Superintendent; W. Tansley, Car Service Agent; F. Ronaldson, Master Mechanic; Lt. Col. Blair Ripley, C.B.E., D.S.O., District Engineer; F. M. Rutter, Superintendent, Bruce Division; H. J. Humphrey, Superintendent, Trenton Division; W. B. Howard, District Passenger Agent; M. H. Brown, Division Freight Agent; S. Wertheim, Superintendent, Sleeping, Dining and Parlor Car Department; H. Eisdale, Paymaster; J. W. Schliehauf, Claims Agent; E. Bury, Commissary Agent.

The following G.T.R. officials will move from the old union station to the new one about Sept. 15:—C. H. Bowker, General Superintendent; W. S. Wilson, Superintendent of Transportation; G. A. Stokes, Superintendent, Toronto Terminals; E. G. Hewson, Division Engineer; L. I. Stone, Assistant Engineer, Toronto Terminals; G. A. Mitchell, Superintendent, Bridges and Buildings; H. Ferguson, Superintendent of Tack, also W. H. Patton, Superintendent of Signals.

The following Canadian National officials will also move about Sept. 15, from their present uptown offices to the new union station, where they will occupy offices in the north section of the fourth floor, viz.:—General Superintendent's organization, Superintendent's organization, Supervisor of Boarding Cars de-

partment, and the telegraph office. The same department of the G.T.R. have moved from the Royal Bank Building to the second floor of the new union station.

Cornwall Inter-switching Arrangements.—The Board of Railway Commissioners is the matter of the proposed interchange between the C.P.R., G.T.R. and N.O.R. at Cornwall, Ont., with a view to the Light & Power Co., which were to take effect Aug. 2, ordered on July 30 that the portions of the steam railway companies schedules which provided for the abrogation of the arrangements be suspended until further order.

Grand Trunk Railway Construction, Betterments, Etc.

G.T.R.-Canadian National Ry. Connections.—The Board of Railway Commissioners has authorized the G.T.R. to make connection with the Canadian National Ry. on Lot 10, Con. 1, Brighton Tp., Ont., and on Lot 21, Con. 2, Richmond Tp., near Napanee, Ont.

East Toronto Bridge Rebuilding.—The Board of Railway Commissioners has authorized the G.T.R. to rebuild, by Sept. 30, 1921, the bridge over its tracks at Main St., Toronto. The bridge is near York station, in the old municipality of East Toronto. The new structure is to be 46 ft. wide, with sidewalks 10 ft. wide on each side of the bridge, the bridge to be decked with cement. The City of

Toronto is to pay the cost of surfacing the bridge and approaches and also of making the bridge of a greater width than that planned in the original plan.

Palmerston, Ont., Terminals.—A press report states that additional land has been secured at Palmerston, Ont., for a car repairing plant. The bridge and building department is reported to be clearing the site and getting things in order for the immediate building of the shop.

London Track Elevation.—The report of the City Engineer on the proposed elevation of the G.T.R. tracks in the city is under consideration by the City of London's crossings committee. The report is said to recommend the placing of subways in the east end of the city, at Adelaide and Rectory Sts., and an overhead walkway for pedestrians at Egerston St. The cost of the subways, it is suggested, be borne 40% by the city and 60% by the railway. The position of affairs in the west end is not dealt with, as it is expected that the Canadian National Ry. will take steps, at an early date, to erect station in conjunction with the Canadian Pacific Ry. and the London & Port Stanley Ry. (Aug., pg. 436.)

Komoka Bridge Rebuilding.—The Board of Railway Commissioners has authorized the G.T.R. to rebuild the overhead bridge carrying the highway over its line at mile 127.98, about 1.75 miles east of Komoka, Ont., on the line between London and Sarnia.

ECONOMY EXTRAORDINARY.

Taxpayer—Does that long train contain tourists or immigrants? Station Master—Neither! Only an Ontario Farmer's Economy Government Minister on an official trip. EDITOR'S NOTE: Hon. Thomas R. McNamee, M.L.A., Minister of Lands and Forests, in the Ontario Government, made a Northern Ontario tour recently, in the government's official car. Whitney, accompanied by members of his family and several relatives, which caused considerable comment.

Application for Increases in Freight and Passenger Rates.

Canadian Railway and Marine World for August contained the application made by the Railway Association of Canada to the Board of Railway Commissioners for an increase in freight rates. The following additional application, including also passenger, sleeping and parlor car, excess baggage and milk rates, was addressed to the board by the association on July 28, over the signatures of Howard G. Kelley, President, and C. P. Riddell, General Secretary:—

"Referring to the application dated July 9, made by this association on behalf of the railway companies members thereof, and of all other railway companies within the jurisdiction of the board, for authority to make a general advance of 30% in the tolls at present charged for the carriage of freight by the said companies. It was set out that the increase in rates sought by that application was based entirely on present costs, and did not take into consideration any increase in wages or costs which might occur thereafter. Accordingly, we desire to take the earliest opportunity to draw the board's attention formally to the award of the United States Labor Board, decision 2, dated at Chicago July 20th, which provides for a very large increase in wages to be paid to all classes of employes on railways in the United States. Demands have already been made upon the various Canadian railway companies for the application to their employes of the same scale of advances, to take effect as from May 1 last. If such demands should be granted it would involve a very large additional annual outlay, which would necessitate a corresponding increase in the revenues of the companies.

"Accordingly, we have thought it advisable to bring these facts to the attention of the board, and to notify it that at the hearing, evidence will be submitted as to the additional expense involved if these demands are to be met, in order that the board may be in a position to grant authority to the railway companies to make such additional increases in freight and passenger rates as it may deem to be necessary to meet the altered conditions. After careful consideration, the representatives of the Canadian railway companies are of the opinion that if the increase in wages granted in Canada is to correspond with the increase recommended in the United States it will cost the Canadian companies an additional \$60,000,000 a year, and they will be unable to meet the situation without rate increases at least equal to those requested by the U.S. roads and now under consideration by the Interstate Commerce Commission. The Canadian companies will, therefore, on the hearing of the present application, request the board to authorize rate increases (in addition to the 30% required to take care of present conditions) at least equal to those requested in the U.S., which are as follows:

"Passenger fares increased 20%, minimum not less than 10c.

"Excess baggage rates 20%.

"Surcharge on sleeping and parlor cars 50% of charge for space occupied.

"Milk 40% (being 30% to equalize the increase asked for in original application and 10% additional).

"Freight and switching revenues to be increased sufficiently to yield the balance of the revenue required to meet

the increased operating expenses due to the wage increase herein referred to, in addition to the percentage increase already proposed in this proceeding—such additional increase in the case of the U. S. roads being estimated at 10%.

"On the hearing the Canadian companies will also urge that the board for the current year authorize such rates as will assure to the companies sufficient revenue to meet all increases on account of wages or materials properly chargeable to the operating expenses of that year. Copies of this letter have been sent to all the parties to whom the original application was sent."

The hearing on the application opened, before the Board of Railway Commissioners, in Ottawa, Aug. 10, the taking of evidence and arguments continuing until Aug. 21, when judgment was reserved. The case for the Railway Association of Canada was presented by F. H. Phippen, K.C., and for the individual railways by E. W. Beatty, K.C., President, and W. N. Tilley, K.C., Consulting Counsel, C.P.R.; D. B. Hanna, President, Canadian National Ry.; H. G. Kelley, President, G.T.R. and G.T. Pacific Ry.; and W. C. Chisholm, General Solicitor, G.T.R. Among the principal witnesses for the railways were W. J. Moule, Assistant Comptroller, C.P.R.; A. J. Hills, Assistant to President, Canadian National Ry.; J. B. McLaren, General Auditor, G.T.R.; G. D. Wadsworth, G. F. and P. A., Quebec Central Ry.; J. H. Coburn, Secretary, Essex Terminal Ry.

Among those who opposed the application were the following:—Nova Scotia Government, represented by R. E. Finn; Maritime Province interests, by E. M. Macdonald; Manitoba Government, by H. J. Symington; Saskatchewan Government and National Dairy Council, by D'Arcy Scott; City of Toronto, by G. R. Geary, K.C.; Canadian Manufacturers Association, by A. C. McMaster; United Farmers of Ontario, by G. Waldron; Canadian Wholesale Grocers Association, by Hugh Blain; Winnipeg and other western boards of trade, by J. B. Coyne; Canadian Retail Coal Association, by J. M. Daly; Eastern Live Stock Association, by C. W. Kearney; Western Live Stock Association, by J. L. Anderson; Canada Lumbermen's Association, by F. Hawkins, British Columbia Shingle and Lumber Manufacturers, by R. H. Alexander; Mountain Lumbermen's Association, by I. R. Poole. A number of individual interests were also represented.

Victoria Bridge, Montreal, Damaged. Considerable damage was done to the G.T.R. Victoria Bridge over the St. Lawrence River at Montreal, Aug. 22. A fire was discovered in the planking of the section devoted to general traffic, and before it could be extinguished about a third of the planking was partially or entirely destroyed. Traffic was not interrupted on the steam and electric railway sections, but vehicular traffic was stopped. Repair work was started the next day, and it was expected to have it completed by Aug. 30.

C.P.R. Cartage.—It was announced by the C.P.R. freight department in Montreal, recently, that its cartage will continue to be done by the Dominion Transport Co.

A. Horace Gow, whose appointment as General Freight Agent, Canadian National-Grand Trunk Rys., Ottawa, Ont., was announced in our last issue, was born there, Apr. 15, 1888, and entered railway service in July 1904, since when he has been, to Nov. 1905, clerk, Passenger Department, Canada Atlantic Ry., now part of the G.T.R., Ottawa, Ont.; Nov. 1905 to June 1911, clerk, Passenger Department, G.T.R., Montreal; June 1911 to Mar. 1917, clerk, Freight Department, G.T.R., Ottawa, Ont.; Mar. 1917 to July 1920, chief clerk, District Freight Agent's office, Canadian National Rys., Ottawa, Ont.

Hon. G. P. Graham, ex-Minister of Railways and Canals, Brockville, Ont., while spending a holiday at Staten Island, N.Y., fell with a seaplane into the ocean, on Aug. 14, owing to engine trouble when several miles from land, and was rescued by a motor boat, which put out from the shore.

George H. Ham, of the C.P.R. head office, underwent a minor operation in the Western Hospital, Montreal, early in August, and he was reported a few days later to be progressing satisfactorily.

C. A. Hayes, Vice President, Canadian National Rys., left Toronto Aug. 24 on a business trip to the Pacific coast, expecting to be away about three weeks.

C. O. Foss, who has been appointed Chief Engineer, New Brunswick Hydro Electric Commission, was born in New Hampshire, Mar. 20, 1852, and from 1878 to 1884, was engaged in general engineering practice at Concord, N.H. From 1884 to 1904 he was Chief Engineer, Nova Scotia Central Ry., Bridgewater, N.S.; 1904 to 1908, Assistant District Engineer, National Transcontinental Ry., St. John, N.B.; 1908 to 1914, District Engineer, National Transcontinental Ry., St. John, N.B.; and in 1917 he was appointed Chief Engineer, St. John & Quebec Ry.

H. H. Hamill, who has been appointed General Agent, Freight Department, Canadian National-Grand Trunk Rys., Detroit, Mich., was born at Somerville, Mass., Apr. 6, 1874, and entered transportation service with the Johnson Steamship Line, Boston, Mass., in 1893, and from Feb. 1, 1900, to June 1, 1906, was city solicitor, National Despatch Line, Boston, Mass.; June 1, 1906, to Apr. 1, 1910, Travelling Agent, National Despatch-Great Eastern Line, Boston, Mass.; Apr. 1, 1910, to Nov. 1, 1911, Soliciting Freight Agent, G.T.R., New York City; Nov. 1, 1911, to June, 1914, Travelling Freight Agent, G.T.R., New York; June 1914 to Nov. 1918, Commercial Agent, G.T.R., Detroit, Mich.; Nov. 1918 to May 1919, General Agent, Freight Department, Lines in Canada, G.T.R., Detroit, Mich.; May 1919 to Mar. 1, 1920, General Agent, Freight Department, Grand Trunk Western Lines Rd. (U.S.R.A.), Detroit, Mich.; Mar. 1 to Aug. 2, 1920, General Agent, Freight Department, Western Lines, G.T.R., Detroit, Mich.

William Pittman Hinton, who has been appointed Consulting Officer to the Receiver of the Grand Trunk Pacific Ry. (the Minister of Railways and Canals), at Winnipeg, was born at Hintonburg, Ont., Aug. 30, 1871, and entered railway service May 3, 1887, since when he has been, to Aug. 1891, clerk, freight passenger and car accounts, and travelling auditor, Canada Atlantic Ry.; Aug. 1891 to Mar. 1898, rate clerk, same road, and accountant, Canada Atlantic Freight Line; Mar. 1898 to June 30, 1901, Assis-

ant General Freight Agent, same road, and Canada Atlantic Transit Co.; June 30, 1910, to Jan. 30, 1913, General Freight Agent, same road; Jan. 30, 1903, to Oct. 1905, General Passenger and Freight Agent, same road; Oct. 1905 to Jan. 1907, General Agent, Passenger Department, G.T.R., Ottawa, Ont.; Jan. 1907 to Apr. 1909, Assistant General Passenger and Ticket Agent, same road, Montreal; Apr. 1909 to Feb. 1914, General Passenger Agent, Grand Trunk Pacific Ry., Winnipeg; Feb. to Oct., 1914, Assistant Passenger Traffic Manager, same road, Winnipeg; Oct. 1914 to Nov. 11, 1915, Assistant Passenger Traffic Manager, G.T.R. and Grand Trunk Pacific Ry., Montreal; Nov. 11, 1915, to Aug. 1, 1917, Traffic Manager, G.T.P.R. and Grand Trunk Pacific Coast Steamship Co., and Western Traffic Manager, Canadian Government Railways, Winnipeg; Aug. 1917 to Aug.

tered G.T.R. service in 1868, since when he has been, to 1870, messenger, Toronto; 1870 to 1875, Assistant Ticket Agent, Toronto; 1875 to 1896, Ticket Agent, Buffalo, N.Y.; 1896 to May 1902, City Passenger and Ticket Agent, Buffalo, N.Y.; May 1902 to Mar. 1, 1911, District Passenger Agent, Toronto; Mar. 1, 1911, to Oct. 1918, Assistant General Passenger Agent, Chicago, Ill.; Oct. 1918 to May 1919, Assistant General Passenger Agent, Chicago, Ill.; Oct. 1918 to May 1919, Assistant General Passenger Agent, Eastern Regional District, U.S. Railroad Administration, Chicago, Ill.; May 1919 to Mar. 1, 1920, General Passenger and Baggage Agent, Grand Trunk Western Lines Rd. (U.S.R.A.), Chicago, Ill.; Mar. 1 to Aug. 2, 1920, General Passenger Agent, Western Lines, G.T.R., Chicago, Ill.

C. S. Maharg, who has been appointed Superintendent, Vancouver Division, British Columbia District, C.P.R., Vancouver, was born in Dufferin County, Ont., Feb. 4, 1867, and entered C.P.R. service in Apr. 1885, since when he has been, to Feb. 1888, freight brakeman; Feb. 1888 to May 1893, freight conductor; May 1893 to Dec. 1901, passenger conductor; Dec. 1901 to June 1902, rule instructor; June to Aug. 1902, passenger conductor; Aug. 1902 to Dec. 1904, Trainmaster, District 1, Ontario Division; Dec. 1904 to June 1906, Trainmaster, Kenora, Ont.; June to Aug. 1906, Assistant Superintendent, Kenora, Ont.; Aug. 1906 to Feb. 28, 1907, Assistant Superintendent, Moose Jaw, Sask.; Feb. 28, 1907, to Dec. 1908, Superintendent, District 3, Central Division, Brandon, Man., and Superintendent, District 5, Central Division, Saskatoon, Sask.; Dec. 1908 to Oct. 1918, successively, Superintendent, District 2, Western Division, Medicine Hat, Alta., Superintendent, District 3, Western Division, Calgary, Alta., and Superintendent, Brandon Division, Manitoba District, Brandon, Man.; Oct. 1918 to Aug. 1920, Superintendent, Cranbrook Division, British Columbia District, Cranbrook, B.C.

A. A. Maver, formerly Master Mechanic, G.T.R., Montreal, died at Jersey City, Aug. 7, aged 71. He was born at Brechin, Scotland, and came to Canada at an early age. He commenced railway work as an apprentice in the G.T.R. Montreal shops and was successively Locomotive Foreman at Richmond, Que., and Toronto, and while at Toronto was appointed Assistant Mechanical Superintendent, Great Western Ry., now part of the G.T.R., after which he was appointed Erecting Foreman, G.T.R., Stratford, Ont., and in 1896, Locomotive Foreman, London, Ont. In Aug. 1901 he was appointed Master Mechanic, G.T.R., Montreal, and continued in that position until his retirement on superannuation a few years ago. The funeral, at Montreal, Aug. 10, was attended by a number of railway officials.

P. Mooney, who has been appointed Assistant General Freight Agent, Canadian National-Grand Trunk Rys., Quebec, Que., was born at St. Catherine's, Que., Apr. 19, 1871, and entered railway service Nov. 1889, since when he has been, to Dec. 1897, stenographer and chief clerk to Superintendent Intercolonial Ry., Riviere-du-Loup, Que.; Mar. 1898 to Feb. 1901, clerk in General Freight and Passenger Department, Quebec & Lake St. John Ry., Quebec; Feb. 1901 to Mar. 1906, chief clerk, General Freight and Passenger office, Great Northern Ry. of Canada, Quebec; Mar. 1906 to Jan. 1907, District Freight and Passenger

J. D. McDonald, General Western Passenger Agent, Canadian National Rys., and General Passenger Agent, Western Lines, Grand Trunk Ry.

23, 1920, Vice President and General Manager, G.T.P.R., Winnipeg. He resigned the position of General Manager, G.T.P.R., just prior to his present appointment.

D. O. Lewis, District Engineer, Vancouver Island Lines, Canadian National Rys., is one of the first of the engineers to be granted certificates in civil engineering, under the recently enacted Engineering Profession Act of British Columbia. Under this act, engineers have until July 1, 1921, to make application for membership in the Association of Professional Engineers, and to have their qualifications passed on by a board of examiners.

Miss **Julia MacInnes**, eldest daughter of **W. R. MacInnes**, Vice President in charge of Traffic, C.P.R., Montreal, is to be married to **Phillip Durnford**, on Sept. 8.

J. D. McDonald, General Passenger Agent, Western Lines, G.T.R., Chicago, Ill., who has also been appointed General Western Passenger Agent, Canadian National Rys., Chicago, Ill., was born at Toronto, Aug. 27, 1855, and en-

Grand Trunk Western Lines Rd. (U.S. R.A.); May 1, 1919 to Mar. 1, 1920, Assistant General Freight Agent, G.T.W. L.R. (U.S.R.A.), Detroit, Mich.; Mar. 1 to Aug. 2, 1920, Assistant General Freight Agent, Western Lines, G.T.R., Detroit, Mich.

H. G. Stanton, who died at Cornwall, Ont., Aug. 8, aged 65, was for some years engaged in railway work in Mexico, and later as engineer on the National Transcontinental Ry., resident engineer in Cape Breton on the St. Peters Canal, and latterly on the Ontario-St. Lawrence canals at Cornwall.

S. G. Wagstaff, whose appointment as Commercial Agent, Canadian National-Grand Trunk Rys., Toledo, Ohio, was announced in our last issue, was born at Hamilton, Ont., Jan. 9, 1866, and entered railway service in Oct., 1881, since when he has been, to Feb. 1887, in local freight office, Great Western Ry., now part of G.T.R., Niagara Falls, Ont.; Feb. 1887 to Feb. 1893, General Freight Agent Through Traffic, G.T.R., Detroit, Mich.; Feb. 1893 to July 1899, chief clerk, Commercial office, G.T.R., Detroit, Mich.; July 1899 to May, 1903, chief clerk, Division Freight Agent's office, G.T.R., Detroit, Mich.; May 1903 to Nov. 1903, Michigan State Agent, Reading Despatch Fast Freight Line, Detroit, Mich.; Dec. 1903 to July 1920, Commercial Agent, G.T.R., Toledo, Ohio.

Dr. T. Walker, District Medical Officer, Canadian National Rys., St. John, N.B., has resigned, after 30 years service with Canadian Government Railways.

A. E. Warren, General Manager, Western Lines, Canadian National Rys., Winnipeg, who has also been appointed General Manager, Grand Trunk Pacific Ry., was born at Taunton, Eng., June 9, 1874, entered railway service in 1889, and served in various capacities in Car Service Department, Superintendent's, General Superintendent's and Manager's offices, and station and yard service, C.P.R., until July, 1901, when he resigned to enter mercantile business. He entered Canadian Northern Ry. service in Aug. 1902, and served as station agent, chief clerk to General Manager, Superintendent, General Superintendent and Assistant to General Manager, Western Lines. From Jan. 1 to Aug. 1, 1918, he was loaned to the Dominion Government and acted as Chief Operating Officer, Department of Railways and Canals, Ottawa. He was appointed General Manager, Western Lines, Canadian National Rys., in Nov. 1918.

Lady Whyte, of Winnipeg, widow of Sir William Whyte, formerly Vice President, C.P.R., is visiting her daughter, Mrs. C. F. Meech, in Vancouver, B.C.

G. Wilson, Superintendent, Locomotive Shops, G.T.R., Montreal, was presented with a chime clock by the staff, Aug. 5, on his marriage. The presentation was made by Sir Alexander Bertram, on behalf of the staff.

David Oliver Wood, who has been appointed General Foreign Freight Agent, Canadian National-Grand Trunk Rys., Montreal, was born at Kleinburg, Ont., Mar. 16, 1864, and entered transportation service in May 1883, since when he has been, to 1902, billing clerk, District Freight Agent's office, and Assistant Foreign Freight Agent, G.T.R., Toronto; 1902 to 1905, Western Freight Agent, Donaldson & Thomson Steamship Lines, Toronto; 1905 to 1917, General Freight Agent, Allan Line Steamships, Toronto; 1917 to Feb. 1919, Assistant Export and

Import Freight Agent, C.P.R., Toronto; April 1919 to Aug. 1, 1920, Traffic Manager, Export and Import Freight Department, Canadian National Rys., Toronto. From Sept. 1917 to Jan. 1, 1919, he was loaned to the British Ministry of Shipping (Canada), and acted as Assistant to the Director General, at Montreal.

Frederick George Wood, who has been appointed General Agent, Freight Department, Canadian National-Grand Trunk Rys., Pittsburg, Pa., was born at Toronto, Sept. 15, 1890, and entered railway service in 1906, since when he has been, to 1908, clerk, District Freight Agent's office, G.T.R., Toronto; 1908 to 1909, clerk, General Freight and Passenger Agent's office, Canadian Northern Ry., Toronto; 1909 to Aug. 1910, secretary to General Freight and Passenger Agent, C.N.R., Toronto; Aug. 1910 to Feb. 1911, chief clerk, District Freight Agent, G.T. Pacific Ry., Edmonton, Alta.; Feb. to Apr. 1911, secretary to General Traffic Manager, Canadian Northern Ry., Toronto; Apr. 1911 to June 1912, Contracting Freight Agent, C.N.R., Pittsburg, Pa.; June 1912 to Feb. 1914, Travelling Freight Agent, C.N.R., Pittsburg, Pa.; Feb. 1914 to Mar. 1916, Commercial Agent, Canadian Northern Ry., St. Louis, Mo.; Mar. 1916 to July 1920, General Agent, C.N.R., Pittsburg, Pa.

John Anderson Wright, who has been appointed Assistant Foreign Freight Agent, Canadian National-Grand Trunk Rys., Montreal, was born at Peterborough, Ont., Oct. 27, 1881, and entered G.T.R. service May 1, 1899, since when he has been, to Dec. 31, 1899, junior clerk, General Freight Office; Jan. 1, 1900, to Jan. 1, 1903, clerk, same office; Jan. 1, 1903 to Sept. 22, 1904, stenographer, Foreign Freight Agent's office;

Sept. 23, 1904 to July 31, 1907, stenographer, General Freight Agent's office; Aug. 1, 1907 to May 31, 1915, clerk, Foreign Freight Office; June 1, 1915, to Mar. 31, 1917, chief clerk, same office; Mar. 31, 1917, to Apr. 25, 1920, Grain Agent, Foreign Freight office; Apr. 25 to Aug. 1, 1920, Assistant Foreign Freight Agent, G.T.R., all at Montreal.

C.P.R.'s McGill University Scholarship.—The scholarship at McGill University, Montreal, offered by the C.P.R. for competition among its employees, has been won by S. D. Rudenks, a messenger in the company's commercial telegraph department, Montreal. The scholarship covers the regular four years work at the University, the winner having the choice of several courses.

Gulf Paper Co.—A press report states that the Northcliffe newspaper interests of London, Eng., have acquired a two-thirds share in the Gulf Paper Co., at Clarke City, Que., owned by members of the Clarke family. The Clarke interests developed extensive properties on the north shore of the St. Lawrence River below Quebec, building Clarke City, with wharves, etc., and a railway to its power development plant.

Bluebird Transit Co. has been incorporated under the Ontario Companies Act with authorized capital of \$40,000 and office at Toronto, to buy, sell and operate for hire, etc., conveyances and vehicles capable of being moved by any form of power for the transportation of animate or inanimate objects by land, water or air, and for other purposes in connection with the same. The provisional directors are F. J. Hughes, D. P. J. Kelly and L. J. Phelan, solicitors, Toronto.

Grain in Store at Elevators.

Grain in store at public terminal elevators, interior terminal elevators, country elevators in Western Division, and public elevators in east, also at U.S. Atlantic seaboard ports. Prepared by the Dominion Bureau of Statistics, Internal Trade Division.

Railway Rolling Stock Orders and Deliveries.

Algonquin Southern Ry. has received 10 heavy and 12 observation cars from Montreal Locomotive Works.

Canadian National Ry. have ordered 10 heavy and 12 observation cars from Canadian Car & Foundry Co. for immediate delivery.

The Thompson & Northern Ontario Ry. ordered an amount that it would be in the market for four Pacific type locomotives.

The C.P.R. between July 14 and Aug. 14, ordered 11 heavy and 12 observation cars from the Angus shops, Montreal.

out of an order for 100, placed this year with the Angus shops, Montreal. The C.P.R. has ordered 10 heavy and 12 observation cars from the Angus shops, Montreal. The C.P.R. has ordered 10 heavy and 12 observation cars from the Angus shops, Montreal.

The C.P.R. has ordered 10 heavy and 12 observation cars from the Angus shops, Montreal. The C.P.R. has ordered 10 heavy and 12 observation cars from the Angus shops, Montreal.

completing orders for these types placed with Montreal Locomotive Works in February. There are also on order with the same company, 12 light locomotives of the same type. Following are the chief details of the medium and heavy locomotives, those for the light locomotive being the same as the heavy, except that they are equipped with Young valve gear:—

	Medium	Heavy
Weight on engine truck	100,000 lb.	100,000 lb.
Weight on tender truck	100,000 lb.	100,000 lb.
Weight on trailer	50,000 lb.	49,000 lb.
Weight on tender	100,000 lb.	100,000 lb.

Santa Fe (2-10-2) Locomotive, Canadian Pacific Railway.

The C.P.R., between July 14 and Aug. 14, received 2 vans and 1 Pacific type locomotive from its Angus shops, Montreal, and 6 vans from its Winnipeg shops.

Canadian Car & Foundry Co. is reported to have orders on its books totalling \$30,000,000, but is said to be hampered somewhat by shortage of material, consequent upon transportation difficulties.

Canadian Car & Foundry Co., between July 12 and Aug. 12, made the following deliveries: 67 Hart-Otis ballast cars, 28

ed in February. These locomotives are fitted with double draw bars between engine and tender, and Vaughan trailing truck. They have cast steel frame and C.P.R. standard vestibule cab, and are equipped to burn coal or oil fuel. Following are the chief details:—

Weight on engine truck	24,000 lb.
Weight on trailing truck	24,000 lb.
Weight on drivers	275,600 lb.
Weight of engine, total	354,600 lb.
Weight of tender, loaded	180,000 lb.
Coal capacity	12 tons
Water capacity	5,000 imp. gal.
Trailing wheel, dia.	36 in.

Wheel base engine and tender	65 ft. 5 1/2 in.	66 ft. 6 1/2 in.
Cylinders, diam. and stroke	20 1/2 x 28	24 x 28

The Pacific Great Eastern Ry. has received one Mikado (2-8-2) type locomotive, out of an order for 3 placed in February with Canadian Locomotive Co. Following are the chief details:—

Fuel used	Oil
Weight on drivers	162,000 lb.
Weight of engine, total	212,000 lb.
Wheel base of engine, total	13 ft. 6 in.
Wheel base of engine, total	30 ft. 9 in.
Wheel base of engine and tender	61 ft. 3 in.
Heating surface, fire box and arch tubes	174 sq. ft.
Heating surface, tubes	2,244 sq. ft.
Heating surface, total	2,423 sq. ft.
Driving wheels, dia.	61 in.
Driving wheel, centers	Cast steel
Driving journals, dia. and length	2 1/2 x 12
Cylinders, dia. and stroke	22 x 28 in.
Boiler, type	Extended wagon top, radial stayed
Boiler pressure	190 lb.
Tubes, number and dia.	43—5/8; 189—2 in.
Tubes, length	17 ft.
Injectors	Nathan No. 9
Safety valves	8 in. Lunkensheimer
Air brakes	Westinghouse American
Packing	King, metallic
Superheater	Locomotive Superheater Co., type A
Frame cradle	Commonwealth
Trailing truck	Delta
Valve motion	Walschaert
Headlight	Electric
Weight of tender loaded	153,500 lb.
Tank capacity, oil	700 imp. galls.
Tank capacity, water	6,000 imp. galls.
Tank, type	Water bottom
Truck, type	Equalized
Wheel dia.	38 in.
Wheel type	Steel tired
Journal dia. and length	5 1/2 x 10 in.
Brakebeam	Safety simplex

Furnishing of Equipment for Loading on Lines Performing Switching Service.

The Railway Association of Canada has issued the following circular:—As the present code of Car Service Rules, A.R.A., does not specifically deal with the furnishing of equipment for loading on lines performing switching service, it is recommended that the following rules govern the practice on Canadian lines in this respect:

1. (a) When cars are to be loaded to destinations within the same switching limits in which the shipment originates, the obligation of supplying equipment ordered rests with the road upon which the car is to be loaded.

(b) When cars are to be loaded on a switching line to destinations beyond the switching limits, primary obligation for equipment ordered rests with the carrier road which is to receive the loaded car for road haul, subject to paragraph 2.

2. A road haul line or terminal switching line loading cars in switching service destined to points beyond the switching limits on a carrier road shall furnish the equipment from such supply as may be available on its rails, and, when equipment required is not available, will call upon the carrier road to furnish necessary cars under paragraph 1 (b).

3. The use of equipment as above is subject to Car Service Rules.

4. Shippers will be required to place order for equipment, desired with proper representatives of the road, on which cars are to be loaded.

C.P.R. Dining Car Department's War Memorial.

The C.P.R. Dining Car Department's Mutual Benefit Association has erected a bronze roll of honor table in the office of the Superintendent of the department at Toronto, room 110 Union Station, in honor of eight of the department's employees who were killed in the war. The tablet was unveiled by W. A. Cooper, Manager, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Montreal, July 31. It bears the names of the following employees:—

L. Collings, chef, 75th Battalion, killed at Vimy Ridge.

G. Mills, cook, 58th Battalion, killed at Vimy Ridge.

W. E. Parsons, cook, 15th Battalion.

C. Coleman, steward, 18th Battalion, killed a few days before the signing of the armistice.

E. Vaughan, waiter, 170th Battalion, died of wounds in England.

P. Geddes, waiter, 15th Battalion, who was last seen when giving his lifebelt to

a nursing sister on board a hospital ship which went down in the English Channel.

H. Wyatt, waiter, 3rd Battalion, killed at St. Julien (first battle).

Jas. Claridge, waiter, 3rd Machine Gun Section.

In unveiling the tablet Mr. Cooper said that out of the 10,000 odd C.P.R. men who enlisted during the war, there were about 1,100 from the dining car department.

Car Shortage.—The U.S. Commission for Car Service reports that the car shortage on U.S. and Canadian railways increased slightly during the week of Aug. 1, when the supply was 132,370 cars less than the demand, compared with a shortage of 125,000 cars during the previous week.

The Swedish Parliament is reported to have approved the electrification of the state railways between Stockholm and Göteborg, and to have appropriated 23,000,000 krona (normally \$1,164,000). It is expected that the work will be completed by 1925.

Prepayment of Freight Charges From the U.S. to Canada Suspended.

The Interstate Commerce Commission issued the following order at Washington, Aug. 17:—It appearing that there have been filed with the Interstate Commerce Commission by F. A. Leland and W. J. Kelly, agents, tariffs containing schedules stating new individual and joint rates and charges and new individual and joint regulations and practices affecting such rates and charges, to become effective, except as otherwise noted herein, on Aug. 18, designated as follows: F. A. Leland, Agent—Supplement 13 to I.C.C. 1316; supplement 14 to I.C.C. 1316, effective Sept. 16; W. J. Kelly, agent—Supplement 13 to I.C.C. 917; Supplement 14 to I.C.C. 917, effective Sept. 16.

It is ordered that the Commission, upon complaint, without formal pleading, enter upon a hearing concerning the lawfulness of the rates, charges, regulations and practices stated in the said schedules contained in said tariffs, viz.: F. A. Leland, agent—Supplement 13 to I.C.C. 1316 on page 7 thereof, item 290; supplement 14 to I.C.C. 1316 on page 8 thereof, item 290; W. J. Kelly, agent—Supplement 13 to I.C.C. 917 on page 7 thereof, item 290; supplement 14 to I.C.C. 917 on page 8 thereof, item 290.

It further appearing, that said schedules provide certain rules and regulations requiring the prepayment of freight charges on traffic from points in the United States to points in Canada, and the rights and interests of the public appearing to be injuriously affected thereby, and it being the opinion of the Commission that the effective date of the said schedules contained in said tariffs should be postponed pending said hearing and decision thereon; it is further ordered, that the operation of the said schedules contained in said tariffs be suspended, and that the use of the rates, charges, regulations and practices therein stated be deferred upon interstate traffic until Dec. 16, unless otherwise ordered by the Commission, and no change shall be made in such rates, charges, regulations and practices during the said period of suspension unless authorized by special permission of the Commission. It is further ordered, that the rates and charges thereby sought to be changed shall not be increased, and the regulations and practices thereby sought to be altered, shall not be changed by any subsequent tariff or schedule, until this investigation and suspension proceeding has been disposed of, or until the period of suspension and any extension thereof has expired, unless authorized by special permission of the Commission. And it is further ordered, that a copy of this order be filed with said schedules in the office of the Interstate Commerce Commission, and that copies hereof be forthwith served upon the carriers parties to said schedules, and upon agents F. A. Leland and W. J. Kelly, and that said carriers parties to said schedules be made respondents to this proceeding, and that they be duly notified of the time and place of the hearing above ordered.

The Wrong Train.—"Why didn't you put my luggage in as I asked you?" angrily demanded a passenger of a porter as his train was moving off. "I did," shouted back the porter; "yer luggage has more sense than yerself. Ye're in t' wrong train."

Traffic Orders by Board of Railway Commissioners.

Exportation of Coal Partly Prohibited

General order 391, July 29.—In the exercise of the powers conferred upon the Board by section 325 of the Railway Act, 1919, and of all other powers possessed by the Board in that behalf, it is ordered that the exportation of coal from the Atlantic, St. Lawrence, River and Gulf ports of Canada, except to the United States or to certain foreign countries (which ports and countries are hereinafter mentioned), and in accordance with regulations to be prescribed by the Board, be prohibited on and after Aug. 1, 1920.

Joint Through Rates from the U.S. to Canada.

General order 392, Aug. 12.—Re intercontinental railway rates, fares and charges, as affected by Interstate Commerce Commission's order, July 29th, 1920, on page 74. Whereas the Interstate Commerce Commission, by its order dated at Washington, D.C., July 29, has granted carriers operating in the United States certain increases in their rates, fares and charges, as set out in the report of the said Commission, made part of its order, and the said increases being thereby made applicable also to the proportions of joint through rates to or from Canada, accruing within the United States, all of which may be made effective upon not less than five days notice; and whereas it is deemed by the Board to be expedient in the public interest that the continuity of joint through rates from points in the U.S. to points in Canada, and vice versa, should be preserved. Therefore, in pursuance of the powers conferred upon the Board by sec. 325 of the Railway Act, 1919, and of all other powers possessed by the Board in that behalf, it is ordered

That the proportions of through rates, fares and charges between the U.S. and Canada, fares in both directions, in effect at the date of this order, accruing within Canada, may, by general or blanket supplement to existing tariffs, be increased to the extent that the through rates, fares and charges shall conform to the increases authorized by the Interstate Commerce Commission's said order; except on coal and coke, increases on which are reserved pending the judgment of the Board in the application of Canadian carriers for increased rates within Canada.

2. That the through rates and fares from points in Canada to points in the U.S., so increased, may be published and filed to become effective on or after Aug. 26, upon not less than five days notice.

Special Freight Tariffs to Atlantic Ports For Export.

General order 394, Aug. 19.—Re special tariffs on freight traffic to Montreal, Quebec, St. John, West St. John, and Halifax, for export: Whereas the rates and charges on freight traffic from United States shipping points to U.S. Atlantic ports will be increased on Aug. 26, by authority of an order of the Interstate Commerce Commission, dated July 29; and the Board, by its General order 392, dated Aug. 13, 1920, has authorized increases in the freight rates and charges from Canada to the U.S. in conformity with the said Interstate Commerce Com-

mission's order, and whereas it is expedient in the public interest that the relationship between the rates and charges from Canadian shipping points on freight traffic to the ports of Montreal, Quebec, St. John, West St. John, and Halifax, for export, and those to U. S. Atlantic ports be continued: Therefore, in pursuance of the powers conferred upon the Board by sec. 325 of the Railway Act, 1919, and of all other powers possessed by the Board in that behalf, it is ordered that the said rates and charges on export freight traffic from Canadian shipping points to Montreal, Quebec, St. John, West St. John, and Halifax may be increased in conformity with the said relationship, to become effective on or after Aug. 26, on not less than five days notice.

Interstate Freight Traffic Passing Through Canada.

General order 395, Aug. 19.—Re matter of reconsigning rules and penalty charges for detention of equipment in interstate traffic passing through Canada: Whereas the Interstate Commerce Commission has, by its Special Permission 50,321, dated at Washington, D.C., July 31, authorized the publication of revised reconsigning rules, applicable on all freight in open top cars, and coal and coke in all cars, and emergency penalty charges for detention to all open top cars, and cars loaded with lumber, coal or coke, to be made effective upon not less than five days notice; and the Canadian Freight Association, in behalf of Canadian carriers engaged in interstate traffic passing through Canada, has applied to the Board for permission to publish and file tariffs in accordance therewith, it is ordered that Canadian carriers of the said interstate traffic be permitted to publish and file tariffs in accordance with the said Interstate Commerce Commission's Special Permission, to apply, at points in Canada, only on traffic en route from any point in the U.S. through Canada to any destination also in the U.S.

Minimum Carload Weights on Grain, Etc., from the U.S. to Canada.

General order 396, Aug. 27.—Re minimum carload weights of grain and grain products moving from the United States into Canada, and rules and regulations applicable thereto: Whereas the Interstate Commerce Commission has, by its special permission 50,450, dated at Washington, D.C., Aug. 21, as amended, authorized the publication and filing, on one days notice, of special supplements to the tariffs of U.S. carriers establishing increased minimum weights on grain and grain products, in carloads, and rules and regulations applicable thereto, renewing and extending from Sept. 1 to Dec. 31, the said tariffs which would otherwise expire Aug. 31, in accordance with the Interstate Commerce Commission's special permission 49,801, Mar. 17, 1920, and the Board's special authority 123, Mar. 29, it is ordered that the said special permission 50,450, as amended, be approved with respect to the said traffic moving from points in the U.S. to destinations in Canada.

Interswitching at Cornwall.

29,930, July 30.—Re proposed cancellation by the Canadian Pacific and Grand Trunk Rys. and New York Central Rd. of the existing interswitching arrangements with the Cornwall St. Ry., Light

& Power Co. at Cornwall, Ont., in accordance with the powers conferred upon the Board by sec. 325 of the Railway Act, 1919, and of all other powers possessed by it in that behalf, the Board orders that those portions of the undermentioned schedules which would, on Aug. 2, 1920, abrogate the existing interswitching arrangements with the Cornwall St. Ry., Light & Power Co. be suspended until further order of the Board, viz., C.P.R. Supplement 6 to C.R.C. no. E-3668, G.T.R. Supplement 5 to C.R.C. no. E-4075, New York Central Rd. C.R.C., N.Y.C. 2139.

Demurrage on U.S. Government Cars at Drummondville.

J. Hardwell, Chief Traffic Officer, Board of Railway Commissioners, made the following report to the Board on July 9 in the case of the United States Ordnance District Salvage Board vs. Canadian Car Demurrage Bureau:—This is an application of the United States Ordnance District Salvage Board, New York, for relief from demurrage amounting to \$7,535, which accrued at Drummondville, Que., during May and June, 1918, on 74 tank cars of U.S. Government ownership, sent in over the C.P.R. for the purpose of removing a large quantity of acid stored on U.S. Government account in the Aetna Explosives Co.'s plant, the removal having been necessitated by a charge in the ownership of the plant. An error of \$10 is disclosed in the case of one car, 357, which reduces the amount to \$7,525, which total includes a deduction already made of \$410 to "bunching" in transit to Drummondville.

Adverting to the contention of the C. P.R. that had the cars not been consigned and waybilled to Drummondville they would not have been accepted from the U.S. carrier; the reason for the requirement in the Car Service Rules of the American Railroad Association (adopted by the Canadian railways) that empty tank cars be accompanied by waybills is that these cars are subject to reconsignment from point to point, instead of to the usual rule of returning direct to the home road or owner. For example, a private refrigerator car loaded with meat at Chicago for Montreal is returned empty to Chicago—the owner desires no other disposition, in fact he demands prompt return; but a private tank car loaded at Chicago may, when emptied at Montreal, be reconsigned empty to New York or any other U.S. point; hence the need of the waybill which is not required for the refrigerator car. But the tank car waybill is merely an operating detail—it carries no charges, while the ordinary waybill is a bill of charges due from the consignee, unless shown prepaid, and is not essential to the routing of the car for which other means could be available. The company's argument would, however, take the tank out of the ordinary empty car category and make it a consignment; in other words, the empty would be treated as if loaded and subject to demurrage at destination. If the cars had been refused at Adirondack Jct., the no-waybill technicality could have been the only reason, for the cars would be carried to Drummondville and the C.P.R. would be alive to the fact of the large volume of traffic waiting for them at that place, and it is not pretended that the company was in a position to supply tanks of its own.

Over and over again the railways, including the C.P.R., have said that in the interest of the public and their own it is the cars they want and not demurrage, and hence the plea for higher demurrage tolls, and that the ideal situation would exist in prompt release of cars and no demurrage. Here, however, was a case where the cars were not wanted elsewhere by the railway or by any other shipper, and yet the full scale of penalty tolls is insisted upon. In my opinion the old blanket toll of \$1 a day should be sufficient compensation for the use of the tracks at Drummondville, and I would include the 33 cars which the Car Demurrage Bureau reports were delayed the entire period on the Aetna Co.'s own tracks, having regard to applicants' admission that the cars were sent to Drummondville in numbers exceeding the shippers' facilities for loading. I would, however, authorize the exaction of the full schedule on the 10 cars, which, according to the Bureau, were not required, and were sent back empty, and on which, therefore, the C.P.R. received no revenue; this in line with the Board's ruling in the Proctor & Gamble case at Vancouver. This recommendation would reduce the bill from \$7,525 to \$3,359, assuming the figures given me by Mr. Col-lin's office to be correct.

The Board adopted the report of the Chief Traffic Officer as its judgment.

Demurrage on Private Sidings.

On the application of the Canadian Manufacturers' Association on behalf of F. R. Stewart & Co., Vancouver, B.C., for a ruling that a consignee who has more than one private siding, or who may require alternative public team track delivery, is entitled under the Canadian Car Demurrage Rules to notification of arrival and to the 24 hours free time allowance of rule 3 to give orders for special placement, the Board gave the following ruling July 27:—

Rule (a) makes provision for 24 hours free of demurrage for various purposes, including the giving of orders for special placement by consignees not served by private sidings or industrial interchange tracks; hence a consignee served by a private siding is excepted from the 24-hour allowance, but is entitled to it in connection with the second movement if a car which would be customarily placed at a private siding is desired elsewhere, either at another private siding or at a public team track.

Rule on Automobile Tire Chains.

In the case of the American Audit Co., Spokane, Wash., vs. Canadian Freight Association, which was heard at Ottawa, May 18, J. Hardwell, Chief Traffic Officer, Board of Railway Commissioners, made the following report Aug. 3:—On June 29, 1918, a shipment weighing about 14,000 lb. was made from Victoria Park, Ont., to Vancouver, B.C., on which the 2nd class lake and rail rate of \$3.10 per 100 lb. was charged, under the following rating of Supplement 5, Nov. 1, 1915, to Canadian Freight Classification 16: "Chains: automobile tire, in boxes or barrels, l.c.l., 2nd class." Applicants describe the shipment as 28 barrels of auto chain. According to information furnished by the shippers, the Dominion Chain Co., to the Chairman of the Canadian Freight Association, it consisted of complete auto tire chains and a few extra parts for repairs.

The original application claimed the benefit of the following item 890 A of Supplement 3, effective Feb. 12, 1917, to Canadian Freight Association West-

bound Commodity Tariff C.R.C. No. E. 3174: "Chains, n.o.s., including link belting, \$1.62 per 100 lb." I interpret this description (the singular number will be noted) to refer to chain in the coil or mass; in other words, to material for re-fabrication into specific articles of utility. Apparently recognizing the force of the Association's answer that the item "does not apply on made-up chains of any description," claimants by subsequent letter, do not see how the application of another item can be disputed, viz., no. 760 of the tariff itself, reading under the general description of hardware: "Chains, halter, jack and safety, in barrels or boxes, l.c.l., \$1.86 per 100 lb." They say "automobile chains are safety chains, inasmuch as they are used for affording additional safety to automobile travelling when roads are wet and slippery." This, of course, is true; but it will probably be conceded that the attribute of safety is not peculiar to this particular article of chain.

It is a well known tariff principle that commodity descriptions are to be interpreted specifically. There can be no question as to the specific character of the other two chains named in the tariff item quoted; and as to the "safety," the Association contends that this is the "style of chain used for fastening the rubber plug to a basin or bath tub, laundry tub, etc.," further, that "automobile chains have never been known to the trade as either jack chain or safety chain. They are known as automobile tire chains and are so described in all catalogues and literature." Enquiry I have made supports this contention. Tire chains are in tire-circumference lengths, with connecting cross pieces and hook attachments—made-up chains in every sense. They are put up in cotton bags with the words "Tire Chains" printed thereon, and my informant says are so known to the trade and car owners, the term "safety chain" not being used, except, possibly, loosely by the unacquainted. Two of the bags seen were from the same manufacturers as the shipment herein referred to, viz., the Dominion Chain Co., another, similarly marked, was from a factory at St. Catharines.

Not being provided with a commodity rate, the only alternative was the tariff rate under the classification as charged. It may be open to argument whether tire chains should not be given the same rate as the other specified makes, but the answer required of the Board relates to interpretation with a view to reparation, and not to an addition to the commodity tariff list.

This report has been adopted by the Board as its judgment.

Railway Finance, Meetings, Etc.

Canadian National Rys.—There have been deposited in the Department of State at Ottawa the following agreements relating to rolling stock:—Between the Canadian Northern Rolling Stock Ltd., the Canadian Northern Ry. Co., and the Girard Trust Co., with reference to renumbering of equipment included in Canadian Northern Equipment Trust series 6, 1919, supplementary to an agreement of May 1, 1919; between the Canadian Northern Ry. Co. and the Pennsylvania Co. for Insurance on Lives and Granting Annuities, with reference to renumbering of equipment included in Canadian Northern Equipment trust series A, 1918, supplementary to an agreement dated July 1, 1918; between

the last named three parties; similarly with respect to Canadian Northern Equipment Trust, series B, 1919, supplementary to an agreement dated Jan. 2, 1919; three agreements between the Imperial Rolling Stock Co., the Canadian Northern Ry. Co. and the Girard Trust Co., with reference to the renumbering of equipment included in Canadian Northern Equipment Trust, series F.I. 1913, series G.I., 1913, and series H.I., 1913, supplementary to agreements dated respectively, Mar. 1, Mar. 1, and Oct. 1, 1913; between the Imperial Rolling Stock Co., the Canadian Northern Ry. Co., and the Philadelphia Trust, Safe, Deposit & Insurance Co. with reference to renumbering of equipment included in Canadian Northern Equipment Trust, series C-1, 1912, supplementary to agreement dated April 1, 1912; two agreements between Imperial Rolling Stock Co., Canadian Northern Ry. Co., and Fidelity Trust Co., with respect to renumbering equipment included in Canadian Equipment Trust series K-I, 1914, L-I, 1916, supplementary to agreements dated Oct. 1, 1914, and Aug. 1, 1916.

Canadian Pacific Ry.—In notifying owners of C.P.R. shares deposited with the British Treasury, the Comptroller-General says:—"As the return of this security will necessitate 25,000 separate transfers and the preparation of about 150,000 certificates, it is expected that the C.P.R. Co. will require some time to carry the transactions through. It is, therefore, requested that those owners of the security who do not contemplate a change in their holding between now and Dec. 1 will return the enclosed form A completed at once, to ensure an early completion of the transfer. To those who contemplate dealing with the security, the Treasury, with the view of equalizing the pressure on the company, are willing, on receipt of the treasury certificate accompanied by the enclosed form A and the lodgment order B, to release the security as soon as possible. In this case the additional allowance would cease on the date of release. The Treasury take this opportunity of thanking holders who voluntarily placed their securities at the disposal of the government for the assistance thus rendered to the state."

Canadian Pacific Ry.—Dividends were declared Aug. 9 as follows, on common stock 2½% for quarter ended June 30, being at rate of 7% a year from revenue and 3% a year from special income account, payable Oct. 1 to shareholders of record Aug. 31; on preferred stock 2% for the half year ended June 30.

Edmonton, Dunvegan & British Columbia Ry. Co.—There has been deposited with the Secretary of State, Ottawa, an agreement, dated June 5, 1920, between the Edmonton, Dunvegan & British Columbia Ry. Co., and the Interior Truck Co., providing for the increase, from 5% to 6%, of the interest payable on the company's 20-year debenture stock, secured by the trust indenture dated Mar. 29, 1919.

London's First Railway.—A correspondent, writing about London, Ont., historically, says, among other things: "On Oct. 23, 1849, Col. Talbot turned the sod for the beginning of the Great Western Ry. Sir Allan MacNab, President of the railway, was present. At the evening banquet, Col. Talbot said that 55 years before he had slept on that very spot which he honored in the afternoon. The first train came to London on Dec. 15, 1853."

have been reported (Lopez et al., 2000; Lopez and Lopez, 2001; Lopez and Lopez, 2002; Lopez and Lopez, 2003).

O. V. Johnson, formerly assistant secretary of Forests Division, has been appointed assistant state agent, with headquarters at North Las Vegas. E. Murray, state agent.

R. Murray, who was appointed acting route agent at North Bay, Ont., is looking after the Niagara fruit district, with headquarters at Hamilton, Ont., and has W. J. McNamee as assistant.

O. A. Sharp, Route Agent, London, Ont., is in charge of the Leamington fruit district, with headquarters at Leamington, Ont., Mr. Chas. Stewart acting as assistant.

W. B. Knott, heretofore cashier at London, Ont., has been appointed acting agent there, vice T. H. McGarrell, transferred. He and his bride have just returned from a trip to California.

J. Barrett, formerly cashier at Ottawa, who has been appointed agent at Oshawa, Ont., vice M. R. Johnson, entered the service April 1, 1911, at Hamilton, and was transferred to Ottawa Jan. 11, 1915.

T. Kelly, who has been appointed Superintendent's accountant at Toronto, entered the service, Aug. 1, 1910, as stenographer and was appointed correspondence clerk in January, 1915. He enlisted for overseas on Aug. 16, 1915, and returned to his duties as correspondence clerk, Superintendent's office, in Jan., 1919.

Matters.

E. N. Smith, President, Canadian Press Ltd., and D. Campbell, have been appointed on a board of conciliation, to represent employers and employees respectively, in the dispute between the Canadian Press Ltd. and its telegraph operators.

The litigation between the Postal Telegraph Cable Co. and the C.P.R. Telegraphs, which was instituted by the former company Mar. 12, in the U.S. District Court at New York, was discontinued by the court's order, Aug. 19, the plaintiff to pay the statutory costs, and to refund to the C.P.R. \$64,978.75, deposited in connection with the case. It is stated that the case was discontinued because the telegraph traffic balances have now shifted in favor of the C.P.R. and have more than offset the amount which was being sued for.

The Dominion Telegraph Co.'s annual meeting was held at Toronto recently. The balance sheet for the year ended June 30 shows assets of \$1,302,416.93 compared with \$1,306,329.42 for the previous year, and the liabilities of \$1,011,923.30, against \$1,013,351.25, the balance of profit and loss account being \$290,392.99, a decrease of \$585.18 from the previous year. The property is leased to the Western Union Telegraph Co. for 99 years from July 1, 1879, the 6% interest on the capital stock being guaranteed. The directors for the current year are:—Sir Henry Pellatt, President; Aemilius Jarvis, Vice President; R. W. Taylor, Treasurer; G. W. Aitkens, R. Lowry, E. Y. Gallagher, Sir James M. Gibson, and D. B. Hanna; the last named replacing Dr. C. O'Reilly, deceased.

The C.P.R. has made an agreement with its telegraph operators, on the lines

The employees' union has been successful in its fight for higher wages. The average monthly wage increase was \$20 a month; other workers received increases of about \$17 a month according to location. The employees on the Nokrum machines, chiefly females, each to receive increases of \$10 a month, and general clerks to receive percentage raises from \$8 to \$12 a month.

sions.

At the Imperial Press Conference at Ottawa, in August, a resolution was adopted recommending that the various governments within the empire increase cable communications and decrease rates, and stating that it is essential that where any government assistance is given to the press by way of cable or other services, it should appear specifically in the public estimates. It was stated that in regard to cable facilities, the empire is really worse off than before the war, although a German owned cable line between Halifax, N.S., and England, is now in British hands. It was suggested that a British cable company be started to compete with the Great Eastern Cable Co. between Great Britain and points in Asia, Africa and India, and that a general cable rate of a penny (2c.) a word be adopted throughout the empire. Sir Roderick Jones, Managing Director of Reuter's Agency, while prepared to support the proposal, was not sanguine of its realization in the near future. The necessity for a better cable service was obvious, as cable traffic had increased enormously within the last few years.

West Indies.

The recent conference at Ottawa between members of the governments of Canada, the Bahamas Island, Barbados, Bermuda, British Guiana, British Honduras, Jamaica, the Leeward Islands, made the following declaration respecting cable communications, supplementary to the Canada-West Indies Trade Agreement, 1920, full particulars of which are given on page 516 of this issue:—With a view to the further promotion of the purposes of the Canada-West Indies Trade Agreement of even date the representatives of the governments of Canada and of the colonies named in the agreement will recommend for the favorable consideration of their respective governments that direct British owned and British controlled cables should be laid as soon as possible, without waiting for the termination of the agreement with the West Indian and Panama Telegraph Co., to connect Bermuda with Barbados, Trinidad, British Guiana, the Windward Islands, the Leeward Islands, and Turks Island or Jamaica. The Government of Canada will institute enquiries as soon as practicable as to the possibility of arranging for the laying of such cables and will communicate the results of these enquiries to the governments of the colonies.

the American Railroad Association, which has filed an appeal from its loss of \$1,000,000 in 1924. The railroad industry has been hit hard by the decline in the price of commodities, and the American Railroad Association has filed an appeal from its loss of \$1,000,000 in 1924. The railroad industry has been hit hard by the decline in the price of commodities, and the American Railroad Association has filed an appeal from its loss of \$1,000,000 in 1924. The railroad industry has been hit hard by the decline in the price of commodities, and the American Railroad Association has filed an appeal from its loss of \$1,000,000 in 1924.

Dominion Express Company.

D. F. Martin, formerly route agent at North Bay, has been transferred to Toronto.

E. Anderson has been appointed acting agent at Windsor, Ont., vice W. Aitchison, resigned.

J. Bayley, route agent, Eastern Division, spent his holiday by taking a trip out west to visit relatives.

Geo. Allen, of the Kingston staff, has been appointed agent at Kingston, Ont., vice F. W. Carr, transferred.

H. W. Cross, agent at Belleville, Ont., being ill with diphtheria, D. F. Martin, route agent, is looking after the office.

Geo. Padwich has been transferred from the Claims Department, Toronto, to the Superintendent's office, acting as correspondence clerk.

T. H. McGarrell, formerly agent at London, Ont., has been appointed acting route agent, vice O. A. Sharp, transferred.

N. J. Bauer, heretofore cashier at London, Ont., has been transferred to Windsor as cashier, vice H. F. Roode, appointed cashier at London.

W. J. Malcolm, formerly chief bill clerk at Toronto depot, has been appointed agent at Galt, Ont., vice E. Anderson, transferred.

J. H. Gallant, who entered the company's service as messenger Feb. 1, 1913

Electric Railway Department

Investigation into Ontario Hydro-Electric Railway Projects.

The royal commission appointed by the Ontario Government to investigate the proposed hydro electric railways for Ontario held its first regular meeting in Toronto July 28, Mr. Justice Sutherland presiding. I. F. Hellmuth, K.C., appeared as investigating counsel appointed by the royal commission. The Hydro Electric Railway Association was represented by Robert McKay, K.C., and the Hydro Electric Power Commission by C. S. MacInnes, K.C. Mr. Hellmuth requested that the following information be supplied:—

1. A general map showing the districts to be served by the proposed hydro radial system or systems. This map to have indicated on it the proposed new radial railway lines, together with those railways already acquired or which it is intended to acquire from the Dominion Government. It is desirable that, if possible, this be on a scale not smaller than four miles to an inch.

2. Route maps of proposed new radial railways and those already acquired or which it is intended to acquire.

3. Profiles to accompany the foregoing route maps of the proposed new radial railways; on these it is desired that the nature of the proposed structures, such as bridges, culverts and railway intersections (other than grade) to be indicated.

4. Specifications, or a resume of same, indicating the nature of structures to be used (a) in the construction of the new radials proposed and (b) in the betterments or reconstruction proposed for those railways already acquired or which it is intended to acquire.

5. Estimates of preliminary engineering and miscellaneous overhead costs and of amounts for purchases of rights of way and other lands and roadbed features, etc., necessary to provide for the proposed new radial lines or necessary in connection with the railways intended to be acquired. These to be classified according to the several purposes and distributed according to the various divisions or sections of the proposed system.

6. Estimates of costs of construction itemized in detail for each division or section of (a) the proposed new radial railway lines and (b) the betterments or construction proposed for the railways already acquired or which it is intended to acquire. These details to include such items as weights of rail and other roadbed features and the several classes of overhead construction. It is desired that these estimates include schedules upon which they are based both in quantity and price.

7. Estimates of costs in detail of railway line transmission, telegraphs, telephones, signal systems and other accessories necessary to the proper operation of the lines.

8. General plans, specifications (resume) and detailed estimates of proposed stations and buildings other than terminal, according to the various classes, necessary for the operation of the railways.

9. General plans, specifications (resume) and detailed estimates of terminals, terminal stations, shops and other terminal buildings necessary for the operation of the railways.

10. General plans, specifications (re-

sume) and detailed estimates of costs of the receiving, transformer, switching and other electric stations and buildings required for the reception and application of the necessary electric power for the operation of the various divisions or sections of the railways.

11. General description and detailed estimates of electrical, mechanical and other equipment for the reception and application of the necessary electric power for the operation of the various divisions or sections of the railways (as intended to be contained in the receiving, transformer, switching or other stations). This also to comprise where necessary such transmission lines or connections thereto as are requisite for and

fund, taxes, car rentals and other like purposes be particularly specified.

14. An estimate of the amount of power required to be placed at the disposal of the proposed radial railway system for the purposes of the entire and efficient operation of each division or section comprising the proposed new radials and the railway already acquired, and which it is intended to acquire. It is desired that separate estimates be made based on operation as at one year, five years and ten years after each division or section is placed in operation.

15. An estimate of the expected cost per horse power per year with reference to the amounts of power required under the foregoing for each division and section of the system. It is desired that separate estimates be made, based on operation as at one year, five years and ten years after each division or section is placed in operation.

16. Detailed estimates of expected revenue from all sources, classified under the various divisions or sections and itemized under the several classes of business, i.e., passenger, goods, etc. It is desired that separate estimates be made based on operation as at one year, five years and ten years after each division or section is placed in operation. It is desired also that the estimates include statements of the various rates for passengers and goods upon which they are based.

17. It is desired that, if possible, a map or maps be furnished which will indicate graphically or otherwise the density of population and the density or intensity of industrial or other activities along or tributary to the lines of the entire radial railway system as now proposed.

The commission met again in August, going over information which had been received and arranging a programme for future sittings.

Glasgow Tramways Buy Rails in the United States.

Canadian Trade Commissioner J. Vernon McKenzie, wrote from Glasgow, Scotland, Aug. 5:—A contract for 10,000 tons of steel rails and fishplates is expected to be awarded very shortly by the Glasgow corporation to the United States Steel Products Co. The sending of this contract abroad has caused a great deal of controversy not only in local municipal circles, but also in the wider field of commerce throughout the country. The corporation invited 21 firms to tender for this order, and out of these only two applied—One United States firm and one English firm, the home firm being \$4 10s. a ton higher in price than its foreign competitor. The relative prices were in the neighborhood of £28 and £24. The Glasgow Tramways Committee recommended that the United States Steel Products Co.'s offer be accepted, owing to the fact that there would be a saving of more than £40,000 on the order, but definite acceptance has not yet been given, owing to the fact that, under the standing orders of the town council, agents acting for firms in a foreign country must send to the corporation an authenticated guarantee that the

Kirkwood, General Manager, Grand River Railway Co. and Lake Erie & Northern Railway Co.; A. W. Melimont, Vice President and General Manager, Winnipeg Electric Railway Co.; H. M. Reade, Superintendent, Quebec Railway Light & Power Co.; Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Railway Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Railway Co.

Official Organ—Canadian Railway and Marine World, Toronto.

chargeable to the railway system and its operation.

12. General description, number, classification (or types), and detailed estimates of cost of new rolling stock intended to be employed in the operation and maintenance of the various divisions of the system proposed, already acquired and to be acquired. These to include locomotive, passenger, goods and work cars and all other rolling stock necessary for the efficient operation as proposed and provided for under the various estimates.

13. Detailed estimates of annual costs of (a) maintenance, (b) operation of each division or section of the proposed new radials and of the railways already acquired or intended to be acquired (including amounts to be set aside for overhead, management, superintendence, upkeep, etc., of the general system). It is desired that separate estimates be made based on operation as at one year, five years and ten years after each division or section is placed in operation. It is desired also that the rates and amounts proposed to be allotted in these estimates for interest, depreciation, sinking

and addresses. In the way of renewals

year, but there is the possibility that some of the attention for what we used in about half this time." And in this case the rails might, no doubt, be a suitable material for the tramway equipment suitable for Scotland. The committee will communicate with the Trade Commission to get information about the products they desire to export, and matter up direct with the Glasgow and other Scottish corporations.

Brandon, Man., Nov. 17.—The Board of Commissioners for the Manitoba Public Utilities Commissioner had approved of an increased schedule of fares for the Brandon, Man., & Winnipeg, W., railway, and supplied with a copy of the order, which states that a hearing was held in Brandon, that due consideration had been given to the effect of increases and that an investigation of the railway's operations had been made. Following is a comparison of the old and new fares:

	New.	Old.
Cash	7c.	5c.
1 year interest	10c.	7c.
What I want to	10c.	10c.
1 year interest	10c.	10c.

British Columbia Electric Ry. applied recently to the Board of Railway Commissioners for approval of its tariff B.C. E.R. 30, C.R.C. 2, between points on its Central Park interurban line, district 1, between Vancouver and New Westminster. No change is made in the regular fares. Only the commutation fares are affected. At present books of 10-ride and 50-ride tickets are sold. It is proposed to eliminate the 50-ride books entirely and raise the price of the 10-ride books. To certain points there will be an increase of 40%, but the old rates are inequitable and should never have been put in force. One of the reasons for the proposed new tariff is to prevent combinations of rates between Vancouver and New Westminster. By means of combinations it is possible to travel between the two cities for 11c., with a transfer to city lines in both places. The regular fare is 25c. On this line the fare is 5c. from New Westminster to certain points, whereas the regular fare on city lines in New Westminster is 6c. City line passengers have been buying commutation rate books, ostensibly to transfer to the interurban line, but really to travel for 6c. instead of 6c. The new rate on the 10-ride book is approximately $1\frac{1}{2}$ c a mile and the lowest combination between Vancouver and New Westminster is 10c.

The company has also applied to the Board of Railway Commissioners for authority to increase its cash fare in the City of Victoria to 7c.

Calgary Municipal Ry.—On City Commissioner A. G. Graves' recommendation the city council made several changes in fares recently. The cash fare theretofore 5c., has been advanced to 10c.; two tickets are being sold for 15c., four tickets for 25c., instead of five for 25c. as formerly; and 20 for \$1, instead of 22 as formerly. School children's tickets are left at 8 for 25c. The object in raising the cash fare to 10c. is stated to be to eliminate the handling of coppers and making change on the cars. The fixing of ticket rates at 2 for 15c. and 4 for

save the motorman-conductor on one-man cars handling a lot of small change. Following is a comparison of the old and new fares:—

Quantity	Price	Total
1 for \$5.	\$5.00	\$5.00
4 for \$25.	\$25.00	\$25.00
20 for \$1	\$1.00	\$1.00

Notwithstanding the increase in fares, it is reported that the receipts for the last 15 days of July were \$220 a day short of the average daily revenue necessary to meet requirements. Superintendent Brown is reported to have recommended that the schedule of fares as given above be amended by reducing the number of tickets to be sold for \$1 from 20 to 18.

The city council is reported to have decided on Aug. 17, by a vote of 7 to 2, to reduce the number of street car tickets sold for \$1 from 20 to 18, the altered rate to go into effect at midnight Aug. 17. A press report of Aug. 18 stated that in the interval between the passing and coming into effect of the new rate \$6,100 worth of tickets were bought by citizens at the old rate.

Cape Breton Electric Co.—Under an order of the Nova Scotia Public Utilities Commission a new fare schedule was put in operation in Sydney and adjoining municipalities on Aug. 15. The new schedule provides for a 10c. cash fare in the City of Sydney, and in the towns of North Sydney, Sydney Mines and Glace Bay; metal tickets are sold two for 15c., four for 30c., and in even multiples of two at the same ratio, each ticket will be accepted in lieu of a single cash fare. On the Sydney and Glace Bay interurban line the new fare is 7½c. per zone (instead of 6c. as heretofore) on the metal ticket system, the cash fare being 10c. There are five zones on the line, and a passenger can pay all in metal tickets or in metal tickets and cash. Through the five zones from Sydney to Glace Bay the ticket fare is 37½c. and the cash fare 40c.

Fort William Municipal Ry.—The Fort William, Ont., city council has under consideration a proposition for increasing fares. A zone system has been suggested, but a press report states this is not favored by some of the members of the council's utilities committee, and that the new fares will probably be:—Cash, 7c., or 4 tickets for 25c.; children's fare, 3c., or 10 tickets for 25c.; school children's fare between 8 a.m. and 3.30 a.m. and 3.30 and 5.30 p.m., 5c., or 8 tickets for 25c. It was expected that the new fare schedule would be approved in time to put it in operation Sept. 1.

Regina Municipal Ry.—The Regina, Sask., city council, on Aug. 4, approved of a new fare schedule for the Regina

compared with the old one as follows:—

	May	Oct
1990	1 (no. 1)	1 (no. 1)
1991	8 (no. 10)	1 (no. 10)
1992	1 (no. 4)	1 (no. 4)

[illegible]

Kingston, Portsmouth & Cataraqui Electric St. Ry.—A press report, Aug. 26, stated that the Kingston, Ont., city council had under consideration an application from the company for permission to do away with the sale of tickets at reduced prices, and to charge a straight 5c. fare.

Montreal Tramways Co.—Owing to the increased wages awarded to the employees by a board of conciliation, to date from July 1, it is estimated that \$800,000 will be added to the company's wage bill for the year. Under the circumstances the company applied to the Montreal Tramways Commission to permit the charging of increased fares. The Commission on Aug. 20 authorized certain increases from Sept. 1, the new rates comparing with the old as follows:—

	New	Old
Cash fare	7c.	7c.
Tickets	16c.	for 30c.
"	0.60	14 for \$1.00

The above fares are within the uniform territory from 5 a.m. to midnight. There is no change in the after midnight rate, which remains at 15c.; school children's tickets, 7 for 25c., are also unchanged. The rates outside the uniform territory are not changed.

The **Toronto Suburban Railway's** Standard Passenger Tariff, C.R.C. 1, which applies to its interurban lines only, and which was approved by the Board of Railway Commissioners in July, as stated in Canadian Railway and Marine World for August, is based on a rate of 2.875c. a mile. The rates previously in force were limited to 2c. a mile, under the Ontario Railway Act, but the line is now under Dominion jurisdiction, owing to its absorption by the Canadian National Rys.

Winnipeg Electric Ry.—A Winnipeg press dispatch of Aug. 23 states that the Manitoba Public Utilities Commission gave judgment on that day on the company's application for power to charge increased fares on its lines in Winnipeg, and on the suburban lines owned by its subsidiaries, the Winnipeg, Selkirk & Lake Winnipeg Ry. and the Suburban Rapid Transit Co. The Commissioner is reported to have announced that the increase granted are to give the companies affected a return of 8% on their investment. The estimates of the increases necessary were based on computations and valuations made by expert appraisers. The company's plants were valued at \$21,399,461. The increase

fares allowed will provide an additional \$450,000 annual income, according to street railway officials. Wage increases recently granted employees will absorb \$300,000 of this amount, they said, and the balance will be devoted partly to suburban extensions and partly to paying a dividend to shareholders. The \$400,000 increase in calculated on a basis of an annual paying passenger list of 60,000,000. The average fare will be raised

from 5¼c. to 6¼c. The cash fare is to be 7c. on the city lines instead of 6c. as heretofore, 4 tickets to be sold for 25c.; workmen's tickets are abolished, but school children's tickets to remain the same as heretofore, 8 for 25c. The new fares are to go into operation Sept. 1.

The fare from Winnipeg to Selkirk is raised from 60 and 80c. to 75 and 90c. The Headingly and other suburban lines are put on the zone system, with a 5c.

fare in each zone. It is stated that the City Solicitor announced that an attempt would be made to have the decision modified.

The company is reported to have announced Aug. 24 that tickets which were sold at the old rates could not be used after Sept. 1, but would be redeemed at the company's offices at the price paid for them, and that a new series of tickets would be issued at the new rates.

Electric Railway Projects, Construction, Betterments, Etc.

Calgary Municipal Ry.—Press reports state that tenders will be received to Sept. 21 for the construction of a street railway crossing, and that an estimate has been prepared showing that the cost of the proposed extension of the line on Centre St. north will be \$9,475, exclusive of rails. (July, pg. 392.)

Cape Breton Electric Co.—A press report of Aug. 20 stated that the City Solicitor of Sydney, N.S., was about to take up the question of the extension of the Cape Breton Electric Co.'s railway lines in Sydney, with the Nova Scotia Public Utilities Commission. (June, pg. 316.)

Chatham, Wallaceburg & Lake Erie Ry.—A press report states that local merchants are of opinion that instead of tearing up the Chatham, Wallaceburg & Lake Erie tracks on King St., Chatham, Ont., before putting down new pavement, the city council should apply to the Hydro Electric Power Commission of Ontario to take over the railway and extend it from Erie Beach to Government Park, Morepeth, Ridgetown, Thamesville, Florence and Dresden. A line through these places would, it is stated, serve a large area now without railway facilities. (Jan., pg. 34.)

Grand River Ry.—A press report states that plans filed with the Galt, Ont., city council for a new right of way through the city provide for taking the line off the streets and carrying it along a private right of way, starting from Hunter's corner, passing under the subway beside the G.T.R. and the C.P.R., and then paralleling Mill Creek into the center of the city to the C.P.R. yards, to which point the Lake Erie & Northern Ry. runs. Between the crossing of Dundas and Main Sts. the line will be double track, the building of which work will necessitate the removal of the C.P.R. freight shed. A passenger station will be built at Main St., and a spur line will be run to the C.P.R. station. The work which the company has in hand on the north end of the line is reported to be practically completed, so that it is expected that the work in Galt will be put in hand at once and completed in time for the operation of traffic over the new route about the time the company's franchise along Water St. expires, viz., Feb. 2, 1921. Another reason for making the change of route is to bring the line up to the same standard as the Lake Erie & Northern Ry., to run heavier traffic over it, and to eliminate stops. (Mar., pg. 145.)

Hamilton, Grimsby & Beamsville Electric Ry.—We are officially advised that it is proposed to rebuild the car barn at Beamsville, Ont., which was destroyed by fire Dec. 28, 1919. (Feb., pg. 81.)

Hamilton St. Ry.—A press report states that the Dominion Power & Transmission Co. proposes to start work immediately on the laying of additional tracks in the west end of Hamilton. The pro-

jected line is from Margaret St. to Paradise Row, and thence westerly to within 800 ft. of the Hamilton & Dundas Ry.

We are officially advised that it is proposed to build about two miles of new line westerly on King St., to the McKilrick survey. (Aug., pg. 450.)

Hydro Electric Ry., Essex Division.—We were officially advised Aug. 10 that it was expected to begin laying about a mile of second track on London St., Windsor, Ont., between Aug. 23 and 30. (July, pg. 392.)

Levis County Ry.—A press report of Aug. 18 stated that the company was straightening a portion of the line in Levis, Que. (Dec., 1919, pg. 675.)

Montreal Tramways Co.—We are officially advised that the company is reconstructing about nine miles of its track in Montreal, and in Outremont, and that it is also building a substation on Cote St., Montreal. (Aug., pg. 450.)

New Brunswick Power Co.—We are officially advised that the company is building a 3,000 ft. extension of its line in East St. John, N.B., the material for which is on hand.

Referring to criticisms as to the betterments work in progress on the lines in St. John, N.B., T. H. McCauley, General Manager, is reported to have said Aug. 7 that the material being put in at the corner of Charlotte St. and King Square, while not bought recently, is not worn; it had been installed at another point but was not used. The spacing of ties is good standard work; concrete is a superior foundation to wood and will last longer. Special attention is being given to bonding before the work is completed so as to eliminate, as far as possible, electrolysis to water and other mains. "The company," added Mr. McCauley, "is not desirous of evading its obligations in any way, but is willing to more than keep pace with the city in any reasonable undertaking." (Aug., pg. 450.)

Niagara, St. Catharines & Toronto Ry. A press report states that the company proposes to build a car shop at St. Catharines and that G. C. Briggs, Architect, Canadian National Ry., Toronto, has prepared the plans. (Dec., 1919, pg. 670.)

Nova Scotia Tramways & Power Co.—A press report states that a committee representing the Halifax, N.S., City Council, and representatives of the N. S. T. & P. Co., after discussing the city paving situation as it affects the company, waited on the Nova Scotia Premier on Aug. 4 to arrive at a plan by which the company could be financially aided so that the paving might be proceeded with. (Jan., pg. 34.)

Ottawa Electric Ry.—A press report states that an automatic switch has been installed at the corner of Banks and Sparks streets, and that two other similar switches will be installed at Elgin and Sparks Sts., and one at the corner

of Rideau and Sussex Sts. (May, pg. 257.)

Peterborough Radial Ry.—A press report states that a report on proposed extensions of this railway in Peterborough, Ont., and vicinity, has been completed by the Hydro Electric Power Commission of Ontario's engineering staff. (May, pg. 257.)

Quebec Ry., Light & Power Co.—We are officially advised that the company has under consideration an extension of about half a mile along Marie Bourgeois Ave. (formerly named Levis Ave., from St. Cyrille St. to St. Foy Road, Quebec. This matter was under discussion with representatives of the city council, Aug. 13, and a press report states W. J. Lynch, General Manager, promised that construction would be started immediately and that the line would be ready for operation in the autumn. (Aug., pg. 450.)

Saskatoon Municipal Ry.—A press report states that Saskatoon, Sask., ratepayers have passed a bylaw authorizing the building of a second track on a portion of the Saskatoon Municipal Ry. lines at a cost of about \$3,000. (Dec., 1919, pg. 670.)

Toronto Civic Car Lines.—The construction of a permanent double track line on Bloor St. from Runnymede Road to James St., at a cost of \$104,245, has been recommended by the City Works Commissioner and the matter is under consideration by the city council. (Aug., pg. 450.)

Toronto Ry.—A frame car barn is being built at the corner of McLean Ave. and Queen St east, Toronto. (Feb., pg. 81.)

Winnipeg Electric Ry.—A press report of Aug. 13 stated that representatives of the Winnipeg City Council were negotiating with the company for continuing to Keewatin St., a temporary track which is already laid on Logan Ave. more than half way to the C.P.R. Deloraine Branch.

The reconstruction of the car barns at Main St. and Assiniboine Ave., destroyed by fire some months ago, is reported to have been started. The reconstructed building will be of reinforced concrete throughout, somewhat longer than the old one, with concrete floor and wired glass windows. It will accommodate 50 cars. Pratt & Ross are the architects and the contract is reported to have been let to Claydon & Co., the estimated cost being \$60,000. (Aug., pg. 450.)

Minneapolis Street Car Fares.—A press report states that the Minneapolis, Minn., City Council has passed an ordinance authorizing the Twin Cities Rapid Transit Co. to charge a 7c. fare as from Aug. 16 and that if this does not produce sufficient to equal the 1919 surplus, a 7c. cash fare is to be charged from Dec. 15 with 4 tickets for 25c.

Electric Railway Employees' Wages, Working Conditions, Etc.

Montreal Ry.—A press report of August 27th last states: The Montreal Street and Electric Railway Company, after a long and bitter struggle, has agreed to accede to the demands of the conductors and motormen. Under the new agreement, the employees will receive an increase of 10% in wages, and the company will be required to pay for the cost of living, as well as the cost of transportation to the company, and the probable effect of increased expenses necessitating an increase of fares. In conclusion, the board said: "Before setting down the figures which we have decided upon, we wish to state that we have, to the best of our ability, analyzed the evidence and weighed with care all the arguments submitted, with a desire to give to the employees the greatest possible measure of advantage compatible with the intangible rights of the public and the resources of the tramway's enter-

prise. We are sure that the increase will be a relief to the employees, and will be a benefit to the public. The company will be required to pay for the cost of living, as well as the cost of transportation to the company, and the probable effect of increased expenses necessitating an increase of fares. In conclusion, the board said: "Before setting down the figures which we have decided upon, we wish to state that we have, to the best of our ability, analyzed the evidence and weighed with care all the arguments submitted, with a desire to give to the employees the greatest possible measure of advantage compatible with the intangible rights of the public and the resources of the tramway's enter-

"Under the existing scale of pay and conditions of work, 3 1/2% of the conductors and motormen rate 37c an hour; 11 2 1/2% rate 40c; 7 4 1/2% rate 44c; 10 2 1/2% rate 48c. Under the proposed scale 3 5/10% will earn 45c; 11 4 1/10% will earn 50c; 8 5 1/10% will earn 55c. "With regard to the other employees we recommend substantial increases for all of them."

The men met Aug. 5 to consider the report, and passed a resolution rejecting it, and authorizing the presentation of an ultimatum to the company asking for the acceptance of the original demands in full within 24 hours. The company announced Aug. 6 that it could not meet the men's demands. On Aug. 7 the men held another meeting, after having announced that in the event of a strike being decided upon the men would go out on Aug. 9. A more conciliatory attitude was taken by the men at the meeting Aug. 7, and a further conference was arranged to take place with the company's representatives. A press report states as a result of the conference concessions have been made by the company, and that the executive of the men's association on Aug. 13, recommended the acceptance of the award. A meeting of the men was held on Aug. 14. They decided by a vote of 1,699 to 547, to accept the board's award, subject to an amendment, agreed upon, regarding shopmen.

New Brunswick Power Co.—The agreement arrived at recently between the company and the Amalgamated Association of Street and Electric Railway Workers of America, Division 663, covering the street railway employees in St. John, effective from June 15, and is to continue in force until June 15, 1921, and yearly thereafter unless mutually changed, notice of any change desired to be given 30 days before the expiration of any year. The agreement covers working conditions, fixes a 9-hour day for motormen and conductors and uniform men; an allowance of 10c, an hour extra to motormen and conductors when called upon to operate snow ploughs and sweeper equipment, and provides for the appointing of a grievance committee. Following are the rates of wages per hour fixed in the agreement compared with the former rates paid conductors and motormen:

	Old rate	New rate
First 6 months	35c.	42c.
Second 6 months	41c.	51c.
After one year	45c.	55c.
After two years	45c.	55c.

Time and a half is to be paid for overtime, and on holidays, and 10c. an hour extra to uniform men required to work on Sunday.

It is said that the signing of the wages agreement was held up owing to the company's wish to insert a section providing for the operation of such cars. After some negotiation a document was drawn up and signed by T. H. McCanley, General Manager, on behalf of the company, and by F. A. Campbell and P. Moore on behalf of the men, providing

that in furtherance of the agreement the company will be required to pay for the cost of living, as well as the cost of transportation to the company, and the probable effect of increased expenses necessitating an increase of fares. In conclusion, the board said: "Before setting down the figures which we have decided upon, we wish to state that we have, to the best of our ability, analyzed the evidence and weighed with care all the arguments submitted, with a desire to give to the employees the greatest possible measure of advantage compatible with the intangible rights of the public and the resources of the tramway's enter-

Toronto Suburban Ry.—The board of conciliation presented majority and minority reports Aug. 8. The majority report, signed by Judge Barron, chairman, and G. D. Kelley, representing the company, recommended the granting of 15% increase to the men employed on an hourly basis, and an increase of \$10 a month to those paid by the month. L. Braithwaite, representing the men, recommended greater increases.

Winnipeg Electric Ry.—The employees submitted to the company on April 8 a draft of an agreement as to wages and working conditions which they demanded to have put in operation on the expiry of the then existing agreement on May 1. The old and the proposed rates of wages per hour were as follows:—

	Old		Proposed	
	Week- days	Sundays	Week- days	Sundays
First 6 months	46c.	54c.	50c.	58c.
Second 6 months	46c.	54c.	50c.	58c.
After 1 year	50c.	57c.	50c.	\$1
After 2nd year	50c.	56c.	—	—

An agreement not being reached by negotiation, a board of conciliation was appointed, consisting of Judge Myers, chairman; C. E. Dafeo, representing the company, and R. S. Ward, representing the men. The board held its first sitting May 19, and sat on three other days in May, and on six days in June, hearing evidence and arguments. A majority report, dated July 5, signed by Judge Myers and C. S. Dafeo, and a minority report of the same date, signed R. S. Ward, were forwarded to the Minister of Labor. The majority report stated that the board had granted certain concessions to the employees respecting passes, platform time, overtime and an amount guaranteed as weekly wage to extra men. The amount granted as an increase in wages would place the employees in more favorable circumstances than street railway employees in most of the Canadian cities, and on a par with those in Toronto. The report added: "The terms of the proposed agreement and schedule are fair to all parties, considering the circumstances." The wages schedule recommended for conductors and motormen was as follows per hour.

	Week	Days	Sundays
First 6 months	46c.	54c.	50c.
Second 6 months	46c.	54c.	50c.
After 1 year	50c.	57c.	50c.
After 2nd year	50c.	56c.	50c.

Extra men to be guaranteed \$20 a week, instead of \$18 as formerly. Mr. Ward, in his minority report, recommended certain other concessions as to uniforms, etc., but added: "Although I am convinced that the changes in working conditions asked for by the men were reasonable, and, with some slight modifications should have been granted, I could have signed the report if an equitable increase in wages had been secured." He recommended that the increases of wages granted by the majority report

Montreal Tramways Co.—In April the conductors and motormen demanded increased wages and improved working conditions, including an 8-hour day. The rate per hour asked for by them in comparison with the rates then in force was:

	Existing	Asked
First year	37c.	42c.
First 6 months	37c.	42c.
Next 6 months	40c.	45c.
Second year	40c.	45c.
Third year	44c.	51c.
After third year	45c.	55c.

The company on May 7 declined to accede to the demands, and the matter was subsequently discussed between representatives of the employees and the Montreal Tramways Commission. The men were advised that the Commission was determined not to increase the fares this year, and pointed out that it would not be possible to provide the all round wages increase asked for by adding at least 2c. to the existing fares, adding that it might be found possible to provide funds for a bonus, which, however, would fall far short of the amount asked for. It was subsequently stated that the amount available for this suggested bonus did not exceed \$500,000, and that its distribution would not include the men on the cars, whom the commissioners considered were sufficiently paid. A platform insurance up to \$1,000 was also offered. The men refused these offers on May 27 and applied for a board of conciliation, which was appointed June 10, and was composed of Justice Archambault, chairman; E. W. Villeneuve, representing the company, and J. A. Woodward, representing the men. The board's unanimous report, dated Aug. 3, reviews the problem before it as it affects the company, its employees and the public; lays down certain general principles which must be recognized in arriving at a decision, and then examines in detail the questions of the prevailing conditions of employment on the company's lines and the rate of wages earned and the cost of living, as well as the cost of transportation to the company, and the probable effect of increased expenses necessitating an increase of fares. In conclusion, the board said: "Before setting down the figures which we have decided upon, we wish to state that we have, to the best of our ability, analyzed the evidence and weighed with care all the arguments submitted, with a desire to give to the employees the greatest possible measure of advantage compatible with the intangible rights of the public and the resources of the tramway's enter-

should be doubled. The company accepted the majority award, but the men declined to do so. The question of a strike was discussed, and on a vote it was decided not to strike and finally the majority award was accepted and the new agreement was signed Aug. 2. The new rate of wages dates from May 1, when the old agreement expired.

The Toronto Railway and City of Toronto.

The Toronto Ry. Co. has acquiesced in the city's decision to take over the company's railway property, according to the terms of the original agreement, when the franchise expires in Sept. 1921, and it passed the following bylaw July 30:—

"Whereas the corporation of the City of Toronto passed a bylaw on June 21, 1920, numbered 8448, to provide for giving of notice to the Toronto Ry. Co. of the intention of the corporation of the City of Toronto to take over certain real and personal property of the Toronto Ry. Co. as therein mentioned. And whereas the said bylaw and the notice thereby authorized to be given to the Toronto Ry. Co. were duly served on the company on June 26, 1920. And whereas the Toronto Ry. Co. acquiesces in, assent to and accept the action of the corporation of the City of Toronto in the enactment of the said bylaw and the giving of the said notice. Be it therefore enacted that the Toronto Ry. Co. acquiesces in, assent to and accept the determination of the corporation of the City of Toronto to take over all the real and personal property of the company necessary to be used in connection with the working of the railways which the said corporation is entitled to take over under the provisions of the act of incorporation, agreement and conditions therein mentioned. And be it further enacted that a duplicate of this bylaw be served upon the corporation of the City of Toronto."

Glasgow Tramway Fares:—Canadian Trade Commissioner J. Vernon McKenzie, Glasgow, Scotland, writes:—

"In Glasgow there is no longer a chance for the thrifty Scotsman to take a ride on his tram for a wee bawbee. A short while ago the minimum fare on the Glasgow tramways was raised from a halfpenny to a penny, one of the last of the necessities of life to be hit by the increased cost of living in this country. Tickets, or as they are called here, 'tokens,' if bought at certain specified depots, may still be procured at 16 for 1s., thus reducing the cost of travelling 'a minimum stage' to three-fourths of a penny. No tokens are sold on the trams. Glasgow tramways have long been famous throughout the world as perhaps the leading exemplification of municipal enterprise, and they have been particularly noted for their efficiency and economy. A passenger in Glasgow may ride 1.15 mile for his penny; the highest fare paid is 8d., for which he is entitled to travel from one of the city's suburbs to another, 14½ miles."

Windsor, Ont., City Council's industrial committee invited the operating officials of the Hydro Electric Ry. Essex Division to a conference on Aug. 3, to discuss the service given in the city by the recently taken over Sandwich, Windsor & Amherstburg Ry. It is reported that the officials said it was hoped to put on five more cars within a short time.

Mainly About Electric Railway People.

W. E. Blodgett, heretofore Secretary-Treasurer, Utah Light & Traction Co., Salt Lake City, has been appointed Comptroller, Winnipeg Electric Ry., and subsidiaries, in charge of all accounting, succeeding A. R. Ross, Internal Auditor, resigned.

Frank L. Butler, heretofore General Superintendent, Winnipeg Electric Railway Co., has been appointed Manager, with charge of operation and maintenance of the company's electric railway, light, power and gas industries, and also of the subsidiary companies, Suburban Rapid Transit Co. and Winnipeg, Selkirk & Lake Winnipeg Ry. He began his transportation work in 1894, when he entered the service of the Vandalia Rd., now a part of the Pennsylvania Lines, remaining with that company in various capacities, and at different points, till 1909, when he was appointed Superintendent, Denver & Inter Mountain Ry.,

Claims Agent, the Detroit United Railways, died recently after a week's illness. He was born in 1872, and was a graduate of the University of Michigan. For five years he practiced law at Hudson, Mich., and was connected with the C. H. & D., and Pere Marquette Railroads for a number of years. He entered the Detroit United Railways service Aug. 1, 1916.

T. H. McCauley, General Manager, New Brunswick Power Co., spoke on electric railway matters before the St. John, N.B., Rotary Club, Aug. 16.

John Montgomery, Roadmaster, Toronto & York Radial Ry., Mimico Division, was camping with his family in a large marquee on the lake front at Long Branch. The marquee was destroyed by fire Aug. 14, and, in endeavoring to save some of the contents, Mrs. Montgomery was burned about the arms and shoulders.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., and Mrs. Murrin returned to Vancouver recently, after spending several weeks in England. In addressing the Vancouver Electric Club, shortly after his return, Mr. Murrin said that British investors are watching British Columbia closely, and that all matters concerning the attitude of the public towards public utilities are being carefully noted. Unfortunately, the province's reputation in Great Britain is none too good, and if electrical development is to go ahead very careful attention must be paid to the treatment of capital already invested here. Capital is very much in demand in England for industrial purposes, and whereas 5% was paid formerly, the present rate is around 10%, and Canadian securities will therefore have to pay similar returns if they expect to obtain capital in competition with British industrial issues.

Hon. J. L. Perron, Minister without portfolio in the Quebec Government, and one of the Montreal Tramways Company's counsel, had between \$5,000 and \$6,000 of silver fox furs, fur coats and muffs stolen from his house recently.

F. L. Butler,
Manager, Winnipeg Electric Railway.

Denver, Col., of which he afterwards became Vice President and General Manager. On Sept. 1, 1911, he was appointed General Manager, Alta, Jacksonville & Peoria Ry., which was then under construction. Shortly afterwards he was appointed its receiver and completed the line to Jerseyville, Ill., remaining as receiver until May, 1914, when the property was sold at a receivership sale. In July, 1913, he was appointed General Manager, Chicago & West Towns Ry., and the Suburban Ry., with office at Chicago, and on April 1, 1918, he was appointed General Superintendent, Winnipeg Electric Ry. The position of General Superintendent, Winnipeg Electric Ry. has been abolished.

W. F. Edwards, heretofore Traffic Inspector, Winnipeg Electric Ry., has been appointed Traffic Superintendent, succeeding A. Macdonald, who resigned on account of ill health and returned to Montreal.

Geo. A. Chapman, Assistant General

Permanent Charges, Etc. — A large number of street railway companies have been successful in convincing civic authorities and the powers that be, that pavement charges and other franchise taxes which were all right in the old horse car days are a rank imposition now, and have been relieved from them. They are a tax on street car riders, and judging by developments in many cities the sentiment now generally prevailing indicates that car riders are more interested in the railway furnishing service at the lowest possible fares than they are in having the company act as a tax gatherer for the municipality.—Winnipeg Electric Railway Service News.

B.C. Electric Railway Freight Rates. The Interstate Commerce Commission has decided that electric railways may increase their freight rates by the same percentages as have been approved for steam railway trunk lines in the same territory.

Winnipeg Electric Ry. Co.'s employees have, according to a press report, decided by a referendum to affiliate with the One Big Union. The employees union has been an independent organization since the general strike of 1919.

the higher cost of gasoline and also to climatic conditions. Assuming these costs to be approximately correct for Toronto, at a 5c. rate at least 10 fares a mile would be necessary in order to make the system profitable. At a 10c. rate, 5 fares a mile would be necessary.

North Toronto has, according to the assessment department figures, a population of about 12,110. This is an increase of 40% over 1914. The civic transportation committee reported, in 1914, that the passenger movement into North Toronto, from street cars and jitneys, was about 4,000 persons in one day. If this be increased by 40% (the rate of growth of population), there will be at least 5,600 people now requiring daily transportation to and from North Toronto.

Eight buses in Akron carried at the rate of about 5,600 persons a day for 312 days in 1919. These buses cost about \$48,000, and are operated on a "no profit, no loss" policy at a 5c. fare. They travelled over brick paved streets which were in bad condition as a rule." North Yonge St. is macadam, in fair condition, and there are several cross streets paved with asphalt and concrete.

It must be noted that in every city in which buses are being operated, with any degree of success, they supplement rather than supplant street cars and rapid transit systems.

Cornwall Street Ry., Light & Power Co.—A press report states that at a joint meeting of the Cornwall, Ont., Town Council and Board of Trade on Aug. 8, a proposition for acquiring the Cornwall St. Ry., Light & Power Co. and the Stormont Electric Light & Power Co., from the Sun Life Insurance Co., Montreal, and amalgamating them was approved. The project was submitted by Brigadier General C. L. Hervey, D.S.O., C.E., of Lancaster, Ont., and Montreal, who asked that the town of Cornwall guarantee \$800,000 of 30-year 6% gold bonds of the undertaking, in return for which the town would be paid one-half of the net earnings of the combined companies, the other half going to the promoters of the new company. A committee was appointed to consider the matter and report to the town council, and at a subsequent meeting of the council the mayor was authorized to engage an expert to value the properties and to advise the committee. If the project is favorably reported upon, and is approved by the council, the necessary bylaws will be prepared for submission to the ratepayers.

London St. Ry.—A statement as to the company's operations for the two weeks ended June 30 is reported to have been laid before the London, Ont., City Council, July 28, as follows:—

Gross	18,727.53
Operating expenses	18,727.53
Net	0.00
Deficit	0.00
Surplus	0.00

Net income \$296.96

Montreal Tramways Co.—A Montreal press dispatch says that the directors on Aug. 25 declared another dividend to shareholders on record Sept. 8, of 2½% on arrears to be paid on the capital stock of the company. This dividend is for the quarter ended March 31, 1919, and makes the fourth payment amounting to 10% on the total of 15% arrears originally accumulated, this leaves two more distributions or 5% on the total arrears, which, it is said, will be paid within the next few months. The first dividend on arrears was paid on Dec. 31, 1919, and practically a payment of 2½% has followed every two months or so. The company has also paid regular dividends on the capital stock at the rate of 10% a year since the beginning of the year, and up the present three distributions have been made during 1920. The common dividend was deferred in the spring of 1918, but was resumed at the close of 1919. By the regular distribution of dividends on the common stock, shareholders will have received by Sept. 15 next, 17½% since Jan. 1.

Regina Municipal Railway.—

	1920.	1919.
Revenue for July	\$26,749	\$28,189
Passengers carried	588,882	582,915

A press report states that the decrease is largely due to the small number of visitors in the city during exhibition week, the total number of passengers carried during the entire week of the exhibition being 182,982, against 188,765 during the four days of the exhibition week in July, 1919.

St. Thomas Municipal Railway.—

Receipts for July	\$1,987.75
Expenditures	\$3,671.11

Deficit \$1,683.36
Passengers carried, 49,829, against 58,391 for July, 1919.

The Toronto Railway and City Percentage Payments.

As mentioned in our last issue, the Toronto Ry. requested the city to allow it to postpone any further percentage payments to the city, until the city takes over the company's property on the expiration of the franchise in Sept., 1921. The matter was brought before the city Board of Control in July, and referred to the City Solicitor for advice. The question was again brought up at a meeting of the Board of Control early in August, when it was stated that the percentage payments for June and July, due respectively in July and August, were unpaid. The Mayor urged that legal steps be taken immediately for their recovery, and that the consideration of the company's proposal be refused. He was overruled, and the discussion adjourned, pending a conference with the company's General Manager.

The agreement between the company and the city provides for the payment of certain defined percentages, "monthly, and every month during the term covered by the agreement, on the first Monday of each month." No provision is made for any specific penalty in case of failure to pay the amounts on their due dates, but another clause in the agreement provides "that the payment of the said gross percentages monthly, and mileages quarterly, and the fulfilment of the obligations of the said conditions shall be a lien and charge on the said railways and the property used in the working thereof, both before and after the incorporation of the said company intended to be substituted as aforesaid in the place of the said purchasers."

At the time of going to press no decision had been reached by the City Council, but it was proposed that the city's legal department draw up an agreement with a view to deferring payment which, if approved, is to be confirmed by legislation.

Toronto Transportation Commission.—The Toronto City Council on Aug. 5 appointed P. W. Ellis, wholesale jeweller, President Toronto Hydro Electric Commission and Chairman Queen Victoria, Niagara Falls Park Commission; Fred. Miller, of Roger Miller & Sons, harbor contractors, Toronto; and Geo. Wright, hotel proprietor, who is a member of the Toronto Hydro Electric Commission, as a commission to manage and operate the Toronto Ry. after it is taken over by the city on the expiration of the company's franchise in Sept., 1921. In the meantime the commission's duties are to consist of preparation for taking over the property, re-arranging routes, ordering additional cars, etc.

Three Rivers Traction Co.'s One-Man Cars.—In the description of these cars, published in Canadian Railway and Marine World for August, on pg. 448, it was omitted to be mentioned that they were built by the Ottawa Car Manufacturing Co.

The Toronto City Council made a trip over the London & Port Stanley Ry. Aug. 14 on the invitation of Sir Adam Beck.

Ottawa Electric Railway's Insurance and Benefit Plan.

including sickness and Marine World. The plan is a comprehensive one, covering all the risks of life and health, and is a valuable asset to the company. The plan is a new one and is a valuable asset to the company. The plan is a new one and is a valuable asset to the company. The plan is a new one and is a valuable asset to the company.

The O.E.R. Insurance and Benefit Plan.

Agreed on this day of 1920, between the Ottawa Electric Railway Co. (hereinafter called the "company"), and (hereinafter called the "employee").

1. The company desires to provide a continuing scheme of insurance for the benefit of its employees, to assist them to make provision for themselves and their families in case of death, illness, or accident not provided for by the Workmen's Compensation Act (Ontario).

2. To attain this object, the company agrees to pay, for each employee, a portion of the premiums for the policies referred to in clause 8 of this agreement and to guarantee that while the employee remains in its employ he will be entitled to benefits nos. , subject to the conditions of this agreement, and the employee agrees to pay to the company the sum of \$ per month.

3. Benefit 1. In case of death from any cause (except suicide within the first year), \$1,000 will be paid to

Benefit 2. Upon retirement from the service, at the age of 65, the employee will have his choice of the following benefits:—

(a) A cash payment of \$1,083.12.
(b) A paid-up insurance policy of \$1,625.00 (subject to further medical examination).

(c) A cash payment of \$416.22, with a paid-up insurance policy of \$1,000.00 (subject to further medical examination).

(d) An annuity of \$100 for the balance of his life, with a guarantee of \$1,000 if he dies before the tenth annuity is paid, the balance will be paid to the beneficiary named above.

If the employee by arrangement with the company remains in the service after reaching the age of 65, any cash payments due him under this agreement will be held in trust by the company, drawing interest at 3% per annum until such time as the employee, retires from the service.

Benefit 3. If the employee is prevented from working, by reason of sickness, or accident occurring while he is off duty, he will receive \$10 a week, but no payments shall be made for disability resulting from venereal disease, nor from any disease for which he is not treated by a physician, nor for the first seven plays of disability, nor for disability in excess of 26 weeks duration, nor for any bodily injuries received while doing any net or thing pertaining to any trade, business, employment, or occupation for pecuniary gain. The employee agrees that the physician appointed under this plan will be the sole judge as to whether he is not capable of performing his duties, and if he fails to return to work at the time that the said physician declares that he is capable of doing so, he will not receive any further weekly payments on account of that illness or accident.

Benefit 4. If the employee, on account of illness, or accident occurring while he is off duty is referred to under benefit 3, paragraph 1, he will be provided with free medical attendance, but this will not include the cost of surgical operations. He will also have the right to consult one of the company's physicians, at the physician's office, whenever he feels that medical advice is necessary for the benefit of his health.

Benefit 5. In consideration of the employee, continuing while in the employ of the company to pay to the company the sum of \$ mentioned in clause 2, the company undertakes to pay whatever sum is necessary to keep the employee insured under the policies mentioned in clause 8, subject to the following conditions:

(a) If the employee, before reaching the age of 65 ceases from any cause to be an employee of the company the total of the monthly sums paid in to the company by him will be returned to him with interest thereon at the rate of 3% per annum; or instead of accepting such refund the employee may continue the policy in force with the insurance company mentioned in clause 8, according to the conditions prescribed by the insurance company in that event. Provided, however, that in case the employee continues the policy in force, it is agreed that if the cash surrender value of the policy at the time the employee leaves the service of the company is greater than the total of the monthly sums paid by the employee with interest at 3% per annum, such excess belongs to the company, and must be paid to the company by the employee before the company transfers its right in the policy to the employee.

(b) Inasmuch as the withdrawal of any employee from the plan, while remaining in the employ of the company, would tend to do away with the consideration for which the company agrees to make the payments mentioned above, and would tend to prevent the plan achieving the results which it may reasonably be expected to achieve if the employee signing this contract continues to make his payments; it is agreed that if any employee while continuing in the employ of the company, gives to the company, through its Superintendent or other official, written notice that he wishes to withdraw from the plan, or who does not make any payment within 30 days after the day on which such payment became due, such employee shall thereby immediately forfeit all right, claim and interest, if any, that he or his beneficiaries may have had at the time of such notice or failure to pay, and shall not receive any benefits under this plan. And in particular it is agreed that such notice or failure to pay shall operate as a renunciation by the employee of his interest, if any, in all payments previously made by him under this plan, and that such payments shall be forfeited to the company. Provided, that where the employee has no wages due and is in the opinion of the company, temporarily unable to pay premiums on account of illness or other similar cause, the company may relieve the employee from such forfeiture.

4. All the benefits are open to all employees who are paid by the hour or day, the monthly assessment being \$1.50.

Employees who are paid by the month, the monthly assessment being \$1.25.

5. The company has no charge of any fund, but will be made except the above monthly assessment.

7. The employee agrees that the assessment mentioned in clause 2 may be deducted from the wages due him, if there are any due, as each monthly assessment becomes payable, and that the monthly assessment will be considered as due on the 20th day of each calendar month.

8. Benefits 1 and 2 are covered by policy no. , issued by The Travelers Insurance Co., Hartford, Connecticut, U.S.A., and are subject to the terms thereof. Benefit 3 is covered by blanket policy no. G.A. 66, issued by The Travelers Indemnity Co. In consideration of the company making the payments necessary to keep these policies in force, the employee assigns policy no. to the company by assignment dated . These policies are open to inspection at the office of the company at all times.

9. It is agreed that neither this contract nor the policies referred to herein shall be hypothecated as security for a loan, or otherwise used to transfer, right, title or interest to a third party.

Electric Railway Notes.

Regina, Sask., ratepayers have defeated a bylaw to provide for the operation of one-man cars on the Regina Municipal Ry. The vote was 428 against and 321 for.

The Toronto Civic Ry., to Aug. 20, had received 14 of the 25 one-man safety cars ordered from Philadelphia, Pa., and it was expected that the balance would be received by the end of August.

The London St. Ry. Co. is reported to have entered an action against the London, Ont., Free Press for alleged libel published during the recent fare agitation in the city.

St. Thomas, Ont., Municipal Ry. began the operation of one-man cars Aug. 2.

The Dominion Power & Transmission Co., Hamilton, Ont., advised us recently that it had bought 80 tons of 70 lb. steel rails.

British Columbia Electric Ry.'s head office employees held their fifth annual picnic on Aug. 5, when over 400 left Vancouver in the steamship Rowena for Bowen Island early in the morning, returning in the evening.

The Montreal Tramways Co. put into effect on Aug. 1, on all its lines, a new transfer form which had been in use for about six weeks previously on the St. Catherine St. line. The new form is punched by the conductor to indicate the proper transfer point.

Nova Scotia Tramways & Power Co.'s employees in a recent petition to the Halifax, N.S., City Council claimed that the operation of the daylight saving bylaw was a hardship in regard to the operation of the street cars and asked that the new time be abandoned. The council on Aug. 13 decided to revert to standard time on Aug. 29, two weeks later than the petition asked for, but two weeks earlier than the date named in the by-

Marine Department

General Shipbuilding Matters Throughout Canada.

B.C. Yacht & Boat Builders Co., Victoria, B.C., which has a contract from the Marine Department for building two motor boats for the British Columbia coast patrol service at \$62,750 each, has commenced work on them, the keels having been laid early in August. The boats will be 75 ft. long overall, with 17 ft. 8 in. beam, and will be equipped with heavy oil engines of the semi-Diesel type of 100 h.p. by Canadian Fairbanks-Morse Co. The company's plant is at Point Hope on the old Songhees Indian Reserve. The members of the company are returned soldiers and have qualified in boat construction in the vocational training branch of the Department of Soldiers Civil Re-establishment.

Bridgewater Shipping Co., Bridgewater, N.S., launched the tern schooner *Hazel L. Myra*, Aug. 4. Her dimensions are,—length of keel 90 ft., beam 27 ft., depth

requirements of the Argentine port authorities. The cargo will be carried in 12 tanks, 6 on each side, and at the forward end there will be a small hold for general cargo. This hold will be separated from the oil tanks by a cofferdam, and will be served by a small derrick on each side of the ship. The machinery will be located aft, with a cofferdam, and oil fuel tank and pump room between machinery space and aftermost cargo oil tank. An expansion trunk will run continuously from boiler casing front to forecabin. Steam heating coils will be fitted in the tanks to facilitate pumping of the heavy crude oil cargo. The crew will be housed in the forecabin, and officers and engineers in deckhouses aft, at each side of the machinery casings. Peak tanks will be arranged to carry fresh water, and feed water will be carried in a double bottom tank under the engines.

Shipbuilding Co. The consideration for the purchase is as follows:—First mortgage 10-year 5% serial bonds upon the corporation's property of the par value of \$1,950,000, unconditionally guaranteed as to principal and interest by the British Empire Steel Corporation. Seven per cent cumulative preference stock of British Empire Steel Corporation, of the par value of \$1,040,000. Seven per cent cumulative second preference stock of British Empire Steel Corporation, of the par value of \$1,040,000. Common stock of British Empire Steel Corporation, of the par value of \$1,040,000. The Collingwood Shipbuilding Co.'s assets are stated as \$6,500,000. The capital stock is \$2,600,000 and funded debt \$1,950,000. Two plants are operated, one at Collingwood, the other at Kingston. About 1,500 men are employed. The stock has sold recently at about 90.

Steel Cargo Steamship *Indus*, approximately 8,800 d.w. tons, built for Swedish East Asiatic Co., Gottenburg Sweden, by J. Coughlan & Sons, Vancouver, B.C. for operation in Indian Ocean.

of hold 11 ft. She is equipped with auxiliary power, was built for W. Duff, M.P., Lunenburg, N.S., who will be managing owner, and will engage in trade with the West Indies, Brazil and Europe.

Canadian Vickers Ltd., Montreal.—The contract for repairs to the C.G.S. *Montcalm* is reported to have been awarded to this company at approximately \$100,000. We have been unable to obtain confirmation of this.

Chester Basin Shipbuilders Ltd., Lunenburg, N.S., launched the tern schooner *D. D. McKenzie* Aug. 12. She is fitted with the latest coasting equipment, and has the following dimensions,—length overall 130 ft., beam 27 ft., depth of hold 11 ft., tonnage 140 net. She is owned by W. Duff, M.P., and E. C. Adams, Lunenburg, N.S.

Collingwood Shipbuilding Co., Collingwood, Ont., launched the bulk oil steamship *Transpet* July 27, for the Compania Transportadora de Petreles, Buenos Aires, a subsidiary of the Standard Oil Co. of New Jersey. The christening was performed by Miss Susan Smith, daughter of the President of the International Petroleum Co., Toronto. This is the sixth oil tank steamship built at this yard for the Standard Oil Co. and its subsidiaries, the previous five being larger than the present one. The s.s. *Transpet* is being built under Lloyd's special survey for the highest class, for river service at Buenos Aires, and has been designed to meet the

The ship will be fully equipped with steam windlass, steam steering gear, electric lighting, refrigerating machinery and cold chamber. The propelling machinery will consist of a set of triple expansion, surface condensing engines, with cylinders 12½, 21½ and 35 in. diam. by 24 in. stroke, supplied with steam by a single ended Scotch marine boiler, 11 ft. 8 in. diam. by 10½ ft. long, designed for a working pressure of 190 lbs., equipped for oil burning, and all designed for a speed of 8 knots an hour when loaded. The arrangements for handling the oil cargo will be very complete. Two duplex pumps 12 x 9 x 18 in. will be provided, with piping so arranged that the cargo tanks can either be pumped up or out. The main suction lines will be 6 in. with 4 in. branches to each tank. The general dimensions are,—length over all 175 ft. 8 in.; length b.p. 170 ft., breadth moulded 35 ft., depth moulded 10½ ft., load draft 30 ft., load, d.w., 625 tons.

At a general meeting of shareholders at Collingwood, at which 95% of the stock was represented, it was unanimously resolved to sell all the Collingwood Shipbuilding Co.'s assets to the Collingwood Shipbuilding Corporation Ltd., which H. B. Smith, President, Collingwood Shipbuilding Co., stated is a subsidiary of the British Empire Steel Corporation. The corporation undertakes to pay all accounts and assume all contracts and agreements of the Collingwood

J. Coughlan & Sons, Vancouver, B.C.

The s.s. *Indus*, builder's yard no. 16, the launching of which was announced in our last issue, and an illustration of which appears in this issue, was laid down originally for Western Canada Steamships Ltd., a subsidiary of the building company, but was sold later to the Swedish East Asiatic Co., Gottenburg, Sweden, for operation in Indian Ocean service. She was built in 66½ days and launched 89 days after the laying of the keel. She underwent her trials in English Bay July 20, averaging 13.56 knots an hour, and as upon her return it was found impossible to obtain fuel oil, it was decided to alter her to burn coal. She has been accepted by J. A. Sturrock on behalf of the owners, and has loaded flour at Puget Sound ports for Alexandria, Egypt. She is of the builder's standard 8,800 d.w. ton type, of steel, with the following dimensions,—length overall 427 ft., breadth moulded 54 ft., depth moulded 29½ ft., and is equipped with triple expansion engines, with cylinders 27, 44 and 73 in. diam. by 48 in. stroke.

The keel of a steel cargo steamship of 8,800 d.w. tons, yard no. 19, intended for one of the builder's subsidiary companies, was laid Aug. 2. She will be similar to the s.s. *Indus*, and will be equipped with triple expansion engines, with boilers fitted for either coal or oil fuel.

Halifax Shipbuilding Corporation Ltd.
launched its seventh steel cargo steamship
Volunda, July 31. This ship has been built
on the company's account, and is of the same
type as the Canadian Sealer and Canadian
Miner, built by the company for the Canadian
Government Merchant Marine Ltd. She is
approximately 2,800 d.w. tons capacity, and
is of the single deck, poop, bridge and fore-
castle type, with the following general dimen-
sions,—length overall 280 ft., length b.p. 270 ft.,
breadth moulded 38 ft., depth moulded 20½ ft.,
draft loaded 17½ ft. She will be equipped
with tri-compound engines, with cylinders 17½,
28½ and 47 in. diam., 33 in. stroke, 875 i.h.p.,
supplied with steam by 2 single ended boilers,
each 12½ ft. diam. by 10½ ft. long, at 185 lb.
working pressure, and fitted with 2 fur-
naces, having a grate surface of 80 sq. ft.,
and a heating surface of 3,000 sq. ft. She will
have a sea going speed under full load of about
8½ knots an hour. The company is laying the
keel for a similar ship, on its own account, and
has also one of the same type under construction,
which is understood to be for the Canadian
Government Merchant Marine, but the contract
for which had not been agreed up to Aug. 18.

W. R. Huntley & Son, Parrishoro, N.S.,
launched its seventh steel cargo steamship
Volunda, July 31. This ship has been built
on the company's account, and is of the same
type as the Canadian Sealer and Canadian
Miner, built by the company for the Canadian
Government Merchant Marine Ltd. She is
approximately 2,800 d.w. tons capacity, and
is of the single deck, poop, bridge and fore-
castle type, with the following general dimen-
sions,—length overall 280 ft., length b.p. 270 ft.,
breadth moulded 38 ft., depth moulded 20½ ft.,
draft loaded 17½ ft. She will be equipped
with tri-compound engines, with cylinders 17½,
28½ and 47 in. diam., 33 in. stroke, 875 i.h.p.,
supplied with steam by 2 single ended boilers,
each 12½ ft. diam. by 10½ ft. long, at 185 lb.
working pressure, and fitted with 2 fur-
naces, having a grate surface of 80 sq. ft.,
and a heating surface of 3,000 sq. ft. She will
have a sea going speed under full load of about
8½ knots an hour. The company is laying the
keel for a similar ship, on its own account, and
has also one of the same type under construction,
which is understood to be for the Canadian
Government Merchant Marine, but the contract
for which had not been agreed up to Aug. 18.

Nova Scotia Shipbuilding & Transportation Co., Liverpool, N.S., launched its
seventh steel cargo steamship Volunda, July 31.
This ship has been built on the company's
account, and is of the same type as the
Canadian Sealer and Canadian Miner, built
by the company for the Canadian Government
Merchant Marine Ltd. She is approximately
2,800 d.w. tons capacity, and is of the single

17½, 28½ and 47 in. diam., 33 in. stroke,
875 i.h.p., supplied with steam by 2 single
ended boilers, each 12½ ft. diam. by 10½ ft.
long, at 185 lb. working pressure, and fitted
with 2 furnaces, having a grate surface of
80 sq. ft., and a heating surface of 3,000 sq.
ft. She will have a sea going speed under
full load of about 8½ knots an hour. The
company is laying the keel for a similar ship,
on its own account, and has also one of the
same type under construction, which is
understood to be for the Canadian Govern-
ment Merchant Marine, but the contract for
which had not been agreed up to Aug. 18.

Prince Rupert Drydock & Engineering
Co., Prince Rupert, B.C.—W. T. Donnelly,
New York, the engineer who designed and
built this drydock and plant at Prince Rupert
for the Grand Trunk Pacific Ry., visited the
yards recently, on behalf of Newman Erb, of
New York, and associates, who have a lease of
the plant, and it is reported that he has
recommended a general development of the
yards and the construction of large oil tanks,
as the present facilities there are not sufficient
to enable the company to extend its business to
handle some prospective contracts.

pletion of these contracts, the plant was
sold to the National Shipbuilding Cor-
poration and contracts for wooden steam-
ships were carried out for the French
Government and the yard was remodelled
to build steel steamships.

Wallace Shipyards Ltd., North Van-
couver, B.C.—It is reported that the C.
P.R. has ordered a steamship from this
company for its B.C. Coast Service, to
replace the s.s. Princess Sophia, which
was lost with her passengers and crew on
the Vanderbilt Reef in the Portland
Canal Oct. 24, 1918. The new ship has,
it is said, been specially designed for the
Alaska service, and will be 325 ft. long,
with a speed of 17 knots. The contract
price is stated to be about \$1,500,000.

Victoria, B.C.—Capt. A. Berquist, a
local owner and builder of steam tugs,
is reported to have bought the Point
Ellice yard, operated formerly by the
Foundation Co. of British Columbia, Ltd.
The plant as it stands is valued at \$250,000,
and consists of 4 building ways, 2
overhead gantries, some electrically driven
machinery and general shipbuilding
plant and buildings. It is said that the
new owner contemplates building tugs
and barges as soon as his plans are com-
pleted, and he has arranged a lease of

the land from the B.C. government.

Victoria (B.C.) Shipyards Ltd., Victoria,
B.C.—J. W. Spencer, President, and
F. B. Pemberton, have resigned from
the board of directors of this company.
The company is building four wooden barkentines
at Chulberg shipyard, under Dominion
Government aid, through loans of \$175,000
from the B.C. government.

Yarrow Ltd., Victoria, B.C.—N. A.
Yarrow, Manager, who is at present in
Great Britain, is reported to be discussing
with the management of the parent
company, Yarrow & Co. Ltd., Glasgow,
the possibility of transferring the Clyde
plant to British Columbia. Sir Alfred
Yarrow stated some time ago that if
labor troubles continued to occur on the
Clyde, his company would have to con-
sider seriously the question of trans-
ferring its works to British Columbia.

Icebreaking Steamship for St. Lawrence River.

The Marine Department called for tenders
to Aug. 13, for the construction of
an icebreaking steamship for service in
the St. Lawrence River and Gulf, the
plans and specifications having been pre-
pared largely on the lines of those of the
icebreaking steamship J. D. Hazen, which
was built by Canadian Vickers Ltd., for
the Department, but transferred to the
Russian Government, early in the war,
at the request of the British Government.
We have been advised that the tenders
received were considered excessive by the
Department, and that they were all re-
jected. The question of calling for new
tenders, or postponing further action un-
til Parliament meets, is under considera-
tion.

The general dimensions of the proposed
ship are,—length between perpendiculars
275 ft., breadth moulded 57½ ft.,
depth moulded 32 ft., tonnage, 3,520
gross, indicated horsepower 8,000, speed
16 knots. The estimates for 1920-21 con-
tain an appropriation of \$2,000,000 for
building this ship.

A Vancouver press dispatch of Aug.
13, states that Wallace Shipyards Ltd.,
North Vancouver, B.C., has been advised
that its tender for the construction of this
steamship was the lowest of those
submitted by any firm on the American
continent, but that it exceeded the
amount of the appropriation. It is stated
that the Wallace Shipyards tenders was
about \$3,000,000.

The Magog & Newport Steam Navigation
Co. Ltd. has been incorporated under
the Dominion Companies Act, with
\$200,000 authorized capital and office at
Montreal, to build, own and operate
steam and other ships of every descrip-
tion, and general navigation and trans-
portation facilities, for handling passen-
ger and freight traffic. The incorporators
are: J. DeWitt, O. S. Pyndale, H. C.
McNeil, O. F. Edwards, Montreal, and
H. Pond, Outremont, Que.

Canadian Pacific Ocean Services' s.s. Empress of Canada Launched.

The s.s. Empress of Canada, which is being built at Glasgow, Scotland, for Canadian Pacific Ocean Services' Pacific service, was launched Aug. 17, the ceremony being performed by Mrs. G. M. Bosworth, of Montreal, wife of the Chairman of the managing company. On completion of the ship in March, 1921, she will sail from Liverpool, Eng., for Vancouver, B.C., via the Suez Canal, on a round-the-world trip, details of which, together with some particulars of the ship, were given in our last issue.

Sir Thomas Fisher, K.B.E., General Manager, Atlantic Lines, C.P.O.S., London, Eng., is reported to have stated in a speech following the launching regarding prospects of steamship service on the Atlantic, that unless there is some cessation in the continually rising costs, British shipyards may find themselves without orders, and that under present conditions it would be absolutely unthinkable to lay down another ship to-day like the Empress of Canada. Before the war, Atlantic steamships cost \$550,000, whereas the Empress of Canada cost \$1,700,000. Increased maintenance is still more serious, and the difference in the cost of running a ship of the type of the company's s.s. Calgarion, could be estimated as follows,—coal per voyage before the war \$4,500, now \$24,000; repairs per round trip, before the war \$7,700, now \$17,000; provisions, before the war \$3,000, now \$8,000; wages before the war \$2,500, now \$9,000. Apart from the cost of the improved accommodation, etc., the total increases for the round trip approximate \$60,000, and the increase in passenger rates is only 185%, against the cost increase of 850%. This, he claimed, could not continue very long, a number of first class ships would necessarily be laid up and he could not conceive of anything worse for the Empire than charging such immense sums. The rising of Atlantic rates would seriously impede communication between different parts of the empire, which, he claimed, if not stopped, would mean empire disintegration. He urged economy in shipbuilding, by better organization, and suggested that standardization might possibly give some reduction in costs. One principal economy in operation, he stated, would be to reduce speed by four knots an hour, and he believed that oil burners as at present utilized on some steamships, would be followed in about five years by internal combustion engines, which, he claimed, would about halve the cost of fuel and bring matters nearer to the pre-war position.

The ship has an overall length of 653 ft., is 77½ ft. wide and 53½ ft. deep to the bridge deck. She has a straight stem and cruiser stern, and will have 3 funnels and 2 pole masts and will be rigged as a fore and aft schooner. There will be a continuous shelter deck with bridge, promenade and boat decks over, the former extending for the full length of the ship; two complete 'tween decks and lower Orlop 'tween decks at fore and aft ends. She will have a gross tonnage of about 20,000 tons and will be arranged to carry about 490 first class, 106 second class, 238 third class and 932 Asiatic steerage passengers and 547 of a crew. Of the cargo spaces a large portion will be fitted for the carriage of silk and refrigerated cargo. The deadweight will be 9,500 tons and the ocean speed not less than 18 knots. The ship is built to the highest class of Lloyd's register, to

full Board of Trade requirements, and will be subdivided in full accordance with the requirements of the Bulkhead Convention.

The first class accommodation will be arranged on the shelter deck, in 2, 3 and 4 berth rooms, and on the bridge deck in 1, 2 and 3 berth rooms, also in a number of special rooms and private suites, comprising sitting rooms, bedrooms and bathrooms. The staterooms will be fitted up with the latest type of open wash basin, having a supply of hot and cold fresh water. The public lavatories and bathrooms will be fitted up with the most modern improvements in sanitary fittings. The dining saloon will be on the upper deck and will accommodate 307 persons; there will be a large reception room forward of the dining saloon, with a passenger elevator at its fore end; and on this deck there will also be a large swimming bath and gymnasium with dressing rooms and other auxiliaries. The remaining public rooms will be on the promenade deck and will include a large lounge, with cinema operating room, long gallery, card room, children's room, drawing room, writing room, smoking room and verandah cafe. They will be treated in a most elaborate and luxurious style in the matter of design and comfort. Long promenades and recreation spaces for games, dancing, etc., will be reserved for the passengers.

The approach to the dining saloon on D deck will be through the first class reception room, which is designed as a large open space suitable for dancing, with a floor space of over 300 superficial feet, and with arched recesses at the sides fitted with fixed seatings and a space for the orchestra. It will be panelled throughout in large painted panels, of a light grey tone with mouldings picked out in white. In the central portion there will be large arch-headed mirrors at the aft end, with jardinières for flowers at their feet, and on the forward end a handsome wrought iron lift enclosure.

The first class dining saloon will be approached from the reception room through two auxiliary dining rooms, which will also serve as supper rooms on the occasion of dances in the reception rooms. It will be capable of seating 325 people. The seating will be arranged to provide separate tables for parties of 6, in recesses at the ship's sides, and 24 other tables seating 4 each, adjoining the main gangways, reserving the long tables for the central portion of the room. The central portion will be carried up to the height of two decks, the upper portion being arcaded in treatment, open at one side to a gallery, and on the other side glazed with semi-circular mirrors. At the forward end will be the musicians' gallery, with a handsome wrought iron balustrade, and at the after end will be a fine carved mahogany sideboard. The whole motive of the central portion is designed to give a great appearance of height. The general scheme of this room will be Georgian in character, with large painted panels of a similar color scheme to the reception room, and with mirrors between these panels, which will add to the light of the room.

The general design of the main stairway follows closely that of the reception room. It will be fitted with fine wrought iron lift enclosures and balustrades at each deck level. On the prom-

enade deck it will open into the long gallery, which will be made a feature of the ship, as it will give access to all the principal first class rooms. It will be 13 ft. wide and 110 ft. long. It will be panelled in polished Honduras mahogany, and the sides will be hung with choice prints and will be amply lighted from the ship's side.

At the forward end of the lounge gallery will be the first class lounge gallery. This room has been planned with a view to providing a large open central space, raised about 4½ ft. in height above the rest of the room and it will be lighted by clerestory windows, by a handsome wrought iron lay light. It will be utilized as a music room, and also for cinema exhibitions. The central portion will be divided from the outer portions by arches supported by columns. The remainder of the room, which will be at the lower level, will be arranged with a view to providing for card parties. The keynote of this design is the wall decoration, which will consist of large brocade panels of a rich design in walnut framing. The utmost use will be made of the facilities for lighting this room, by introducing large teak windows, with transom lights, at frequent intervals along the side, and by large teak bays at the forward end. The floor of this room will be in oak parquet.

The smoking room has been planned on somewhat similar lines. The central portion in itself will constitute a large and well lit room, while the portions towards the sides of the ship will be adapted with a view to the accommodation of card parties. The room will be panelled in large oak panels, sub-divided with carved ionic columns. At the sides of the ship there will be 3-light mullioned and transomed windows. The features of this room will be the fireplace at the after end with its large canopied pediment, under which will be a carved Canadian coat of arms, and at the forward end will be the handsome central doorway surmounted by a carved and quilt Sunray clock.

The first class card room's walls will be panelled throughout in grey sycamore panels, with large fielded and selection moulded panels, and with a fine carved cornice and bold dado skirting mouldings.

The first class drawing room main feature will be the decoration of the panels above the dado, which will be in specially selected printed linen, with curtains and upholstery to match. The framing of these panels at intervals will be carved and gilt mirrors, and over the fireplace a painted flower picture. All the panelling and dado panelling will be painted in mahogany in soft tints.

The second class accommodation will be arranged on the shelter deck aft, in 2 and 4 berth rooms. The state rooms will be fitted up similar to the first class. The dining saloon will be on the upper deck, and will accommodate 100 persons and there will be a lounge on the bridge deck aft.

The third class (permanent and portable) will be arranged on the upper and main decks in large 2, 4 and 6 berth rooms. The dining saloon will be on the upper deck and will accommodate 100 persons. The Asiatic steerage will be arranged in compartments, on the main, upper and shelter decks, in open berths. Large and airy rooms will be arranged for officers and crew.

Canadian Government, Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Launching of Steamships.—Since Canadian Railway and Marine World for August was issued we have been advised of the following launchings of steel cargo steamships for Canadian Government Merchant Marine.

July 20 and 26, s.s. Canadian Squatter, Marine Department contract 45; builder's yard no. 5; approximately 4,575 d.w. tons, British American Shipbuilding Co., Welland, Ont. The aft section was launched July 20, and the forward section July 26, both sections being towed to Montreal, where they will be joined together.

July 27, s.s. Canadian Conqueror; Marine Department contract 51; builder's yard no. 78; approximately 8,390 d.w. tons, Canadian Vickers Ltd., Montreal.

Aug. 14, s.s. Canadian Fisher, Marine Department contract 15; builder's yard no. 7; approximately 5,100 d.w. tons,

cargo at Sydney, N.S., for Liverpool, Eng.

Names of Steamships.—The name chosen for the steel cargo steamship being built under Marine Department contract 54, by Midland Shipbuilding Co., Midland, Ont.; builder's yard no. 10; approximately 3,890 d.w. tons; for Canadian Government Merchant Marine Ltd. has been changed from Canadian Racer to Canadian Logger.

We were officially advised on Aug. 20 that while the contract to be numbered 59, for building a steel cargo steamship by the Nova Scotia Steel & Coal Co., builder's yard no. 8, approximately 2,800 d.w. tons, had not been signed, the name Canadian Sapper has been selected, in the event of the contract being awarded. The keel for this ship was laid May 4.

Oil Fuel Equipment.—We are officially advised that oil fuel equipment will be provided on the following ships being

ger service with the West Indies is to be operated successfully, the ships will have to be of a class to compete on even terms with those sailing from New York.

Refrigeration Equipment.—We are officially advised that refrigerator equipment will be fitted in the following ships now building for Canadian Government Merchant Marine Ltd., viz., Canadian Winner and Canadian Traveller, by Harbour Marine Co., Victoria, B.C.; Canadian Exporter, Canadian Inventor and Canadian Prospector, by J. Coughlan & Sons, Vancouver, B.C.; Canadian Cruiser and Canadian Constructor, by Halifax Shipyards Ltd., Halifax, N.S.; Canadian Victor, Canadian Conqueror, Canadian Commander, and Canadian Leader, by Canadian Vickers Ltd., Montreal; Canadian Highlander and Canadian Skirmisher, by Wallace Shipyards Ltd., North Vancouver, B.C.

Steel Cargo Steamship Canadian Runner, approximately 4,350 d.w. tons, built for Canadian Government Merchant Marine Ltd., by Port Arthur Shipbuilding Co., Port Arthur, Ont.

Tidewater Shipbuilders Ltd., Three Rivers, Que.

Deliveries of Steamships.—In addition to the steamships mentioned in Canadian Railway and Marine World previously, the following deliveries have been made to Canadian Government Merchant Marine Ltd.:—

July 17, s.s. Canadian Inventor, Marine Department contract 36; builder's yard no. 13; approximately 8,390 d.w. tons; J. Coughlan & Sons, Vancouver, B.C. This ship loaded general cargo and lumber and sailed from Vancouver, Aug. 13, for Sydney and Melbourne, Australia.

July 18, s.s. Canadian Otter; Marine Department contract 44; builder's yard no. 4; approximately 4,575 d.w. tons; British American Shipbuilding Co., Welland, Ont. This ship loaded a general cargo at Montreal and sailed Aug. 20 for Barbados, Trinidad and Demerara.

Aug. 10, s.s. Canadian Hunter, Marine Department contract 18; builder's yard no. 460; approximately 5,100 d.w. tons; Davie Shipbuilding & Repairing Co., Lauzon, Que. This ship loaded a

built for Canadian Government Merchant Marine Ltd., viz.: Canadian Highlander and Canadian Skirmisher, Wallace Shipyards Ltd., North Vancouver, B.C.; Canadian Challenger, Davie Shipbuilding & Repair Co., Lauzon, Que.; Canadian Transporter and Canadian Freighter, J. Coughlan & Sons, Vancouver, B.C.

Passenger Accommodation for Trade with West Indies.—The question of providing some passenger accommodation, on some of the steel cargo steamships being built for Canadian Government Merchant Marine, to be used in the West Indian service has been under the Marine Department's consideration, and it has been decided to make the changes necessary in the two ships being built by Tidewater Shipbuilders Ltd., Three Rivers, Que., viz., Canadian Fisher, and Canadian Forrester, each approximately 5,100 d.w. tons, and similar changes in other ships are being considered. This, however, can only be a temporary expedient, as these ships will have a speed of only 11 knots, which is not sufficient for passenger business, and if a passen-

Officers of Steamships.—The following masters have been appointed to steamships by Canadian Government Merchant Marine Ltd., since those mentioned in our last issue:—Canadian Miner, Capt. A. Blouin, vice Capt. M. Fraser, resigned; Canadian Otter, Capt. J. McFadyen; Canadian Victor, Capt. M. Robertson; Canadian Volunteer, Capt. C. R. Bissett. Chief engineers have been appointed as follows:—Canadian Conqueror, J. J. Pringle; Canadian Spinner, W. Humphreys.

The s.s. Canadian Inventor, which loaded lumber at Chemainus, B.C., towards the end of July, for Australia, is expected back at Vancouver about Nov. 1, when she will inaugurate the Canadian Government Merchant Marine service to India and other Oriental ports. It is stated that capacity cargo for this ship has already been booked for Shanghai, Hong Kong, Singapore, Calcutta, etc.

British American Shipbuilding Co., Welland, Ont., advised us Aug. 18 that the s.s. Canadian Otter; Marine Department contract 44; builder's yard no. 4;

Canadian Vickers Ltd. plant, and had been ordered in the summer of 1919. The ship was built at the Vickers Ltd. plant, and had been ordered in the summer of 1919. The ship was built at the Vickers Ltd. plant, and had been ordered in the summer of 1919.

Canadian Vickers Ltd. plant, and had been ordered in the summer of 1919. The ship was built at the Vickers Ltd. plant, and had been ordered in the summer of 1919. The ship was built at the Vickers Ltd. plant, and had been ordered in the summer of 1919.

Canadian Vickers Ltd. plant, and had been ordered in the summer of 1919. The ship was built at the Vickers Ltd. plant, and had been ordered in the summer of 1919. The ship was built at the Vickers Ltd. plant, and had been ordered in the summer of 1919.

David Shipbuilding & Repairing Co., Lauzon, Que., delivered the steel cargo steamship Canadian Hunter, Marine Department contract 18; builder's yard no. 460; approximately 5,100 d.w. tons; to the Marine Department, Aug. 10. She was transferred to Canadian Government Merchant Marine, and proceeded to Sydney, N.S., and loaded a cargo for Liverpool, Eng.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—The s.s. Canadian Runner, Marine Department contract 32; builder's yard no. 43; approximately 4,350 d.w. tons, built by this company, sailed from Port Arthur, Ont., Aug. 8, with a cargo of grain for Port Colborne, on her way to the ocean. She is stated to be the largest ocean going freight steamship ever built on the Great Lakes and she will be cut in two by the Great Lakes Engineering Co. at Ashtabula, Ohio, and the two sections will be towed through the canals by the Great Lakes Towing Co., to Montreal, where the sections will be rejoined by Canadian Vickers Ltd., after which she will be operated on the West Indies route. Her keel was laid Aug. 29, 1919, and she was launched May 8, 1920. Her dimensions are,—length overall 333 ft. 7 in., length b.p. 319 ft. 10 in., breadth moulded 43 ft. 10 in., depth moulded 25 ft. She is of the two deck, poop, bridge and forecastle type with 'tween decks, and is equipped with triple expansion condensing engines of 1,900 h.p., supplied with steam by two Scotch boilers, each 15 ft. diam. by 11 ft. long, under forced draft. Her propellers are of bronze, and on her trial trip she developed a speed of 12 knots an hour.

Tidewater Shipbuilders Ltd., Three Rivers, Que., launched the steel cargo steamship Canadian Fisher, Marine Department contract 15; builder's yard no.

Coal Exportation Prohibited and Rules for Bunkering Atlantic Steamships Suggested.

Trade authority of the Dominion Parliament at its last session, and which was published in full in Canadian Railway and Marine World for August, pg. 431, the Board of Railway Commissioners passed a resolution on July 22, as follows:—"In the matter of the question of the coal supply in Canada, and the powers conferred upon the board by chap. 66 of the act of the Parliament, 1920: Upon its appearing to the board that there is a real or apprehended scarcity of coal, with a view to conserving the supply, and in pursuance of the powers conferred by the said act, the board doth order that the exportation of coal from the Atlantic, St. Lawrence River and Gulf ports of Canada, except to the United States or to Newfoundland, unless otherwise permitted, and in accordance with regulations to be promulgated by the board, be, and it is hereby prohibited on and after Aug. 1, 1920."

Suggestions for Bunkering Atlantic Steamships.

Hon. F. B. Carvell, Chief Railway Commissioner, has written Thos. Robb, Manager, Shipping Federation of Canada, as follows:—"In order to conserve to as great degree as possible the coal supplies of Canada, this board, as you are already aware, has by order prohibited the exportation of coal from Eastern Canada after Aug. 1, which will release nearly 100,000 tons a month for home consumption which has been exported during the present summer. This, if properly distributed, should to some extent relieve the situation. We have interviewed the Interstate Commerce Commission, the Chairman of the American Railway Association, and others in authority in that country, earnestly desiring a larger amount of U.S. coal, and do not feel we are treating them fairly in allowing coal imported presumably for our domestic purposes to be used for bunkering ships not only across the Atlantic, but for the return voyage, as has been a very common practice since the opening of navigation on the St. Lawrence. While realizing the responsibility resting upon this board, as well as the danger of interfering with the trade routes of the country, we have decided for the present not to issue positive orders, but to express to you our wishes re the bunkering of coal as follows:—

"That passenger and freight liners for United Kingdom ports running on schedule may be bunkered at Montreal.

"That passenger and freight liners to French Atlantic ports may be bunkered to destination and thence to a United Kingdom port only, unless it be a liner returning direct to Canada, when it may receive sufficient bunkering to bring it back to Canada.

"That tramp steamships should be allowed only sufficient coal at Montreal or Quebec to carry them to Sydney, and at that point should receive sufficient coal to take them to destination, and, if bound to the Mediterranean, sufficient to bring them back to Canada.

"That all vessels for South Africa, South America, the West Indies, Australia and New Zealand may be bunkered at Sydney, N.S., where they will be provided with sufficient coal for a return or to first coal port, excepting vessels loading at Montreal or other Canadian port requiring surplus bunkers stowed under

port.

That if it is found that a United Kingdom port should, whenever possible, be bunkered at the first Canadian port, Canada and return."

It is reported that the N.S. time 21, about 19,000 tons, is now waiting in port, in the hope that the prohibition against the exportation of coal to Europe, which is now in effect, sailed for other ports Aug. 16. One, the s.s. Lord Dufferin, which, it is stated, had about 7,000 tons of coal on board at the time the prohibition went into effect, was allowed to leave for Holland.

Canal Traffic Statistics.

Figures issued by the Dominion Bureau of Statistics show a falling off in traffic through Canadian canals in July. The total number of vessels through all canals was 4,969, with 1,971,193 net tonnage, a decrease from July, 1919, of 261,399 tons. Cargoes totalled 1,272,746 tons, a decrease of 210,378. Since the opening of navigation the cargoes through the canals are: Bituminous coal, 1,201,806 tons, decrease 136,954; anthracite coal, 172,542 tons, decrease 41,785; iron ore, 464,043 tons, decrease 1,214,680; pulpwood, 259,828 tons, increase 62,814; wheat, 562,815 tons, decrease 327,368; oats, 88,312 tons, increase 1,128; flour, 104,367 tons, decrease 60,323.

The main July cargoes, as compared with July, 1919, are: Bituminous coal, 489,423 tons, decrease 6,376; wheat, 127,000 tons, decrease 1,738; iron ore, 79,768 tons, decrease 123,816; pulpwood, 124,835 tons, increase 15,177; anthracite coal, 68,534 tons, decrease 6,732; sand, 106,348 tons, increase 36,371.

Toronto Floating Drydock.—John E. Russell, contractor, Toronto, has bought a floating drydock, in Montreal, and it is being towed to Toronto, where it will be used for the repair and overhaul of ships. The dock was a part of the plant which was established in Montreal by the U.S. Emergency Fleet Corporation, for use in connection with the joining of U.S. ships which were sent through the Welland Canal from the Great Lakes to the seaboard, during the war. The dock, which is built in sections, capable of being added to, is stated to be about 300 ft. long, and it is probable that it will be acquired by the Toronto Dry Dock Co., which, in 1917, bought a floating drydock about 160 ft. long, at Sturgeon Bay, Wis., with which it may be incorporated, thus giving sufficient dock capacity for handling the larger ships trading on the lakes. The Toronto Dry Dock Co. was incorporated under the Ontario Companies Act in 1917, the incorporators being C. S. Boone, President; J. E. Russell, Vice President and Managing Director; L. Solman, Manager, Toronto Ferry Co.; J. J. Manley, and H. Dickson.

Vaccination of Steamship Passengers. Quebec press dispatch.—Steamship officials are disturbed over orders issued by the Immigration Department that no passengers on ocean liners, whether saloon, second cabin or third class, be permitted to land at Canadian ports unless being vaccinated, unless they can give proof that they have been vaccinated within the required time. They point out that the ruling is absurd, since passengers can land at any point in the United States and enter Canada by rail without being vaccinated.

Canada-West Indies Trade Agreement and Steamship Services.

The Government of Canada, in giving six months notice may provide that, to be entitled to the concessions granted in articles V and VI the products of Canada shall be conveyed by ship direct without transshipment from a Canadian port into the said colony or by way of one of the other colonies entitled to the advantages of this agreement.

The Government of Canada on giving six months notice may provide that, to be entitled to the concessions granted in articles II and III, the products of any of the colonies aforesaid shall be conveyed by ship direct without transshipment from the said colony or from one of the other colonies entitled to the advantages of this agreement into a Canadian port. Provided that, should the discretion recognized in this article be at any time exercised by the Government of Canada, provision shall be made, in all contracts entered into with steamships subsidized by the Dominion and the colonies aforesaid and plying between ports in Canada and ports in the said colonies, for an effective control of rates of freight.

Steamship Services.—Eastern Group.

Article X. The Government of Canada will use its best endeavors to arrange for a mail, passenger and freight steamship service to come into effect as soon as possible, and in any case within three years, between Canada, Bermuda, the Leeward Islands, the Windward Islands, Barbados, Trinidad, and British Guiana, on the following lines:

(1) Steamers shall sail weekly from St. John or Halifax, calling one week on the outward passage at Bermuda, Barbados, Trinidad and British Guiana, and on the homeward passage at Trinidad, Grenada, St. Vincent, Barbados, St. Lucia, Dominica, Montserrat, Antigua, Nevis, St. Kitts and Bermuda; on alternate weeks calling on the outward passage at Bermuda, St. Kitts, Nevis, Antigua, Montserrat, Dominica, St. Lucia, Barbados, St. Vincent, Grenada, Trinidad, and

Trinidad, Barbados, and Grenada. The steamer shall be from 1,000 to 1,500 tons, shall be fitted with a cargo hold, and shall be provided with a deck, passengers, and shall be provided with 'tween decks.

Article XI. The Government of Canada will stipulate in any contract entered into for such steamship service that:—

(1) There shall be reasonable proportionate allocation of passenger and cargo accommodation between the colonies mentioned in article X.

(2) There shall be no unfair differentiation in rates of freight against the smaller colonies as compared with the rates to larger colonies situated at a similar distance from St. John or Halifax.

(3) The steamers shall be so constructed that, so far as the traffic warrants, cold storage shall be provided if this can be secured without unreasonable additional cost.

Article XII. If a subsidized steamship service is arranged for, the Government of Canada will endeavor to secure the co-operation of the owners of such steamship service towards the provisions of hotels and bungalows in the colonies, the governments of the colonies being prepared on their part to offer such facilities as may be practicable, both as regards sites and financial assistance.

Article XIII. The representatives of the colonies mentioned in article X undertake to recommend to their governments that these governments shall contribute towards such subsidized steamship service, when established, not less than the following amounts annually: Barbados, \$5,000; Bermuda, \$2,000; British Guiana, \$7,500; Leeward Islands, \$2,500; Trinidad, \$7,500; Windward Islands, \$2,500; total, \$27,000.

Article XIV. Pending the establishment of such service the Government of Canada will use its best endeavors to maintain a fortnightly service on the existing lines and to supplement it with such additional freight or passenger and freight vessels as the trade may require.

Steamship Services.—Western Group.

Article XV. The Government of Canada, subject to the adoption by the Governments concerned of the recommendations embodied in article XVI, undertakes to provide as soon as possible, and in any case not later than Jan. 1, 1921, a fortnightly freight, mail and passenger steamship service between Canada, the Bahamas, Jamaica, and British Honduras, on the following lines:—

(1) The steamers shall not be less than 3,500 long tons d.w., shall have an ocean going speed of not less than 10 knots, and shall have accommodation for from 15 to 20 first class passengers, and shall be provided with 'tween decks, and, so far as the traffic warrants, with cold storage, if this can be secured with reasonable cost.

(2) The steamers shall sail from Canadian ports as freight conditions require and shall proceed to Belize in British Honduras, calling at Nassau in the Bahamas, and at such port or ports in Jamaica as may be necessary, and shall call on the return voyage at such port or ports in Jamaica as may be necessary, and at Nassau.

Article XVI. The representatives of the colonies mentioned in article XV undertake to recommend to their governments that these governments shall, if the service is established, contribute towards the cost of such service, not exceeding, in the case of the Bahamas, \$2,000 a year; in the case of British Honduras, \$5,000 a year, and in the case of Jamaica, \$5,000 a year.

Article XVII. This agreement shall be subject to the approval of the Parliament of Canada and of the legislature of each of the colonies aforesaid, and of the Secretary of State for the Colonies. Upon such approval being given, the agreement shall be brought into force at such time as may be agreed upon between the governments of Canada and of the colonies aforesaid by proclamation to be published in the Canada Gazette and in the official gazette of each of the said colonies.

Article XVIII. This agreement shall remain in force for ten years after the proclamation aforesaid and thereafter until terminated by 12 months written notice given either by the Government of Canada, or by the government of any of the colonies aforesaid, but in the latter case the agreement shall remain in full force and effect as to any of the other colonies which have not given such notice.

A Halifax, N.S., press dispatch says a meeting of the local board of trade's council was held there Aug. 20 to discuss a matter in connection with the Canada-West Indies trade agreement, information having been received by the board to the effect that unless certain conditions are complied with Bermuda may be left out as a port of call. It was shown that Bermuda's purchases in Canada amount to practically \$1,500,000, Halifax sharing largely in this. The council decided to write the Minister of Trade and Commerce, asking if the information is correct, and if it is, the board will make representations in the matter.

Welland Canal Lock Gate Accident.—While the s.s. Robert R. Rhodes, owned by W. E. Lawlor, Hawkesbury, Ont., up-bound and light, was being raised in lock 9, Welland Canal, Aug. 3, the two lower gates of the lock were broken over, and it was necessary to replace them by spare gates. It is stated that the ship did not touch the gates and that apparently the valves in the upper gates were opened when the lower gates were not properly mitered, but whether the responsibility for this rests on the lock motormen, or the ships crew, was not determined. Navigation was resumed at 6.30 a.m. Aug. 4, very few ships being delayed. The cost of the lock repairs is estimated at \$6,000, the ship was not damaged.

South American Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with \$750,000 authorized capital and office at Toronto, to operate freight and passenger steamships, and to carry on general navigation, transportation and other allied businesses. The incorporators are: M. L. Gordon, J. S. Duggan, J. W. Bicknell, T. S. H. Giles and M. H. MacGregor, Toronto.

The American Association of Port Authorities will hold its convention at Chicago, Ill., Oct. 4 to 6. A number of papers will be read, four of them dealing with Canadian ports.

The United Kingdom Resumes Supremacy in Shipbuilding.

By Harrison Watson, Chief Canadian Trade Commissioner in the United Kingdom.

The outstanding feature of Lloyd's shipbuilding report for the quarter ended June 30, 1920, is that the further and uninterrupted increase in the tonnage of merchant vessels under construction in the United Kingdom has enabled that country to almost reverse her position of a year ago in comparison with the United States, in so far that, while on June 30, 1919, the tonnage building in the United States exceeded that under construction in the United Kingdom by approximately 1,350,000 tons, the surplus at the present time in favor of the United Kingdom is about 1,472,000 tons. In fact shipbuilding in the United States during the past year has fallen off by nearly a half, because whereas the tonnage returns under construction on June 30, 1919, showed 994 ships with a gross tonnage of 3,874,143, the present position shows 414 aggregating only 2,105,956 tons. The opposite result achieved in the United Kingdom is shown in the following table:

Description.	June 30, 1920.	No.	Gross tons.
Steel	888	3,666,251	
Ferro-Concrete	3	860	
Wood and composite	4	1,799	
Total	895	3,565,910	
Sail			
Steel	11	9,469	
Ferro-concrete	3	2,174	
Wood and composite	2	600	
Total	46	12,243	
Total, steam and sail	941	3,578,153	

During the past three months ended June 30, 200 steamships, aggregating 584,829 tons, and 14 sailing ships with a tonnage of 3,775 tons, were commenced, while 154 steamships with a tonnage of 518,568 and 11 sailing ships aggregating 4,375 tons were launched.

It seems scarcely necessary to state that the extraordinary increase in U.S. ship construction which took place during the war was due to unique circumstances which have now largely passed away, and the results achieved are a lasting tribute to U. S. enterprise. Upon the other hand, even if there has been a heavy falling off from the express speed of war requirements, the U.S. has risen from her comparatively humble pre-war position to that of the second shipbuilding nation in the world, and on June 30 was constructing more than half of the merchant ships building in the whole of the world outside of the United Kingdom, with an output more than five times greater than her nearest competitor on that date—Holland.

Lloyd's figures show that on June 30 merchant ships being built in the whole world aggregated 7,720,904 tons, to which the United Kingdom contributed 3,578,153 tons, and all other countries 4,142,751 tons, which is in striking comparison with similar figures of a year ago, when the United Kingdom's share of 8,017,767 tons was only 2,524,050 tons against 5,493,717, so that the proportion during the twelve months has risen from 30% to 46%.

Construction in the British dominions has fallen from 346,453 tons in June, 1919, to 268,799 at present, and Canada's proportion has gone back from 261,643 tons to 209,405, but this is entirely due to a reduction of 73,000 tons in wooden ships, and there was an actual increase in steel ships of 26,000 tons.

The gross tonnage of merchant ship construction on June 30, 1920, in the principal countries, excluding the United Kingdom, was:—

	Tons.
United States	1,350,000
Holland	200,000
Italy (including Trieste)	100,000
British Dominions	268,799
France	50,000
Japan	250,000
Sweden	12,000
Denmark	18,400
Norway	81,000

A United States View of the Situation.

Washington, D.C., press despatch, Aug. 16.—Lloyd's shipbuilding returns, just issued, show that the volume of shipping under construction in England has increased by nearly 60% during the last 15 months, while that of the United States has been reduced by nearly 50%. The complete change of position between the two countries is illustrated by the following figures. At the end of June, 1919, the amount of tonnage under con-

	March 31, 1920.	No.	Gross tons.	June 30, 1919.	No.	Gross tons.
United States	31	3,874,731	701	2,189,829		
Great Britain	7	1,101	10	2,156		
Other countries	4	1,799	8	2,293		
Total	825	3,382,931	719	2,494,569		
United States	35	8,171	35	9,878		
Great Britain	4	2,854	28	19,608		
Other countries	1	189				
Total	40	11,494	63	29,481		
Total	865	3,394,425	782	3,524,950		

struction in the United States exceeded that of Great Britain by over 1,250,000 tons. This excess in the U.S. had by the end of 1919 been turned into an excess in Great Britain of 27,000 tons, while at this time the amount of tonnage being built in England exceeds that of the United States by nearly 1,500,000 tons.

The explanation of this great change, according to reports received here, is said to lie in the fact that British shipbuilding industries, released from government control, are now working off five years' arrears, whereas the great revival in the U.S., due to the war, is now declining.

Closer analysis of the relative shipping position of the two nations discloses the fact that, while U.S. tonnage has increased by over 10,000,000 tons in six years, that of Great Britain is still less than it was in 1914 by 781,000 tons, and that during the year ended June 30, 1920, the U.S. merchant marine fleet increased over 2,500,000 tons, whereas the British increase was only slightly over 1,750,000 tons.

The total amount of tonnage under construction in England is just over 3,500,000 tons, and for the rest of the world slightly over 4,000,000 tons, which seems to indicate that in a very short time the supply of cargo tonnage will exceed the demand. Freight rates are already falling and the market price of cargo tonnage has dropped by 25%.

The Northern Chartering Co. has been incorporated under the Manitoba Companies Act, with \$10,000 authorized capital and office at Winnipeg, to carry on business as general brokers and agents for ships, marine and other insurance, transportation lines, etc. The incorporators are: R. D. and A. T. H. Smith, A. J. Milligan, W. S. McEwen, and C. Darragh, Winnipeg.

Increases in Great Lakes Freight and Passenger Rates.

Washington, D.C., press despatch, Aug. 24.—Increases of 40% on freight traffic and 20% on passenger traffic between ports on the Great Lakes were authorized by the Shipping Board today. The increases may be made effective on one day's notice not later than Jan. 1, 1921. It is said the carriers will increase the rates at once, in accord with the decision, which says, in part:—"The advances proposed by the Great Lakes carriers approximate 40% on freight and 20% on passenger traffic. It appears from the record that the expenses incident to the operation of vessels on the Great Lakes have increased substantially to the same extent as on the Atlantic coast. For example, it was shown that these carriers are now paying for bunker coal approximately 100% more than they paid in 1919, and they claim to be receiving a poorer quality than was then available. These carriers also claim that they are paying 60% more for materials and supplies, and 40% more for labor than they paid in 1919. A situation existing on the Great Lakes which does not confront the carriers operating on the Atlantic and Gulf coasts is that the Great Lakes operations are seasonal, and during several months of the year some of the carriers are obliged to discontinue operation on account of weather conditions. During this non-operating period the overhead and fixed charges of the carriers remain fairly constant."

Radiotelegraph Direction Finding Stations.

The Sydney, N.S., Post contained the following recently:—"The local office of the Marine Department has been informed that radiotelegraph direction finding stations are to be opened by the government at Chebucto Head, Canso and Cape Race. The purpose of this type of station is to ascertain the true bearings of a ship from the station, thus affording aid to mariners in determining their position."

The facts are, that the Naval Service Department erected four of these stations, at Cape Sable, Chebucto Head, Cape Canso and Cape Race, during the war, but for easily understood reasons this was not given publicity. When the restrictions on publicity were removed, Canadian Railway and Marine World dealt with the matter fully, a descriptive article, with illustrations, being given in the issue of May, 1919.

Sydney, Australia, Port Improvements.

Additional railway and harbor facilities for Sydney, New South Wales, are being provided at Darbor, west of the city and at the head of the landlocked bay on which the city is situated. An area of 23 acres at the inner end of Darling harbor has been reclaimed by filling. Double deck steel and concrete freight sheds are being built on long piers for ocean steamship service, and will be served by a waterfront railway connecting the city terminals with the freight belt line. At Glebe Island a grain elevator, with a storage capacity of 6,500,000 bush, is under construction. In order to keep switching movements clear of the harbor work a freight yard with capacity for 3,000 cars has been built at Rozelle, the junction of the lines to the docks and to the grain elevator.

United States Shipping and Shipbuilding Notes.

New York, N.Y., is reported to have established a new high record for 1920 in point of ship entrances, 508 steamships engaged in foreign trade having arrived there during June.

The gross tonnage of U.S. shipping is reported to have increased since 1914 by more than 500% and now to stand at 16,049,000, which places the U.S. second only to the United Kingdom, credited with 18,330,000 tons.

The U.S. Shipping Board, on Aug. 18, opened hearings on the applications of 60 coastwise, gulf, and Great Lakes steamship lines for freight rate increases, corresponding with those granted under the Interstate Commerce Commission's jurisdiction.

On June 1 private U.S. shipyards were building, or were under contract to build, for private ship owners, 345 steel ships of 1,060,643 gross tons, compared with 348 steel ships of 1,391,341 gross tons on May 1, 1919. This is the first decline since July, 1919. These figures do not include government ships building or contracted for by the U.S. Shipping Board out of money voted by Congress.

The U.S. Bureau of Navigation reports 171 sailing, steam, gas and unrigged vessels of 214,840 gross tons as having been built in the U.S., and officially numbered, during July. The output of U.S. shipyards, of ships officially numbered by the Bureau, during the 12 months ended July 31, was 2,086 ships, of 3,554,352 gross tons, of which 684 were steel ocean steamers aggregating 3,146,257 gross tons.

According to its latest statistical compilation the U.S. Shipping Board owns and controls a total gross tonnage of ships amounting to 9,243,464. This comprises 1,493 ships, of which 1,388 are cargo, 28 cargo and passenger, 59 tank, 15 refrigerator, and 3 transport ships. About one-ninth of the total consists of wood, composite and concrete ships, including 271 wood and composite, of 997,854 tons, and 4 concrete, of 13,500 tons.

The U.S. Shipping Board is reported to be getting together in the James River the wooden ships which were built by the U.S. Emergency Fleet Corporation, during the war, and it is said that there will be eventually 170 of them gathered there, and that they will be offered for sale to any interests who care to purchase them. During the war the U.S. Government built about 300 wooden steamships at an approximate cost of \$250,000,000, but owing to delays in construction, few, if any, of them were available for war transportation purposes.

The shipyard at Hog Island, Pa., which was laid out by the U.S. Emergency Fleet Corporation during the war, is offered for sale to the highest bidder, tenders being invited up to Sept. 20. It is announced that 122 cargo steamships, totalling approximately 976,000 d.w. tons, were built and equipped at that yard. The plant has an area of 946 acres, a water frontage of two miles, with 82 miles of railway, a complete sewerage and drainage system, 50 shipbuilding ways, 7 piers and a number of buildings.

The U.S. Shipping Board issued the following notice Aug. 13:—"Since the action of the Interstate Commerce Commission in authorizing common carriers under its jurisdiction to increase transportation rates, the Shipping Board has

received numerous requests from water carriers, subject to the Board's jurisdiction under the Shipping Act, 1916, and Merchant Marine Act, 1920, and operating on the Atlantic Coast, Gulf of Mexico and Great Lakes, to materially increase their present rates. The Board has also received from shippers and commercial organizations protests against such proposed advances, and in order that the reasonableness of the proposed advances may be determined, the Board desires to consolidate all such applications for advances in rates, and to have hearing thereon, beginning Aug. 18."

President D. B. Hanna on Steamship Services.

Daily newspaper press dispatches credited D. B. Hanna, President Canadian National Rys. and Canadian Government Merchant Marine, with having stated, during his recent visit to the Pacific coast, that the C.N.R. would inaugurate a Vancouver-Victoria-Seattle steamship service, that passenger steamships would be put in operation between Vancouver and Oriental ports as soon as available, and that the company had been in negotiation for the purchase of a passenger fleet, involving an expenditure of approximately \$85,000,000, but that it had fallen through.

We are advised that Mr. Hanna did not state that the C.N.R. intended to inaugurate a Vancouver-Victoria-Seattle steamship service, but did say that the C.N.R. service on the Pacific Coast would not be rounded out until such a steamship service was provided. The Grand Trunk Pacific Coast Steamship Co. is already operating a coast service, which is now under Canadian National Rys. management. Mr. Hanna did not say that passenger ships would be put in operation between Vancouver and Oriental ports, but he did say that on the completion of the Dominion Government's present steel cargo steamship shipbuilding programme, 12 steamships aggregating some 100,000 d.w. tons, would be operated out of Vancouver. Mr. Hanna did not say that the Canadian National Rys. had been negotiating for the purchase of a fleet of passenger steamships, involving an expenditure of approximately \$85,000,000, or any other amount, no such negotiations having taken place.

The Position of Canadian Shipping.

Shipping facilities in Canadian ports are in course of being greatly improved. As regards Europe, our eastern ports are in touch with more points in the United Kingdom than ever before, with several in Norway, with Gotenburg, Malmo and Norrköping in Sweden, with a free port at Danzig, with Antwerp and Rotterdam in Holland, Passage in Spain, and Havre, Bordeaux and St. Nazaire in France, while for the first time there will be a direct line from Montreal to Mediterranean ports, such as Gibraltar, Palermo, Naples and Genoa. This line may be extended to take in Odessa and other ports in the Black Sea. There have been for years regular sailings between Canada, British West Indies and British Guiana, and latterly Canadian Government Merchant Marine ships have also been running to Cuba, Jamaica, Barbados, Trinidad and British Guiana.

A new field of trade possibilities has been opened up by a service which has been instituted from Montreal to the west coast of Africa. A new line from

Montreal to Australia, and many new ships on the Vancouver-Australia-New Zealand route have been reported. More ships are to be placed on the Vancouver-Japan-China service. From the east and west, Canada is now in touch with her markets. Direct shipping facilities of this nature are prerequisite to the establishment of our foreign trade on any satisfactory basis. The lack of them involves, at the best, higher transportation charges, and in many cases means that our imports and exports pass to their destination through the hands of a foreign middleman. During the last six months the usual course of trade has been interrupted, and much United States freight has passed through Canadian ports on account of the severe traffic congestion existing in the U.S.—Royal Bank of Canada Monthly Letter.

Shipbuilding Depression in Japan.

Attacks on Japanese interests overseas, combined with internal depression, have influenced the great shipping companies to modify or to abandon the ambitious building programmes they decided on at the height of the shipping boom. It is reported that the Nippon Yusen Kaisha and the Osaka Shosen Kaisha have cancelled their decision to build an aggregate of 1,000,000 tons, and this will seriously affect the already attenuated war boom in the shipyards. The outlook in the shipbuilding industry is thus most discouraging. The largest yards are engaged in warship construction, and are showing evidence of the sobering effects of financial depression. A member of the House of Peers ventured recently to propose that Japan should economize by purchasing warships abroad. The fact that such a proposal has been seriously broached to a patriotic assembly is eloquent of changing times.

Employment of Children on Ships.—The International Seamen's Conference at Genoa, Italy, has decided that no children under 14 years old shall be permitted to work on seagoing ships, unless on ships on which only members of the same family are employed, and in case of children working on training ships under the supervision of public authorities, these latter, it being decided, being actually pupils and there being no intention of obtaining profit from their work.

Seamen's Working Hours, Etc.—Brussels, Belgium, press dispatch, Aug. 13.—The International Seamen's Federation has adopted resolutions for immediate steps for the enforcement of a demand for a 48-hour maximum week at sea, a 44-hour week on port duty, and for fixed international seaman's wage. An amendment urges the calling of a conference of ship owners and seamen before the precipitation of a strike.

Freight Rates on Great Lakes.—In commenting on the general condition in lake freight traffic, L. A. W. Doherty, General Traffic Manager, Canada Steamship Lines Ltd., is reported to have said that there will probably be an increase in freight rates on the Great Lakes in the autumn, but that no changes will be made in passenger rates.

B. W. B. Navigation Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$1,000,000 authorized capital, and office at Vancouver, to build, own and operate steam and other vessels of every description, wharves, piers, drydocks, warehouses, etc.

Atlantic and Pacific Ocean.

The Canadian Pacific Ocean Service has been informed that the *St. John's* has been chartered by the U.S. Navy for service between the U.S. and Canada.

The *St. John's* has been chartered by the U.S. Navy for service between the U.S. and Canada.

The *St. John's* has been chartered by the U.S. Navy for service between the U.S. and Canada.

Furness Withy & Co. are operating two steamships on a service between Liverpool, Eng., St. John's, Nfld., and Sydney, N.S. It is said to be the first cargo transatlantic steamship service making Sydney its Canadian terminal port.

A long distance wireless telephone station is reported to be under construction at Devizes, Wiltshire, Eng. It is said that conversation will be maintained with ships on the Atlantic to a distance of over 1,000 miles, and that the station will be kept in touch with ships at least two-thirds of the way across the ocean.

It is announced that U.S. mail for the Orient is being transported across the Pacific Ocean by Canadian Pacific Ocean Services' steamships and that a probable feature of the arrangement in the future will be the conveyance of mail from Seattle, Wash., to Vancouver, B.C., by aeroplane, thus saving nearly a day on the trip between those points.

The Canadian Robert Dollar Steamship Co., Vancouver, B.C., is reported to have bought an 11,500 ton steamship named *Parisian*, in Great Britain, recently, and it is stated that she will sail from London, Eng., about the end of August for New York, in ballast, and that on arrival she will be placed on the Canadian register under the name of *Esther Dollar*.

Canadian Pacific Ocean Services' s.s. *Tunisian* and *Manchester Liners' s.s. Manchester Division*, collided in the St. Lawrence near Quebec, Aug. 8, considerable damage being done to the hulls of both ships, which, however, both made port in safety without assistance. An enquiry into the casualty was opened before Capt. L. A. Demers, Dominion Wreck Commissioner at Montreal, Aug. 19.

The Anchor-Donaldson Line's steamships *Athenia* and *Letitia* are expected to be completed by the Fairfield Shipbuilding & Engineering Co., Glasgow, Scotland, shortly. They will be operated between Glasgow and Montreal, and will be 520 ft. long overall, with 66 ft. beam, and with accommodation for 2,000 passengers. They are designed for a speed of 15 to 16 knots an hour using fuel oil. We are advised that they are not expected to be on the route until next summer.

Canadian Pacific Ocean Services' s.s. *Empress of Britain*, which has been overhauled and reconditioned after her war service, details of which work were given in our last issue, underwent a series of trials early in August, in the Irish Sea, when she developed a speed of 19 knots an hour, or one knot better than when she was burning coal. She is scheduled to sail from Liverpool, Sept. 1, for Quebec, and from Quebec Sept. 15.

has arranged with the Japan and China Companies to allow the sale of overland tickets in connection with its ocean tickets, between Yokohama and Montreal, to attract passengers to visit the principal points of business, historical and scenic interest, in Japan, Korea and China. Tickets are limited to 90 days, allow certain stopovers, and include express train charges and transit duty.

Canada Steamship Lines Ltd. has been appointed Canadian passenger and freight agents for the U.S. Mail Steamship Co., which has been organized recently to take over from the U.S. government, for operation, a number of former German passenger and freight steamships. It is stated that when the company is completely organized it will have in operation over 100 steamships, which will be operated to London and Plymouth, Eng., Havre and Cherbourg, France, to Danzig and on other routes not yet decided upon.

The Cunard Line announces that two additional steamships building at Birkenhead and Wallsend on Tyne, Eng., named respectively *Samaria* and *Laconia*, will be launched shortly. They are to be 625 ft. long over all, with 74 ft. beam, 30 ft. draft and 27,000 tons displacement. They will be equipped with geared turbines of 12,500 h.p., for an average sea speed of 16 knots, the boilers being fired with fuel oil. They will be of the three class type, with accommodation for 343 first class, 347 second class and 1,698 third class passengers, and 315 officers and crew.

The Cunard Co. has, according to a Montreal press report of Aug. 18, sold the s.s. *Royal George* to Furness Withy & Co., for operation between Liverpool, Eng., and Boston, Mass. The s.s. *Royal George* was built at Glasgow, Scotland, in 1908, when she was named *Cairo*, for the Egyptian Mail Steamship Co.'s Marseilles-Mediterranean service. She was bought in 1909 by Canadian Northern Steamships Ltd., and after being remodelled to make her suitable for Atlantic service, was operated between Canada and Avonmouth, Eng. On the Canadian Northern deciding to relinquish the ocean passenger steamship business, the ship was sold, with others belonging to the company, to the Cunard Co. The report of the sale is unconfirmed, according to our latest advice on Aug. 25.

Maritime Provinces and Newfoundland.

S. C. MacMillan has been appointed measuring surveyor of shipping, Isaac's Harbor, N.S.

J. B. Hachey and A. Gatain have been appointed pilot commissioners for the

Halifax District of Bay of Fundy, N.B., since J. J. S. Hachey and H. White, resigned.

The certificates of registration, issued under the Nova Scotia Companies Act, to the *Stella Maris Steamship Co. Ltd.*, and the *Coastal Dredging & Construction Co. Ltd.*, have been revoked.

The Dominion Public Works Department will receive tenders, to Sept. 14, for repairs to the breakwater at Port Lorne, N.S., and for an addition to the east breakwater at Port Maitland, N.S.

The Dominion Public Works Department has established a new harbor headline at Halifax, N.S., beyond which wharves, piers, breakwaters, and similar structures are not permitted to be built.

Tenders were received by the Naval Store Officer, H.M.C. Dockyard, Halifax, N.S., at the end of August, for the purchase of a number of small motor, steam and sailing boats at the dockyard and at Sydney, N.S.

The s.s. *Martara*, owned by G. W. Jones, New York, ran ashore near Lunenburg, N.S., Aug. 13, and is reported a total loss, having broken her back over the ledge. She was bound, in ballast, from Philadelphia to Botwood, Nfld.

The suction dredge *Tornado*, which was towed from Norfolk, Va., for use in the Courtenay Bay development works, arrived at St. John, N.B., Aug. 4, where she will be operated by the St. John Drydock & Shipbuilding Co., contractors for the work. The *Tornado* is owned in Toronto, and was built there by Polson Iron Works.

The Nova Scotia Shipping Co.'s s.s. *steam tug Diamond*, while bound from Parrsboro to Economy, N.S., July 30, sprang a leak when off Five Islands, and sank. She was built at Pictou, N.S., in 1894, and was screw driven by engine of 10 h.p. Her dimensions are,—length 43.3 ft., breadth 12.4 ft., depth 5.6 ft.; tonnage 23 gross, 15 net.

The Minister of Customs and Inland Revenue is reported to have stated at St. John, N.B., Aug. 16, that the Marine Department has an appropriation of \$25,000 for the installation of a radio-telegraph station in St. John harbor, to assist ships in negotiating the entrance to the harbor in safety during storms and dull weather.

The International Mercantile Marine Co. has presented Capt. C. F. Martin, superintendent of tow boats, G. S. Campbell & Co., and Capt. T. O. Ormiston, master of the tug *S. F. Roebing*, of Halifax, N.S., with an engraved gold watch each, as a memento of their services in rescuing the crew of the *Leyland Line s.s. Bohemian*, when she stranded on Sambro ledges, near Halifax, on Mar. 2.

The Dominion Coal Co.'s s.s. *Wabana*,

while bound from Sydney, N.S., to Bell Island, Nfld., in ballast, to load ore, during July, ran on Cape Freels rock near Cape Pine, Nfld. She refloated at high tide and proceeded to St. John's under her own steam, where she was placed in the drydock for overhaul and repairs to her fore foot and stern. A number of plates were also damaged below the water line.

The schooner Netherton, owned in Dennisville, Me., was abandoned at sea in a burning condition, early in August. She was built at St. John, N.B., in 1918, and named Dornfontein. While on her maiden voyage she was captured by a German raider in the Bay of Fundy and set on fire, and was afterwards rebuilt and renamed. She was a four master, of 666 net tons, and cost about \$100,000.

The Royal Mail Steam Packet Co.'s s.s. Cobeguid, which was wrecked on Trinity Ledge, some time ago, is being salvaged by the wrecking steamship Coast Guard. It was expected that the material would be cleaned up before the end of August, after which the wrecking steamship would proceed to Beaton's Rock, near Briar Island, to deal with the s.s. Corinthian, which stranded, and afterwards sank, there, early in 1919.

The British s.s. Willdomino struck an uncharted rock off the eastern shore near Canso, N.S., towards the end of July, and tore a large hole in her bow. The C.G.S. Lady Laurier was sent to her assistance and towed her into Halifax. The s.s. Willdomino, which was bound from St. Michaels, via Halifax, for New York, was formerly named War Convoy, and was built by J. Coughlan & Sons, Vancouver, B.C., for the British Government, under order from the Imperial Munitions Board.

The U.S. Shipping Board's wooden steamship Quinesesco was taken into Halifax, N.S., at the end of July, considerably damaged by fire. She sailed from Newport News, Va., July 4, for Sydney, N.S., where she took on a cargo of coal, and sailed for Aarhus, Denmark, via Hull, Eng., July 17. When about 700 miles east of Halifax, fire was discovered in her port bunker. Considerable damage was done to her planking before the fire was subdued. She was taken to port under her own steam, and by her own crew.

The Minister of Customs and Inland Revenue is reported to have stated at St. John, N.B., Aug. 11, that the filling of the west channel, between Negro Point breakwater and Partridge Island, to provide protection for docks 15 and 16, would be commenced immediately. It is also stated that a floating grain elevator will be placed in the harbor next winter, and it is possible that one of the floating elevators of 6,000 bush. an hour capacity, owned by the Montreal Harbor Commissioners, will be bought or hired for use at St. John.

The Naval Service Department will receive tenders to Sept. 9, for the purchase of the steamship Thirty-three as she now lies at Halifax, N.S. She was built at North Shields, Eng., in 1902, and is screw driven by engine of 21 h.p., at an approximate speed of 9 knots an hour. The hull is of steel, with the following dimensions,—length 80 ft., breadth 18.1 ft., depth 8.3 ft., tonnage 79 gross, 33 net.

Job Bros. & Co., St. John's, Nfld., are offering for sale 2 three-masted wooden schooners built with hardwood frames, and with stern, stern post, rudder stock and keel all with galvanized fastenings below the waterline. They are designed

on lines to make fast sailers and are guaranteed to pass American Bureau and Bureau Veritas A1 classifications. They have the following dimensions,—length of keel 120 ft., registered length 128 ft., beam 28 ft., depth shoalest place 10 ft. 8 in., depth deepest 12 ft. 6 in., tonnage 255 gross, 220 net, 400 d.w.

Province of Quebec Marine.

The s.s. Perreault, which was launched at Roberval, early in August, has been built under subsidies from the Quebec Government and will be operated on Lake St. John.

The Dominion Public Works Department has awarded a contract for repairs to wharf at St. Francois Sud, Isle of Orleans, to S. Ratte, St. Anne de Beaupre, at schedule of prices.

The wrecked s.s. Germanicus, which ran aground at Bic Island, last autumn, is reported to have been examined early in August by C.P.R. officials, having in view the possibility of salvaging her. It is said that the cost would be approximately \$400,000.

The Keystone Transportation Co.'s s.s. Keybell struck bottom near the entrance to the Lachine canal, Aug. 20, and sank at the bow. It has been found that the water at the point where the casualty occurred is only 14 ft. deep. The ship has been marked and a notice to shippers drawing over 13 ft. 10 in. has been issued.

The Marine Department's s.s. Speedy II is reported to have been sold to T. M. Kirkwood, Montreal. She was built at Leith, Scotland, in 1896, as a private yacht, for Barney Barnato, of the DeBeers Co. of South Africa, and was acquired by the Dominion Government after his death, and operated under the Marine Department. She is screw driven by engine of 88 h.p., and has the following dimensions,—length 115 ft., breadth 20½ ft., depth 10½ ft., tonnage 252 gross, 145 net.

The s.s. C. W. Chamberlain is reported to have been sold to the Sincennes McNaughton Line Ltd., Montreal. She was built of oak, at Walkerville, Ont., in 1881, when she was named C. N. Pratt, and was rebuilt in 1890. Her dimensions are,—length 127 ft., breadth 26½ ft., depth 9 ft. 7 in.; tonnage, 385 gross, 243 net. She is equipped with fore and aft compound engine, with cylinders 18 and 82 in. diam. by 26 in. stroke, 280 i.h.p. at 100 r.p.m., and supplied with steam by a

Scotch boiler 10 ft. diam. by 11 ft. long, at 100 lb. She was at one time owned by the Midland Transportation Co., Midland, Ont., and later by James Swift & Co., Kingston Ont. She was damaged by fire at Cornwall, early this year, since when she was reported to have been owned by Capt. H. Martin, Kingston.

The Sincennes McNaughton Line Ltd., Montreal, has bought the s.s. New Island Wanderer, from Canada Steamship Lines Ltd., and has transferred her from the U.S. register to the Canadian register, under the name of Jeannette R. She was built at Buffalo, N.Y., in 1888, and registered at Alexandria Bay, N.Y. She is of the hurricane deck type, with oak hull, of the following dimensions,—length 116 ft., breadth 21 ft., depth 7 ft.; tonnage, 123 gross, 84 net. She is equipped with fore and aft compound engine, with cylinders 15 and 28 in. diam. by 24 in. stroke, 165 i.h.p. at 100 r.p.m., and is supplied with steam by a fire box boiler 7½ ft. diam. by 10½ ft. long at 135 lb. She was owned originally by the St. Lawrence River Steamboat Co., Kingston, Ont., and was taken over by Canada Steamship Lines Ltd. on its incorporation.

Ontario and the Great Lakes.

P. W. Lyon, Toronto, has been appointed Inspector of hulls, steamboat equipment, boilers and machinery.

The Gulf Navigation Co.'s s.s. Gonzaba, which was built by the Dominion Shipbuilding Co., Toronto, for service in the Gulf of Mexico, sailed from Toronto at the end of July with a cargo of 60 lb. rails for Sagua la Grand, Cuba. This is said to be the first direct ocean cargo shipped from Toronto.

The Dominion Public Works Department will receive tenders as follows:—To Sept. 10, for repairs to superstructure of western breakwater, including headblock, at Port Colborne, Ont. To Sept. 14, for reconstruction of 466 ft. of superstructure of east piers of eastern channel, Toronto harbor.

The Minister of Railways and Canals is reported to have stated, at St. Catharines, Ont., Aug. 23, that the construction of the Welland Ship Canal, which was held up owing to the war, will be pushed to completion at the earliest possible moment. While in the neighborhood he went over the route with some of the engineering staff.

The U.S. Lake Survey reports the stages of the Great Lakes for July, in

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during July, 1920:

Articles	Eastbound	M. ft. B. M.	Canadian Canal	U.S. Canal	Total

Phelan, while downbound, with 60,400 bushels of grain on board, was struck by a large iceberg in the St. Lawrence River, near the mouth of the river, on August 10, 1919. The ship was damaged and the grain was lost. The ship was towed to the mouth of the river and the grain was salvaged. The ship was then towed to the mouth of the river and the grain was salvaged. The ship was then towed to the mouth of the river and the grain was salvaged.

covered by insurance. The grain was lost and the ship was damaged. The ship was then towed to the mouth of the river and the grain was salvaged. The ship was then towed to the mouth of the river and the grain was salvaged.

The Montreal Transportation Co.'s barge Quebec, now owned by Canada Steamship Lines Ltd., and which was sunk following the explosion at the Dominion Government grain elevator at Port Colborne, Aug. 9, 1919, has been raised and taken to Toronto, where she has been placed in the drydock for examination and repairs. At the time of the disaster 11 persons on board were killed and 16 injured, while the cargo of grain, valued at \$100,000, was a total loss.
